

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

The Nation.

NEW YORK, THURSDAY, JANUARY 6, 1898.

The Week.

The scores of thousands of operatives in New England cotton mills who received notice of a reduction in wages just before the end of 1897 were not the only class of working-people in that section to whom such a holiday gift was made. The employees in a great shoe factory at North Brookfield, Mass., have just been informed that their pay will be cut down with the new year, and the operatives in similar establishments elsewhere fear that the example thus set will be generally followed. The only reason assigned by the manufacturers is that they are losing money, and cannot continue the business unless they reduce the wage account. The company in question has always enjoyed a good reputation for fair treatment of its hands, and they are more disposed to accept the claim that the cut must be made in order to keep the shops going than is sometimes the case when such an announcement is made by an employer. A local newspaper says that "the people of North Brookfield hope that the peace and general good-will will not be interrupted by the present unpleasant situation."

Why do shoe manufacturers find that they cannot pay as large wages hereafter as heretofore? Has any change in the conditions of the industry occurred during the past year? There has been one change, which is of great importance. A tax has been put by the Dingley law upon the raw material used in making shoes. The new tariff imposes a duty upon hides. This duty was imposed against the earnest protests of shoe manufacturers, who insisted that it would seriously injure their business. Six months have not passed since the law went into operation, and already a reduction of wages is found to be inevitable. Such a showing cannot be a pleasing spectacle for Republican Congressmen who promised prosperity as soon as a Republican tariff should go into effect, and who must meet next fall the interrogatory of a host of working-men why prosperity involves smaller pay for them.

The wheels of the reciprocity chariot are tarrying unconscionably. One brake on them is the fact that we cannot surrender a dollar of revenue, in the interest of reciprocal trade, without still further embarrassing our Treasury. How can we remit any part of the duty on sugar when we need the whole and more than the whole? The second great ob-

stacle in the way of reciprocity is the fact that the men who moved heaven and earth to get a high duty put on their products do not now propose to surrender a fraction of 1 per cent. of it. It certainly does look like interfering with vested rights, and we know what an awful thing that is. Take the lumbermen, for instance. They lobbied through a duty of \$2 on white pine, which, as they boasted, meant \$6,000,000 clear to them, and now are they to be asked to give up any part of that honest profit for the sake of reciprocity with Canada? Why, the very suggestion fills them with disgust; and they have their secretary notify Reciprocity Commissioner Kasson that nothing of the sort must be attempted. All they are asking is a protection of 20 per cent., while they are cheerfully paying 40 or 50 per cent. on other people's goods. Does Mr. Kasson want to rob them of their little all? Reciprocity must be had, of course—it is in the platform; but the lumbermen never did think much of reciprocity with "nations in the same temperate zones as our own." Reciprocity they thought to be well understood as a matter only for the tropics and Dagoes—something far off, anyhow, and with no relation to lumber. And that is what they all say: Reciprocity to the top of your bent, but touch our duties if you dare!

We unite with our protectionist friends in rejoicing that at last the Dingley tariff has made both ends meet during a single month. It is true, the December "surplus revenue" of \$1,714,831, reported on Tuesday by the Treasury, leaves a net deficit of \$44,376,663 for the six completed months of the fiscal year. It is true, also, as Dingley and his friends reluctantly confess, that a heavy deficit in January is inevitable, which will remove still further from the domain of legislative sanity Mr. Dingley's estimate of \$113,000,000 increase in the revenues of the fiscal year. Still, a surplus is a surplus, and no true-hearted protectionist need now hang his head. When the wicked jeeringly refer to the "Dingley Deficit," all that is necessary is to point to the December surplus, and ask by what right such a tariff as that can be called a deficit-maker. Meantime, if internal revenue receipts increase as they have done in the past six months, seven millions over the corresponding period of 1896, let it be remembered that this increase must be ascribed to the customs schedules of the Dingley law, while any general shortage in revenue during the next few years must be set down to "anticipatory importations." The polysyllables involved in this explanation have done, we can ourselves testify,

great execution already in the ranks of the enemy, and they may be made to do service as long as deficits continue.

Commissioner Evans fully confirms the worst that has ever been charged against pension attorneys as a class. He points out that during the past thirteen years \$13,000,000—a full million a year—has been paid to such attorneys, a large proportion of the vast sum for really trifling services. He shows how unscrupulous agents persuade veterans to enter claims against the Government which the old soldiers would never think of presenting if left to themselves, and make combinations with incompetent or conscienceless medical examiners to put through absolutely fraudulent applications. In many cases the old soldier is illiterate, and a shrewd attorney prepares almost any kind of affidavit that he wants, and directs the soldier to sign it, which the latter does in ignorance of what it contains. Commissioner Evans reports that the Bureau unearths sharp practice of one kind or another by these attorneys every day, and he sees no hope of a reform except by Government oversight of the business. With this change in methods the pension bureau would have direct control of the attorneys, whose business it would be to see that all honest claims were promptly and intelligently presented; and if one of them should fail to do his duty or should be found incompetent, it would be an easy matter to remove him. It is a great thing to have a Commissioner who realizes the abuses of the existing system so thoroughly as Mr. Evans does, and the McKinley Administration will be entitled to great credit if it shall carry through the reforms which he advocates.

When the bill prohibiting pelagic sealing was on its hasty passage through Congress, the whole stress was laid on our duty to do what we asked other nations to do. We were asking the Canadians to give up pelagic sealing, and yet were open to the taunt that Americans were not above taking seals on the high seas. Let us make the nefarious business unlawful for our own citizens, and then our "moral position" will be much stronger in calling upon other nations to abandon it. That was the argument before the bill passed. But no sooner had it passed than it was found to contain a clause absolutely prohibiting the importation of sealskins or of articles made of sealskin. No sealskin muff or purse, no article of wearing apparel in which sealskin is even a part, can pass through our custom-houses without being ripped to pieces to see if the pelt carries the proper

stamp. No lady going abroad can safely take a sealskin coat along without a "certificate of ownership" from the Collector of the port; otherwise, this, too, on her return, will be torn open for examination. That is to say, while ostensibly passing a bill to prohibit pelagic sealing, we were really making a law to prohibit importation of sealskins. Incidentally we were giving an absolute monopoly of the sealskin trade in this country to the North American Commercial Company, which leases the Pribyloff Islands and is entitled to bring in its skins as before. Thus is our moral position made strong. Thus is a customs law again made to wring the soul of the foreigner and to cause the native to pay more for his clothes.

After weeks of hard labor, the Navy Board, headed by the Assistant Secretary, has finished its bill for the reorganization of the service, and transmitted it to Secretary Long, accompanied by a very long explanatory report, written by Mr. Roosevelt. As was expected, the bill provides for the union of the line and the engineers, promotion by selection, increased pay for the officers, and a retired list for the enlisted men, and is therefore the most radical measure ever prepared in regard to our navy or any other navy. It requires not only that each graduate of Annapolis shall be an infantry drill-master, a hydrographer, an electrician, a navigator, a naval tactician and strategist, and an ordnance expert, acquainted with the handling and making of guns, powders, torpedoes, armor, and projectiles, but that he shall also be fully able to care for and direct the intricate machinery of every kind to be found on board a man-of-war. Whether, in these days of necessary specialization, one officer can become expert in all these scientific matters, is a question that can be decided only after the system has been put in effect, for in no other service of to-day has it been thought of. Indeed, the only analogies that Mr. Roosevelt can draw are from the times of the Spanish Armada, of Blake, and of Nelson. It is well that the bill provides also for a body of warrant machinists, who will not be called upon to do "deck" duty, and upon whom the responsibility of the engine-room will mainly rest, as it does upon the engineers of to-day.

The proposal to regulate promotion by selection—that is, by having a certain number of the least able officers forcibly retired each year in order to promote their subordinates—is open to two very serious objections. The danger that these retirements will be largely affected by political and social influence Mr. Roosevelt himself recognizes, but seeks to minimize by having the weeding out done by officers of the highest rank. It is unfortunately true, however, that

some of the most persistent seekers after and wielders of political influence in Washington, of late years, have been captains, commodores, and admirals, and they will probably continue to be, unless human nature changes or most stringent regulations are enforced. Furthermore, the voluntary or forced retirement each year of a number of able-bodied and—if the general standard is high—mentally qualified officers will add to the retired list fifteen or more members each year. If these men are employed on shore duty, it will be tantamount to an increase of the active navy; if unemployed, the Government will find itself with a new class of able-bodied pensioners, quite capable of earning large salaries, on its hands. Mr. Roosevelt lays stress upon the fact that the proposed increase will augment the pay of the navy "only" \$600,000. That will be true this year, but not in 1899, and still less as the years go on and the retired lists of officers and men steadily grow, for the present one has largely increased from year to year during the last decade. That 180 more officers have been asked for is no surprise. Fifteen years ago the cry was, We must have new ships, and plenty of them, to keep our officers busy. Now, having built more ships than are needed by so fortunately situated and peaceably disposed a nation as ours, we must have more expensive officers. It is only a couple of years since the number of enlisted men was increased, and now there are calls for more of them, and will continue to be as long as there is any chance of aping European countries and heaping greater and greater burdens upon our own.

The factional opposition to Hanna in Ohio has proved to be more widespread and persistent than was anticipated, and the Foraker wing has detached from the machine enough members to carry its point if it can hold its men. At this writing it has won the first skirmish at Columbus by securing the organization of the Legislature, but the real fight over the senatorship is still to be fought. The opposition have the advantage temporarily, by reason of controlling the patronage of the Legislature, but they are suffering from the lack of popular support. They are repudiating all the obligations of partisanship, and yet they are unable to show that there is any patriotism or principle in their course. In this situation the champions of regularity are supported by public opinion, and it remains to be seen whether the bolters can stand out against the popular demands that they shall abide by the action of the party organization. The Republican opponents of Hanna are also embarrassed by the difficulty of making terms about the senatorship with the Democratic members of the Legislature, who are inclined to drive

a hard bargain. As the voting for Senator will not begin for a week, and may drag on for a good while, the country is going to have a thorough exhibition of Ohio factional politics at its worst.

The method of selection which has been followed in regard to the men who are to operate the machinery of Greater New York is a totally new thing in the history of civilized government. Mr. Croker has been engaged for two months, mainly at Lakewood, New Jersey, in the task of choosing these men. Who have been his advisers in this great task? Has he taken counsel with our leading authorities on municipal government, our most eminent financiers, our successful merchants, our chief lawyers and professional men? Have any of these been to Lakewood and had audience at the Croker court? Not one of them has been seen there. If any of them had gone, he would have been given short shrift by the Boss, who has made it known to the world that he has no use for the advice of such citizens. Not only has he spurned the counsel of men of success in all walks and professions of private life, but he has confined his selection of men for office under the new government to persons who either have no private business, or so little of it that they are willing to abandon it on becoming public servants. This is right under the Boss system. Any other plan would have been absurd. Hugh J. Grant promised us in 1888, that he would make his appointments from the "highest order of citizenship that the county affords." The present Tammany boss has "moved farther into the wilderness" since he was restored to power. He openly spurns the highest order of citizenship and constructs his government from the lowest. The results of his policy will furnish material for thought to the students of government throughout the world.

It should be said of the new Police Board that we have never had a more complete embodiment of the bi-partisan idea than it presents. It is headed by Barney York of the Borough of Brooklyn, who is on it as "Boss McLaughlin's man." Its Treasurer is Tom Hamilton of the Borough of Manhattan, who is on it primarily as "Gibbs's man," but fundamentally as Platt's man, the information that he was Platt's selection for the place having convinced Croker that he was the man for it. He represents on the board the first instalment of the debt which Croker owes to Platt for the gift of the government of the city. The next man on the board is Johnny Sexton of the Borough of Manhattan, a Tammany district leader who is known as "Hugh J. Grant's man." The fourth and last member is Billy Phillips of the Borough of Brooklyn, who is known as "Willis's man," Willis being one of the

Republican deputy leaders in Brooklyn who helped Platt "turn down" the Hon. Jacob Worth for his atrocious conduct in supporting Seth Low in preference to Tammany. It will be seen that every member of the board is on it as the representative of an expert in machine politics. We venture to say that there will be no "bickerings" or wrangling in this board. It will run as smoothly as in the days when Jimmy Martin and Sheehan represented Tammany on one side and Mike Kerwin and Charlie Murray represented Platt on the other. Genuine bi-partisan boards never quarrel; they "divvy." Each side is awarded its share of the good things a-going, and there is no provocation for squabbling.

Objection has been made to our recent statement that the plan of Cuban autonomy gives less than the Canadian measure of home rule. It is said that the Governor-General of Canada appoints all the members of the Dominion Senate and names all the judges. Yes, but the Canadian House has the absolute power of the purse; the Senate can neither initiate nor amend a money bill. The proposed "Council of Administration" in Cuba has, on the other hand, powers concurrent with those of the House of Representatives. Moreover, in Canada the Governor-General makes his nominations, and performs all executive acts, by and with the advice and consent of the Council of Ministers. But who are these ministers? They are the leaders of the party having a majority in the lower house of Parliament. Without that majority they cannot remain in office a day. Sir Wilfrid Laurier became Prime Minister by carrying a majority of the seats in the Dominion House. As soon as he loses that majority, out he goes, and all his ministers with him. As it is really the Canadian Ministry, and not the Governor-General, in whom the executive power is lodged, and as the Ministry is a creation of the popular Chamber, it is really in the latter that all power, subject to English sovereignty, resides. It would be easy to show, if it were worth while seriously to discuss the proposed Cuban autonomy any longer, that it comes far short, even in theory, of granting any such degree of home rule.

French and English relations were as much strained in negotiations about Madagascar, it appears from a recent parliamentary paper, as in disputes about rights on the headwaters of the Nile. When the French protectorate over Madagascar was established, existing British treaty and trading rights were recognized. But little by little the pressure of French protectionism led to the attempted introduction in the island of the French customs tariff, to the detriment of British trade. When Lord Salisbury protested against this step,

Prime Minister Hanotaux responded with the coup of annexing Madagascar outright, making it therefore French territory and subject, accordingly, in all respects to French law. But Salisbury still protested; France had obtained her position in Madagascar on the strength of certain assurances to England; now she could not go ahead to annul by annexation the stipulations which alone had made annexation possible. He proposed, however, to surrender all English claims in Madagascar provided all similar French claims in Zanzibar were withdrawn; and this compromise appears to have been accepted and to have ended the controversy. The whole illustrates the ticklish international questions which are apt to grow out of annexation of distant territory.

The Chinese are said to be not at all comforted by the assurances offered them that the occupation of Kiao-Chau and Port Arthur is to be only "temporary." This is not strange. There is a French proverb which says that "nothing is more durable than the provisional," and the Mandarins have doubtless heard of this, or have something equivalent in their own language. Nor can they be much reassured by recalling the facts about some recent "temporary" occupations of foreign territory. England's stay in Egypt was to be brief. As soon as order was restored and the finances consolidated, the red-coats would be seen no more in Cairo. But now they are on the march to Khartum, with palpable intent to stay. So of the Anglo-Indian expedition to Chitral. The English garrison was to be rescued, the tribesmen punished, and then withdrawal was to follow. But now all the fighting beyond the frontier is for the purpose of permanently annexing the territory. So of the French in Madagascar, the Russians in Persia and Corea. No wonder the Chinese officials are a little dubious about the entirely friendly and purely temporary seizures of their bays and ports.

The declaration, announced in the Manchester *Guardian* on Monday, that Great Britain will use the most-favored-nation clause in her treaties, to see that she gets from China whatever any other Power gets in the way of privileges, naval stations, mines, or monopolies of any description, makes the situation look considerably clearer. This declaration does not cover cessions of territory, but it contains an obscure hint that, if territory is ceded, there may be trouble. The reason why the grand expedition of Brother Henry has been sent out is plain enough in view of the condition of the German trade with China. This has been falling off steadily during the last year. It appears from the English *Financial News* that German ex-

ports to Japan to \$7,250,000, during the years 1895-6, as against \$74,000,000 British. But during the last seven months of 1897 the seven principal articles of German exportation to China have fallen off in weight 49 per cent. Those to Japan have fallen off 46 per cent. in weight. The *News* has taken these figures from the Imperial returns, and what they mean we do not pretend to know, but the Consecrated Person evidently believes he can apply a remedy. The only efficient remedy would be to compel the Chinese to take their custom away from the British and make their purchases of Germans, but this can hardly be done. There is thus some reason to fear that after Prince Henry gets on the ground, he may find his rôle reduced to great insignificance. Lord Salisbury will now probably have to act very energetically, for though the British business man may be willing to let him dawdle and be timid when he is acting on behalf of Greeks or Armenians, we may be sure there will be no indulgence when British trade is at stake. The British naval force in the Eastern seas is so much greater than that of any other Power, especially if supported by Japan, that a determined man at the Foreign Office can really do what he pleases in those regions.

Some seventy German editors are now in jail for *lèse-majesté*, and they will be welcoming more of their comrades as soon as the Emperor gets time to read the "press clippings" on the royal speeches at Kiel. The German newspapers are loyal, and they are cautious, but "the gospel of your Majesty's hallowed person" was too much for them. Some of the other exuberances and mediaevalisms of the speeches are to be accounted for by the high-flown official dialect, which in German is something as different from English as English is from Chinese. But that "gospel"! "Only one Gospel is preached to us Christians," said the Conservative *Kreuz-Zeitung*. The Agrarian organ observes that "it is not permissible to speak of the royal person as 'hallowed.'" "There is only one hallowed person on earth—the Pope," declared the Catholic *Germania*. The loyal *Tageblatt* gave up the offensive phrase as one "which for the present is beyond our humble powers of comprehension"; while the Socialist *Vorwärts* sardonically invited the Cardinals and Archbishops to enlighten the public about the new gospel. One paper even ventures to challenge William's historical knowledge, and to deny that the Hanseatic League decayed, as he alleged, for "lack of imperial protection." This is rank blasphemy, and the only proper answer to it is a good term of imprisonment. There is nothing like solitary confinement on a bread-and-water diet to inculcate proper ideas about hallowed Majesty.

BOSSOCRACY.

Very few people seem to have fully understood the importance of the event of last Saturday—the transfer of the government of this city to Tammany Hall. Many intelligent people, some of them, we regret to say, lawyers, imagine that nothing more happened than the commencement of a term of four years of a régime likely to prove very corrupt, which the indignation of the citizens was sure to overthrow at the end of that time. What was really witnessed was one of the most interesting events in human history, the establishment not only of a new government, but of a new form of government, much more novel in many respects than the government of the United States was in 1789. Some imagine that it was the creation of a Cæsarism, but they forget that no Cæsarism has ever been set up except by the use of force, and that all Cæsars have been either successful soldiers or masters of a great army. In the present case all the forms of existing laws have been observed, and the person who seems to play the part of a Cæsar has never been a soldier, has never followed any higher calling than that of a blacksmith, has fought in the pugilistic ring, has been tried for murder, and is quite illiterate. Many people, too, imagine that the change means simply the transfer of the offices to a new set of men of the same kind as those who usually hold offices in cities—that is, to men who have won some repute in other callings and have some business experience; that, in short, Cromwell has taken the officers who served under Charles I. and Louis Napoleon those who served under Louis Philippe, and that there will be no real change in the city administration. The fact is that an entirely new kind of men has been introduced into public life, for the first time, we think, in human history—men who have never won any repute in any calling, who have never followed any honest calling, who have no experience or character, and who have obtained their appointments on an absolutely new system.

In all civilized countries, even in China, the appointing power at least makes a pretence that he has selected his appointees for fitness. Under this new régime, which is called "Bossocracy," he makes no such pretence at all. Offices are filled just as peers are created. The Boss is the fountain of offices, just as the King of England is "the fountain of honor." Men get them just as they get a dukedom or the Order of the Garter, not because they deserve them, but because the Boss likes them. An office in New York to-day is bestowed entirely without regard to merit, just as Lord Melbourne said the Order of the Garter was bestowed, because there was "no d—d merit in it." This is the greatest novelty of all—the holding

in a civilized state of a large number of offices by men who make no pretence to being fit for them, as functions, or of having ever deserved them, as honors. The same power which made this peculiar arrangement might clearly go one step further, and make unfitness meritorious, reward a man openly for being drunk, idle, and ignorant, a soldier for running away in battle, a cashier for embezzling funds, or a policeman for robbing a house.

Singularly enough, too, the establishment of this new government has not, like all other new governments, been preceded by either discussion or defence. No one has recommended it or apologized for it. It is not described or explained in any of our schools and colleges. Go into any one of them to-day, and you will find all lectures on government devoted to a form of government which has not existed in this State or city for some years, and the disappearance of which apparently few people regret, while the new one is passed over in total silence. Yet it is the most interesting government ever set up. Montesquieu divides governments into three classes, and his classification has stood for one hundred and fifty years—the republican, the monarchical, and the despotic. He gives as the "principle" of both democracy and aristocracy "virtue," as the principle of monarchy "honor" as the principle of despotism "fear." Well, this new government of ours, having come into existence comparatively recently, of course is not mentioned by him; but its principle is not that of any of the three governments of which he speaks. The principle of Bossocracy is the "stuff," as it is called, and means simply the hope of those who live under it to make something, however small, out of it and by any means, even if ordinarily considered discreditable. Neither virtue nor honor nor fear finds any place in it. It is thus, as is easily seen, organized on a new basis, and deserves the attention of publicists. What we need from some competent hand is a candid examination of the "stuff" as a new political force, the limits of its action, and its influence on national character.

Another very curious feature about Bossocracy is that, although it apparently wants nearly every one of the old marks of good government described by the text-writers, it has been accepted by this great city more peaceably than any other new government ever set up. No existing monarchy or republic has made good its position without prolonged discussion, angry protests, and often bloody conflicts. But Bossocracy has taken its place without any opposition worthy of the name, and on a simple demand for the places. When the Democrats first began to frame it, the Republicans looked on with interested curiosity; then proceeded to imitate them, and, after a

few years, joined them in setting it up. This makes it seem as if it supplied a long-felt want, and as if its suitability to the times was so plain that recommendation was unnecessary. The general result is that the belief is spreading that human experience has made a great mistake as to the conditions of successful administration and as to the objects of government. We are entering evidently on another great experiment. We are apparently about to try whether we need honor, or honesty, or knowledge, or character, for the conduct of human affairs; whether rascality and ignorance would not do just as well, besides coming far cheaper; and whether the object for which governments are set up is not chiefly to enable the knaves to enjoy themselves. If this be true, of course it will cause the greatest remodelling of moral systems ever seen since civilization began. The Republican theory that dearness is a benefit to the poor man, full of mental perturbation as it is, would be nothing to the theory that thieves were public benefactors, that lying was the best of social bonds, and that tyranny was the best form of government.

REPORT OF THE MONETARY COMMISSION.

The aim of the Indianapolis convention of last year, to inaugurate "a consistent, straightforward, deliberately planned monetary system," has been carried out in the most admirable manner by the commission appointed to do the work. It would be rash to assume that the plan reported by the commission will be adopted at once by Congress. It would be improper to claim perfection for it in all details—no such claim is made by the members themselves. Yet the main object has been accomplished of giving to the friends and advocates of currency reform a definite scheme to unite upon and work for, instead of scattering their forces on various plans or wasting their strength as heretofore on mere generalities. The commission has given us a plan that can be easily understood and readily put in the form of a bill for the consideration of Congress. It has also put, in clear and forcible terms, the reasons why such a bill should be passed, and why the existing haphazard condition of the currency is fraught with dangers too grave to be longer borne.

This report is not exposed to attack on the ground that it is the work of bankers or of doctrinaires. The latter phrase is usually applied to persons who have risen to the position of instructors in universities and colleges. Only one such person was a member of the commission, and he was chosen to fill a vacancy. No national banker was on the commission. The membership was composed almost wholly of representative

business men of the country. They are the same kind of men as their constituent body, the Indianapolis convention, and these were the same kind of men as their constituent bodies, the commercial organizations of the United States. We have absolute assurance, therefore, that there is no politics in this report, no class interest, no deception, no design to favor bankers at the expense of other people, but that we have the plain truth as it is given to eleven men of intelligence, drawn from the ordinary walks of life, not appointed by political influence, and not paid for their services, to understand it. We put some stress upon these facts because so much lung power has been wasted in senseless oburgation against the national banks. Here is a document of the weightiest character relating to the currency question which no such banker has had any share in preparing. If it is to be attacked, it must be on other grounds than that of special and exclusive interest on the part of the men composing the commission. Something might be said of the high personal character and established reputation of the men composing the commission, but that would be superfluous.

The report begins with an enumeration and description of our ten different kinds of currency and the amounts of each in existence. It then takes up the subject of the standard of value to which all these things must be kept equal. Existing laws require that everything shall be kept equal to gold. Nevertheless, a considerable part of the voters in the last election supported a policy looking to a change in the present system and to a degradation of the standard. The reasons why the gold standard should be preserved and fortified are stated with clearness and without passion. The measures suggested to this end are (1) an explicit definition of the gold standard and a pledge that it shall be maintained; (2) a requirement that all obligations when not otherwise stipulated in the contract shall be payable in conformity with that standard; (3) the gradual retirement of the outstanding note issues of the Government.

To accomplish the third end it is proposed first to separate the banking functions of the Treasury from its other functions. The suggestion of Secretary Gage, that a Division of Issue and Redemption be established to which shall be transferred the gold reserve and all other assets and things belonging to the currency branch of the Government, is endorsed and made a part of the commission's plan. There are some differences of detail which we need not dwell upon now. The commission also endorses President McKinley's recommendation that Government notes once redeemed shall not be paid out again except in exchange for gold. It is recommended, also, that \$50,000,000 of green-

backs and Treasury notes be retired and cancelled when presented for redemption, and that thereafter the retirement of said notes shall not exceed in amount the volume of new banknotes issued. The existing silver certificates are not to be disturbed. They are to be redeemed in silver dollars according to the terms of their issue, but silver dollars are to be exchangeable for gold at the Treasury at the request of any holder. No banknotes of less denomination than \$10 are to be issued, so that eventually the field of circulation for small currency will be given wholly to silver and silver certificates. It is believed that under such circumstances there will be a constant demand for all of this kind of money outstanding in retail trade, so that none of the silver dollars will be presented for redemption. If presented, however, the obligations of both law and morality require that they be redeemed in gold, and it is essential that they should be so redeemed.

The last part of the report, which relates to changes in the banking system, is, perhaps, the one which will engage the greatest interest. It proposes to abolish gradually the present requirement of bond security for the issue of banknotes, and to substitute therefor note issues, based upon the general assets of the banks, which must not exceed the paid-up and unimpaired capital of the banks, and upon a common guarantee fund to be contributed in the form of a tax by all the banks. This guarantee fund must equal 5 per cent. of the notes outstanding, and, whenever reduced below that sum, must be replenished by an assessment on all the banks in proportion to the notes outstanding. Noteholders have the first lien on the assets of failed banks, and also on the liability of shareholders. The Government is not liable for note issues beyond the application of the guarantee fund and the assets to the purpose intended, but all the banks in the national system are responsible. This plan of note issues shall not take effect fully until the end of five years, prior to which time the note-issuing banks must have 25 per cent. of their capital stock invested in U. S. bonds and deposited in the Treasury. This is the Baltimore plan, with some variations, which we shall discuss hereafter.

The plan, as a whole, is worthy of the highest commendation, and the thanks of the business community are due to the members of the commission for the industry, intelligence, patience, and courage with which they have performed their duty.

ALLEN VS. FLOOD.

The case of Allen vs. Flood, decided in the English court of last resort on the 14th of December, is perhaps the most important English judgment rendered

since the *Mogul* steamship case. Besides involving questions of the highest moment affecting liberty of contract and speech, it possesses great professional interest for lawyers, as having led to an authoritative exposition, by the ablest judges in England, of the nature and foundation of civil liability according to the system of law under which, not merely all English-speaking nations, but the whole civilized world lives.

The facts were not complicated, and may be stated in a few words. Flood and Taylor were two shipwrights doing "wood" work on a ship in the employment of the Glengall Company. They were engaged only by the day, and were liable to dismissal at any moment. There was a strong feeling against these men among the iron-workers employed by the company, arising out of the circumstance that the two "wood" men had previously done work in iron for another firm. The iron-workers, accordingly, called in Allen, a delegate or official of the Boilermakers' Union. Allen saw Halkett, the managing director of the company, informed him that there was danger of a strike, or that the iron-workers would be "called out" if they had to go on working with Flood and Taylor, and the two men were thereupon dismissed. They immediately sued, not their employer (because the latter acted entirely within his rights in discharging them), but the delegate Allen, and the question which has now occupied the courts for three years has been, Could damages be recovered against Allen because he procured their discharge? In the trial court the delegate was held liable, and the Court of Appeal affirmed the decision. When the appeal came before the Lords, however, it was found to be a case of such difficulty that they directed it be reheard by the judges who were called upon to advise the House of Lords as to the law. Six of the judges were in favor of dismissing the appeal, two only in favor of its allowance. But now, after taking the judges' opinion, the House of Lords has overruled it, and has allowed the appeal by the majority of six to three. It is said that no English precedent exists in which such a preponderance of judicial opinion and decision has been finally overruled. Ten judges and three Law Lords have been overruled by two judges and six Law Lords. It must be said, on the other side, that among the minority are numbered the greatest judges in England, and we doubt if any impartial American lawyer can read the opinions without coming to the conclusion that in the end the case was rightly decided.

The question which really caused most trouble in the case may be stated thus: A, for objects of his own, persuades B to discharge C, as B has a right to do. Can C sue A, and if he shows that some improper (i. e., selfish) motive

operated on A's mind, recover damages? This and all the questions presented were fully disposed of by Lord Herschell's judgment, and his exposition of the law is so luminous that we cannot do better than follow it. It should be said in advance that the trial judge, Mr. Justice Kennedy, held that no case of conspiracy, coercion, or intimidation had been made out, but left two questions to the jury: (1.) Did Allen maliciously induce the company to discharge the plaintiff? (2.) Did Allen maliciously induce the company not to engage the plaintiff? Both these questions were answered in favor of the plaintiff, and damages were awarded. The question on which the Judges were asked to advise was: "Assuming the evidence given by the plaintiff's witnesses to be correct, was there any evidence of a cause of action fit to be left to the jury?"

Lord Herschell, after stating the facts, said that the question before the court was whether the findings of the jury entitled the plaintiff to a judgment. This question, he said, must be answered in the negative (because the defendant had done nothing unlawful) unless the finding that his behavior was "malicious" made him liable. This made it essential to determine what "malice" meant, because there could be no greater danger to a community than that a jury should be "at liberty to impose the penalty of paying damages for acts which are otherwise lawful because they choose" to call them malicious. He then showed that the judges who took the opposite view from him, in attempting to define malice, had got no further than making it equivalent to some sort of bad motive, or "such a disregard of his neighbor as no honest and fair-minded man ought to resort to." But this is no legal test, because it "makes men's responsibility for their actions depend on the fluctuating opinions of the tribunal before whom the case may chance to come, as to what a right-minded man ought or ought not to do in pursuing his own interests."

He then cites some cases in which it seems to have been suggested that legal malice includes persuasion where the object is to benefit the person who uses the persuasion at the expense of another, and points out that numberless instances may be put where such persuasion, "which is of constant occurrence in the affairs of life," is not considered even reprehensible. One of the commonest illustrations would be persuading a workman to strike, but Lord Herschell puts his whole reasoning in a nutshell, and enforces it by a homely illustration, easily understood by every one, man or master, employer or employed. Every one, he says, has a right to pursue his employment without molestation or obstruction, but this is only a deduction from a wider right to do what we please generally, and this

wider liberty includes the right to say what we please (the right of free speech)—i. e., to exhort, command, advise, and induce, provided we do not slander, or deceive, or commit any other legal wrong. Unless one is shown thus to have abused his right, he cannot be called upon to justify himself because his words may interfere with some one else in his calling. If the butler, says Lord Herschell, quarrels with the cook, and tells his master that they cannot remain under the same roof, and thus induces him to discharge the cook, must the butler pay the damages?

While finding the decision entirely in accord with the general drift of American authority, we should be inclined to suggest that in this class of cases another principle, which for some reason judges and counsel of great eminence often fail to notice, has an important bearing on the true conclusion. This is the principle that, as a rule, legal liability exists only when the efficient cause of the damage complained of is found in the defendant's act. When it is found in the voluntary act of a third person, the defendant is not liable, because he is not, in fact, as men look at such matters, responsible. In *Allen vs. Flood* the act which caused the damage was the act of the master and not of Allen. He had a perfect liberty of choice to discharge or not to discharge, and the discharge was consequently his individual act. But for this principle, legal responsibility, as we know it, would cease to exist, and a new system would be introduced, under which a man could not open his mouth, in any matter in which he had an interest, without running great risk of an action for damages. The Lord Chancellor, in his opinion, actually goes so far as to suggest that the lawfulness of what we say or do depends on there being no "indirect motive" present; the prevailing opinion is founded on what we believe to be the sound and ancient principle, that civil liability has no necessary connection with motive, but is closely and inevitably related to that notion of responsibility which we apply every day to one another, in our ordinary dealings and judgments.

TRUMPERY LIBEL SUITS.

A batch of newspaper libel suits was brought recently before the Lord Chief Justice and a special jury, in the Court of Queen's Bench, London, and disposed of in a manner quite different from that followed in our courts under similar conditions. The first case was that of a professional magician against a newspaper which had commented in a jocose manner upon a project which he had for making money out of the Queen's Jubilee. He had made an agreement with some property-owners in St. Paul's Churchyard, to take down their shops

and erect his grand stand in their places, pledging himself to rebuild the shops free of cost after the celebration was over. In commenting upon this plan, the offending newspaper had spoken of the magician's grand stand as his latest Aladdin's palace, and intimated that the magician might be playing a trick, since he had "so often seriously deceived the public." The magician made formal complaint to the newspaper, through his solicitors, that the article was calculated to throw doubt upon his ability to carry out his project, and thus interfere with the sale of his grand-stand seats. The editor replied that his remarks were intended to be humorous, and he believed that that intent was sufficiently obvious to prevent pecuniary damage to the scheme.

When this case came before the Lord Chief Justice, and the offending paragraph was read to the court, his Lordship asked in some surprise: "'Deceived the public'—is not that true? Surely that has been Mr. Maskelyne's [the magician's] business. I know he has often deceived me." There was general laughter in the court-room at this direct method of meeting the case; and his Lordship continued, asking the plaintiff's counsel: "Where is the libel? Is it any thing more than a chaffing article? Really, for a man of Mr. Maskelyne's reputation to think that this article involves any imputation upon his character seems to me ridiculous." In response to this, all the plaintiff's counsel could say was that he thought the article was calculated to injure the seat-selling prospects of his client, and that instead of being always engaged in the business of deceiving the public, his client had devoted himself repeatedly to the exposure of deceits foisted upon the people by others. When he had finished, the foreman of the jury said that he and his associates were of the opinion that there was no libel and did not think that the case should proceed. The case was thereupon dismissed, the defendant's counsel saying they were quite willing to declare that no imputation was intended in what was sincerely meant to be a joke.

After this, two other cases were presented against as many newspapers for the same offence. There was a misunderstood joke at the bottom of these complaints also. The Registrar of the Croydon County Court alleged that he had been held up to ridicule and damaged in the estimation of the community, because, in reporting an incident in his court, in which a bogus lord had been ejected from the room for using bad language, he was said to have "roared" at the offender. The newspaper accounts sought to make the incident ludicrous by picturing the bogus lord as waving his arms and belaboring with his umbrella the officer who ejected him, but the only reflection made upon

the Registrar was in the assertion that he "roared, 'Turn that man out.'" When the Lord Chief Justice had the case fully before him he asked the plaintiff's counsel in visible surprise: "Is the whole thing that you complain of here that it stated that the Registrar roared? I do not know what these cases are coming to at all." When the counsel had endeavored to show that the charge was likely to bring the Registrar into disrepute by making him appear as having acted in an undignified manner, the truth being that he had not "roared" but had spoken quietly, his Lordship said: "There is no judge so low that he cannot afford to pass over matters of this kind. This gentleman, I see, is said to be a member of the bar. He ought to have better sense than to take notice of trash such as this."

In this case, as in the preceding, the jury volunteered the information that they had reached the conclusion that there was no libel, and the cause was dismissed, as was its fellow against the other newspaper. In disposing of the entire batch the Lord Chief Justice said:

"I cannot avoid making this observation. There is no more valuable remedy for the protection of the character of private and public persons than the law of libel, but there is no remedy so susceptible of abuse as that law, and I am very glad to see that juries are ready and able and firm enough to discriminate between trumpety cases and real cases—by trumpety cases I mean such as those we have been dealing with this morning. The courts are not intended for the ventilation of unreal and unsubstantial grievances, but for the vindication of character from real imputations, aspersions, and wrongs."

This view of the law of libel is especially pertinent in this city at the present time, for never in our history has the business of trumpety, or, as we know them, frivolous libel suits been prosecuted with such systematic persistence as at present. We have, in fact, a considerable body of lawyers who devote their energies entirely to it. They scour the newspapers for reflections of all kinds upon anybody and everybody, in the hope of making them the basis of suits for damages in libel. It makes no difference where the matter appears, whether in the news or in the editorial columns. When they find it, they go to the persons whom it concerns and tell them that there is a "house and lot," or a "small fortune," or some other alluring thing in it for them, and offer to bring the suit for a half share in the sum secured. This business has assumed enormous proportions in recent years, and it seems to have attracted envious attention in England. It is a great pity that our courts do not dispose of it as summarily as the Lord Chief Justice did. Our libel laws are far less stringent than the English laws are, but our court methods are quite different, so far as the part which the Judge takes in the proceedings before him is concerned. At the same time, our judges have full power to prevent

frivolous cases from going to the jury, and they might exercise this much more frequently than they do.

THE MODERN LANGUAGE ASSOCIATION.

NEW YORK, December 30, 1897.

The fifteenth annual convention of the Modern Language Association, held December 27-29 at the University of Pennsylvania, passed off successfully, and will be remembered with pleasure by all who were in attendance. Philadelphians long ago set a high standard in the entertainment of scientific societies; there was reason to expect good things, both formal and informal, and this expectation was abundantly fulfilled. The address of the President, Prof. Albert S. Cook of Yale, though entitled "The Province of English Philology," was not an attempt to delimit English in contradistinction from other philologies (this would hardly be necessary), but rather a *pro domo* for philology in general. In an urbane and well-turned argument, which was full of quiet edification for those who heard it, Prof. Cook paid his respects to the defamers of philology from Seneca down to a certain living toreador, whom he did not call by name, and whom we shall therefore forbear to mention. The attack was made to appear a very old story, resting always upon the same sort of bad logic and narrow prejudice. The speaker did not say, Father, forgive them, for they know not what they do; but he deftly laid bare the mental condition on which that famous petition is grounded. Some dull men had indeed taken to philology in every age of the world—because there was not room for all the dull men in the other professions. Prof. Cook closed with a plea for a broad interpretation of philology, as the science which aims to make the past relive "in its form and pressure" through the study of its surviving records. He deprecated, as many have done before, the identification of philology with linguistics, urging at the same time, as a fact proved by experience, that literary study cannot really thrive without careful attention to the matters of language. The spirit is the main thing, but the spirit is revealed only through the letter; wherefore the letter can never be unimportant.

In the course of four half-day sessions of the Association more than a score of papers were read. To single out any of them for comment in a brief report like this would be unfair, since the mere selection, to say nothing of the comments, would inevitably reflect the writer's private bias. Suffice it to say that the programme was of at least average scientific interest, several animated and profitable discussions having to be cut short for lack of time. Of the twenty-eight papers listed, a plurality had to do with the English language and literature; the Germanists being less in evidence this time than the Romance philologists. As its next President the Association elected Prof. Alcée Fortier of Louisiana, and it was agreed to hold the next meeting at the University of Virginia. It is also worth noting that action was taken looking toward a joint session with the Philological Association and the Oriental Society in 1899. Whether this initiative will lead to the end desired remains to be seen, but the cause is at any rate good. This was demonstrated at the memorable Whitney meeting three years ago.

A minor incident of the Philadelphia convention is of sufficient general interest to deserve mention by itself—namely, the report of progress submitted by the Committee of Twelve upon college entrance requirements in French and German. The appointment of this committee was ordered a year ago in response to a communication from the National Educational Association, which is endeavoring to bring about, for the country at large, a somewhat greater uniformity in preparatory standards and in modes of testing a candidate's fitness for college work. The Modern Language Association was invited to put itself on record, as counsellor of the Educational Association, with respect to the preparatory study of French and German; to agree upon and define certain grades of preparation, the meaning of which could be definitely understood by teachers everywhere, and which could then be prescribed by the colleges in their own way without any impairment of their existing prerogative. The matter was felt to be one of considerable educational importance, and was accordingly turned over to a large committee, with elastic orders to investigate and report. The committee has done a great deal of work during the past year, chiefly in the collection of facts, opinions, and suggestions pertaining to the teaching of French and German in the secondary schools of the United States. The collated returns from several hundred circulars were given to the full committee at Philadelphia, but as several important questions were evidently in need of further investigation, it was decided to appoint a number of sub-committees, report progress to the Association, and ask for further time. One of these sub-committees is charged with reporting recent contributions to the methodology of modern-language teaching; another will study the question of French and German in grades below the high school, while a third will draw up model courses of different lengths, and define the grade of attainment to be aimed at in each. It is expected that these committees will take their tasks somewhat seriously and present reports of scientific value. Another year must therefore elapse ere the general committee can be ready with its final report. Meanwhile, teachers and others interested in the committee's work can obtain a hearing for their views if they have any practical suggestions to offer. The chairman is Prof. Calvin Thomas, Columbia University, New York.

THE AMERICAN HISTORICAL ASSOCIATION.

NEW YORK, January 3, 1898.

The thirteenth annual meeting of the American Historical Association, in Cleveland last week, was one of the most successful and important ever held. From a pedagogical standpoint the principal event of the session was the report of Prof. A. C. McLaughlin of the University of Michigan, chairman of the Committee of Seven appointed a year ago to consider the study of history in schools. Although this report was by no means final, the general lines of investigation and solution of the problem seem to have been fairly established. The question early resolved itself into two, the determination of an ideal course of history in the schools, and the question of college entrance requirements in history. Of these

the first absorbed the greater attention, owing to the greater divergence in the standards and facilities for history teaching in the schools. The extremely tentative general conclusions on which the committee agreed regarding this question were as follows. It was suggested that a course of four years of five hours a week should be the goal of teachers of history. It was further suggested that the first year be devoted to Greek and Roman history to the downfall of the Empire, studied not as entirely isolated subjects, but as related, together with some consideration of the history of the more ancient nations; the second year, to general European history from perhaps the fall of Rome to modern times, a period of equal weight and importance, though the question of the line of division between the first and second year's courses was left open for the present. It is possible the committee may recommend later some such arrangement as will include general European history to 800 or to the formation of the Holy Roman Empire in the first year's work. The third block or period includes English history, which, although in itself possibly undeserving of so much attention as its predecessors, may be given greater weight by dwelling upon its broader aspects of continental relations and imperial development, and be studied in part as an amplification of European history, with England as the central and illustrative figure. The fourth year, it was agreed, should be devoted to American history, with special reference to the preceding work, having civil government as a collateral study, and regarding present conditions, institutions, government, and law in the light of evolution.

As to methods, it was suggested that a narrative text-book should be used, aided by collateral reading largely in secondary material, written work, reviews, and recitations, topical work, maps; and, as far as possible, sources should be used by the teacher for illustration, to add reality and concreteness to the instruction. In its final printed report the committee hopes to indicate what sources it considers suitable, and in other respects to be as helpful and suggestive as possible. The question of training in history in grades below the high school was postponed until further light could be shed upon that subject by an examination of the present status of history teaching in the schools in this country and abroad. The committee's report was approved by the Association, and the committee continued.

The paper of Superintendent Nightingale of the Chicago public schools on the same subject followed almost exactly the same lines and reached practically the same conclusions as that of the Committee of Seven, which, by the way, will meet again next April in Ann Arbor. The discussion as to the extent to which sources may profitably be used in the teaching of history below the Graduate School was led by Prof. A. B. Hart of Harvard, E. P. Cheyney of Pennsylvania, and J. A. Woodburn of Indiana, and was extremely animated. The general weight of opinion inclined on the whole towards a judicious use of sources and so-called "source books" by the teacher, and to some extent by the student, whenever practicable, as a vivifying adjunct to text-book, lecture, and class-room work, and this view was borne out later in the discussion on the report of the Committee of Seven.

Among the most pleasant and profitable

features of the meeting were the two joint sessions with the American Economic Association. The first of these was occupied with a discussion on the opportunities for American students of history and economics in Europe, led by Prof. C. H. Haakins of Wisconsin, who read an exhaustive and interesting paper on "Historical Studies in Paris," and by Prof. H. Morse Stephens of Cornell, who spoke on facilities for American students at Oxford. The opinion of each of these speakers and of those who followed was that, more and more, American students must realize that the chief good of study abroad is not to the beginner, but to him who has already obtained his training, method, and information here. The second joint session was taken up with a paper by Prof. A. T. Hadley of Yale on "Rate-Making and Taxation: Their Resemblance and Difference," attended by discussion, and with an extremely interesting debate on the relation of the teaching of economic history to the teaching of political economy, led by Prof. H. B. Gardner of Brown, H. R. Seager of Pennsylvania, and G. W. Knight of Ohio State University. Of the various papers read before the Association, probably those of most general interest were the admirable study of the teaching of history in German Gymnasia by Prof. Lucy M. Salmon of Vassar, and the estimation of State historical societies by R. G. Thwaites of the State Historical Society of Wisconsin and Prof. J. Franklin Jameson of Brown.

By far the most important question on the administrative side which came up for consideration was that of the identification of the *American Historical Review* with the American Historical Association. Certain plans were discussed and certain steps taken to this end, and the result will appear at some further meeting. In the way of other business the Association was shown to be on a sound and satisfactory financial basis by the report of the Treasurer, Dr. C. W. Bowen of New York. The next meeting will be held in New Haven, December 27, 28, and 29, 1898; and it is greatly to be hoped, for both social and financial reasons, that the Economic Association may, as this year, convene at the same place at the same time. The officers of the Historical Association for the ensuing year are: President, Prof. George P. Fisher of Yale; First Vice-President, James F. Rhodes; Second Vice-President, Edward Eggleston. The other officers are continued with a few changes. Ex-President James Schouler is added to the Executive Council, ex-officio; Prof. George B. Adams and President E. M. Gallaudet retire from the Council, and Chief Justice Fuller and Prof. A. B. Hart were chosen to fill the places thus left vacant. The report of the Manuscripts Committee of the Association by Prof. J. Franklin Jameson consisted mainly of an announcement of the forthcoming volume of the Association report. This will include five valuable sources for American history, the letters of Phineas Bond, English agent in Philadelphia, 1787-1789; a monograph on Canadian history; a collection of letters of the High Federalist, Stephen Higginson; the diary of Edward Hooker about 1805; and Prof. F. J. Turner's valuable collection of correspondence of the intrigues between Genet and George Rogers Clarke regarding the contemplated expedition to attack New Orleans. To these, among other material, will be added a bibliographical descriptive list of archives.

Succeeding volumes, it is expected, will contain among other things a bibliography of Colonial and State Legislatures to 1800, and accounts of material in the various State archives.

No report of the meeting of the Historical Association which omitted all notice of the social side of its activities could pretend to completeness. The various receptions by hospitable Cleveland citizens and clubs, the great luncheon of the combined Economic and Historical Associations, together with the luncheon given them by the Western Reserve University at Adelbert College, and the usual Historical Association reunion, added much to the pleasure of the meeting.

THE AMERICAN PSYCHOLOGICAL ASSOCIATION.

NEW YORK, January 3, 1898.

The American Psychological Association met in Christmas week at Ithaca with the American Naturalists and Affiliated Societies, which included this year for the first time the newly formed Botanical Society and Section H of the American Association for the Advancement of Science (Anthropology). It will probably have a regular winter meeting hereafter with these societies. The Psychological Association commanded a good attendance, and the same is true of most of the other societies—the physiologists and anthropologists being exceptions.

The programme of the Psychologists was full and interesting, and for the first time it extended over part of the third day. The first day was devoted largely to experimental papers and reports. Much research work already done and awaiting publication was reported from the laboratories at Columbia, Yale, and Princeton, by their respective directors, Cattell, Scripture, and Baldwin, with interesting details of new apparatus. In the afternoon the abundance of material required the operation of two sections, one of which was occupied with a further report of the committee on mental tests, which, it may be remembered, made a preliminary report last year. Prof. Jastrow of Wisconsin, a member of the committee, read the main paper on the subject, laying down, as he considered the requisites of a scheme of tests which could be made generally available in colleges and normal and high schools. Following him, Prof. Cattell analyzed last year's report with a view to indicating the amount of agreement which existed in regard to the tests proposed; and Prof. Baldwin reported further researches carried on in his laboratory on the methods of investigating and testing memory. On the whole, the afternoon's discussion brought out many interesting aspects of the matter of physical and mental tests. The interest in it may be judged from the facts that the committee was continued, and the Association appropriated \$100 to aid the committee in carrying on its investigations. This appropriation is the first in the history of the Association, and indicates both its flourishing financial condition, and the beginning of a policy of lending its aid and encouragement to scientific projects which seem to be for the general good.

The morning of Wednesday was devoted to the address of the President, Prof. Baldwin, and a well-planned discussion on the psychology and anthropology of invention.

The President's address was on "Selective Thinking," which he defines as "the determination of the stream of thought." His general point of view may be described as a continuation into the sphere of selective thought of the principles of motor accommodation and organic selection worked out in his recent book on 'Mental Development.' The address, which appears in the January issue of the *Psychological Review*, was distributed the day before, and so came into the discussion on Invention. The discussion proper was opened by Prof. Royce of Harvard with an elaborate paper. He first laid out the topic, indicating its main problems and bearings, and then reported some interesting experiments carried out by him to determine the actual working of the mind in the invention of new varieties of simple hand-drawn figures. This is the first attempt to bring the inventive processes to the test of experiment, and it was generally acknowledged that the speaker made a distinct "lead" which psychologists could take up with profit. The second speaker was Prof. Jastrow, who emphasized the phenomena of variation, and gave hints toward the statistical treatment of the facts of invention. Dr. W. M. Urban of Princeton followed with a special examination of the "Utility-Selection Theory of Mental Development," devoting attention to the recent theory of Dr. Simmel of Berlin and to the President's address. In the general discussion which followed, the anthropological side of invention was well presented by Dr. F. Boas of Columbia and Dr. Magee of the Bureau of Ethnology at Washington. Abstracts of the discussion may be found in the Proceedings, to be published in the March number of the *Psychological Review*, and the principal papers will appear in full in that or a later issue of the same journal.

On Wednesday afternoon the Psychologists met with the Affiliated Societies to hear the discussion of the Naturalists on the "Biological Problems of To-day," in which each of the subjects Paleontology, Botany, Anatomy, Psychology, Physiology, Developmental Mechanics, Morphogenesis, etc., were discussed. The main problems stated by an expert on the platform of the most recent address. The general result was good, despite the very uneven character of the addresses. They varied from the admirable résumés by Morgan and Davenport to the inadequate report by Prof. Wilder of Cornell, who represented the problems of anatomy by presenting his own views of the morphogenesis of the olfactory lobe! Psychology was represented by Prof. Cattell, who hardly took the occasion seriously enough.

On the third day the time—only the forenoon—was given to more philosophical papers which do not lend themselves to brief reporting. The social features were pleasant, including a reception to all the societies, tendered by President Schurman. As to reception and entertainment, the University authorities made admirable arrangements, and much gratitude was felt to the local committee, officered by Profs. Gage and Rowlee. The next meeting of the Psychologists is to be with the Naturalists, probably in New York, barring the possibility of a one-day session in Boston in connection with the American Association next summer. The newly elected officers of the Psychological Association are: President, Prof. Hugo Münsterberg of Harvard; Councillors, Profs. Creighton of

Cornell and Delabarre of Brown, and Dr. Kirschmann of Toronto.

Correspondence.

THE SPECIE CIRCULAR.

TO THE EDITOR OF THE NATION:

SIR: I am certainly grateful, as I doubt not others will be, to Mr. Catterall for his communication, in No. 1696 of the *Nation*, in regard to the "alleged specie circular of 1827." I beg to say, however, in reply to Mr. Catterall's remark that if I "had looked a little further," I should "have found that the instructions of Rush did not stand alone, but were supported by like instructions, both before and after Rush's incumbency of the Treasury," that I did "look a little further," and had before me the various circulars from which he quotes, and the speeches of Benton and others to which he refers; and that I did not introduce them because they did not appear indispensable to the elucidation of the small point to which my attention had been attracted, namely, the alleged "similarity" of the two circulars of 1827 and 1836. Now that Mr. Catterall has made such interesting and instructive use of this additional material, I am disposed to regret even less that I did not try to use it myself.

WILLIAM MACDONALD.

BOWDOIN COLLEGE, December 31, 1897.

PLATO SHELVED.

TO THE EDITOR OF THE NATION:

SIR: There has recently come into my hands an interesting specimen of modern academic eloquence. It is entitled "The Passing of Plato," and purports to be an address delivered at the sixth annual commencement of the Leland Stanford Junior University. The ingenuous youth of that institution of learning are herein given to know that, during the last hundred years, physical science has completely transformed the world and shown mankind that all previous history has been a mistake. This beneficent consummation might have been realized far sooner had not the development of the good genius of humanity been arrested at its birth in Greece some four hundred years before Christ. It was Socrates and Plato who stayed the progress of civilization by introducing the vain distinction between mind and body, and accustoming mankind to the pernicious exercise of "pure thought." To Platonism, the incarnate antithesis of the scientific spirit, is chiefly due the long night of the Middle Ages, broken by a few stray gleams at the Renaissance, but completely dispelled only by the new dawn of physical science in the present century. *Pauca tamen suberunt priusce restigia fraudis.* Ahirman still lingers in those "Plato-ridden institutions," our elementary and secondary schools. But he will soon be expelled from his last stronghold, and then happiness and science will dawn, though late, upon the earth. Then shall we abandon the idle distinction of mind and body; philosophy will "give up that solemn bluff"; the old education will no longer be defended by "mystic pictures of its fancied relation to an imaginary soul"; the graduate will discard the foolish

millinery of caps and gowns, the undergraduate will study, not for a degree, but from pure love of science, and all will be well in the most scientific of all possible worlds and universities.

All this would be merely funny were it not that it is typical of a style of eloquence and a conception of human progress that threaten to be very potent in moulding opinions and shaping policies. There seems to be no tribunal of educated opinion of which our popular teachers stand in awe when they mount the platform. No peal of Homeric laughter greeted President Andrews's statement that Virgil is an indecent writer, that Plato is a Hobbit, and that John Stuart Mill owed nothing to the classics. And the scientific reputation of the author of this pamphlet will not suffer at all from the unscientific character of the philosophy of history which he has taken at second-hand from Lewes's 'Biographical History of Philosophy' and Lange's 'History of Materialism.' Of what avail is it to tell him and his readers that Plato advocated the endowment of mathematical research, demanded and predicted the application of mathematics to physics and astronomy, and insisted that all leaders of public opinion ought to be trained in the severest science of the age? What heed will they pay to the observation that the Middle Age was not so narrow because it studied Aristotle, but was unable to get beyond an imperfectly understood Aristotle because it was so narrow? How can he feel the absurdity of identifying progress with the "Passing of Plato" if he is not aware of the simple and verifiable fact that the influence of Plato on the world's best thought and literature during the last fifty years has been greater than at any time except the Renaissance and the age of Neo-Platonism?

The eloquence of this discourse is wasted on a dead issue. Science is anything but a Cinderella or a persecuted martyr at the American university. No humanist now attacks science or, except in casual controversial petulance, says a word in disparagement of "her." One might as well speak disrespectfully of the Equator or run a tilt against the law of gravitation. The question of the next twenty years is not whether physical science shall be cultivated at the university and continue to receive the lion's share of buildings and appropriations. It is, rather, Shall the humanities be cast out altogether as obsolete rubbish in order to secure what our writer calls "the cleanest action" of the educational system? When disheartened as to the issue of this controversy, I sometimes encourage myself with the reflection that the instinct of self-preservation in humanity will never tolerate, as the dominant or exclusive type of modern education, a discipline the final flower and outcome of which is such a rhetoric and such a philosophy of history as we find in this pamphlet.

PAUL SHORRY.

UNIVERSITY OF CHICAGO, December 29, 1897.

ENGLISH GRAMMAR BY WAY OF LATIN.

TO THE EDITOR OF THE NATION:

SIR: May I speak of "the time-problem" in preparation for college, in connection with the ordinary public schools?

In the spring of 1888 a book called a "Language-Book" was in use in our grammar-schools, employing a nomenclature in part

translated from the German. A noun was a *name-word*; an adjective, a *quality-word*; a verb, an *action-word*; an adverb, a *how*, *when*, or *where-word*. After one year and two terms spent on this book, a class took up an ordinary grammar, when this clumsy nomenclature, so needlessly sown in their hapless minds, had to be uprooted, and an unusually bright boy said he had not expected to find parsing so difficult. Much of his trouble undoubtedly came from finding himself obliged to call everything by a new name. Although the book is discarded, the case is still in point, for the boy is now halfway through Harvard College, and I can say definitely where some of his time was wasted. The moral is, that text-books require college supervision from the outset. When scholars arrive in the high school, it is already too late to think of saving time; the time is lost in the grammar school.

Why spend five years in studying English grammar to gain results confessed to be so unsatisfactory? One reason why they are so is, that the work is too advanced for the minds of the children, which would be more fitly employed in acquiring the jingle-jingle of the Latin inflections, leaving the parsing for a later day. When the time for that arrives, the principles of grammar are the same in all languages; while, owing to the lack of inflection in English, it is actually easier in Latin to see how the various parts of speech agree, and to grasp the relations of case.

When the boy of the Middle Ages sat down to study grammar in the monastery schools, he did not study English grammar or German grammar; he went directly to work on Latin. Why cannot the boy of the present day do the same? It would be killing two birds with one stone. He would get no less than he gets now of the English (which is evidently so much dead matter; he does not assimilate it and cannot use it), and he would be laying his Latin foundation instead of leaving that for the high school and an age when he will acquire it less easily, and will be fit for more advanced work. As it is, he has almost nothing to show for five years' work. If he began with Latin, he could not avoid having his inflections, while the age from eight to ten years is of all others the age for learning them—the age at which a jingle-jingle is so readily acquired and so indelibly retained. Five years is the age set for learning to read. Eight should be set for beginning Latin. I have heard complaints from children whose parents' anxiety had not allowed them to learn to read until the age of seven. The hard-pressed boy of the period might with equal reason complain, "Oh, why did you not give me Latin sooner?"

If he spent two years on the inflections, he would be using two years to advantage which are now all but wasted. He should not be expected to parse, as the graduate from the "Language-Book" was. He should learn only the inflections, and he should repeat them orally and write them on the board; for one child takes things in more easily at the ear, and another at the eye. Both should be considered, and the former has been too much disregarded of late with all the mischievous individual writing on paper, which isolates children instead of letting their minds rub one on other. It is the same with spelling. Oral spelling was long forbidden in our schools,

which is one-sided, for the reason above mentioned. Such a fad, going hand in hand with the phonetic system of spelling (that stupendous failure), has produced a generation that cannot spell. Their letters, written in my young days, would have reflected great discredit on the individual; now they simply expose the system.

Educators have yet to learn the currents of that unknown sea, the child's mind. They might very well take a lesson from the great Nansen, the apostle of fitness, and, seeking out those currents, patiently float with them—not impatiently strain athwart them. The grouping of cases in the modern arrangement of the inflection of Latin nouns, for instance, is a snag which interrupts the flow without leaving any permanent trace, for it is a distinct, conscious effort of the mind, and the child will forget it when he would not forget the jingle of the cases in their natural sequence.

HELEN MANSFIELD.

GLOUCESTER, MASS., December 27, 1897.

Notes.

'The Sacrament in Song,' a collection of extracts from poems bearing on the Communion, fitted for a Christian daily year-book, with a preface by the Archbishop of York, will shortly be issued by Henry Frowde.

A Genealogy of the Sanborn Family, compiled by V. C. Sanborn of La Grange, Ill., is nearly ready for the printer. It will embrace a chapter, by Mr. Frank B. Sanborn of Concord, on the mode of life and general character of the New Hampshire people in the eighteenth and nineteenth centuries; together with numerous portraits of prominent bearers of the name, and other illustrations.

'Literary Statesmen and Others,' by Norman Hapgood (Chicago: Herbert S. Stone & Co.), is a collection of essays in literary criticism. The book has nothing to do with statesmanship, although there is some allusion to it in the essay on John Morley, and Lord Rosebery and Arthur Balfour are subjected to examination. But this examination relates only to their writings, and in the case of Lord Rosebery it is slight enough. Mr. Balfour is more carefully estimated, and Mr. Morley receives even more critical study. In fact, the essay on Morley is a very clever piece of criticism; discriminating, appreciative, and, on the whole, just. The papers on Stendhal, Mérimée, American Art Criticism, and American Cosmopolitanism, do not impress us; that on Henry James is more substantial. Mr. Hapgood possesses both critical insight and literary skill; but his criticism seems to us to lack unity and continuity. In dealing with particular aspects of style, however, it is often suggestive.

In a privately printed pamphlet, Mr. J. C. Schwab has told in great detail the 'Revolutionary History of Fort Number Eight.' Naturally the attention is concentrated on the military movement, and no attempt has been made to place the fort in its relations with the general plan of campaign, if, indeed, there could be such a plan when Washington could not tell where the next blow would be struck on his force, demoralized by the ill-advised Long Island occupation and subsequent retreat. Fort No. 8 was a redoubt hastily thrown up by the British on what is now the Schwab property to cover

the attack on Fort Washington. It is to be feared that few will agree with the writer's military opinions. To speak of the British army as the best organized and "officered military body ever seen up to that time" is too favorable a judgment; while to "epitomize" Washington's skill as a general by his "ability to run away from the English troops and to escape being drawn into battle except under circumstances more favorable to their side," is too unfavorable to American generals. With a changing and untrained army, or often with only the shadow of an army, it required true generalship to keep any front to the enemy. A well-drawn map accompanies this praiseworthy essay in Revolutionary incident.

'Historic Letters,' from the Wayne and Persifer Smith collections in the State Normal School at Westchester, Pa., opens with a letter from Arnold to Wayne on this capture of Fort Washington, and closes with a letter from Jefferson Davis to General Smith. So long an interval covered in less than forty pages of large type implies that the letters are few in number; the material, however, is good, and well deserves preservation in this neat form. Gates, Irvine, Sullivan, Wayne, and Schuyler are the more important writers. The letter of Irvine tells a gruesome story of the treatment of deserters and those who tempted them. It would form a good text for an Anti-War Society. A portrait of Washington (one of Peale's) and two minor illustrations are given. Mr. G. M. Phillips is the editor, and the pamphlet is privately printed.

'Figures Contemporaines,' by Bernard Lazare (Paris: Perrin & Cie.), is one of those collections of newspaper articles to which journalists are becoming decidedly too partial. Newspaper writing seldom has the polish and the literary finish one expects to meet with in critical studies presented to us in book form. But it is not even studies that M. Lazare gives here; it is the sketchiest kind of talk about a number of writers, fifty altogether, who belong to the past and the present, the immediate past and present. He is apparently desirous of distinguishing himself as a *frondeur*; and while some of the things he says are no doubt true, the general tone of the articles smacks too much of their origin—the columns of a lively newspaper whose business it is above all to be entertaining. Nothing is added to our knowledge of the authors treated of, and something is taken from our enjoyment of them.

The second series of René Doumic's 'Études sur la Littérature Française' is published by Perrin & Cie. The reproach addressed to Lazare's bookful of emptiness cannot be transferred to M. Doumic's, which offers substantial reading and information well put in literary form. The influence of the great critic who now presides over the fortunes of the *Revue des Deux Mondes* is visible in the ideas expressed and also in the style, though in neither case does the originality of M. Doumic suffer from the fact. He, too, speaks fearlessly what is in his mind, even if he lacks the force and the authority of M. Brunetière. His articles on Madame Geoffrin and Madame Roland, on Zola, Goncourt, and France, appear to us to merit the praise of outspokenness and justice. He is not blinded by the great reputation of any one of the quintet, and seeks evidently to give what to him is the true view of their merits and demerits. M. Doumic is writing better than he did, and gain-

ing something of a charm of manner in his appreciations which considerably heightens their value from the literary point of view.

The perplexing task of critically grouping the productions of recent and contemporary German writers has been remarkably well performed by Adolf Bartels in 'Die Deutsche Dichtung der Gegenwart; die Alten und die Jungen' (Leipzig: Avenarius). The author, himself one of the younger members of the craft, gives evidence of very extensive reading and great independence, originality, and soundness of judgment. It is only by means of such a survey as this that one can realize not only the great literary activity in Germany during the last two generations, but also the goodly proportion of truly superior talents among the large number, not to speak of the two or three geniuses or "partial" geniuses. It should be said that the author's standard is high, notwithstanding the large number of names in the index, and that the 114 octavo pages of text are not an annotated catalogue of names and titles, but a noteworthy essay in literary history and criticism, quite as interesting and valuable as the recent publications of Litzmann, Wolff, and others, which do not cover as wide a field as the present work.

A rather pragmatic article by Karl Pearson, on the decadence of German science, which appeared some time ago in *Nature*, and was subsequently the occasion of a sharp polemic, was ostensibly a review of two recent German books, Dreyer's 'Methodenlehre und Erkenntniskritik,' and Volkmann's 'Grundzüge der Naturwissenschaften,' but the real thesis was "the departing glory of German science." Now it may well be that Dr. Pearson's extended reading justifies his general contention, but it is very unfair to these two books to assume that they would alone justify or even suggest it. Volkmann's at least is a brief, wholly popular, suggestive, and useful book. Written in a minor key, evidently a by-product of more important work, expressly disclaiming the attempt to make a rigid final system, and in no way characteristic of the ordinary German scientific treatise, it was a very unfortunate selection for so weighty a thesis.

Nansen's fine Norse physiognomy in a vigorous etching forms the frontispiece ornament of the new *Minerva*, that invaluable bond between the learned institutions of the world (Strassburg: Karl J. Trübner; New York: Lemcke & Buechner). The scope is ever expanding, and the present volume takes in for the first time a number of scientific, archaeological, collegiate and bibliographical institutions in France, Italy, Greece, and India. The precious index of names has been prepared by Dr. F. Mentz, who will hereafter be a regular member of the staff of *Minerva*.

From Lemcke & Buechner also we receive the handy pocket 'Geschichte-Atlas,' a companion to the 'Atlas Antiquus' issued four years ago by the Gotha firm of Justus Perthes. What is now offered is a chronology of historical events from the Christian era to date, under the respective countries of Europe, with a section allotted to America.

These are followed by a crowded, only led by small as utilized.

scale, so that the series is pretty rich in geographical information.

Finally, the same German and New York firms bring us the issue for 1898 of the venerable *Almanach de Gotha*, in which there are many changes and some wholly new features, such as the articles on Abyssinia and the Grand Republic of Central America, and the sections descriptive of those factors of human brotherhood, the international bureaus and unions for various scientific, humane, and statistical objects. Some stress is laid on the extra trouble imposed on the editors by the diplomatic changes attendant upon President McKinley's accession to office; and that potentate might well feel a pang of remorse when he witnesses the magnanimity displayed in coupling his portrait with that of Queen Victoria and of Queen Wilhelmina of Holland.

The *Musen Almanach* for 1898, edited by Dr. Otto Braun, and published by Cotta in Stuttgart, contains three pieces of prose fiction: "Scharka," by Max Haushofer, "Eigenes Leben," by Ernst Muellenbach, and a most ingenious and entertaining *Märchen*, entitled "Ben Saccaria's Wunderhorn," by J. R. Haarhans. The contributions in verse are by the best of contemporary German poets, among whom W. Jensen, H. Längg, Max Jordan, G. Scherer, F. Dahn, G. Ebers, H. Vierordt, A. Matthaël, and Agricola von Hörmann may be especially mentioned. There are excellent sonnets by the editor, Otto Braun, and several pungent epigrams by Ludwig Fulda. The volume is neatly printed, and is rendered additionally attractive by six full-page engravings.

Students who are fortunate enough to be familiar with Flemish will welcome the second volume of Dr. Paul Fredericq's 'Geschiedenis der Inquisitie in de Nederlanden,' in which he follows the fortunes of the Netherlandish Inquisition and its victims during the fourteenth century. The period here treated is, perhaps, the most interesting one in the Low Countries, prior to the rise of Protestantism, as it comprises the overthrow of the Templars, the persecution of the Beguines and Beghards, the remarkable developments of the Flagellants and the Dancing Mania, and the various forms of mysticism, more or less moral, in which the boundary line between orthodoxy and heterodoxy was so nebulous that a man like Gerard Groot might either be persecuted himself or be an Inquisitor persecuting others. The history is further varied by the competition between the Episcopal and the Papal Inquisitions, and the intervention of the secular power, either to use the Holy Office as its tool or to limit its field of action, as the politics of the moment might suggest. Professor Fredericq's familiarity with the sources, and skill in exposition, are too thoroughly recognized to render it necessary for us to do more than express the regret that he has not chosen to render his labors accessible to a wider circle of readers than will be able to derive benefit from them in the idiom in which they are presented.

The Programme of the Royal Statistical Society, London, for the current session, which opened so strikingly on the 14th of December with President Courtney's inaugural address, is to be followed on the 20th of January by a paper from Sir George Denison-Fowell, M.P., who has taken the Colonial Empire under his special care, and will discourse upon the Foreign Trade of the British Colonies. Other subjects to be dealt

with are: "Old Age Pensions," by Sir Henry C. Burdett; "Female Employment in Factories, with special reference to its effects on the health of the employed and of their children," by Miss Clara E. Collet, M.A.; "Further Notes on the Utility of Common Statistics," by Sir Robert Giffen, recently Assistant Secretary to the Board of Trade, now retired on pension; "Local Taxation in London," by G. Laurence Gomme; "Poor Relief in Scotland; its Statistics and Development, 1791 to 1891," by C. S. Loch; and "Life Tables, and the Registrar-General's Mortality Statistics," by A. C. Waters. Contrary to the usual custom of London societies, the statisticians have their meetings first and their dinners afterwards, and very good the latter are, as those who have joined them know.

I. Zangwill, Professor Dowden, Édouard Rod, and Karl Frenzel pay tribute to the memory of Heinrich Heine in *Cosmopolis* for December. The personality of the poet, the pathos of his life and long agony, the complexity of his character, have proved the most tempting side of the subject to the English and French writers. The veteran writer Karl Frenzel discusses the worth and influence of Heine's poetry, which he is disposed, in a measure, to rank among world literature.

The *Scottish Geographical Magazine* for December contains a summary of recent investigations of the surface currents of the North Sea, made in order to ascertain their part "in transporting the floating or pelagic eggs and larvae of marine fishes." Two kinds of floats—bottles and strips of wood—were used, and "the results showed that the bottles were much more reliable than the wooden slips." Among the conclusions reached were, that the circulation was from the north of Scotland southerly to the Wash, and thence northeast along the Danish and Norwegian coasts; that the average daily speed of the movement was about two or three geographical miles, and that the principal cause of the circulation is "probably the influence of the prevailing winds." There is also an account of the climate, products, and industries of Queensland, and a slight sketch of the antiquities and legends of Anaga, a district of the island of Tenerife.

The latest *Bulletin de la Société de Géographie* opens with an account of an exploration of the river Koto in the French Congo. One of the greatest obstacles to the progress of the expedition was the frequency of tornadoes, of which there were often two in the course of a day. This is followed by a description of a tour in Cyprus, made for the purpose of ascertaining the traces of the French colonists who followed the Crusaders. Incidentally the author, M. C. Enlart, praises the British rule as a model of administration, and refers especially to the efforts being made to reforest certain districts, by protecting the nurseries of plants and the planting of the French of seeds and the planting of the French of seeds. In some notes upon mining, Shafts of the mine worked to a depth of from sixty to a hundred feet, in groups of six or eight, which are joined by tunnels. The shafts, when detached, are drawn up by ropes made of vines, and are raised in the village. These shafts are worked and washed. In one of the shafts, by three or four months' labor, make, above his expression.

much larger than the Senate in the time of Washington. Every Councillor held office for life; he could be removed only for actual and proved breaches of duty, such, for example, as corruption. He held his position, that is to say, on a tenure even more certain than the tenure by which English judges have held their places since 1689. The first body of Councillors were appointed under the Instrument. Vacancies, as they occurred, were to be filled up by a complicated system of appointment, which, as far as one can judge, would have led to the result that, while few men would have become Councillors who were not members of Parliament, no man could be chosen who was not acceptable to the Council; and it is no bold conjecture that, had the Instrument of Government remained in full force, the Council would in effect have filled up vacancies in its body by cooptation. The Protector, it will be said, towered above the Council. As regards Cromwell, this is obviously true, though Cromwell, as Mr. Gardiner points out, was at the Council board no despot, and his Councillors were no ciphers; but, under the Constitution of 1653, succeeding Protectors would have in all likelihood become the leaders or even the servants of the Council, for the Council, among its other attributes, had the right of electing the Protector, and all experience shows that a small body of statesmen with the right of electing their head will in general succeed in choosing, as they will always endeavor to choose, that one of their members who will carry into effect the wishes of the electors. And however this may be, in considering what was the authority of the Executive under the Instrument of Government, we must look upon it as a body which would usually act in harmony with the Protector. Whenever this was the case, the Council created by the Instrument of Government was constituted so as to possess greater powers than have fallen to any King or Cabinet since the time when the House of Commons became an essential part of the English polity.

Henry the Eighth, it may be suggested, committed acts of tyranny which could never have been perpetrated by the Protector and his Council. This is true, but the prerogatives of the Tudors, ample though they were, were limited on every side by custom. No Tudor possessed a standing army; no Tudor could despise the power of Parliament. The authority of Henry and of Elizabeth rested on their capacity for recognizing the permanent will of the nation. Modern cabinets, again, have disposed of armed forces, and have expended revenues, incomparably larger than the armies or the revenues at the disposal of Cromwell, but the strongest of ministries has been dependent for its very existence on the support of Parliament, or, in truth, of the House of Commons. The Cromwellian Council was a permanent body which was intended to outlast one Parliament after another; and, what is of even more consequence, the power of the Council was not in reality balanced by a body with anything like the weight of the houses which had at times withstood the wilfulness of Elizabeth, and had, during the Civil War, destroyed the power of the Crown. For the single House of Representatives elected under the Constitution of 1653, though called a Parliament, was in reality a very different thing—a mere legislature. This transformation of Parliament into a legislature was, in

truth, one of the main alterations introduced into the Constitution of England, though nothing is more probable than that the Constitutionalists of the Commonwealth did not fully recognize the nature of the revolution which they had effected.

The first Parliament of the Protectorate possessed, indeed, some prerogatives or advantages which did not belong to the Parliaments of the monarchy. It became an essential part of the new system of government, it was necessarily convened every three years, and, when so assembled, could not be adjourned, prorogued, or dissolved for five months. It was, further, what we should now call a reformed Parliament; it was so constituted as, in theory at least, to reflect the will of the people far more accurately than did the House of Commons at any time up to the great Reform Bill of 1832. The small boroughs—the rotten or nomination boroughs of later times—were abolished, the rising towns received representatives, the centre of political power (as far as it depended upon parliamentary representation) was in the main transferred from the population of the towns to the country electors, and among the country electorate there was no residuum of poor laborers. Every elector was required to possess property worth £200, or, if we allow for the change in the value of money, property real or personal which would be worth at the present day about £1,000. The object of the Cromwellian reformers clearly was the same as the object proposed to themselves by Chatham and his son, namely, the vesting of political authority in the small but independent country landowners. Whether this change would ultimately have strengthened Parliament is open to question, but it certainly was intended to give moral authority to the representative body. To all this we must add that, in matters of ordinary legislation—in all matters, that is to say, which did not touch the Constitution—Parliament was endowed with absolute authority. It was authorized to pass bills over the head (as we should now say) of the Protector. All that he could in strictness do was to insist upon the reconsideration of measures which did not meet with his approval. In matters of legislation, the Protector possessed nothing but the dilatory veto which the Constitution of the French Republic has conferred on the President, and which no President has ventured to use. But, for all this, Parliament was deprived by the Instrument of Government of the powers by whose exercise the House of Commons has finally obtained an authority hardly distinguishable from sovereignty. To Parliament was given only an indirect share in the appointment of the Council. It was denied the means of dismissing a single Councillor from office; it ceased to wield without restraint the power of the purse, for considerable revenues were by the Constitution itself guaranteed to the Protector; nor did the legislative powers of Parliament remain unlimited, for they could be exercised only in accordance with the Constitution.

For the third and most important of the changes introduced by the Constitution of 1653 was, if we may use modern terms, the transformation of a "flexible" into a "rigid" Constitution. According to the view taken by Mr. Gardiner, the Instrument of Government made the whole of its provisions—or, in other words, every article of the Constitution—immutable. There is nothing in

itself unreasonable in this interpretation of the Instrument. During the sixteenth or the seventeenth century, lawyers who used strongest language about the authority of Parliament held in effect that Parliament—a term which in their mouths of course meant the Crown and the two houses—would not or could not constitutionally change the fundamental laws of the realm. The Puritan leaders, though forced, under the stress of circumstances, to become revolutionists, were in spirit staunch Conservatives. Their indignation had been excited by the despotic innovations of the Crown, and the preservation of liberty was in their minds associated with the rigid maintenance of established custom and inherited rights. It must never be forgotten that it was not the enlightenment of Bacon, but the crabbed legalism of Coke, which earned the veneration of parliamentarians. It is therefore quite possible that the authors of the Constitution of 1653 wished to endow the fundamental institutions of the state with a fixity which, though not secured by law, has been in fact insured by the force of custom. But to any one who studies the Instrument of Government with the eye rather of a lawyer than of an historian, the fact, strange though it be, soon becomes apparent that its unknown authors were men of subtle intellects and of great sagacity, and that, with a foresight rarely found among the framers of constitutions, they had provided the means for constitutionally changing the greater part, at any rate, of the polity which they had framed.

A careful perusal of Article 24 leads to the following result: Laws were by the Constitutionalists of 1653 divided into three classes: (1.) Ordinary laws, which did not touch the provisions of the Instrument, or, in other words, which did not affect the Constitution. Such laws could be enacted by Parliament with or without the consent of the Protector. (2.) Laws which amended the Constitution, but did not affect certain fundamental provisions thereof referring in the main to religious freedom; such laws could be enacted by Parliament with the consent of the Protector, but not otherwise. (3.) Laws which affected or restrained the effect of these "fundamentals" contained in articles 35 to 37; such laws, if so they can be called, could not be enacted at all: they were *ab initio* invalid. On this point the Instrument is absolutely clear. Article 38 enacts "that all laws, statutes, and ordinances, and clauses in any law, statute, or ordinance to the contrary of the aforesaid liberty, shall be esteemed as null and void." The "aforesaid liberty" is of course the religious liberty guaranteed by the Constitution, and it may be well to note that, with a tenderness for religious freedom which may perhaps be fairly attributable to the breadth of Cromwell's own sympathies, the very article which invalidates any law that should restrict, does not invalidate any law which should extend, the sphere of spiritual liberty. However this may be, it is plain that the Constitution was not in reality as a whole unchangeable. The greater number of its articles could be changed by Parliament with the assent of the Protector. The only amendments which were constitutionally forbidden were amendments, if so we may call them, intended to restrict the guarantees for freedom of religion.

Here we come across the fourth noteworthy feature of the Constitution of 1653.

It introduced into the world that conception of guaranteed rights which is familiar to the Constitutionals of every country but England. Whatever be the logical merits of this idea, it has certainly been fully accepted by the people of countries such as the United States and Switzerland, where religious and political freedom has flourished; and any one who reflects upon the nature of English law and the habits and traditions of English and of American courts may feel a conviction, as certain as it is allowable for any sensible man to entertain about events which have not happened, that, could the Constitution of 1653 have held its ground, the existence of a written and more or less rigid Constitution which guaranteed certain rights would, in England, as it did in a later age in America, have changed the whole position of the judiciary. Once acknowledged that a law passed by the Legislature is null and void, because it contravenes an article of the Constitution, and a court influenced by the ideas common to the whole English people will be certain to hold that, in any given case, the courts must treat such law as a nullity. But if this be once conceded, the result inevitably follows that the Judges must pass judgment upon the constitutionality of laws, or, in other words, the judiciary must become the protector of the Constitution. It is no vain imagination that, had the Instrument of Government remained the supreme law of the land, Hale might in England have performed the task and obtained the fame which in the United States fell to the lot of Marshall.

Here, then, we have embodied in the Instrument of Government as remarkable—we may perhaps say as admirable—a constitution as has ever been consciously framed by men bent on founding a well-grounded commonwealth. If we look simply at its terms, we should think the Constitution of 1653 at least as well constructed and as likely to endure as the Constitution of the United States. We all know that the Constitution of 1653 had no permanence, and that its very existence has been all but forgotten by Englishmen. In another article we shall consider what were the reasons why the Constitutionals of the Commonwealth failed utterly in the attempt to erect a Government which should secure to the English Commonwealth the advantages both of order and of liberty.

RECENT FICTION.

St. Ives. By Robert Louis Stevenson. Charles Scribner's Sons.

Captains Courageous. By Rudyard Kipling. The Century Company.

Hugh Wynne, Free Quaker. By S. Weir Mitchell, M.D. The Century Company.

King Washington. By Adelaide Skeel and William H. Brearley. J. B. Lippincott Co.

An Open-Byed Conspiracy: A Saratoga Idyl. By W. D. Howells. Harper & Brothers.

The most careless reader of Mr. Stevenson's novels has probably suspected that, besides being a first-rate story-teller, the author might be, in many other lights, an unusual and rather fine sort of man. With that knowledge of his actual life which is public property, on closing *'St. Ives'* the longest thought can hardly fail to be about the man, particularly about a spirit so bright

and a courage so dauntless that his great gift of story-telling seems in comparison but a common thing, a quality of mind borrowing distinction from less obtrusive qualities of soul. The swan of fable singing as it dies, the soldier shouting for his country as he falls, and the captain calmly going down with his ship, all captivate the multitude conscious of a certain moral splendor about figures facing death with such serenity and fearlessness. *'St. Ives'* compels us to dwell upon an even more impressive exit from life, and to find even more heroic the figure of a peaceful man of letters who, lying long in the jaws of death, resolutely defied pain and, knowing no fear, took his leave with the grace and gayety of Lovelace going to the wars.

The fine figures of Mr. Stevenson's creation represent two classes—men whose actions are governed by the fear of God and a stern interpretation of the moral law, Hebraic rather than Christian; and men who would be raging heathen but for the saving virtues of honor, courage, and courtesy. For himself, he could not help belonging to the one that was his breed; and by romantic temperament and æsthetic sympathy he was able to identify himself with the other. In creating the gentleman of many aliases, Viscount Anne de Keroual de Saint-Yves, he threw off the restraints of heredity and upbringing and became a bold, witty, graceless, gallant noble of France and soldier of the empire. None of his scampish adventurers is more freely and naturally drawn than *St. Ives*, and of all he is the most astute, light-hearted, and attractive. Viscount Anne is a worldling *de race*; neither the horrors of a childhood spent in the shadow of the guillotine, nor hard apprenticeship in the practice of war, as Champdivers, private, Eighth of the line, nor constant association with "brawling, bruising, ignorant pillars of low pot-houses," had power to chasten his external frivolity, or could teach him to regard any situation as too serious to be mastered by ready wit and beautiful manners. Perilous adventure was, of course, the breath of his nostrils, and he would far rather fight than eat or sleep; or, at least, no one can doubt his preference, though, as a matter of fact, he is always conspicuously running away.

The first flight, from Edinburgh Castle to the English home of the Count de Keroual, is a splendid bit of narrative pressing on at hot pace, yet leisurely enough for ample characterization of people and places and for love-making and brawling by the way. Up to the parting with the Glichrists at Swanston cottage, the illustration of the art of story-telling is pretty nearly perfect, and if we had to make a choice of the most vivid and entertaining scene in all Mr. Stevenson's novels we should hardly hesitate to say, "Chapter ix. of *'St. Ives'*." The second flight, in the claret-colored chaise, with the wrathful disinherited Viscount Alain in full chase, has not the same authority, the same easy command of material and expression, while the third flight—all that follows the Assembly ball—is a comparatively disorderly scamper. It happens that at the Assembly ball Mr. Stevenson left off and Mr. Quiller Couch, working from the author's notes, finished the tale. No one can say what Mr. Stevenson would have done with his notes, but when we remember the fantastic and unrelated ending of *'The Ebb Tide'* there is no certainty that he would

have spared us Viscount Anne's adventures in the balloon, or the voyage with the mysterious Captain Colenso—an extravagance which no author except Mr. Frank Stockton could perpetrate and be forgiven. Mr. Stevenson's taste was not faultless; yet it is not probable that he would have crowded the final scenes in Paris with such commonplace devices, or overwhelmed Viscount Alain with such melodramatic defeat.

The conclusion of *St. Ives'* love story seems to us more in Mr. Stevenson's manner than the narrative of adventures. Always shy of the passion of love, Mr. Stevenson, in using it as a motive, conceded the smallest possible amount of emotional and sentimental detail, and Mr. Quiller Couch scrupulously respects his reticence. Though the lovers are always head over ears in trouble, *St. Ives* is as gay as a lark, and Miss Flora Glichrist far from a love-lorn damsel. She has practical sense and courage in adversity, qualities which, when embodied in a beautiful woman, went to make the sort of woman that, so far as he has given us his confidence, Mr. Stevenson most admired. As *St. Ives*, incessantly playing with tragedy, is never tragic, and only once, in describing his relations with a transient figure, the aged French Colonel, achieves pathos, there is no scope for Mr. Stevenson's most impressive style, no passage where the poet's presence is intimated in impassioned prose. But as an example of his narrative style, his gift for telling just what was seen and said and done, of giving a distinct personality even to the least of the actors in the drama, he has left us nothing so characteristic as *'St. Ives'* except *'Kidnapped.'* The Viscount's perfect command of the descriptive epithet is alone enough to insure him a long literary life.

Good a story-teller as Mr. Stevenson was, if the test is ability to give an impression of truth, Mr. Kipling is perhaps a better one. This is not to say that he is a bigger figure in letters, for that emphatically he is not—a declaration which some serious seeker for truth may hereafter attempt to make good, or perchance refute, in a bulky and unprofitable volume. But, for the stories, in the last analysis a candid admirer may be forced to admit that perhaps none of Mr. Stevenson's could be quite and all true, while even an enemy could display only childish rancor in denying to every one of Mr. Kipling's the seal of a scornful veracity. Equally profitless would it be to dispute their interest. He imagines things so strongly, and he knows things so well, that subjects, however alien to our thought and tastes, become at once of the utmost importance. We reproach ourselves for having lived so long in neglect or contempt of them. The cod-fishing industry is not intrinsically, of itself, apart from Mr. Kipling, an occupation that invites attention from those who dwell remote from the Banks, knowing the fish chiefly as a substance triangular and tough, with no suggestion of the ocean about it except the salt. Cod-fishing has never been made a "cause," that we should shout for it, or even denounced as a pleasant vice, that we should hasten to know it in order to suppress it. Cod-fishing, except for fishers and their families, has always been but a name for a transaction on the deep which nobody could be expected to inquire into. All this until Mr. Kipling chose to sweep the pampered son of an American millionaire off from the decks

of an Atlantic steamer into a fisherman's dory and set him to catch, split, and salt cod for three months. Thus suddenly knowledge about cod-fishing has been widely diffused; it has become picturesque, absorbingly interesting in every detail, and doubtless a source of hope and consolation to the parents of insufferable boys. The description of Harvey Cheyne's apprenticeship on board the *We're Here* is a capital expression of Mr. Kipling's singular ability for investing plain facts with the arresting charm of fiction by imparting his own vigorous interest in them to the reader. The abrupt, disagreeable first chapter, and the chapters narrating the rush of the Cheynes across the continent to meet their lost darling, show that rare and wonderful imaginative force which occasionally makes fiction more real than life itself. The characterization of the cod-fishers is feebler, vaguer than anything of Mr. Kipling's we can think of, and the corrupt English which they speak has never been heard on the Gloucester shore or from the deck of a Canuck fishing-smack. On the other hand, Harvey Cheyne is known and detested by every one except his mother wherever a score of Americans may be gathered together. Not less familiar and dismal is Mrs. Cheyne, with her nerves, her doting subservience to the abominable child, her selfish command of the husband so lavish of wealth and with the patience of a thousand donkeys. Mr. Kipling has drawn her with a vindictive irony which implies that he has made arrangements for permanent absence from her country. "She" is not likely to forget the picture of her ridiculous self controlling the railroad system of a continent by her hysterical cry, "Hurry," or to forgive such an innocent-seeming paragraph as that announcing the arrival of the Cheyne special at Chicago: "It is on record that the last crew took entire charge of switching operations at Sixteenth Street, because 'she' was in a doze at last, and heaven was to help any one who bumped her."

The reminiscences of 'Hugh Wynne, Free Quaker,' make a very readable historical novel. Most historical novels are not readable, and, so far, Dr. Mitchell has scored a success. The tale is dull at first; the inherent tediousness of childhood's memories being increased by a formal, constrained style which is mistakenly supposed to give the eighteenth-century *cachet*. Once Wynne is grown up, the story moves, and the style is correspondingly freer and more natural. The long and rather involved tale of love, war, and colonial social life is carefully constructed and linked smoothly; the scenes and situations are vivid, some of them spirited, and there are at least two admirably drawn and strongly contrasted characters—Hugh's father, John Wynne, a sombre-minded Quaker, and his aunt, Miss Gainor Wynne, a sort of chaste colonial Baroness Bernsteins.

There are persons still living who suppose, perhaps erroneously, that behind the commercial reasons for the revolt of the Colonies, there was discontent very general, very profound, very passionate, with the rule of kings and the supremacy of aristocracies, and that the Revolution was largely an expression of resentment against the existing social order, and even a protest against the idea which its continued existence involved and proclaimed. Such persons, after reading 'Hugh Wynne,' can hardly escape being con-

fused in mind, and, if imaginatively attached to theories, troubled in spirit. All their cherished ideals are shattered. There is not even a passing bow to freedom, equality, and the rights of man. Jefferson, Franklin, and the rest were not "fathers of the Republic"; they were "founders of an empire." Washington was no impeccable patriot leading his people to a higher destiny. He was a haughty, reserved, arrogant aristocrat, blasphemous at times; he was a soldier of the King, temporarily out of work, and, all on account of a trifling extra cost for a cup of tea, willing to turn his hand against his master and plunge his country into a long war of which the issue was most uncertain. The men who captured Major André, and those who condemned him to death for conspiring with a traitor, were so insensible to the charm of birth and breeding that no gentleman could speak of them without a shudder. Washington felt the ignominy of his own part in the regrettable incident so deeply that he could not permit the unfortunate young Englishman's name to be mentioned in his presence. Arnold himself was not half a bad fellow. It is true and undeniable that he tried to sell his country; but then he had always kept open house in Philadelphia, and had married a daughter of a first family, and had got into luxurious extravagant ways, and really needed a good deal of money to keep him going. Why Hugh Wynne and his Aunt Gainor joined the rebels, it is useless to inquire. All their tastes and habits were aristocratic, and they had plenty of money to pay for tea at any price. Clearly, on the evidence, the Revolution was a colossal folly. A society apparently better-bred, more polished, altogether finer and gayer than anything known in America during this century, was broken up by it, and whatever the people not in the "Governor's set" may have gained by it does not appear in Dr. Mitchell's quite readable historical novel.

This question is not answered in another novel of the Revolution, not quite readable. The title, 'King Washington,' is rather agitating. The "Colonial Dames," the "Daughters of the Revolution," the exclusive Massachusetts coterie of "The Twenty-nine," have compelled us to acknowledge the noble origin of most of the native population of the United States, but have not yet prepared us to believe that Washington ever was, or could have been, or would have been, a king. On page 293 of this novel our incredulity is confirmed by Washington himself. The story is a meandering, romantic account of an attempt to kidnap Washington, when, towards the close of the war, he was in headquarters at Newburgh. A young woman implores him to spare the chief agent of the conspirators. Washington, we are told, "removed his glasses and did not think it beneath his dignity to wipe the tell-tale moisture from his eyes." Then, quite in the good old cherry-tree-and-hatchet manner, he spoke: "The power to pardon does not rest with me. In America no one person is King." It has been the fate of many great men to be misunderstood, but few have been made to appear ridiculous so persistently as Washington.

Mr. Howells's 'Open-Eyed Conspiracy' is one of the light, brilliant performances with which he occasionally amuses himself between serious labors. Mr. and Mrs. March, spending a few weeks at Saratoga, the one philosophical and ironical, the other im-

pulsive and literal, both inveterate meddlers, involve themselves in the affairs of a forlorn rustic beauty. Always protesting that they have nothing to do with it, they get her engaged to marry one of their pet young men. Slight as the episode is, it attracts attention to a change amounting to transformation that American social life has undergone in the last ten or fifteen years. The glory of the Saratoga caravansaries has departed; culture shuns them; fashion recognizes them not; aspiring plutocracy would not be found dead there. Only benighted Cubans imagine them still to be the centres of fashion which ante-bellum legends describe them. There is a crowd, heterogeneous, brilliant, appearing very rich and even splendid, but the presence of a really "nice" person is as rare as that of an angel. All this Mr. March, who knew Saratoga long ago, and still has a fondness for it (a fondness shared, but less frankly owned up to, by Mrs. March), notes, as he sits positively sizzling even in the shade, or strolls beneath the splendid trees, or lounges about the big hotels where he doesn't stop, where Mrs. March wouldn't stop for untold gold. The tone of Mr. March's reflections is genial, humorous, ironical, hardly a serious note; nevertheless, he manages to contribute impressively to that series of social studies which, by their brilliancy and comprehensiveness, we trust may insure for Mr. Howells enduring fame.

NOMINATIONS.

Nominations for Elective Office in the United States. By Frederick W. Dallinger. [Harvard Historical Studies, Vol. IV.] Longmans, Green & Co. 1897.

Mr. Dallinger's book goes over ground which is familiar to every one. He begins with an historical sketch of the nominating machinery in the United States, in which he traces the rise and growth of the present primary and convention system. The sum and substance of this chapter, the drift of which is entirely historical, is to show that the present system is modern. It has little or no relation to the old caucus, nor to the system of self-announced nominations (the English system), at one period common in the South. It is the application of representative, democratic institutions to a purely party business within party lines, and is made the analogue, so far as possible, of those institutions themselves; the primary corresponding to the town or ward meeting, and the convention to the Legislature.

The first chapter is followed by a description of the present system as it exists, and by an account of the defects observed in its operation, while the remainder of the book is occupied with a discussion of the remedies proposed. We shall not weary our readers with rehearsing the shocking story of the abuses of the system, for they may be summed up in a few words: Instead of the primaries and conventions turning out candidates fairly representative of the community, they tend to fall into the hands of a local "ring" headed by a corrupt manager or boss, who himself nominates; the primaries and conventions merely registering his decision, and that decision being dictated mainly by his own private interests. His nominees are, in the main, place-men dependent on the taxes for a living which his favor provides, forming a close corporation or "machine," which effectually bars the door to

any nomination not authorized by him. Through his control of the nominating machinery, he fills all departments of the government with his private agents, and thus, though elections seem to remain free, he really determines whom we shall elect, and becomes himself the government, though he may not hold any office in it. When we come to the question of remedies, we find that a great number have been proposed, among them minority representation and regulation of primaries by law; but the remarkable thing about this part of the book is that the author, whose familiarity with the history of the subject no one can dispute, dismisses all the specifics proposed, and tells us that he knows of but three things likely to have much effect on nominations—a diminution in the number of elective offices, absolute separation of local from national and State politics, and, above all, the abolition of the spoils system, and consequent destruction of the class of professional politicians. We may perhaps throw some light upon the view of the important subject of nomination to which Mr. Dallinger's researches tend, by calling attention to one or two points involved, though not expressly stated, in his study.

Down to very recent times, writers who have discussed the fundamental questions of government have generally failed to foresee the importance of the nominating system in a modern representative democracy enjoying a wide suffrage. In Greece and Rome, owing to the narrow local suffrage and the fact that representative institutions did not exist, the difficulty now felt did not arise. Nor was its future importance anticipated by Montesquieu, Hobbes, or Locke. When the authors of the 'Federalist' discussed the proposed Constitution, and explained the mode contrived for electing the President, their explanation showed that they had never thought about the detailed work of nominations at all. "The people of each State," they said (Fed., No. 671), "shall choose a number of persons as electors," as if this function would be performed by the whole people coming together in a sort of State meeting and balloting. Attention has been frequently directed to the fact that the Electoral College, which they intended to be a body of notables, speedily came to be a body of nobodies—dummies selected by party machinery to cast a fore-ordained ballot; but it is at least equally curious that the method by which the candidates for electors were to be chosen should not even have occurred to them or to their critics. As they say themselves: "The mode of appointment of the chief magistrate of the United States is almost the only part of the system of any consequence which has escaped without severe censure, or which has received the slightest mark of approbation from its opponents." What they were thinking of when they talked about "the people," was really some small classical, mediæval, or Renaissance city community, the inhabitants of which knew each other more or less by sight, and in which the number enjoying the franchise was very small, and the notables all men of established position, known by sight to everybody in the place. Having in their minds a very different sort of community from that which was destined to establish itself in America, they could not foresee the result of their scheme, and they accordingly gravely state that "they have not made the appointment of the Pre-

sident to depend on any preëxisting bodies of men, who might be tampered with beforehand to prostitute their votes; but they have referred it in the first instance to an immediate act of the People of America." Yet to-day the nomination of the candidates does depend on preëxisting bodies of men, and we have only to turn to such a book as the autobiography of Mr. John Sherman or the present account to find that certain portions of these bodies are universally known to be purchasable, while nomination of any one for an office by "an immediate act of the People of America" is a mere phrase signifying nothing.

When Louis Napoleon obtained possession of France and shrewdly constructed a tyranny resting on universal suffrage, it began to be perceived that the business of placing before the people the candidate for whom, or the question on which, they were to vote was no less important than the extension of the right to vote itself. We see the same thing continually in private corporations and stock companies, when stockholders continue bad managers in control because the ticket is made up by the managers themselves, and even vote away their own rights because the method of presenting the question to them is devised by those whose interest it is that these rights shall be voted away. We know now that on the control of nominations the whole character of any government, or the conduct of private corporate affairs, may easily turn. In the long run, any one who controls them must control everything.

Unless we are mistaken, it will be found that whenever the suffrage is very extended and popular, the business of nominating candidates for elective office falls into the hands of a small number of men, or into those of the candidates themselves. Hence, in a democracy, the first question is, What is the character of these bodies? In this country, self-nominated candidates are beginning to reappear (and in our opinion as time goes on their number is likely to increase); but, as a general thing, candidates are nominated by "preëxisting bodies," and the character of the candidates depends in the long run on the character of these bodies. To believe otherwise is to believe that the tree is not to be known by its fruit. Now to-day these bodies are not bodies of distinguished or even responsible men, but aggregations mainly of obscure and irresponsible men, "politicians" by profession, whose very occupation is a by-word, who are frequently corrupt, and who, when not actually dishonest, are biased against the selection of good candidates by every habit and influence of their lives. The condition of our legislatures, of the Senate of the United States, is enough to show that the machinery of selection works badly, and yet, as we have said, upon the selection of candidates by these or other bodies depends the whole future of the government. Hence, it is the universal conviction of those who have given much attention to the subject, that the present low character of the men turned out as candidates by our nominating system cannot continue if our system itself is to last. The government might go on long after its essential virtue had departed, but, as it degenerated, the country and its civilization would decline; laws would cease to be observed, property and life would become less secure, provision against the future would not be made, debt and ex-

penditures would increase, and in the end, whether through the effect of war or intestine commotion and disorder, rotten forms would be swept out of existence by the strong hand, and some sort of despotism be established in place of the institutions we have known. A cynic might even say with some plausibility that we need not wait, and that we are actually now living in the state of things we dread for our children, that our dumb legislatures are but a modern copy of the silenced Senate of Rome, and our Platts and Crokers the vulgar despots of a vulgar age. To this length we do not go, simply because we are inclined to believe in the inherent power of cure possessed by the germ of freedom—the *vis medicatrix libertatis*. But let no one doubt on what road we are travelling. The sign-post is the working of our system of nominations.

The modern primary and convention system was introduced in order to make nominations more representative, and so they no doubt did for a time; not until a comparatively recent date did the public awake to the fact that the system had fallen into the hands of permanent "preëxisting bodies" or committees, which, under the supervision of a Boss, and to a great extent in his pay, manipulated and prearranged these conventions and primaries. In the days of the caucus and congressional nominations, nothing of the sort was heard of, and we have no doubt that one of the most potent causes of the rapid perfection of the new system, and its present smooth working, was the corruption of the civil service by the spoils system, which, in the years after the war, came to its height and is still most powerful in local and municipal politics. If this view is correct, the gradual improvement of the civil service which is going on all the time must be taking away from the Boss a large part of his capital. The Post-Office and the Custom-House, and even the Navy-yard, are pretty nearly free from his grasp already, and in time the municipal and State service will be; he can still keep a governor and legislature, however, and this he does almost entirely through a rotten nominating system, combined with appeals to party feeling.

Dad as the boss system is, it should show us the direction in which improvement, if at all, is to come. The business of selecting candidates in a modern community can be managed only by a comparatively small number of persons. If we wish the nominations to be representative of our interests and aims, people who are really representative must themselves nominate—whether by "petition," or by self-announced candidature, or by a citizens' committee, matters very little, they must nominate, and they must at the same time take away the causes which make the Boss's control count at present for so much. If the class of men engaged in political life were representative, we should get representative nominations now. But how can they become so? The author has enumerated some of the means. We should add to them everything that could diminish the enormous pecuniary stake which elections keep before the eyes of the greedy and unscrupulous, and especially the control of the Legislature over private and local interests, over cities, corporations, over the tariff. Two hundred million dollars was once given as a fair estimate (p. 150) of the annual incomes represented by patron-

age, local, State, and national. The complete reform of the civil service means the complete removal of this fund as a temptation to the predatory politicians. Cut down the number of elective offices, and cut off the corporate and municipal plunder and the tariff, and the Boss's occupation will be gone; politics will again become a representative career, and nominations will be free. If the view of those who insisted thirty years ago that the abolition of the spoils system was the necessary first step towards this goal was correct, then in another generation, or even sooner, we ought to see the final extinction of the present system of boss encroachments on the right to nominate for office. If they were wrong, then free government on this continent is certainly doomed.

All attempts to avert this fate by legal remedies have hitherto proved unavailing, and, if our analysis is correct, must continue to prove so. Even if we could imagine the primary perfectly protected by legal supervision, it is impossible to compel the good and wise to take part in it, and the real "machine" is only a congeries of voluntary meetings of those who wish to accomplish a certain end. To suppose that those who wish to make a free nomination of the best man for a given office (for this is always the object of an election, so far as the public at large is concerned) can unite in a choice with those who wish to select the tool of a ring, is nonsense, because no two persons who have opposite and conflicting objects in view can unite to carry them out, and no law can enable them to do it. The only thing which those who desire better nominations than the primary produces can do is exactly what they are doing—abandon the primary and nominate for themselves. All that the law can do is to make this easy. We see no reason why the State should not permit any one to be a candidate for any office who will give a bond with sufficient sureties to reimburse the State for the additional expense which his candidature causes. However this may be, there can be no doubt that the more freely men of character and position can come forward and enter into honorable competition with the creatures of the machine for the right to discharge a public trust, the sooner will the grasp of the masters of the latter upon the government be unloosed.

School-Boy Life in England: An American View. By John Corbin. Harper & Bros. 1898.

This is an entertaining and valuable book, but to a superficial or ill-informed reader the entertainment is not unlikely to obscure the real value. The author, from residence at the University of Oxford, and the personal acquaintance which such residence naturally develops with sons of the great English public schools, is able to draw a very vivid, but decidedly rose-colored picture of the occupations, sportive and serious, the temper, and the traditions of those extraordinary institutions. He has selected Winchester, Eton, and Rugby as his special themes; and those among us who fancy that the last of the three overtops all other English schools may be surprised to be told, what is perfectly true, that Winchester is fully the equal of Eton and above Rugby in general English estimation, and that Winchester men say that Arnold's work at Rugby was simply a de-

velopment of what he learned at Winchester. Mr. Corbin is so enthusiastic to show the noble work of the English schools, with their magnificent traditions, that he seems to ignore the fact that much of this noble work to-day, especially at Winchester, could never be done—indeed, could never have been started—without throwing many traditions and prejudices to the winds. Arnold's Rugby boys made fine men, and so do those trained by his successors; but Arnold's Rugby boys pulled up the stakes set out by Robert Stephenson's surveyors for the Birmingham Railway. The great value of Mr. Corbin's book for Americans lies in his treatment of the extent to which English public schools may serve as models for American boarding-schools. It is admirably handled, and portions of it show a combination of wise candor and wise reserve rare in such discussions.

Mr. Corbin regrets that his space does not allow him to give some account of Harrow, the school of Sheridan, Byron, Peel, and Palmerston. This want is in a manner supplied by 'Old Harrow Days,' by J. G. Cotton-Minchin (London: Methuen & Co.). In this very vivacious and somewhat amusing book the heroes, butts, sports, and triumphs of Harrow are dealt with in the peculiar Harrow tone, which can never be acquired by an outsider, yet will reveal itself fully to every one who has the most superficial acquaintance with Harrovians. It had its culmination in Palmerston: a detestation of hypocrisy that becomes the opposite vice, which Aristotle called "irony"; a strong conviction that an English public-school boy, and particularly a Harrow school boy, is the last triumph of the race, and that if one leaves in the sixth form, the perfect life (as the sensible man would define it) consists in being a sixth-former to the end of your days. There is a personality for praise or ridicule in Harrow talk, and in this book especially, which is often more amusing than considerate. It may raise one's opinion of Harrow's energy, pluck, and steadfastness, but hardly of her gentleness, seriousness, or readiness to learn from others.

Ornamental Design for Women Fabrics. By C. Stephenson and F. Suddards. London: Methuen & Co.; Philadelphia: J. B. Lipincott Co.

The Americans are said to be an ornament-loving people. If this love can only be so chastened that it shall become submissive to simplicity, appropriateness, and restraint, we shall take a great stride in civilization. Far away as such a condition seems to be when one looks at all the miscellaneous ugly and useless objects set out before us in the shops, these are certainly less gaudy and crude and even less useless than the smaller collections of ten or twenty years ago. Much lies in the hands of our manufacturers. If they will give us good designs—designs, which are based upon the principles of decoration proved to be sound by centuries of suitable use—we shall learn to like them and to choose them. But the artisans must also be trained and enlightened. To this end it is most encouraging to find not only the technical processes being more thoroughly taught, as in the trade-schools, but that such collections as the Trades Museum in Philadelphia and the excellent beginning made in our city by the Misses Hewitt at the Cooper Union are open

to the public, so that men of any class may see examples of technically beautiful productions of other nations and periods. This is what the French have done for a century past. We have heard a couple of men who were painting blinds on a summer-house in France discuss an exhibition of Louis Quinze furniture and appreciate its beautiful qualities with satisfaction and understanding. When may we hope for that here? But we must hope; and as the helps multiply, we shall be nearer to reaching such a condition.

One such aid is the book before us; an excellent, straightforward treatment of the special manufacture of fabrics. Without any waste of fine words, the writers, from the trades colleges at Bradford and Leeds, not only have explained the preparation of designs for each class of fabric, as any practical worker might have done, but have, with taste and judgment, set forth and illustrated the laws of repetition, contrast, variety, symmetry, balance, repose, etc., which govern all good composition. These laws are exemplified by plates from Japanese, Flemish, Spanish, French, and Italian stuffs which are remarkably well chosen for beauty, good arrangement, and technical usefulness. The following of the steps, from the simple line and spot idea through the filling up and elaboration of the plan, is clear and easily comprehensible. In short, the whole work would be instructive reading to any one who wished to learn to know the good from the bad in composition, whether he were buyer, seller, or worker.

BOOKS OF THE WEEK.

Album d'Antiquités Orientales. Paris: Ernest Leroux.
 Almanach de Gotha, 1898. Gotha: Justus Perthes; New York: Lemcke & Buechner.
 Battershall, Rev. W. W. Interpretations of Life and Religion. A. S. Barnes & Co. \$1.50.
 Child Memorial Volume. (Harvard Studies and Notes in Philology and Literature. Vol. V.) Boston: Ginn & Co.
 Clark, Rev. G. W. Romans and Corinthians. [A People's Commentary.] Philadelphia: Baptist Publication Society. \$1.25.

The Nation.

NEW YORK, THURSDAY, JANUARY 18, 1898.

The Week.

The debate over civil-service reform in the House is proving most fortunate for the believers in the merit system. The spoliemen are more open and unblushing in their attitude than ever before, and they are thus making the cause which they champion more offensive than it has previously appeared. Gen. Grosvenor of Ohio on Thursday confessed that he and his kind sympathize with Tammany in this city because the two sets of politicians hold the same views about patronage. "Hundreds of thousands of Republicans," he said, "felt a secret sympathy with Mayor Van Wyck, who announced that none but Democrats would be appointed to office under the new city government." Gov. Black said in his message that when what Gen. Grosvenor called "the late unlamented Republican government of New York" came into power, there were 15,000 Tammany men in office, and when it expired there were still 15,000 Tammany men on the pay-rolls; and Gen. Grosvenor declared that "the Republicans had been justly punished for keeping these enemies in their camp." The friends of the merit system have made very effective replies to the assaults of the spoliemen upon it, but these replies were hardly necessary. Such diatribes as Gen. Grosvenor's answer themselves, and make votes for the reform.

The attacks on the federal civil-service law which were daily made during the debate in the House, suggest the desirability of an "eligible list" from which the people could select a candidate for Congress. It is safe to say that, under the present system, constituencies know almost nothing of the views of the men they vote for as regards public questions at large. There is usually some one subject on which a candidate must be "sound"; that condition being met, all others are disregarded. The necessity for some protection of this kind against charlatanry received a striking illustration in Monday's debate in the House, when a New England constituency, undoubtedly composed largely of reputable and churchgoing people, was put to shame by the speech of its Representative. The speaker was "Cy" Sulloway of New Hampshire, a country lawyer "with chin whiskers." After attacking the supporters of the civil-service law as "the eunuchs of politics," he went on to say:

"Why, if St. Peter was on earth to-day as an official of the United States Government and wanted to hire gate-keepers for

some of the golden streets, he would have to apply to this commission to get a list of eligibles, and, when the list was submitted, if it was like the average list, the good St. Peter would be impelled to say: 'My God, I have not seen such a gang since the day I was crucified!'"

We should not care to insult any New England constituency with the assumption that it would allow a man to remain on its "eligible list" of congressional candidates after reading such a speech by him.

We fear that Secretary Gage has inadvertently given aid and comfort to the spoliemen by some of his remarks about the need of exempting from the classified service various positions in the Treasury Department included in President Cleveland's order of May 6, 1896. As to the advisability of exemption we say nothing. We will concede, if any one insists, that it may be an open question whether the order was not too sweeping. But Mr. Gage's argument for exempting deputy collectors of internal revenue seems to us not to have its eye on the fact. He says that a collector, responsible as he is legally and financially for his deputies, ought not to be compelled to select them from "an eligible list, the names on which he may know nothing about," but should be allowed to choose "men concerning whose personal characteristics and integrity" he has knowledge. But supposing the eligible list abolished, will the collector be allowed to choose his own deputies? Not at all. Before he gets his office—as a condition of getting it—he has to agree to a "slate" of appointees to every position in his gift. It comes down to an alternative between an eligible list about which he knows nothing, and a "slate" thrust in his hands by the boss who creates him, about which he also knows nothing. The idea that any collector is nowadays left free to look about him and choose his own subordinates is absurd. He appoints the men he is ordered to appoint. Imagine the scornful laughter of a boss who should find his collector wanting to know about the deputies on the "slate." "That's my affair," he would say; "I am responsible for them, not you." The bosses will all endorse Secretary Gage's reasoning, but they will do it, not in order to improve the service as the Secretary intends, but to debauch it as they intend.

In Mr. Bryan's speech at Chicago on Saturday we read his desire that the campaign of 1898 and the greater one of 1900 shall be fought on the silver issue pure and simple. We read also his apprehension lest this issue shall be complicated with the banking question. His attempt to lug in Gen. Jackson and

his fight against the Bank of the United States is very significant. Jackson was one of the "gold-bugs" of the period in which he lived. The gold bill was passed by his friends, during his administration, and it bears his signature. Gold had been driven out of circulation by the legal ratio of 15 to 1, and there was a loud demand, especially among the Jackson men, that the ratio should be changed in such a way as to banish silver and supplant it with gold. Benton was the leader of this movement in the Senate, and Benton was also the leader of the Jackson men in that body. He fought for the gold bill and secured its passage. To claim Jackson as a silverite in the face of these facts implies either dense ignorance of history or a remarkable development of "cheek."

Mr. Bryan's use of the phrase "national bank" is equally deceptive. He said in his Chicago speech:

"It is especially fitting that at this time the American people should recall the name of Andrew Jackson and gather inspiration and encouragement from his public career. We are engaged to-day in a contest very similar to that in which he played so conspicuous and honorable a part. During his term of office the national bank attempted to overawe the representatives of the people and control the Government. He grappled with it and overthrew it."

Why did not Mr. Bryan call the bank which Jackson overthrew by its right name, viz., the Bank of the United States? Evidently because the phrase national bank needs only the addition of an s to make national banks, thus assimilating the fight which Jackson made to the one which the Populists and some Democrats are carrying on now. The truth is that the whole force of Jackson's animosity against the Bank of the United States was directed against it as one corporation enjoying the deposits of the money of the Government; that is, a monopoly. His veto of the bill rechartering the bank was grounded upon that idea alone. He had no objection to banks generally. He had none to those that were not monopolies. A good deal might be said to show that his fight against the Bank of the United States was a fight against a windmill which he mistook for a giant. In this case, however, he demolished the windmill instead of being unhorsed by it. The material fact is that he removed the deposits from the big bank because it was big, and put them into other banks because they were small, or at all events not open to the charge of being monopolies. Now we have no such case at the present time. There is no monopoly bank. All the banks that we have are of a kind that Jackson would have favored if there had been any in his day. Mr. Bryan's uneasiness on the subject is

very easily explained. He fears lest the bank question may supersede the silver question as a political issue. Hence his gross perversion of history in dragging Jackson into a controversy so unlike the one in which he took part. Hence his bitter attack on Secretary Gage.

Americans are the proudest as well as the freest people on earth, intensely jealous for their liberties and fiercely resentful of any encroachment upon their rights. We know this because we have heard it said. But, for such a nation, we do delight in submitting without a murmur to every annoyance and interference and maddening espionage and regulation that our rulers take it into their heads to inflict upon us. Was there ever such a bit of small-minded and vexing tyranny of power as our new Treasury regulations about sealskin cloaks? Ladies sailing for Europe have to get a "certificate" that their cloaks are really their own, and that they were made up before pelagic sealing was made illegal; otherwise, their property will be confiscated on their return. Arriving passengers will for some days be in uncertainty and in terror lest their sealskin garments be stripped off them in the custom-house, and they turned out shivering into the streets of the second city in the world. On Sunday in Detroit, family groups strolling on the bridge to the Canadian shore were stopped and warned that if the ladies wanted to bring their sealskin cloaks back they would have to take out the "certificates." The vexation and meddling could not well be more intolerable.

But does anybody complain? Does any indignant husband write to the papers? Does any exasperated woman acquire an unwonted volubility on the subject? Are there protests and appeals addressed to Congress? No, the untamed American takes it meekly. It is just one of those "queer" things about the tariff which we shrug our shoulders at and say nothing. But if such a thing had been attempted in an enslaved country like England, the papers would have been filled with angry communications, the Government would have been deluged with inquiries and threats. A mere dog-muzzling order last summer raised such a row that the Ministry were frightened out of their senses. Such an offensive law as this stealthy enactment of ours about sealskins would be enough to upset an English government. But the haughty American bows his neck and bares his back without a whimper. We must say that there is something significant in these attempts of our rulers to take away our clothes. First they made their law—their "breech-clout legislation," as we called it at the time—to prevent people from bringing clothes from Europe. Now

they expect us to act on the Scriptural principle of giving our cloak also to the man who has taken away our coat. But why this zeal to make us go naked? Is it not a symptom that Dingley is really a barbarian at bottom, and that, in his laws, he is but enacting the part of the "civilized" Patagonian, of whom Darwin tells, who threw away his clothes when with his tribe again, and showed himself the howling savage he was?

The developments about the nomination of Charles P. Bryan as Minister to China illustrate perfectly the absurdities of the system by which places in the diplomatic service are apportioned. Mr. Bryan had no fitness for the Chinese mission and no special desire for it; indeed, he picked it out only because it seemed to be the best place that had not already been disposed of, and what he wanted was a good place. When certain Republican Senators, who had learned what a "fresh" young man Bryan was, protested to the President against sending him to so responsible a post, Mr. McKinley set out to see if something "equally as good" could not be provided for the Illinois office-seeker without the risk to American interests involved in sending him to Peking. A plan was suggested by which Mr. Newell, who is considered a more capable man, might be transferred from the Netherlands to China, Minister Conger from Brazil to the Netherlands, and Mr. Bryan sent to Brazil, where there is nothing to do, and the same salary (\$12,000) as in China. But this change fell through because the Minnesota friends of Minister Newell said that he was so comfortably placed at The Hague that he was disinclined to go to China, although his salary is only \$7,500; and "thereupon," it is announced, "the President decided to let the Chinese appointment stand." Thus do we show "the heathen Chinese" the superiority of Christian civilization in the art of government and secure the China trade.

The discursiveness of Gov. Black's message is a distinct sign of Plattism. During the city canvass we could not get a Platt man to discuss city affairs. He always wanted to discuss silver, and Hawaii, and the tariff. Nothing is a better mark of good government than the practice on the part of officials of keeping to matters which concern them. Relevancy is the chief mark of efficiency. For instance, the Governor admits that the State, through its "labor bureaus," has done all it can for labor. But he then goes on to talk of things with which he has, as Governor, nothing to do, and what is worse, which he evidently does not understand, making one regret more than ever that he should have said so much about the civil service. Lamenting over disputes between

laborers and employers, which are simply disputes about prices, and are no more preventable than disputes about the cost of clothing, he makes the following remark:

"If present conditions continue, disputes will frequently arise, and I believe it would be wise to encourage the method of university settlement. No man can be a fair judge who does not understand both sides, and while he may acquire this understanding after the trouble has arisen, his capacity to effect a settlement is greatly reduced because of the inflammation which invariably goes with a declared grievance. It is not only harder to settle a dispute when opponents have come face to face, but in the case of labor troubles large sums of money are lost while the dispute goes on. The plan of university settlement is not so much to compose differences as to prevent their occurrence. Its wisdom is obvious."

Now, this makes a little "intolerant criticism" absolutely necessary. There is no such thing as "a method of university settlement," either for composing differences or preventing their recurrence. If the Governor knew what a "university settlement" was, he would not have made this ludicrous observation. He made somewhat the same mistake last year, but as no one in politics called his attention to it, he seems not to have given himself the trouble to make inquiries about the matter. A "university settlement" is so called because, as a rule, provided by university graduates, here and in England. It consists in a house built or hired or furnished by such men and their wives, like Toynbee Hall in London, and in which they reside all or part of the year, for the sole purpose of promoting friendly social intercourse between the different classes of society, by lectures, concerts, conversaziones. No university settlement has ever thought of acting as an arbitrator in labor disputes. If it did, it would soon become worthless. The settlements have no qualifications for such a task. There is no "university settlement" method of doing so. The whole scheme and purpose of these settlements was explained by Canon Barnett of Toynbee Hall in the *Nineteenth Century* for December. The rôle the Governor has assigned them is the product of a lively imagination.

It was clearly a Tammany belief at the opening of the legislative session that a "deal" with Platt at Albany might be arranged, otherwise Tammany statesmen would not have been introducing measures which could be passed only with the aid of Republican votes. They have presented in both houses a bill to give the Mayor power to remove members of the Board of Education, and have been considering the preparation of others to abolish the Court of City Magistrates and possibly the Board of Rapid Transit Commissioners. There could be no hope of passing such measures except through a "deal," and it is

difficult to see why they should have been presented if there had been no expectation of passing them. At the same time, a "deal" to be effective must include acquiescence by the Governor in the resulting legislation, and even so defiant a scornor of "intolerant clamor" as Gov. Black might well hesitate before openly allying himself with Tammany Hall. Indeed, the announcement is made, apparently by authority, that he will not sign any bills of this sort. The fact is recalled that he blocked some measures of the same nature which were favored by the Platt machine at the last session, and there is certainly every reason why he should maintain such opposition now.

We are glad to see that the Civil-Service Reform Association is determined to keep up the fight for reform more vigorously than ever. The curse of our politics is that the old American tradition which made graceful submission to defeat at the hands of honorable opponents who were only seeking the same ends in a different way, is still preserved in dealing with people who are no more a political party than a party of safe-robbers, and seek nothing from the community but its money. It is almost ludicrous to see self-respecting citizens kissing the hands of these people as their masters, and offering to help them, simply because they have been knocked down and their purses taken. Tammany is to-day making a clean sweep of the city offices. There ought to be a political party to resist the process, as far as the law allows, in the name of good government. There is no such party. Our policemen have joined the burglars, and they are all "having a little something" together. We must, therefore, be grateful to the Civil-Service Reform Association for keeping the flag of decency and order and law still flying, by reminding the eminent Coler that the civil-service rules of December 31, 1897, are still in force, that under them no man can be appointed except after open competitive examination, and no member of the classified service can be removed without reasons in writing and opportunity of defending himself. Consequently, if Mr. Coler pays any man who has not been so appointed, he is personally liable for the amount he pays; if he refuses to pay a man who has not been so dismissed, he can be enjoined. The Association will put the law in force if necessary. We only hope the office-holders will assist it by standing their ground. The practice of running away when a Tammany man appears to take the place, is treason to the government and the law.

The letter which Mr. Roberts, Comptroller of the State, has addressed to Mr.

Aldridge of the Public Works Department, upon the subject of canal improvements, depicts what has been from the outset the inevitable sequel of the latter's appointment by Gov. Morton in 1895. Mr. Aldridge was credited with saying at the time of his appointment that it was his intention to "make the canals Republican." Mr. Roberts shows that this is what he has been doing. Mr. Aldridge had been an active Platt politician for several years, and was an avowed believer in machine politics. Almost his first act on entering office was to defy the civil-service law of the State in regard to the selection of subordinates in his department, and nothing but a decision of the Court of Appeals availed to convince him that he must obey the law. He seems to have been taking the same contemptuous view of the law in regard to the expenditure of the \$9,000,000 voted by the people for canal improvement. As Mr. Roberts says, the people voted this expenditure upon the statement and understanding that the contemplated work could be completed for that sum. Mr. Aldridge has been at work on a totally different basis, knowledge of which he has concealed from at least two of his fellow-members in the Canal Board, the Comptroller and the Attorney-General. These officials say that they gave their approval to the plans for the expenditure of the \$9,000,000 with the belief, based upon Aldridge's statements, that the entire work would be completed within the appropriation. Now they learn from Aldridge that at least \$7,000,000 more will be necessary to complete the work, and they are asked to support him in a request to the Legislature to authorize this additional expenditure. The Comptroller refuses to do this, on the ground that so large an additional outlay ought not to be undertaken until formally authorized by the people. He says with unanswerable force: "It would appear to me that we have no right to assume that the people would have authorized the expenditure of \$16,000,000 for this improvement simply because they authorized the expenditure of \$9,000,000, or that they would have authorized the expenditure of \$9,000,000 had they realized that that sum would only half do the work." This style of reasoning, however, will seem very childish to Aldridge and Platt.

The extraordinary excitement in France over the Dreyfus affair, renewed as it is just now in the trial of Count Esterhazy, arises from the stirring of two powerful passions—those connected with the national defence and with anti-Semitism. Anything that touches the army has, since 1870, touched the heart of "mutilated" France. Plans for revenge on Germany are not doubt extremely vague in the French mind, but their very vagueness gives the

best opportunity in the world for all sorts of wild fears to be excited in connection with them. If the army is as unready as it was in 1870, if the plans of mobilization are sold to the Germans, Frenchmen think themselves "betrayed" again, and there is no more furious being in the world than a Frenchman who thinks himself betrayed. But the peculiar exasperation due to dislike and dread of the Jews has to be added in to account for the pitch of popular frenzy which the Dreyfus affair has touched. Other officers have been tried and convicted for selling documents relating to the national defence, and no national explosion followed. In 1890 Lieut. Bonnet was convicted at Nancy of this offence; in 1888 an adjutant was found guilty of a similar crime; the same charge was fastened upon Capt. Guillot in 1895. But they were not Jews, and Dreyfus was. That he was rich, and that therefore no motive for his treachery could be produced, of course only heightened his offence in the popular mind; it was just that kind of causeless crime which his race was famous for. As the *Anti-Semite Libre Parole* said, from the beginning, "The officer is a Jew," and that was enough. The Minister of War and the court-martial continue to assert that the proof against Dreyfus was conclusive. It would seem highly desirable to publish it then, inasmuch as the only documents which have been published turn out to be far from conclusive.

The German logic in the argument for a big navy is as hard to follow as that of our own reasoners on the same subject. Look at our beggarly array of war-ships, said William to the Reichstag; actually fewer now than in 1885. How can you expect to develop a foreign trade with no fighting-ships to protect your merchant marine? But we thought, timidly interposed some one, relying on parliamentary privilege to escape a prosecution for treason—we thought our foreign trade had been increasing rather remarkably. Of course it has been, triumphantly reply the German Admiralty, and print figures to show that Germany's foreign commerce expanded more than \$200,000,000 between 1881 and 1895. Well, how could that be with the battle-ships actually diminishing? And if trade has been doing so well without a big navy, why must we have a big navy in order to make trade do well? Look, to the merchants, the theologians say, the naval logic is not at all sound. The answer is that we are a strong, enterprising, inventive people, but we shall not remain so unless we have a big navy. The answer is that we are a strong, enterprising, inventive people, but we shall not remain so unless we have a big navy. The answer is that we are a strong, enterprising, inventive people, but we shall not remain so unless we have a big navy.

*THE CHAMBER OF COMMERCE
AND CURRENCY REFORM.*

The prompt and cordial response given on Thursday by the Chamber of Commerce to the call for the reassembling of the Indianapolis convention was a very encouraging symptom. The remarks made by Mr. Rhoades, Mr. Dodge, and others, implied that the commercial interests of New York approve of the report of the Monetary Commission, and that they may be counted on as the supporters of a vigorous movement for currency reform. The brief speech of ex-Secretary Fairchild, giving some account of the reasons governing the commission in reaching their conclusions, received the warm applause of the Chamber.

In this speech we desire to draw attention particularly to the concluding portion, which explains why the commission saw fit to endorse the plan for banknote issues based upon the assets of the banks. It is agreed upon all hands that if such note issues can be made safe—that is, if they can be so made that the noteholder shall in no case be a loser by accepting them—then such a system is much to be preferred to the present system of bond-secured note issues. The reasons why it is better are that it is less expensive, more convenient, and more responsive to the exigencies of trade. It is less expensive because the bank is not obliged to invest its capital at the outset in Government bonds which command a high premium in the market. The primary object of banking is to collect the little streams of floating capital in the community into a common reservoir and use the same for the discount of commercial paper—in other words, to furnish ready means to the producers and dealers in goods, thus quickening the industries of the locality and bringing a return to the owners of the capital so employed.

This is the main part of the credit system of modern times, of which banknote issues are one branch, but not the largest division. The largest branch is the system of checks and deposits, as to which no Government-bond security is required, and upon which no limitation is put by law except that a certain reserve of cash shall be kept in proportion to the deposits. Note issues are liabilities of the bank of identically the same nature as deposits, differing only in the time that they usually remain outstanding. They circulate rather more widely than checks, but they are payable out of the same fund, and usually in the same way. Ordinarily the notes would be as safe as the checks, even without any Government interference. But it is indispensable, for various reasons, that the notes should be safer than the checks—in fact, that they should be perfectly safe. It is acknowledged that anything short of this—any system which should leave a workingman ex-

posed to the loss of his wages by bad banknotes—would be swept aside with popular fury upon the first occasion of such loss. No such system could survive, or ought to.

The plan proposed by the Monetary Commission has certain safeguards intended to prevent any such loss. These are matters of detail. The fundamental principle, as stated by Mr. Fairchild, is that everything of a pecuniary nature, including the Government credit, is based upon the business transactions of the people, that these business transactions are for the most part carried on through the medium of the banks, that the assets of the banks are the kernel and essence of the whole mass, and that if, at any particular time, they are not sound, we are all bankrupt, the Government included. This is demonstrably true. It is patent at a glance. Therefore, the plan of banknote issues based upon the assets of the banks is philosophically sound, and it is only necessary to provide against sporadic cases of failure, and against premeditated swindling, in order to make such issues safe in all cases. This it is proposed to do in part by a system of mutual insurance through the medium of a common guarantee fund.

The advantages of such a system in a financial sense have been often explained. Are there not advantages of a political sort also to be looked for? The demand for the free coinage of silver in the Southern States (without whose co-operation free coinage as a political issue would disappear in a twinkling) has been based on the idea, honestly entertained, that that was the only way by which a sufficient amount of currency could be obtained to meet the wants of trade. It is useless to argue with a man or a community in whom this conception has gained lodgment. The only thing to do is to put before that community some better remedy for the supposed evil. That the South is open to conviction in this way there is abundant reason to believe. At all events, the present is a most favorable time for testing the disposition of that section. If her people are offered the opportunity to issue banknotes without a previous pledge of Government bonds, but with adequate safeguards for the goodness of the notes, and if they still prefer the free coinage of silver at the ratio of 16 to 1, then we shall at least know where we stand. We may begin to buckle on our armor for the same sort of campaign in 1900 that we had in 1896. But in no case should we support any system of banknote issues that we did not regard as absolutely sound.

OPTIMISM AND PESSIMISM.

If a business man, seeking credit from a bank or from a fellow-merchant, were asked on what he based the ex-

pectation that he should be able to meet his notes at maturity, and were to say, "I do not know exactly, but I am a lucky fellow; no serious misfortune has ever happened to me, and I feel sure all will come out right in the end"—would the bank or a fellow-merchant be satisfied and let him have the money? If the general of an army opposed to Napoleon, or Moltke, or Grant, were asked for what reason he thought he should beat him, and were to answer that he had no reason except the abundance of his resources, or the goodness of his cause, would his Government be apt to let him try his fortune? Would it not be dreadfully frightened, and look about at once for somebody who had a plan of campaign and knew how to manœuvre an army? Is there any department of human activity, except government, in which an optimist has any standing, or is listened to? None, so far as we know. In human business, naked, unaided optimism, optimism which has nothing to rest on except buoyancy of temperament, has no place. It would speedily ruin any human undertaking. What successful business rests on is thinking clear and seeing straight, and leaving nothing to chance which can be kept from chance. What the business man seeks is a clear, dry light, not a rosy light, or a pink light, or a "dim religious light." An optimistic bank or an optimistic dry-goods house would soon have a visit from the sheriff. An optimistic business man would soon become a penniless laughing-stock. The type of such men is Wilkins Micawber, who is always waiting for "something to turn up," and believing that it is sure to do so.

But this optimism, which has to be so sternly denied a place in business undertakings, actually has complete control of our government—so much so that any attempt to question, decry, or criticise it is treated as what is called "pessimism," which to many minds is a kind of disease, whereas in nine cases out of ten it is simply the application to politics of business principles. It is passing judgment on politicians and measures by the same rules by which men carry on trade or commerce, and keeping a constant watch against self-deception. Baseless optimism is the characteristic of children. A child, from want of experience, thinks he shall be happy and well to-morrow because he has been so to-day, and he naturally hates the man who bores him with warnings about the quicksands and snares of life. A successful man knows something of contingencies, and succeeds by providing against them.

A very striking illustration of the way optimism works in politics may be found in Mr. Dingley's financial career. In Congress, he alleged, without any data to go on, that the additions to the tariff which he proposed would increase the

revenue by \$113,000,000. This was the amount by which he *wished* to increase it, and he said, therefore, that this was the amount by which he *should* increase it. The pessimists told him this was a mistake, and instead of an increase, he has a deficit of over \$40,000,000 in the first half year. But you may be sure he hates the pessimists. Again, some New York tailors told him that by annoying European travellers returning in the fall, overhauling their baggage and levying duty on their wearing-apparel purchased abroad, he would secure \$10,000,000. He believed this story, because this was the amount he wished to get from this source. Well, in the month of September, when most travellers return, he got \$96,000. In the other months he probably did not get half as much, and if he has got \$400,000 in all in the six months, it is the very outside. For this he has exasperated thousands of his countrymen, and made his government the laughing-stock of foreigners. But we may be sure he damns the pessimists.

Another illustration is the career of Platt. Platt has been coming for fifteen years—that is, slowly building up a machine like that which the Democrats constructed under Fernando Wood, Tweed, and Hill. He has done it all in the light of day, in the presence of all the people of the State. Every year has seen a little addition made to his power; has seen the influence of enlightened and educated opinion on the State Government gradually diminishing; has seen the habit of open discussion declining; has seen the passage of the Legislature and of the high officials more and more under the control of this one corrupt and ignorant man—has seen, in short, the gradual disappearance of the old State of New York, the State of Marcy, and Silas Wright, and Seward, as a political organization. All this time the pessimists have been pointing out how, according to all human experience, this would end; but it was not till Platt owned the Legislature, like cattle, had made himself Senator, like Tiberius, had committed every kind of fraud in support of his power, and had combined with Tammany to hand the city over to the hordes of corruption, that the optimists could be induced to say a word or lift a finger against him. They are busy now warning, and denouncing, and lamenting, but they remind us of bank clerks who, after having allowed strangers to rove about the building and visit the vaults for days, should begin to descant on their rascality when they found the securities gone. Any one may read in Friday's *Tribune* what is really the wall of the optimists over Platt's gross abuse of the confidence of his unsuspecting countrymen.

One of the worst features of political optimism is its crass reliance on material prosperity. In this field it has,

of course, an easy victory over the pessimists. Nothing can hinder America from being the greatest money-making country in the world for centuries to come, except loss of security for property, which is not in the least likely to occur. No matter what changes of government may take place, whether we live under a free constitution, or a Cæsar, or a boss, we may be sure population will grow, the revenue swell, the hotels become more gorgeous, the teas and luncheons and the private cars become more numerous. No pessimist who is not a blockhead will deny this. But what about the old American government, "consecrated by the prayers of Puritans and the blood of patriots," as Wendell Phillips said—the government of free men, "knowing, uttering, and arguing freely, according to conscience"? Where will this be? Is optimism saying it? Has optimism as yet provided means for its rescue from foreign malice or domestic treason? The very worst feature about political optimism is the utter indifference to *tendencies* which it teaches; and yet tendencies to the good citizen are what rocks are, or ought to be, to the careful seaman. Nothing in the great ocean of modern democracy needs closer watching. Optimism teaches us to pay no attention to them, but, when we see something unpleasant occurring, to dismiss it from our minds and "whoop her up with the boys." So our city to-day is in the hands of a band of ignorant foreigners, acting in concert with a band of knavish natives, and we are furious with any one who reminds us that nearly all great evils have small beginnings.

"STRAIGHT LINES."

There never has been any telling what new phase the Hawaiian question would next take on. New reasons for annexing it crop up nearly every day. The Government was overthrown by missionaries' sons on account of the heathenism and unchastity of their own converts. It was then proposed that we should annex it lest England should get it, though it had long been formally announced that it was under our protection, and that we should not allow any other Power to take it; so that we had then to believe not only that England would take it, but that she would go to war with us to get it. On England's failing to lay claim to it, we were to take it as "a key to the Pacific." We then all went to work to discover what "a key to the Pacific" was, and all we could learn was that "a key to the Pacific" was an island in the Pacific where we should invite foreigners to come and fight us. But here Capt. Mahan intervened in an unseemly and unpatriotic fashion by saying boldly that an island in the Pacific would be of no use as a place to fight in, unless we had a fleet to

protect the island; that to make an island a "key," it has to have fleets to anchor around it, and that we had no fleet ready, and were not likely to have one for some years. This seemed to bring the discussion into an *impasse*. A great silence came on the Hawaiians as soon as they found they were of no good as a "key." So they waited to see what would happen next. The key theory had been their main reliance, and its breakdown seemed to paralyze them.

Light suddenly came from an unexpected quarter. As soon as the Consecrated Person sent Our Brother to China to seize the Bay of Kiao-Chau, the Hawaiians felt that their clock had struck twelve. Russia and Germany were going to seize bits of China; this showed at last—that we should seize a bit of China? that we should enter into an alliance with England and Japan in order to get a fair share of the booty from Russia and Germany? Heaven forbid. "Such a thing is not for a moment to be supposed." What it showed was that we should seize Hawaii. It proved the futility of all the leading arguments against the seizure—the sudden departure from our traditions; the absence from our system of any machinery for governing dependencies; the admission of alien, inferior, and mongrel races to our nationality; the opening of fresh fields to carpetbaggers, speculators, and corruptionists; the un-Americanism of governing a large body of people against their will, and by persons not responsible to them; the entrance on a policy of conquest and annexation while our own continent was still unreclaimed, our population unassimilated, and many of our most serious political problems still unsolved; and finally the danger of the endorsement of a gross fraud for the first time by a Christian nation. All these things the Consecrated Person disposed of at one stroke by seizing Kiao-Chau Bay.

The absence from this reasoning of an undistributed middle at first plunged us in perplexity. But it seems that there is no middle term in it of the ordinary kind, and we are not to look for one. The syllogism runs in this way: The Consecrated Person has seized Kiao-Chau Bay; if we draw a straight line from San Francisco to Hong Kong, or from Victoria to Sydney, or from Nicaragua to Shanghai, it will pass through Hawaii; therefore we should annex Hawaii. This conclusion seems overwhelming if the straight lines aforesaid really pass through Hawaii; we should be the last to resist such ratiocination. But do they? All depends on this. In a little work published by the Hawaiian Government, which lies before us, there is a map which shows that a straight line from every important place on earth, if drawn carefully with a ruler, does pass through Hawaii. Straight lines on this map from Port Stanley, Valparaiso,

Lima, Panama, New Orleans, San Diego, Portland, San Francisco, Victoria, Sitka, Bering Strait, Kamtchatka, Katar, Yokohama, Shanghai, Hong Kong, Hue, Singapore, Borneo, New Guinea, New Hebrides, Sidney, Auckland, and Tahiti, all meet in Honolulu. It seems as if more "straight lines" meet there than in any other place in the world, and they undoubtedly suggest the conquest of all the places they start from, as part of the great work before us.

But, being of a cautious temperament, we looked at the official Pilot Chart of the North Pacific, issued by the Hydrographic Office in Washington, and we found, either that the Hydrographic Office had been "got at" by the British, or that "the straight lines" did not get to Hawaii in the manner described by the missionary government. The only lines which meet in Honolulu are one from San Francisco and one from Yokohama, and one from Hong Kong. But they are not straight. That from San Francisco deflects about 15 degrees south, and that from Yokohama about 10 degrees. Hong Kong is the only place that sends a line approaching to straightness, to Honolulu. It is only the Hong Kong steamer that comes in honestly, or can be fairly used by us to justify annexation. We can find no precedent for using as "a key" any island which could not be approached in a straight line, and we think every government should be careful to have lines drawn on its maps that will support its policy. Railroad companies are always mindful of this in making their maps. Their own line is always the shortest between any two given places, and the places it reaches are always the principal ones. If we are to annex by lines, we must see that the lines are straight, and that there are plenty of them. We must not allow our maps to be got out by ignorant astronomers or navigators. Lively "American" newspaper men are the people for that sort of work. A map constructed by them of any sea, inlet, island, or bay is sure to show that we ought to have it, that we always owned it, and that, if we do not take it, two Powers at least are waiting to grab it or buy it.

TRoubles OF THE FRENCH PRESS.

The report that a more stringent libel law is to be pushed in the Chamber must surprise those who know how stringent the French law of libel already is. Our leading editors would go to jail in a body if they were living under it. The most violently suspect politician, the all but proved rascal, is safe, under the French law, from having his name banded about in the newspapers as with us. All must be done by way of insinuation. Thus, when the scandal of the sale of Legion of Honor decorations in Presi-

dent Grévy's time came out, the *XIXe Siècle*, which fired the train, and which had all the facts and all the names in its possession, had to be very guarded. Instead of naming outright the trafficking General, it could only say that he was "un officier général porteur d'un nom historique." So the woman in the case, Madame Limouzin, could be alluded to only as a "certain lady living not far from the Arc de Triomphe."

The French newspapers have long had a bad name, and, we fear, with warrant, for venality. This may be due in part to the fact that they have not built up such valuable business properties as we know all our newspapers to be—on their own confession. Without a large income from advertising, the newspaper proprietor, who "must live," has in France had peculiar temptations when an Arton has a Panama "campaign in the press" to make, and 2,000,000 francs to do it with. But it is not because their columns are more than ever purchasable, or are thought to be, that the new complaint against French newspapers has made itself heard, and is believed to inspire the attempt to increase the risks and penalties of libel by the press. The trouble lies in practices borrowed from the most offensive English and American newspapers. What the French call "reportage" has grown portentously among them in recent years. The lying interview (the introduction of the thing has compelled the poverty-stricken French language to invent the verb "interviewer"), the exploitation and glorification of crime, the frothy blowing up of the trivial and of empty gossip—all the peering and prying and impudence and insult which we know so well under the name of reporter's enterprise, has made its way into French journalism to the dismay of its victims.

In the recently published 'Mémoires' of M. Goron, ex-Chief of the Paris "Sûreté," he has a chapter devoted to the press in its relation to crime. It is curious to see our most advanced newspaper methods there reproduced. The French press, too, is coming to have its sleuth-hound reporters, keener of nose than any Javert that ever lived, able to see deeper into a millstone than Sherlock Holmes; and as for comparing them with any mere policeman or detective, why, the thing is absurd. In Paris as well as New York the reporters drive the police authorities frantic with their meddling, their rage for defeating justice by indiscreet publicity, their advising criminals of the steps taken to effect their capture. M. Goron intimates that more than one fleeing felon has owed his escape to a friendly hint conveyed to him by the *Petit Journal*. So high had the evil mounted that M. Goron's predecessor determined at one time to shut his door in the face of all reporters, to give them absolutely no news. But they at once turned upon him so savagely as

the greatest criminal going, and proceeded to make his life so miserable, that he was forced to rescind his obnoxious order. His only resource was to make his "renseignements" to the newspapers as mysterious and misleading as possible.

All things come at last to the novelist in France, and so we have the French reporter, new style, made the subject of a realistic "roman contemporain." The book is by M. Paul Brulat, and he entitles it 'Le Reporter,' warning the reader that it is only "the first volume of a series on contemporary journalism." This of itself suggests that a new journalism has grown up in France to be studied—and why should it not be? asks M. Brulat.

"Why should the press escape the investigation which we moderns apply to all worlds, to all professions? We have studied judges, priests, soldiers, workmen, peasants, tradespeople, politicians—why not journalists? The press which denounces, attacks, scourges, assumes the right to expose all abuses and redress all wrongs, can scarcely expect to remain unassailable, to withdraw itself from criticism. . . . Why should it dread the results of an impartial scrutiny of itself? It certainly can lose nothing by having the truth known, so great is the zeal of journalists in discrediting each other."

Under M. Brulat's realistic pen a sad picture comes out of what Gaston Deschamps calls, in the *Temps*, the "stupefying progress and the monstrous methods of reportage." One would think, he says, to judge from the growth and popularity of this kind of journalism, that the French nation was made up solely of hysterical *concierges*. Thus we see how our Servant's Own newspapers are extending their conquests. Nor does M. Deschamps omit to ask what is the complicity of the public in the monstrosities of journalism. It is for each one, he writes, to make an examination of his conscience on this subject. Do peaceable citizens like a daily douche of filth and crime and scandal? If not, why do they appear to like it by patronizing those who put it on sale? We wearily recall asking such questions ourselves more than once, and if M. Deschamps gets a rational answer to them, he will be luckier than we have been.

If unable to suppress or discourage an irresponsible, a crime-loving and crime-breeding press, how can we arm ourselves against it? How can we help the public mind to free itself from its terrors? This, too, is a question which they are asking in France, and one of the most sensible answers we have seen is that given by M. Raymond Poincaré in the *Revue Bleue*. A first step, he says, is to free ourselves from the superstitious regard for the printed page. There is, indeed, something besotted, something Arabic, in the awe of otherwise sensible men in the presence of a few lines of print. There it is in the papers! But, as M. Poincaré says, the very absurdities of the typographic gods thus worshipped are working their ruin. Even unedu-

cated people are beginning to say that an extravagant article in a newspaper is of no more account than the maunderings of a drunken man in a café—perhaps it is really just that, only with the advantage of being in type. This is a great gain. To know Mumbo Jumbo of the press for the toothless old idol he is, is the beginning of better things. Then, as M. Poincaré adds, it is necessary for honest men to cultivate the new form of courage which the excesses of the modern press call for. They must learn to despise its attacks, to condemn and denounce its lies, to loathe its grossness. When we come generally to treat a coarse mountebank who has managed to possess himself of ink and paper and a cylinder press, as still nothing but a coarse mountebank, and leave off silly talk about "editors" and "the press," we shall have done a good deal towards driving back into its native sewer much of what passes for news and journalism.

IRISH AFFAIRS.

DUBLIN, December 25, 1897.

The Irish land question, as usual, is occupying a large share of public attention. The last Land Act was passed in 1896, and was a patch on the former medley of land laws. It purported to make great changes in the existing system, but one of the reasons why laws in Ireland fail in their intended effects is, that their administration is usually placed in the hands of persons who abhor the principles on which these laws are based, whose practice, if not whose object, is to make out that the new and disliked law means nothing, or as little as possible. And so it has been with the Land Act of 1896, which was passed through the House of Commons with enormous trouble, but also with much haste.

After two refusals to appoint a commission to inquire into the operation of a law that had not so far had any effect, Lord Salisbury at length surrendered to the landlords and appointed a commission of inquiry. It then appeared that what the landlords objected to was not the recent law, but all the laws regulating the relations of landlord and tenant and protecting the expenditure of Irish farmers from being confiscated by their landlords. Common decency would have required that at least one representative of the tenants' interests should have been placed on the commission. It consists, however, of (1) an English ex-Judge, Sir Edward Fry, an admittedly able and upright man, but steeped in the old and narrow traditions of English lawyers as to the rights of landed property; (2) a London surveyor and valuer, conversant with city property; (3) a Scotch agricultural surveyor; (4) an Irish landlord of the most aggressively violent type; (5) a solicitor whose principal business has been selling landlords' estates at high prices to the tenants.

The proceedings of this commission have not appeared to be very fair. Contrary to the usual practice, they have allowed counsel to conduct the inquiry instead of doing so themselves; knowing that the landlord organization had procured the best counsel obtainable for money, while the tenants had merely some junior barristers of little or no

experience in the land courts. Landlord witnesses have been allowed to express their thoughts and beliefs, to tell what they have heard and suspected, to ramble all over the land controversy and dilate on their alleged grievances; while tenant witnesses were sharply checked, told that what they were saying was not legal evidence and could not be received, and were allowed to be bullied and brow-beaten by the landlords' counsel, and generally hurried out of the witness-chair instead of being questioned at length on the points to be inquired into. At these inquiries it is impossible for a witness to state his views unless questioned skillfully and sympathetically; he is not allowed to make long statements, or anything in the nature of a speech; he is effectually shut up by being asked a very few unimportant questions, and then, "Is there anything else you wish to say?" He has attended in the belief that the commission want to get information from him, and finds that all they want is to get rid of him as quickly as possible.

The ignorance shown by the three British Commissioners of the conditions of Irish land tenure and of the Irish land laws is illustrated by their frequently asking the tenant witnesses, "If your rent is too high, why don't you surrender your farm to the landlord?" as if they were quite unaware that most Irish farms have been created by the tenants, and that their present value is due to the tenants' expenditure in building, draining, fencing, reclamation, and road-making. These Commissioners have not yet taken in that the law purports to give the tenant a right to hold his farm at a rent less than its present fair value, by the amount the tenant has contributed to make the farm of that value. It would be as reasonable to tell the Esquimaux that if the conditions of life in Greenland don't suit them, they can go away and live in London. The population of Ireland are not farmers by choice, but from the necessary force of circumstances; in the past they have shown a very great willingness to go away when it was possible. Even now it is the aim of many young people to save enough money to take them to the United States, though their parents, naturally enough, desire to keep them at home. Thousands of young people would still gladly leave Ireland if they had the means to do so, but only because the conditions of life are still such as to make comfort and independence impossible. The main question for the mass of the people is whether they can have their farms at such rents that they can "live and thrive." If they have, they may defy the landlord and his bailiffs, but unless rents are low, there can be no security for home or household. Eviction notices for impossible rents have already deprived hundreds of tenants of the qualified security of tenure which the Land Law of 1881 purported to give them.

The late spring and the cold wet summer of the past year almost completely destroyed the oat and potato crop in the poorest parts of the country, and the population of many districts is now face to face with famine. Already deaths are reported, not from starvation, but from eating diseased potatoes, and from fever of an epidemic character. Although "fair rents" are supposed to have been fixed by the Land Courts, no rent, in the economic sense of the term, has been earned from the land. It is claimed,

nevertheless, and may be enforced by seizures of what goods can be seized, or by eviction. It has never been possible for the farmers in these districts to accumulate capital on which they could draw for support in years of scarcity. Stuart Mill's explanation of Ireland's poverty is still true of many large areas. "Returning nothing to the soil," he said, "the landlords consume its whole produce minus the potatoes strictly necessary to keep the inhabitants from dying of hunger." It is not possible to get exact figures on the subject, but it seems probable that at least £1,000,000 a year of rent is paid in Ireland by means of remittances received from friends and relatives in America and the Colonies.

The autumn speeches of political leaders of all parties have been devoted, not only to criticism and defence of the present Government's actions, but to the formulation of programmes for the coming session of Parliament. What is termed the alliance of the Irish Nationalists with the English Liberal party has been the subject of much discussion; but no such alliance exists. The Nationalists have, naturally enough, given a general support to the party that brought in the Home Rule bill, but have voted against them over and over again when that party, from the Irish point of view, was in the wrong. The Nationalists have been challenged to require from the Liberal party, or its leaders, pledges to put home rule in the forefront of its programme. But such pledges would be worthless unless the relative strength of English parties enabled Irishmen to compel their fulfilment. It is most improbable that the Liberals should ever have a majority in the Imperial Parliament without the help of the Irish, and only a united Irish party will enable the Liberals to make home rule an effective plank in their platform. Some of the staunchest English adherents of the home-rule cause hold that until manhood suffrage is established, and the House of Lords reformed, abolished, or limited in power, no measure of home rule can be passed. It is manifestly useless passing any measure which it is known that the House of Lords can reject with impunity. Until the Liberals are in power, it would be quite premature for Irish parties to define what their action is to be. If it seems desirable to support manhood suffrage and abolition of the House of Lords' veto as a means to passing a home-rule bill, it would be both right and expedient for Irish members to do so.

The recent speeches of John Morley, Herbert Gladstone, Asquith, and other prominent English Liberals indicate that they are as firmly convinced as ever of the necessity of home rule for Ireland, in the interest, not only of Ireland, but of the British Empire. The Liberal leaders, however, show a great lack of affability and frankness towards Ireland. Their party can scarcely hope to return to power without the aid of the Irish Nationalists. But the English Liberals never speak in Ireland. If the leaders of the Liberal party made a practice of coming over here and declaring, not their programme in detail, but the principles on which they proposed to act towards Ireland, they might secure the support and the hearty coöperation of the mass of Irish voters. We have no doubt been fooled over and over again by promises from both English parties; but when the choice lies between the Conservatives and the Liberals, there is no

doubt that the majority in Ireland would support the party which advocates home rule and equal and simultaneous legislation for the two countries.

The overtaxation of Ireland continues to engage increasing attention. The Unionist party have now taken up the question with a good deal of the zeal of converts. The decreasing population of Ireland, and its decreasing capacity to bear fiscal burdens, become more manifest every year; they contrast so strongly with the growth of population and prosperity in Great Britain that the unfairness to Ireland of the existing fiscal system can no longer be questioned. The report of the Royal Commission, presided over by Mr. Childers, three years ago, was conclusive, but highly embarrassing to the present Government, which announced that another commission would be appointed, practically to refute the conclusions of the former one. This has never been done; and it is well known that the reason is that the Government cannot get the services of men of sufficient eminence for their opinions to carry any weight, and subservient enough to report the conclusion wanted. The grievance is one which Irish Nationalists have never ceased to expose; the Irish Unionists are now convinced; but it is doubtful whether their convictions are strong enough to make them stand shoulder to shoulder with the Nationalists, and vote against the Conservative Government on vital questions as a means of compelling attention and action.

The promised local-government bill of next session will afford an opportunity for all Irish parties to show some solidarity as to the financial treatment to be accorded to Ireland, and there are many indications that they will do so.

AN IRISHMAN.

LITHOGRAPHS AT DÜSSELDORF.

LONDON, December 29, 1897.

An event that, in Paris, may attract the attention of the world, if it comes off in a small German town will, more likely than not, pass unnoticed. Everybody went to the centenary exhibition of lithographs held at the Champ de Mars in 1895, and everybody talked about it; next to nothing has been said of a no less interesting show just about to close at Düsseldorf. Of course, if this had been merely the Paris exhibition over again, there would have been no reason to speak of it. But, while it covers very nearly the same ground, while it also has its two sections—the one retrospective, the other representative of contemporary lithography—it differs in certain important details. In Paris, naturally, the French lithographers were chiefly in evidence; in Düsseldorf one sees more of the German work, both the old and the modern. Something of the character of the exhibition is explained when I say that it includes but one Raffet, but one Chariet, that there are but six prints by Gavarni, but two by Daumier; though it should be added that if there are only a couple of examples of Delacroix, these fortunately are from his "Faust"—the Margaret at Church and the Witches' Sabbath; designs which are seldom seen now, but were almost his earliest public profession of Romanticism, proving him, it was said at the time, a leader of *l'école du laid*. They strike one now as rather sensational and self-conscious, but they received the approval of Goethe, though this means little. They had a tre-

mendous influence for a while, and they are unquestionably historical documents of great value.

If the comparatively limited number of French prints is a loss to the collection, since it is in France that the art of lithography was first developed and ultimately perfected, on the other hand it was in Germany that lithography was invented, and many of the lithographs shown are closely associated with the history of the invention. When, in 1795, Senefelder, much to his own surprise, and quite by chance, discovered a method of engraving on stone (lithography proper, surface printing, or chemical printing, as he called it, was not evolved by him until three years later), his first thought was to apply it to the printing of music. It is interesting, then, to find examples of the music produced by the Senefelder house at Munich during the very first period of its existence. Six variations for the piano are dated 1800 (the year in which Senefelder went from Offenbach to London to secure the English patent) and signed Theob. Senefelder; Theobold being one of the brothers taken into partnership by Aloys, the inventor, and afterwards the torment of his life. It is interesting again to see a print of 1804, with the title "Polyautographische Zeichnung"; Polyautography being the name borne by lithography at the outset. Another notable print is a portrait of Senefelder, by H. Ott, printed at Offenbach by J. André, one of the house with which Senefelder's early fortunes were so intimately connected. And a clue to his after fortunes is to be had in the portrait of his grandchildren, Louis, Henrietta, and Christine; a lithograph by Llan-ta after a portrait by Ben. Adam, the children's guardian, published at Paris many years later for their benefit, they having inherited, with the family name, little but the family poverty and misfortunes. Work by Engelmann and Lasteyrie, the pioneers of lithography in Paris, both of whom studied with Senefelder, is here; and there are many examples of the copies of paintings and drawings made on the stone by Strixner, Piloty, Hanfstängel, and others.

When Senefelder joined with Baron Aretin to start a new firm in Munich, and the artistic possibilities of his method began to be practically realized, the copying of pictures and designs was the work to which artist-lithographers were put, and Strixner and Piloty were among the first to execute Senefelder's commissions. His satisfaction with them he placed on record in his short Memoir. In the old days, few German artists of distinction ventured to use the stone as a medium of original expression; few attempted to vie with the inexhaustible caricaturists and illustrators of France, the indolent architectural draughtsmen and portraitists of England. It seemed as if Germany was content with the glory of the invention. Of the story of lithography in that country there would be little to tell, from the death of Senefelder until the present, were it not for Menzel; and it is, therefore, only as it should be that Menzel at Düsseldorf is well and characteristically represented. With Menzel, born in the opening years of the century, modern illustration, of which lithography is a branch, virtually begins, and his first work, it should be remembered, was in lithography, and also, strangely enough, some of his most recent. The earliest of his prints now at

Düsseldorf dates back to 1835, the last, "Das Refectorium," belongs to 1860, so that the series is not altogether complete, though it affords ample proof that on stone, as on wood or paper, Menzel was the accomplished draughtsman, the master of his medium. Perhaps the most remarkable print is the very elaborate, highly finished "Christus als Knabe im Tempel," dated 1852, with its marvellous study of Jews.

To come to the modern section is to find the German artist at last, after a long century, beginning to understand the resources of lithography, and to use it as a means of multiplying—not reproducing, as the critics usually describe it—an original design. There is no doubt that the new vitality given to the art has come to Germany by way of France. If it had not been for *L'Estampe Originale*, and other publications of the kind, we might not have had *Pan* or *Jugend*, that extremely clever weekly, now published at Munich. But the younger Germans, wherever they derived their inspiration, have not allowed their debt to others to suppress altogether their own individuality, though they are too ready to cringe before the decayed remains of English Pre-Raphaelitism, and though with many individuality is but another name for affectation. You feel this even in the work of Hans Thoma, distinctly the strongest of them all. Often as his lithographs have been shown in the smaller London galleries, I have not seen such a complete collection as he has sent to Düsseldorf. One may weary a little of the mysticism, at present the fashion, that has guided him in the choice and treatment of his subjects. But Thoma can draw, and most of the modern mystics cannot, their mysticism being a cloak to hide all technical defects. He is a genuine primitive, but whether the resurrection of the technical shortcomings of the primitives is the highest form of art, the future must decide. Personally, I am of the opinion that very little of this sort of work will be heard of by coming generations. More individual really than Thoma are men like A. Frens and Otto Greiner. They, too, are mystics, if you will, but their mysticism is carried out in a modern spirit. They are prophets of the ugly—that is, they give the most realistic renderings of their models—but often the results are very fine, and at times, though rarely, very decorative in the right sense. They have always enough character to be interesting. There are many other Germans who show good or clever lithographs; but to mention them all would be to produce a list of names meaning little in America, where, I fancy, their work is still to be seen. It is more to the purpose to point out that the two great achievements of modern lithography in Germany are, first, the excellence of the portraits that are being made on stone and paper, chiefly by Fechner, Gents, and Kalckreuth; and second, the beauty and distinction of the color work. This has absolutely nothing in common with the chromolithography of commerce. The effect is at times produced by using one or two different colored inks on a tinted paper, a favorite device; at others, by printing in flat washes, somewhat in the manner of the Japanese wood-engraver. Wonderful prints have been done in this way, far more effective, for instance, than the colored reproductions after Mr. Nicholson, not the work of the artist, of which so much has recently been heard in England. For, as a draughtsman, Mr.

Nicholson can but rarely rank with the German lithographers.

Of the work sent from other countries, there is nothing much to be said. The only lithographs I had not seen before which struck me as above the average were the portraits of Mesdag and Menrel and other celebrities by the Dutchman J. Veth; portraits full of character. A large display is made by France, but to the work of Fantin-Latour and Helleu, of Dillon and Lunols, of Lautrec and Steinlen, and innumerable others, I have referred so often in writing about the two Salons that it seems superfluous to describe it again. I was surprised, however, to come upon two examples of Manet which I do not think were with his lithographs at the Beaux-Arts in 1891, or at the Champ de Mars in 1885. One is another version of his execution of Maximilian, and it is curious to note how much more the commonplaceness of the composition is felt in the print than in the picture. Manet was the incomparable painter in *Le Bon Bock* and similar themes, but the dramatic was a quality which did not come within the range of his powers. It is curious, too, to find a man who was such a master of the brush so clumsy with the lithographic chalk. But Manet seldom could express himself in black-and-white, whatever his medium. With the exception of his drawing of the Raven for M. Mallarmé's translation of Poe, I know of no illustration by him worthy of a place beside his paintings.

The only lithographers the Germans have so far discovered in England are Shannon, Whistler, and Halloway: I give the names in the order in which they appear in the introduction of the catalogue. As in its pages, so upon the walls, it is to Mr. Shannon prominence is awarded, though he owes to Mr. Whistler almost everything that he has not borrowed from Sir E. Burne-Jones. In this section, however, I am afraid the hanging committee were altogether at sea; they have solemnly hung, as a lithograph, an etching by an artist who is not an Englishman, but an American, and who has made many lithographs. But, after all, as I have said, it is because of the chance it offers for the study of German work that the exhibition is worth seeing, and I only regret that it has been held in one of the smaller towns so rarely visited by the foreigner. N. N.

Correspondence.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: I am duly grateful to you and to your reviewer for the kind words which are said about my anthology of 'English Lyric Poetry' in the Warwick Library in your number of December 9. The notice, however, gives the impression that there are numerous defects in the text and in the proof-reading. Of several such errors I am myself aware, and can only plead in excuse the "unavoidable residuum," and distance from the printer at the time the volume was going through the press. But inasmuch as I strove to secure the greatest attainable accuracy and authority of text, I cannot let the three instances of errors alleged by your reviewer pass without answer.

In the line from Peele's "Farewell to Arms" (p. 58).

"And feed on prayers, which are age his arms,"

which I am informed should read "old age his arms," I have followed the texts of Dyce and Bullen, which in turn are based on Peele's 'Polyhymnia,' 1590 (the only two copies known, I believe, are at Edinburgh, and in the Devonshire Collection). In Segar's 'Honor, Military and Civil,' 1602, page 199 (I have just verified the passage), where the poem is quoted, the reading for the last half of the line is "that are old ages almes." I know of no authority for "old age his arms," and I do not know by what canon of criticism the reading of Segar in 1602 should be preferred to that of Peele in 1590.

In the case of the reading from Vaughan (your reference should have been to p. 251),

"But what fair well or grove he sings in now,"

which, I am told, should be "what fair dell," the reply is even less doubtful. In the 'Silex Scintillans,' 1651, part II., page 6 (again I have just verified the reading), Vaughan certainly gives, "But what fair Well." As Dr. Grosart long ago pointed out (in his edition of Vaughan, vol. I., p. 185, note), the author's reading certainly makes as good sense as that of his modern "improvers," and again I am at a loss to know why I was under obligation to change it.

As to the last line of "Waly, Waly," I am by no means so sure. I should certainly never venture to dispute the practically final authority of Prof. Child if it were a question of a ballad reading. But the poem is obviously sophisticated and "literary" in many other touches, and, as it seems to me, is to be accepted rather as an example of the influence of the ballad on the more popular literary lyric than as a pure ballad-song in itself. As it had obviously been freely touched many times before it came into Allingham's hands, he also was at liberty to try his own variations on it. In its peculiar mixed kind, I am inclined to think that the later version is an improvement. If you regard it as a ballad and a pure folksong, of course your preference will be for the stricter and earlier version.

FREDERIC IVES CARPENTER.

LONDON, December 30, 1897.

[We should have been glad to have Mr. Carpenter's explanation of the apparently curious selection of a "well" as a place for a bird to sing in. Grosart suggests that it was doubtless an Eastern sunken well, with trees around it; and he gives another similar citation. This use of the word, we confess, had not occurred to us, nor had it apparently occurred to the editor of the Pickering edition of 1847, who gives the word as "dell." In the case of Peele's fine poem it is obvious that "prayers" must be prolonged into an emphatic dissyllable if the line is to read rhythmically. It is a curious fact that Segar, reprinting the poem only twelve years later than Peele's edition, should have treated "prayers" as a monosyllable, and apparently inserted "old" to make out the line.—ED. NATION.]

THE SPECIE CIRCULAR ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of December 30 appears a communication from the University of Chicago which undertakes to make a positive contradiction of Prof. Sumner and Mr. Schouler in their assertion that a circular similar to the noted specie circular of President Jackson was issued in President Adams's administration. Your correspondent would deserve praise for historical research if he were a trifle less inclined to historical censure. "Similar" is a generic term not equivalent to "identical"; and it would seem that, after three columns of rather fine-spun exposition, he has hardly made his point that there was no similarity in the two documents. He quotes from a debate in the Senate on this subject, in which Benton maintained that there was a strong similarity, while his distinguished opponents, in their eager antagonism to Jackson, maintained as stoutly the contrary. Something should be allowed for party rage in such a debate; for, as Sir Roger de Coverley used to observe, "there is a great deal to be said on both sides."

Not content with his dogmatic conclusion, your correspondent further proceeds to impugn Mr. Schouler's accuracy and carefulness "in making important statements," and charges him with transferring to his own pages both the assertion and reference from Sumner's 'Jackson,' without verifying the one or the other. In the first place, Mr. Schouler evidently did not consider the matter of much importance, as it had only a casual bearing upon his description of Jackson's specie circular; and in all such matters any historian appears justified in citing so excellent a financial expert and scholar as Prof. Sumner by reference to his book and page accordingly. But, as a matter of fact, Mr. Schouler did verify Prof. Sumner's reference for his own statement, and derived the same impression that Prof. Sumner himself did. Mr. Schouler's offence consists (4 Schouler 262) in describing Jackson's specie circular in his text, and then adding as a passing comment in the foot-note that "a similar circular" was once issued by Jackson's predecessor (citing, besides Sumner's Jackson 336, 7 J. Q. Adams's Diary 427). Adams's Diary, when referred to, shows that the specie circular issued by Rush was stricter in terms than that preceding it, and caused anger in Southern quarters. In any comparison of these two circulars it should be borne in mind that the United States Bank had failed to procure a recharter, and that its currency was no longer in normal circulation for Government dues when Jackson's specie circular was issued. Your correspondent seems hardly to have taken this point into consideration in his criticism. J. S.

January 4, 1898.

PROTECTION OF FOREIGNERS.

TO THE EDITOR OF THE NATION:

SIR: The letter under the above title in the *Nation* for December 2 is funny enough, but the piece of stupidity it commemorates is outdone by the practice of the customs for years past under all administrations. It is very well known that Timothy Cole, an American-born and educated artist, has been working for the *Oratory* in the reproduction of works of art by various masters, and that

his engravings on wood have gained a world-wide reputation as the most artistic of their kind that have ever been produced. It will be news, however, to most people in America or England, that the blocks, when engraved, are not admitted as works of art, but are classified as "carved wood," and, as such, subjected to a duty of 30 per cent., which, as they are priced at about \$250 each, when of the size of the full-page blocks for the *Century*, is a serious burthen on American art. But what is funnier than Mr. Robinson's instance is the fact that when these blocks are stereotyped in Paris, the stereotype-blocks go free of duty through the American custom-houses. The ass who framed this decision that wood-engraving is not art, based it, apparently, on the classification in the tariff, and could find no other description of the blocks which came within his comprehension than that of "carved wood," and probably prided himself on his acumen. Now the correct title of these articles, if they are to be categorized in industrial terms, is not carved wood, but engraved wood. It is not to be expected that a customs authority in the United States should know enough about art to know that the blocks by Cole are noble works of art, but he might have known better than to classify them as "carved wood."

Mr. Cole has been for some time engaged on a series of blocks which he intends to publish by subscription, each block being as large as four of those of the *Century*, and, as "carved wood," worth four times as much, and Mr. Cole would have to pay \$300 each to pass them through the custom-house. He therefore has them stereotyped in Paris and will send the plates over to America to be printed from, for, curiously enough, there are no printers in Paris who can print these blocks properly. As the impressions from the stereotype blocks are never quite as good as those from the originals, and the latter will never give equally good proofs after the stereotyping as before it, we are obliged to see a most important artistic interest suffer, with no gain to any other, high or low, because our Treasury Department was unable to comprehend that a work by a wood-engraver is a work of art. Having laid the prohibitive duty on the work of the American artist, we allow that of the French stereotyper to pass free of duty. Many Americans pride themselves on the "sound common sense" in the management of our public affairs, but, as a matter of fact, it violates common sense more than all the monarchies of Europe combined. Our tariff alone may challenge the official doings of the civilized world to show such an accumulation of absurdities.—Yours truly,

W. J. STILLMAN.

ROME, December 23, 1897.

Notes.

Coinciding with the recent tendency of literary study in France, and to a less extent in Germany, to make much of the literary "species" and its development, is the plan of a series of "Representative English Comedies," announced by Macmillan for publication during the coming year, of which Prof. C. M. Gayley of the University of California is general editor, and Professors Dowden, A. W. Ward, Herford, J. W. Hales, Flügel, G. P. Baker, Gummere, Woodberry,

Matthews, G. R. Carpenter, Beers, and Messrs. Pollard, Henry Bradley, A. H. Bullen, Gollancz, Sidney Lee, and others, editors of individual comedies and contributors of monographs tracing the growth of English Comedy in its several periods and parts from the Miracle Plays to Sheridan. Some forty plays in five volumes are promised, with occasional issue of the more important and popular plays in separate form. The plan, in fact, contemplates a complete history of English Comedy written by specialists, with the unusual and added advantage of presenting with the text of the history complete and annotated illustrations of the more important masterpieces discussed, rather than the unsatisfactory and broken excerpts possible in most literary histories. In these days of the servitude of the English comic stage to German and French originals and models, we have pretty well forgotten that at one time English Comedy was a very vigorous growth and ranked scarcely second to any—surely first of all, if Shakspeare be thrown in to tip the scales.

It is interesting to notice the names selected by the editor in his "Announcement" of those whom he considers the most important writers of English comedy (not all of whom, however, will be represented by illustrations among these reprints). In the sixteenth century these are John Heywood, Udall, Gascoigne, the author of "Gammer Gurton's Needle," Lyly, Peele, Greene, Henry Porter, and Shakspeare. Specimens of the comic elements in the Miracle Plays, in the Moralities, and in other transition dramas of the period the editor hopes to present at some later time in a preliminary volume, if the series receive sufficient encouragement. Following these appear the names of Ben Jonson, Chettle, Dekker, Chapman, Middleton, Richard Brome, Beaumont and Fletcher, Shirley, Thomas Heywood, Massinger, Cowley, Wilson, Howard, Villiers and "The Rehearsal," Dryden, Wycherley, Etherege, Crowne, Congreve, Cibber, Vanbrugh, Farquhar, Mrs. Centlivre, Addison, Steele, Gay, Hoadley, Moore, Townley, Murphy, Whitehead, Kelly, Foote, Colman, Macklin, Cumberland, Goldsmith, and Sheridan—a catholic list of names, but presenting enough of important position to justify the presentation in so elaborate a form of the literary kind chosen. The names of the editors and contributors are a guarantee of thorough and discriminating workmanship in the execution of the plan.

During the present month D. Appleton & Co. will bring out 'Various Fragments,' by Herbert Spencer; 'Evolutional Ethics and Animal Psychology,' by Prof. E. P. Evans; 'The Psychology of Suggestion,' by Boris Sidis; 'The Story of Animal Life in the Sea,' illustrated by L. J. Hickson; 'Anatomy,' in the "Concise Knowledge Library"; 'Modern English Literature,' by Edmund Gosse; 'Biometallism,' by Major Leonard Darwin; 'H. R. H. the Prince of Wales,' a biography; and 'Crusoe's Island,' a bird-hunter's story, by Frederick A. Ober.

Mr. Higginson's 'Cheerful Yesterdays' will graduate from the *Atlantic Monthly* into book form in the spring, with the imprint of Houghton, Mifflin & Co.

Lamson, Wolfe & Co., Boston, have in press a 'History of the Lowell Institute,' by Mrs. Harriet Knight Smith, which has been closely preceded by a History of the Smithsonian Institution.

Ginn & Co. announce a 'Guide to the

Study of Fiction,' for class-room purposes, by Charity Dye, teacher of English in the Indianapolis High School.

'Hampton,' by the Rev. Edward E. Hale, a book with an economic aspect, will be issued by T. Y. Crowell & Co.

Fords, Howard & Hulbert will publish 'The New Puritanism,' a series of papers presented during the semi-centennial celebration of Plymouth Church (1847-1897).

Mr. Temple Scott's 'Book Sales of 1897' (London: George Bell & Sons; New York: Macmillan) makes a prompt appearance as a result of a change of plan, by which the calendar year is abandoned for the "seasonal." Hereafter this record will run from November 1 to July 31. Another novelty is the inclusion of select American sales, viz., the Sewall, Frederickson, and Bierstadt. Mr. Scott remarks on the continued interest in Americana in England, on the slight falling off in Cruikshankiana, and the diminishing favor accorded to Bewick's works. The Kelmascott Press publications, justly described by Mr. Scott as "not book-readers' books," at present "are being treated as fairly common bric-à-brac." The sale of the first portion of the library of the Earl of Ashburnham was the great feature of the year, realizing in eight days \$150,000. American commissions contributed to make "the prices paid for 'lots' twenty per cent. above market values," in Mr. Scott's estimation. A 'Biblia Pauperum' of forty leaves fetched £1,050. The several sales are catalogued apart, with a continuous numbering, and a general index furnishes a key and shows whether it is worth while to apply it. The book is beautifully printed.

Having already reviewed Mr. F. M. Chapman's 'Bird Life' at some length, it remains to notice the new edition which appeared a few weeks ago. The text is the same as that of both the previous issues, but the book in its new dress is much larger, handsomer, and more expensive, with heavier paper, wider margins, and colored plates. Photographic bromide enlargements of Mr. Thompson's original black-and-white drawings have been made, and these copies have been colored from life under the author's supervision. The mechanical reproductions of these by a lithographic process would seem to insure absolute accuracy; but, unfortunately, several of the plates as printed have turned out far from proof, and should be remade in time for the next binding of a batch of copies, which will no doubt be soon required. The latest embellishments of 'Bird Life' do not modify our judgment that Mr. Chapman's 'Hand-Book' is much the better one of the two, having been written with care, and not made to order; but each has its admirers, and both are prosperous, useful books (Appletons).

'Idle Hours in a Library' is the title given by the author, Prof. W. H. Hudson of Stanford University (San Francisco: William Doxey), to a volume of readable popular essays on literary topics, otherwise unrelated, such as it is the modern fashion to bind up together in book form. The subjects treated are 'London Life in Shakspeare's Time' (lucid, easy, and picturesque), 'Pepys and his Diary' (a subject somewhat worn, but always offering good material for the essayist), 'Two Novelists of the English Restoration' (Mrs. Manley and Mrs. Behn), and 'A Glimpse of Bohemia' (on Henri Mürger). These sketches make no pretence at originality, being written in the lightest

essay frame of mind, and therefore require no serious consideration. The style has the merit of being easy and interesting, and well suited to the subjects chosen.

One seldom encounters a stronger contrast between an author's prefatory remarks and the body of his work than in 'Lilliput Lectures,' by W. B. Rands, reissued after a quarter of a century under the editorial care of R. Brimley Johnson (London: James Bowden; New York: M. F. Mansfield). Mr. Rands's introduction (which shows him to have been a Sunday-school teacher) abounds in sense, and can hardly fail to raise expectations regarding the religious talk which follows. But great is the disappointment. There is no more evidence in these vague, rambling, abrupt chapters on the World, the Sky, Cities, Science and Philosophy, Art and Artists, etc., of fitness to address the infant mind than there is of poetic talent in the original verse, which uniformly ends the discourse, and which almost seems to have been the motive for publication.

In a country where education is so eminently a concern of the whole people as in ours, the reports of the Commissioner of Education ought to attract a good deal of attention. The recent appearance of the Report for the year 1895-'96 calls to mind the unanimous and vigorous protest, about a year ago, of the Michigan State Teachers' Association against certain animadversions on these reports in a leading Western daily. In fact, it is hard to conceive of a teacher or school officer worthy of his name that fails to appreciate the value to himself of these public documents. The present issue combines, as usual, much statistical matter with historical information and discussions of new tendencies and current questions, not chosen at random, as might seem to be the case to the uninitiated, but printed for some good reason and with a purpose. We find again chapters on early education in some of the States (New York, New Jersey, Pennsylvania, the Southern States); and as the last Report contained critical discussions of American schools by some eminent Germans, so we have this time the views of that well-known French authority, M. Compayré. From among several articles relating to foreign lands we can mention only the one on the English Education bill of 1896, and a first presentation of the state of education in Iceland. This notice of a compilation of more than 2,000 pages should not pass over in silence, however, the Commissioner's own brief estimate of the labors of Horace Mann (at the end of vol. I.), followed by a bibliography prepared by the son of the latter.

A woman, Mlle. Pellechet, has been charged with the difficult task of editing the lists of incunabula owned by 196 French public libraries, drawn up (in divers modes) at the request, in 1886, of the Minister of Public Instruction. The first volume (A—Biblia Italica) has lately appeared (Paris: Picard), and redounds to the credit, already well established in the same line, of Mlle. Pellechet, who has handled almost all the books described with the greatest exactitude. The arrangement is chronological where possible, and when a date is wanting, an arbitrary ordering by the number of lines to a page is adopted. The final volume will contain index and preface. In each case, of course, the library possessing a given volume is indicated.

The *Bibliographische Blätter*, which was published quarterly in 1896 and bi-monthly in 1898, has undergone a transfer and transformation into the annual 'Bibliographisches Jahrbuch und Deutscher Nekrolog' (Berlin: Georg Reimer). At the head of the editorial staff is F. von Bezold, associated on the *Blätter* with the late Michael Bernays. The first volume, embracing the German dead of 1896, is a large octavo of more than 500 pages, divided into three parts: (1) biographical essays or documents not restricted to the past year, as, the autobiographic fragments from the pen of Ludwig Richter (edited by A. Michaelis), or the reminiscences of Bodenstedt, by C. von Lütow, together with select obituaries (Clara Schumann, M. Bernays, H. Bürkner); (2) a bibliography of biographical literature, with author entries but alphabetical arrangement by subjects; (3) the necrology for 1896, but (a wise reserve) with postponement of such notices as could not yet be adequately written for want of data. The arrangement is not strictly alphabetical, but the index repairs that defect, and, while it fails to indicate that Clara Schumann is twice commemorated, it includes the postponed names. When we add that there are five photogravure portraits of Treitschke and Du Bois-Reymond, we have described the scheme of this solid and valuable work. How much one like it in English might have lightened the labors of the editors of the 'Dictionary of National Biography.'

Students of German literature and lovers of the Suabian school of poetry will be interested in 'Uhländ's Tagebuch,' edited by J. Hartmann from a posthumous manuscript now in possession of the Schwäbischer Schillerverein, and just published by Cotta in Stuttgart. The laconic diary begins with the latter part of Uhländ's student life at Tübingen in 1810, when he took the degree of LL.D., and ends with his marriage in 1820. It covers, therefore, the period of his sojourn in Paris for the purpose of studying the manuscript works of the old French and old German poets, his early career as a lawyer, at first in the ministry of justice and afterwards as an advocate in Stuttgart, his patriotic opposition to the attempt of the King of Württemberg to introduce a new constitution abridging the rights of the people, and his political activity and efficiency as a member of the Diet. Only fragments of this diary have been hitherto accessible to Uhländ's biographers, and its publication in full, so far as it has been preserved, enables the reader to follow the course of his mental and poetical development continuously during the formative period of his life.

The Munich publisher Oldenburg has just issued an exhaustive work on 'Politische Geographie,' by Dr. Friedrich Ratzel, Professor of Geography in the University of Leipzig. It is an octavo volume of 733 pages with 33 illustrations in the text, and treats of what the author calls "biogeography," by which he means the configuration and constitution of the earth's surface in their influence upon the evolution and organization of human life, and more especially the relations of the soil to the state. Among the topics discussed are possession and sovereignty, migration, conquest, and colonization, the fundamental laws determining the growth of states, the political effects of extended and limited domain, natural and artificial boundaries, insular, peninsular, and

continental empires, the sea and maritime nations, mountains, plains, lakes, and rivers as elements in determining the character of the body politic.

An important geological work has been undertaken in Paris in the translation of Suess's 'Das Antlitz der Erde,' under the direction of E. de Margerie, who has, with his collaborators, extended the original in a most scholarly manner by the addition of notes and references on relevant topics that have been published since the appearance of the original work. The first volume is now issued with the title, 'La Face de la Terre' (Paris: A. Colin & Cie.), with seventy-six figures especially prepared for the French translation, in addition to the original series, and two colored maps. Prof. Marcel Bertrand of the École des Mines contributes an excellent preface. This volume contains two of the four parts into which the work is divided—movements of the crust, and mountain chains. The changes of the sea and the face of the earth will be treated in a second volume. The most characteristic part of the present work concerns mountain chains, in which Suess discovers a prevailing asymmetry; an exterior side, towards which the range has been driven, characterized by long folds, and an interior side, where faulting prevails. In Europe, the exterior side of the chains is on the north; in Asia, on the south. The advanced student of geology will find this work well repaying his perusal.

H. Aschehoug & Co. of Christiania have just brought out the first 'Hefte' of an account of the voyage of the *Fram* by one of Nansen's followers, Hjalmar Johansen. It is entitled 'Selv-Anden på 86 14' (Number Two at 86 14), and it is said to give promise of an interest hardly inferior to that of 'Farthest North.' Special attention is paid to the sledge trip, and many events on the *Fram* not touched on by the leader are described. There is a large number of illustrations.

One of the best deliverances on the teaching of living languages is to be found in George Ticknor's address before the American Institute of Instruction in the year 1832. The ideas there expressed are in the main the same as those now held by the great majority of judicious teachers, and there is no prospect, near or remote, of a general revolution in favor of any of the numerous "new" methods, one of which, that of Gouin, is so favorably discussed in the *Educational Review* for January. It is the same method advertised with much ado about five years ago by the editor of the *Review of Reviews*, and since then improved by Messrs. Swan and Bétis. It will not be found superior to other more common methods, provided these are used with more judgment than M. Gouin brought to the study of German before he invented his own method.

In the latest issue of the English Historical Manuscripts Commission, treating of the Foljambe MSS., a long letter from Priestley to Sir George Savile, dated October 28, 1775, is printed. The letter is of interest for the character drawn of Shelburne. "He is by no means that artful, ambitious politician that he has been represented. . . . He is not without that prudence and circumspection that becomes his situation, but he has no deep political secrets." His wish was to abridge the power of the Crown, and make proper examples of the "present wretched administration." "With respect

to America, I cannot help thinking that the people of that country would have more confidence in Lord Shelburne, provided there should ever be an opening to treat with them (which, however, for my own part, I despair of), than in Lord Rockingham, whose *declaratory act* will never go down with them." In a later letter (1780) Lord Rockingham attributes Burke's defeat at Bristol to the American war, which had "too deeply affected the wealth of the merchants, who so honorably and at such a large expense had supported and carried his former election." Savile in 1782 lays stress upon the expediency of obtaining a weighty vote on Conway's motion, condemning the war, from the country members—the "purest part of the representation." He thought it would impress the King by pitting corruption against incorruption, and giving the sense of a "pure House of Commons" for his guidance.

A slight but important typographical error disguised the name of the writer of the communication on "South Carolina Precedents for New Jersey" in our issue for December 30, Mr. Edward McCrady of Charleston.

—In his annual report to the President of Harvard University, Prof. Pickering, Director of the Observatory, presents some of the greatest needs of astronomy at Cambridge—among them, new buildings to replace the old ones of wood; a modern machine-shop, and a library building where clerical work can be performed. While the Observatory has abundant income to employ assistants (twenty-one men and nineteen women are in its constant service), more principal is needed, not for investment, but for material equipment. The important work of the meridian photometer is now approaching completion, so far as northern stars are concerned. That of the Henry Draper Memorial continues a splendid record both at Cambridge and in Peru; and owing to the great number of photographic exposures every clear night, mere developing had become a laborious task until an apparatus was constructed by which twelve plates may be subjected to this process at once. The Boyden work in Peru is also progressing finely, and, in addition, meteorological observations are made at seven stations, varying in altitude from 100 feet above sea-level to 19,200 on El Misti. The great Bruce photographic telescope at Arequipa is performing most satisfactorily, experiment showing it perfectly capable of the power of registration claimed for it. Nearly 700 photographs are its work for the year, a few of which were taken with the prism additional. An interesting result has been reached from a study of two of these plates showing spectra of stars in the famous Magellanic Cloud; Mrs. Fleming having discovered six stars with spectra of the fifth type, which, as the only stars of this class so far from the Milky Way, may furnish another important clue to mysteries of constitution in the Magellanic Cloud. Meteorological work at Blue Hill Observatory continues, as formerly, in conjunction with Mr. Rotch; also the telegraphic distribution of important astronomical discoveries. Eight circulars printed during the year have brought new announcements promptly to scientific notice. Vols. i. to xxxvi. of the *Annals of the Observatory* are now practically complete, and succeeding volumes to xlii. are already well advanced.

—The death of Gardiner G. Hubbard of Washington gives occasion for recalling the admirable service which he, with his son-in-law, Prof. A. Graham Bell, rendered in founding a journal of science. It could be made a reproach to this country, in 1883, that there existed no scientific newspaper, and that men devoted to the interests of different sciences had no medium of intercommunication nearer than London. Moved by that consideration, these gentlemen, in the year named, and during many subsequent years, expended some \$80,000 in the foundation and support of *Science*. As Prof. Newcomb said, in the few words with which he introduced the New Series of that journal: "Great success in advancing scientific knowledge cannot be expected, even from the most gifted men, so long as they remain isolated; the attrition of like minds is almost as necessary to intellectual production as companionship to conversation." While, within the range of each science, there are now scientific journals of an adequate nature, it is none the less indispensable that there should be a common clearing-house where the different sciences may be brought within range of each other. It is to be hoped that *Science*, in its present form, under the charge of its self-sacrificing and efficient editors, may have in full measure the success which it deserves. There could be no better way of expressing gratitude for the generosity with which it was founded than by assuring its present prosperity.

—Part xii. of Dr. Reginald Lane Poole's 'Historical Atlas of Modern Europe' (Oxford: Clarendon Press; New York: Henry Frowde) completed the first year's issues of Mr. Poole's monumental work so long delayed by the magnitude of the task and the difficulties of publication. From this instalment of the thirty parts promised it is possible to estimate the scope and value of the work. Of its value there can be no doubt. It has had but one predecessor with which it can be fairly compared, namely, Spruner-Menke. Poole's work covers in time and space much the same ground as Spruner-Menke, and is, in fact, avowedly modelled upon that atlas, being indebted to it for general plan and for many details. From the point of view of mechanical execution it is certainly a great improvement on it. The maps are rather smaller, but in general much clearer, the size and style of the lettering, and in particular the coloring, being a great advance on the Spruner-Menke, while the doing away with coast-line shading permits definition impossible under the old system. The historical sketches accompanying each map are concise but very full, and much superior to the brief notices in Spruner, or even the more elaborate text of Droysen. It is to be hoped that the pages of the completed volume may be numbered like those of any other book, and especially that there may be a complete index of place names. The German maps of Poole are as yet neither so numerous nor so detailed as those of the German atlases, naturally enough. On the other hand, the maps of the British Isles will supply a very real and long-felt want. Of those which have already appeared, the two maps of Anglia Sacra, the ecclesiastical divisions of England *temp.* Edward I., and Anglia Monastica *temp.* Henry VIII., the admirable map of parliamentary boroughs to 1832, by Mr. Prothero, with dates of their establishment, decay, and revival, and the map of Great Britain under Edward I., are

especially to be commended, while those of Roman Britain, Ireland prior to the Anglo-Norman occupation, Scotland in 1300, England and Wales under the house of Lancaster, and Ireland under the early Tudors, are extremely useful. This series is certainly unique, and in many respects the most valuable part of the new material in the atlas.

—The difference between the German and the English atlases on ground common to both can best be seen by a comparison of such maps as those of Europe in the Merovingian and Carolingian periods. In each case Mr. Poole has based his general map on that of Menke, reducing the size, but greatly increasing the clearness and definition by the devices already mentioned. Menke's Merovingian Europe contains, in addition to the large map, nine smaller maps—four general, showing the changes at the partitions of 511, 561, 587, and 625, and five special local maps. These latter Mr. Poole omits, and reduces the size of the former very considerably; but, by ingenious use of color and omission of place names, which really have no business in such maps, he manages to convey the state of affairs much more clearly than is done in the more elaborate but confused maps of his model. We must also mention the series of eight maps of Europe, 396-720, by Prof. Bury, the new Gibbon editor; the Italian maps of Miss Ewart, the French maps of Mr. Rhodes, together with that of the Spanish kingdoms by the late Mr. Ullick Burke, and of the Swiss Confederation by the Rev. W. A. B. Coolidge, this last including the passes in use in the Middle Ages—a particularly useful piece of work. It is to be regretted that the price for this atlas (3s. 6d. for each part) is so great, and especially that so far the publishers have not seen fit to offer the maps for sale separately, as most other publishers do. This would be a very great convenience, both to those who desire particular maps for special work and to those who could thus supplement what they already possess.

—It would not be easy to find a more illuminating and instructive survey of its subject than the lectures of Mr. Platon E. Drakoules entitled 'Neohellenic Language and Literature' (Oxford: B. H. Blackwell). They were recently delivered at Oxford, and are an admirably condensed sketch of the development of the modern Greek language and literature, embraced in a pamphlet of seventy pages. It may be read with profit by any one who has the least tincture of Greek, and it will leave such a reader with clearer views than are imparted in many a larger and more formal treatise. It is characterized by exact and sound learning, great moderation of tone, and a general view of the mission of the modern Greek which commends itself by its wisdom and sobriety. There are many such Greeks as Drakoules and Bikelias, and there is strong hope that their wisdom will leaven a people which has some of the vices bred of recent centuries of slavery, some of the faults and foibles of children, and many virtues that might be commended to their older brethren among the nations. The fatal Jingoism which they have lately shown was at least on behalf of their own oppressed kindred; and as to the causes of this error, Mr. Drakoules has a paragraph so wise and right-minded that it sums up the whole situation: "Thus it is that Greece, in-

stead of moral leaders, has politicians, who can teach her no good thing, and at the hands of whom industrious, hard-working, frugal, heavily taxed, and wofully neglected Greece is periodically led astray, merely in order to afford them the satisfaction of calling themselves her rulers—rulers who never really cared much for education, and never did anything for moral instruction and manly training—who, while it was in their power to regenerate their country by encouraging the development of the nobler part of Hellenic nature, wasted her resources in insincere military preparations. It is from this body of men that Greece deserves to be saved, in order to be enlightened and show that she is an influence for good in the Levant." This little book answers many questions which are naturally put by the intelligent inquirer. It is most interesting as showing the substantial continuity of the language, and its growth through the centuries, since Homer. It sketches also the conscious development of a modern literature and literary language, produced by the new national consciousness and freedom so lately won. The author is unusually well acquainted with English culture and literature, and the results of his knowledge are manifest in his style and illustrations.

STILLMAN'S ESSAYS.

The Old Rome and the New, and Other Studies.
By W. J. Stillman. London: Grant Richards; Boston: Houghton, Mifflin & Co. 1897.

According to the author, this volume is to be taken as containing the serious literary production of a lifetime. In his preface he says: "I had the good fortune to learn soon that the opinions of young men are rarely worth preserving, . . . and I then decided that I would publish nothing before I should be forty; when I was forty I postponed to fifty; at fifty I said, Sixty is not too late; and at sixty I had still too much to learn, and I would trust to seventy." Some things he has had to put forth for bread-winning, and some, like the History of the Cretan Insurrection, from a sense of duty; but now he has for the first time willingly gathered together something of the much he has written, has revised and reconsidered it, and is "prepared to stand or fall in the opinion of his critics by what is printed."

The ten papers he has selected for perpetuation are somewhat miscellaneous in nature and subject. Three of them, "John Ruskin," "The Decay of Art," and "The Revival of Art," deal with questions of art criticism, and it is with Mr. Stillman as a critic of art and with his views and principles as an art critic that we shall concern ourselves in this review. In the paper on Ruskin he combats that writer's theories; in that on the Decay of Art he tells us why, in his opinion, art has decayed, and in that on the Revival of Art on what terms, if at all, it may be revived. His doctrine is the antipode of that of Ruskin, and may be called the extreme form of idealism.

As a young man Mr. Stillman was deeply influenced by Ruskin, as were most intelligent young men in the English-speaking world of that epoch, and he began the practice of art on pre-Raphaelite principles. He long tried to produce an artistic impression by the literal and exact copying of nature in its details; and, failing, as failure was inevitable, he has been carried in theory—for

he has long since ceased from the practice of art—to the opposite pole of opinion. He seems to have come to believe that all study of nature is destructive of art—that "Nature has in every case killed art," and "the nearer to nature the farther from art." True art, for him, is purely subjective, "done out of the head," and the true artist is one, like Fuseli, whom "nature puts out." In his 'Old Italian Masters' he tried to show that art declined exactly in proportion as the study of nature increased, and seemed to exalt the least of the Giotteschi above the great masters of the high Renaissance, certainly denying to Lionardo any very great rank because of his naturalistic theories and scientific temper. In the present work we find him justifying Turner's wildest contraventions of natural laws while pointing them out as disproof of Ruskin's doctrines, saying that Turner "attained the highest expression of subjective art of his time—possibly of all time," and that he does not yield to Ruskin in admiration of the "Slave Ship," though "the whole picture is a flagrant falsehood," with an "utterly impossible sky" and an "utterly impossible sea."

Is it, then, possible that artists have always been entirely wrong; that their tireless efforts for self-improvement, for mastery of natural forms and colors, for the investigation of natural appearances, have been utterly wasted and worse than wasted? Is it possible that art would have been the better if perspective had never been discovered nor anatomy studied, and that it is enough to compose, and we have no need to draw or to paint? Of course Mr. Stillman does not really think this himself; and yet his theories, logically carried out, would bring us to just this conclusion, and some of his statements seem almost to assert it. Ruskin's theory of the obligation of absolute record of natural fact is doctrine more dangerous because more plausible; Mr. Stillman's doctrine is only not dangerous because impossible of acceptance by any painter with a love of nature and a habit of work.

And yet Mr. Stillman's error springs from an unguarded and overstrained insistence upon the most important and fundamental of truths about art. He thrice gives us his definition of art, and, as far as it goes, it is an admirable one. It would be hard to state more clearly or concisely the true nature and function of all art than in his saying that "Art is the harmonic expression of human emotion." The one thing that binds all expressions of the art impulse together, the thing that is art, and which is fundamentally the same in all the arts, is harmony in some of its forms: order, rhythm, melody, proportion, and the like. But there is only one of the arts that is pure art. Music, and music alone, deals in these qualities of pure proportion and with nothing else. Architecture stands next to music in its independence of imitation, and perhaps is therefore called frozen music; but it is bound to construction and to utility, and its danger is degeneration into engineering. Poetry is bound to the direct expression of ideas in words—when it is too artistic it becomes melodious nonsense, and when it is not artistic enough it ceases to be poetry altogether. The dance, the drama, painting, and sculpture, are increasingly dependent upon imitation, and their special dangers are realism on the one side and neglect of nature on the other. A purely musical art of color and form, an art

which should exactly conform to Mr. Stillman's definition, is indeed conceivable, but it would not be what we know as the art of painting. It would be pure decoration by means of lines and colors, with no reference to natural fact. Mr. Stillman conceives this to have been the earliest form of art, but it is doubtful if it ever really existed. The earliest attempts at art that we know are the attempts at representation of the cave-men, and the earliest known art of Egypt is not less but more realistic than that of later periods. The latest investigations tend to show that all the "geometric" designs of savages had originally some basis of representation. The truth seems to be that the art impulse—the love of harmony—has moulded the material of art into various and strange shapes; but that material has always been the representation of observed natural facts.

The only question, then, in the arts of painting and sculpture is as to what is the proper balance of the two great elements that make them up—the decorative, or strictly artistic, and the representative, or naturalistic element. This balance varies constantly with the purpose of the work of art. In the lower forms of ornamentation very little representation is allowable, while in the higher forms of decorative art a great deal may be introduced, and in the independent picture or statue there is no limit to the amount of naturalism that may be introduced, except the limit of the artist's skill in realization, and of his power to mould what he introduces into the harmonies required by art. If nature "puts him out," he is quite right to abandon the study of nature, but the fact that he is obliged to do so is a measure of his weakness. The greatest men have been those who have been able to put the most nature into the service of the highest art. Mere representation is no more art than mere sense is poetry, but the highest art can no more exist without nature-study than can poetry without sense. The nonsense picture exists as well as the nonsense verse, and Turner, for instance, came sometimes perilously near it.

It is worth observing, also, that what is ordinarily meant by "idealism"—the choice of noble and beautiful types, and the elimination of ugly or even trivial and unnecessary detail—is, after all, a matter pertaining to the subject-matter and material of art, to its representative side, and not at all to its purely artistic side; so that it does not at all follow from Mr. Stillman's definition of art, even accepted as final, that the painter should be an idealist in this sense. The art of Raphael is in the arrangement of his lines and spaces, in the "harmonic expression of his emotions," and might exist without the beauty of his personages, just as that of Rembrandt exists without regard to the ugliness of his. No greater harmonist, no greater artist, than Rembrandt ever lived, and none who more determinedly moulded nature into the forms that would express his own feeling; yet he was strangely tolerant of ugliness, and would paint the deformed body of a fat housemaid with painful veracity. He was a great poet of light and shade, and his light and shade is artistic and not natural, but his conception of form is not above that of the most grovelling of realists. It is not the choice of material for representation that marks the realist, but the absence of art in the

manner of treatment; or, rather, realist and idealist in the matter of choice may be equally artistic or equally inartistic in the matter of treatment, and a still-life painter may be, after his degree, as true an artist as Michelangelo—witness Chardin. If he composes with light and color, what matter if the light falls on a jug instead of on a woman's head? Yet Mr. Stillman's confusion of the doctrine of harmonic expression with that of "idealism" leads him to refuse to consider the still-life painter as conceivably a true artist, and to think of mere imitation as the end of still-life painting, just as it leads to his failure to perceive that "mere brush work" is not necessarily only a show of dexterity, and may have a kind of harmonic value and an artistic purpose.

Indeed, we should cease talking of realists and idealists and talk of workmen and artists. Pure art has never existed, and neither has pure imitation. All the art that has ever existed has a mixture of the two elements in varying proportions, and in the greatest art the amount of imitative truth which is fused with artistic imagination is amazing. We quite agree with Mr. Stillman in thinking that the danger of our modern painting is in its over-emphasis on realization at the expense of art, though there are not wanting signs of reaction, and we have lately had pure decoration pushed to the verge of nonsense in some of the results of the poster fad. Let us by all means preach that imitation is not art, but let us not imagine that art will be helped by ignorance. We have not studied nature too much, we have not studied it nearly enough, and we have substituted a superficial imitation for a profound knowledge. It will not revive art to shut the schools, though it is to be hoped that the schools will give better instruction than they do now. Even Mr. Watts, whom Mr. Stillman cites as "the profoundest thinker on art with whose opinions" he is convergent, idealist though he is, is obliged to enter his caveat against the extreme form which Mr. Stillman's opinions seem to take. In a note which he has written, and which Mr. Stillman prints, while accepting the general tenor of Mr. Stillman's article, he says: "When Wordsworth wrote the 'Intimations of Immortality' he never had to think of his grammar or his spelling. Such a necessity must have crippled his utterances. . . . A very considerable knowledge of, and acquaintance with, the structure of the human frame is absolutely necessary. . . . There should be no hesitation for want of knowledge; and the more elevated the intention, the more necessary that there should be no obvious violations of grammar in art." He then tells his own method of study, by occasional reference to the model to refresh his knowledge, and concludes: "I consider the painting from the model in a set position a pernicious practice, but the study of nature is another thing and cannot be dispensed with."

Mr. Stillman professes the conviction that these views "are in no wise in conflict with those I have tried to expound," and we must therefore assume that he is not really as radical in his opinions as he often seems from his utterances. Mr. Watts's opinion that the study of nature is indispensable, and that "there should be no violations of grammar in art," certainly sounds different from the praise of Turner's violation of all natural law and the implied con-

demnation of those moderns who are "afraid to be out of drawing." But even if Mr. Stillman is prepared to accept a good deal of study of nature in practice, his theory calls for none, and a thousand things in these essays show that he considers the innovation of the first painters who made drawings from nature for their work as of doubtful propriety, and that he thinks Fra Angelico almost the last painter who was altogether right in his practice. All he could logically admit is, that art was not yet ruined by the incursion of nature study until the time of the immediate successors of Michelangelo and Titian, though it had long been in a bad way. Probably he is not logical, but his theory is, we think, fundamentally incomplete. For want of considering the nature of painting and sculpture as mixed and not pure arts, he formulates a doctrine which would lead, if there were any danger of its being carried out, to the total abolition of painting and sculpture, and yet he does it in the name of a conception of the nature of art which is a thoroughly right one. He is on the right side, on the side of art against mere fact, on the side of the artist against Ruskin; but his conclusions are so extreme that there is danger of his convincing his readers of the falsity of his general position. In the name of the cause which we believe in as heartily as he does, it is necessary to show what we conceive to be his error.

THE CONSTITUTION OF 1653.—II.

History of the Commonwealth and Protectorate, 1649-1660. By Samuel Rawson Gardiner, M.A. Vol. II. 1651-1664. Longmans, Green & Co. 1897. 8vo, xxii and 503 pp.

Why did the labors of the constitution-makers of 1653 produce no permanent result? Why is the Instrument of Government forgotten even by historians, and quite unknown to the mass of the English people?

The answer to these questions lies in one sense on the surface of history. The Puritans were at best a minority of the nation; the men who wished to establish a commonwealth of any kind were a minority among the Puritans, and the authors of the Constitution of 1653 were a minority among the supporters of a Commonwealth. They were founding a Republic almost without Republicans, and, by one of those strange strokes of irony with which history abounds, the practical statesmen of the Protectorate were hated by the only faction which really desired a Republic. The Instrument of Government, which ultimately owed its existence to the *coup d'état* by which Cromwell dissolved the Long Parliament, was at least as hateful to the Commonwealth's men as to the adherents of the ancient monarchy. Nor can we suppose that the enthusiasts who expected the renovation of the country from the nominated Parliament could look with genuine approval on the act of statecraft by which the representatives of the most energetic among the revolutionists were induced to surrender their authority into the hands of Cromwell.

The truth appears to be, that while the men who might reasonably have supported the Constitution of 1653 were alarmed, not without cause, at the immense powers conferred upon the Protector and the possibility of a military despotism, the great body of

the people were disappointed at discovering that Cromwell would neither restore the monarchy nor himself take the place of an English king. Students of history may probably be of opinion, though this (we must add) is not the conclusion towards which Mr. Gardiner inclines, that Cromwell pretty well understood the wishes of the nation, and would, had his life lasted, have ultimately assumed the crown. It is at any rate clear that every political change during the Protectorate tended towards an approximation to the old monarchical system of government. However this may be, the fact is clear that the Constitution of 1653 could, from the first, command but a very limited amount of popular support.

If proof of this were wanting, it might be found in an event which immediately followed the death of Cromwell. The Parliament summoned by Richard was, indeed, a Parliament of the United Commonwealth, but it was elected—in England, at any rate—by the old Parliamentary constituencies. The reform of Parliament (to use modern expressions), which constitutes to modern critics one of the best features of the Instrument of Government, was quietly but of set purpose ignored. Nor should it be forgotten that the Constitution of 1653 was, even during the Protectorate, so profoundly modified that we can hardly say how far it ought to be considered as still existing at the death of Cromwell; and if it were necessary to find further general causes for the failure of the premature attempt to endow England with a more or less Republican Constitution, there is no difficulty in their discovery. It may be noted, for example, that the revolution in the Parliamentary institutions of England was practically unaccompanied by any corresponding change in the subordinate or the local institutions of the country. The law courts, the judges, the sheriffs, and the magistrates continued pretty much the same during the Protectorate that they had been when James or Charles was on the throne. Hence there was an utter incongruity between the system of the central government established in London and the scheme of administrative government which continued to exist throughout the country. Some practical steps may have been taken to keep authority as far as possible in the hands of men who favored the Protectorate; but the administrative business of the country was, in spite of large exclusions from electoral rights, intrusted to men who at best acquiesced in, if they were not absolutely hostile to, the new form of government.

To all this we must add one consideration of supreme importance. The Puritan constitutionalists, the men who in a certain sense accepted the Instrument of Government, showed just that want of statesmanship which in times of revolution renders abortive the action of the honest friends of freedom. Their object was presumably to preserve the advantages gained by the Civil War; the risk was obvious that all the fruits of the struggle might be lost by a reaction ending in a restoration. It is certain that Cromwell was no ordinary tyrant, and that he had no wish to rule without a Parliament. It was equally plain that there existed in the whole country no man qualified to take Oliver's place, and that he alone had the authority necessary for controlling the army and averting a military despotism. Under these circumstances every man who sin-

cerely wished to maintain English freedom and to avert the restoration of the Stuarts, ought, one would naturally think, to have stood by the Protector and have supported him in his efforts to found a government which should insure to the country at once the permanence of parliamentary institutions and a system of religious toleration; and the way to support the Protector was to accept loyally the Instrument of Government. But this is exactly what the Parliamentarians of the Commonwealth declined to do. They condemned the transactions which had given birth to the Constitution of 1653; they entertained a profound and a not unreasonable but a most unfortunate distrust of Cromwell. For the failure of the Constitution of 1653 a great share of our blame ought to rest upon Cromwell, but almost if not quite an equal share falls upon the Parliamentarians of the Commonwealth, whose policy can be traced with some certainty in the Constitutional Bill published by Mr. Gardiner in his 'Documents of the Puritan Revolution.'

But the very admission that the politicians who were prepared so far to accept the Instrument of Government as to take in hand its amendment and leave the Protectorate in the hands of Cromwell, could not see their way to accept unaltered the Constitution of 1653, of itself suggests the inquiry, What was it in the character of the Instrument which made it unacceptable to men who were not reactionists, and who were willing to attempt at any rate the formation of a free Commonwealth with Cromwell for Protector?

The answer to this question is worth giving, and in effect supplies part of the reply to the inquiry with which this article commences. The immediate cause of the breach between Cromwell and the Parliamentarians who drafted the Constitutional Bill was apparently the desire on their part to prevent the establishment of a large standing army. But though the Parliamentarians may not themselves have fully realized the true reasons of their instinctive opposition to the Instrument of Government, critics who scan the subsequent course of English history ought to recognize the fact that the Constitution of 1653, with all its merits—and they were very great—was not in any true sense an anticipation of parliamentary government as it has been ultimately developed in England. By a singular fatality the Puritans, in their constitutional ideas as in many other things, "missed their mark," to use an expression of J. R. Green's. The constitution-makers of 1653 formed a polity which might have suited other countries, but which was not the kind of polity that was ultimately found to suit the English people. The fundamental differences between the constitutionalism of 1653 and the constitutionalism which owes its existence to the Revolution of 1688, are marked though they have hardly received sufficient notice.

The idea which underlies the whole Instrument of Government is the desirability of combining a powerful executive with a purely legislative Parliament. The Council, as already pointed out, was intended to be as powerful a body as was compatible with the coexistence of a real legislature and the preservation of that personal freedom, secured by the supremacy of law, which has been the ideal of all English patriots. One cannot insist too much upon the considera-

tion that the Council was not, and was not intended to be, anything like a modern cabinet. It was to be a body depending upon resources of its own. It occupied under the Constitution a position coördinate with the Legislature; it was a permanent body subject only to the most gradual change; it elected successive Protectors; it must, almost of necessity, have become the most powerful body in the state. It is likely that the authors of the Constitution thought they were doing little more than restoring and reinvigorating the Privy Council of the monarchy. It is also not unlikely that they may have been influenced by notions derived from the system existing in Holland; the United Provinces were, in the middle of the seventeenth century, the most successful of free States. Their institutions exerted over the reformers of other countries the sort of influence which, in the seventeenth century, was exercised by the Constitution of England, and during part of the nineteenth century by the Constitution of the United States. However this may be, government by a permanent, powerful, and almost self-electing Council is not a form of administration which has ever taken permanent root in England. Then, again, the Legislature was a law-making body, it was not a sovereign parliament; it was neither the creator nor the controller of the executive.

From one point of view, indeed, the statesmen of the Commonwealth anticipated ideas which have been developed in the United States. The relation under the Constitution of 1653 between the Council and the Parliament has some affinity to the relation between the President and Congress. Yet this parallel must not be pressed too far. The likeness lies in the President being an authority coördinate with the Legislature, and in Congress being simply an organ of legislation. But the Presidency has none of the permanence of the Cromwellian Council; and the Senate, which has an element of relative permanence, does not appoint the head of the executive, and seats in the Senate are not filled up by coöptation. The true parallel to the system which the reformers of 1653 meant to found is to be discovered not in America, but in Germany. Modern German constitutionalists have, under the influence of Prussian ideas, created both in Prussia and in the Empire a polity in which an executive of all but overpowering authority is to a certain extent checked, though by no means balanced, by the rights of representative Assemblies which can make or repeal laws, but can neither appoint the Government nor control its action. The Cromwellian ideal, if we may assume that the Instrument of Government represented the constitutional notions of Cromwell and his immediate adherents, has been realized, not by Washington, but by Bismarck.

The reform, indeed, of Parliament seems at first sight to forestall the Reform Bill of 1832. Yet here, too, the essential difference is much greater than the superficial resemblance. The reformers of 1653 changed the centre of electoral power. The country was to become predominant over the towns, and the rule of the country would have meant the supremacy of the small independent landowners. The idea of basing the Constitution of England upon the support of what may popularly, though not quite accurately, be termed the yeomen and freeholders, possessed obvious recommendations and has fascinated many patriotic states-

men; but it was based on a wrong forecast of the development of English society. It was hardly compatible with the authority of the great landowners and of the wealthy merchants which saved the freedom and developed the power of England during the eighteenth century. It in no way met the unexpected growth of manufacturing industries in the north of England, which at bottom necessitated the reform of 1832.

In their conceptions of toleration, if anywhere, the constitutionalists of 1653 provided for the needs of the coming time. Cromwell, at any rate, and (we may assume) many others besides Cromwell, saw with more or less distinctness that freedom of conscience and liberty in matters of religion needed recognition, and that nothing short of wide toleration could give peace or prosperity to the state. Yet, though the Cromwellians must have the credit of having been, in the matter of religious liberty, in advance of their age, it is worth notice that, even in the matter of toleration, the Constitution of 1653 did not adopt anything like the method by which religious freedom, and in the long run the very fullest liberty of discussion, have been established in England. The Constitution, indeed, abolished every kind of penalty for non-conformity to the religious observances supported by the state; and whoever reflects upon all that was meant in the seventeenth century by this absolute prohibition of all active persecution must own that the Cromwellian statesmen made a step in advance on the road of progress and civilization which ought to insure to them everlasting respect. Let it further be noted that, in the matter of toleration, the Parliamentarians who wished to amend the Instrument fell far short of the liberal ideas entertained by Cromwell. Yet here again the statesmanship of 1653 failed to adopt the means which experience has shown were in fact best adapted for the securing of toleration. A passage in Macaulay's History sets forth the characteristics of the Toleration Act, and, in words too well known and too long for citation, insists that it "most strikingly illustrates the peculiar vices and the peculiar excellences of English legislation." The vices may be summed up in the statement that the Toleration Act does not lay down a single principle of toleration. The excellences may be broadly summarized by the statement that the Toleration Act, by a number of apparently petty enactments, whose meaning even a lawyer finds it difficult to master, made active intolerance or persecution all but impossible. By this policy of theoretical intolerance combined with practical toleration, the Whigs opened the era of perfect religious freedom. But this was not the policy of the statesmen of 1653. They laid down broad principles of toleration which were not wide enough to satisfy the principle of freedom, and yet alarmed moderate Englishmen by threatening to introduce an era of religious anarchy. The course of subsequent history does not make it possible to assert that the Puritan policy might not have succeeded, but we may say that it was exposed to every chance of failure. It irritated the Church of England, and seemed, at any rate, to deny freedom of worship to all Prelatists—that is, if we construe the term strictly, to believers in the creed which has permanently satisfied the mass of the English people; it alarmed moderate men, and at the same time threat-

ened Freethinkers or Socinians with possible intolerance.

It is interesting to conjecture what would have been the result as regards religious freedom in England of the continued existence of the Constitution of 1653. Orthodox Protestants, including in that term any man whom we should now call a Low Churchman, would probably have enjoyed perfect religious freedom. Roman Catholics, High Churchmen, Quakers, Unitarians, Freethinkers—any class, in short, whose avowed creed deviated from the predominant orthodox Protestantism of the country—would, we may suppose, have held their right to the profession of their faith and the exercise of their religion by a precarious tenure. The great majority of the nation would, under these circumstances, have found nothing to complain of, but this very fact would have made the gradual extension of toleration, by which freedom of thought, worship, and discussion has been at last secured for the most unpopular of sects, all but an impossibility. Here, too, the statesmanship of Puritanism missed its mark.

The Story of Gladstone's Life. By Justin McCarthy. Macmillan. 1897.

The story of Gladstone's life is a more than twice-told tale. Within less than three years, at least two Lives of him have been noticed in these columns, and we know not how many more have escaped our attention. Undoubtedly several elaborate biographies are awaiting the inevitable hour, and, when it shall have arrived, there will be a deluge of Gladstonian literature which will probably exceed in volume and duration all previous obituary floods. Sooth to say, it is not altogether reasonable that some hundreds of thousands of readers whose lives have terminated or will terminate before Mr. Gladstone's should go unprovided with systematic information about his career merely because of its prodigious duration; and in Mr. McCarthy's case there is perhaps especial reason why he should not delay to offer a tribute which he is so well qualified to prepare.

It is not unworthy of attention that almost forty years ago Mr. Bagehot was moved to publish a critical estimate of Gladstone. He was writing, in the *National Review*, essays on several departed statesmen—Pitt, Bellingbrooke, Brougham, and others—and he could not resist the temptation to characterize a living hero. He excuses himself by saying that some deliberate truth must be spoken of our statesmen; and as it is not to be expected of the newspapers that they should fulfil this function, it falls to the quarterly review. Of course Mr. Bagehot offered this explanation with a twinkle in his eye; his reason for writing was because the man interested him, and he begins his essay by calling Gladstone a problem. The problem fascinated him, and he offered a fascinating solution of it. Even now, although Bagehot wrote in 1860, we doubt if any more delicate appreciation, any more accurate analysis of Gladstone's nature and career, is in existence. We even doubt if any will be; for Mr. Bagehot's equal as a judge—a genuine connoisseur—of statesmanship is not to be found among us. He took as his text the exclamation of an old Whig who did not approve of Gladstone's budget of 1860, although he had to vote for it: "Ah, Oxford on the surface, but Liverpool below." With

this text he discourses on the conflicting tendencies of scholastic and commercial life, and certainly suggests many plausible explanations of some of the contrarieties in Mr. Gladstone's course.

But we must not be tempted longer by Mr. Bagehot, although we advise whoever would understand Mr. Gladstone to read him. Mr. McCarthy's book is still before us, and deserves attention. It is beautifully printed and splendidly bound. It is adorned with many excellent reproductions of fine portraits. There are not a few of Mr. Gladstone at different ages, and indeed nearly every man of distinction whose name is mentioned in the text has his likeness presented to us. Mr. McCarthy is master of an easy and flowing style; it is pleasant to follow his narrative. His matter is well arranged, and he leads us through the events of sixty years with much skill. Like an experienced cicerone, he pauses at the right places, and tells us the particulars which tourists and sightseers are expected to memorize. He has himself been present on many of the occasions which he describes, and we have the benefit of his own direct observation. It need hardly be said that he is an ardent admirer of Gladstone. He might almost be called one of his intimate friends, and he has certainly been associated with him in Parliament for a generation. Such being the conditions, a writer of Mr. McCarthy's gifts could hardly fail to produce an interesting book. With such a subject even an inferior writer could not be altogether unsuccessful.

Yet the book will seem to many readers superficial. It will serve admirably to adorn a parlor table; even to give the "general reader" a fair idea of the course of public affairs in England during the last half-century, and of Gladstone's part in them. It does not fail to point out the changes that have taken place in the attitude of the great statesman, or to offer explanations of all these changes. But these explanations are not very satisfactory; they compare very unfavorably with Mr. Bagehot's acute observations. In fact, we have read in the newspapers nearly all that Mr. McCarthy has to say, and his writing is not much above the level of good newspaper description. When it comes to home rule for Ireland he is able to speak with special authority, and this is perhaps the most valuable and the most interesting part of his book. But on the whole we lay it down with a feeling of disappointment. The subject seems to demand special qualifications in him who attempts it; different abilities from those of Mr. McCarthy. It still awaits the hand of some consummate biographer, and should such a one appear, a great book will certainly enrich our English literature.

A Memoir of Anne Jemima Clough. By B. A. Clough. Edward Arnold.

American women who studied at the elder Cambridge before the death of Miss Clough in 1895, received from the mere fact of her gracious old age a sense of historical perspective in connection with the movement for the higher education of women. That movement has been one of storm and stress; it has been carried on for the most part by the restless energy of youth; its disciples are trained to consider its accomplishment as nothing in comparison with what is left to do. In contrast with all this ferment, Miss

Clough's personality arrested the attention by the impression it gave of actual attainment. Energy she had in plenty, but it was the patient energy of age. It was difficult to believe that her college did not rest on as ancient a foundation as its masculine neighbors, so strongly did she mark it with the air of permanence. Her niece, in preparing the present memoir, has told incidentally the story of the evolution of the women's college in England, and shown what good reason Miss Clough had for adorning her last years with the suavity of success.

Anne Jemima Clough was born in Liverpool in 1820. When she was two years old her father removed his family to Charleston, South Carolina, and did not bring them back to live in England till 1836. For the next sixteen years Anne's life was that of the ordinary middle-class young Englishwoman. The history of these years shows the leaven of her strong sense and generous heart working in the lump of a Philistine environment. She kept a *journal intime* during this period which would certainly not have "sent her papa to Uganda." She chronicles her success and failures in the teaching of children, which she early undertook, the vivid pleasure of walks and talks with her brother Arthur, her reprehensible tendency to wandering thoughts of love and marriage when she should have been at her 'Euclid,' and the timid mooted of such questions as "the necessity, or rather great benefit, of women finding work, and considering it a duty to do so, and also whether they are at liberty to choose their own paths in some cases (I mean single women) without reference to their families."

In 1852, after her father's death and Arthur Clough's removal to London had left Miss Clough with the sole charge of her mother, the two ladies resolved to make their home at Ambleside—the unsophisticated Ambleside, which as yet knew not the shrine-seeker. Here Miss Clough opened her school for the girls of the neighborhood, which defied pedagogic theory and won the loving adhesion and lasting gratitude of the scholars. In 1860 Mrs. Clough died, and Arthur Clough in 1861. Miss Clough's health suffered from the successive shocks; by the doctor's advice she gave up her school and home at Ambleside, and came out into the world and into contact with the new ideas which she was destined to assimilate and modify.

The history of the educational movement which culminated in the establishment of Girton and Newnham may be instructively compared with the course of events in this country. In England the primary object was the opening to women of the established universities; in this country it was the foundation of isolated colleges for women. The comparative weakness and unimportance of our colleges for men thirty-five years ago no doubt went far to rob of its audacity the notion of duplicating them for women. But it is noticeable that the notion has not flourished in communities dominated by powerful and well-established universities, and also, as has been recently said, that it has apparently been checked in this country by the growth of the university idea with its doctrine of centralization, for the three most recent American colleges for women are all of the affiliated type. In England there was no discussion of the a-priori fitness of women to profit by a sys-

tem of training devised for men. On the contrary, they were favored by the popularizing impulse within the universities which sought to bring the soundest instruction within the reach of the humblest minds, of the workingman on the one hand and of the school-girl on the other. In the one case the impulse gave rise to university extension; in the other, as the girls responded more and more satisfactorily to academic requirements, to the colleges for women. Some of the best ability in Cambridge was given to the struggling cause. In the first list of lectures for women in Cambridge (in 1870) there were advertised courses in English history by Prof. Maurice, in English literature by Mr. Skeat, and in algebra and arithmetic by Prof. Cayley. Christ's College, which was the first to admit women to its lecture-rooms, was driven to do so by the fact that its undergraduates asked leave to attend a course on Macedonian history given by Prof. Jebb to the women students in a room hired for the purpose. The scene of the lectures was shifted to Christ's, and men and women were admitted on equal terms. Besides labor, many members of the university gave financial aid, Mr. Henry Sidgwick being a foremost benefactor in both kinds.

Miss Clough's part in all this progress was very important. She was not primarily an originator of large ideas, or an expositor of doctrine. Her power of expression was defective, and she had not always valid reasons for the faith that was in her. But she had unbounded good sense, and enthusiasm that burned without flickering, and the gift of conciliation. She never forgot that it is almost as important for the social innovator to be agreeable as to be right. When Newnham College was organized in 1871, Miss Clough became principal, and held the office until her death. Miss Athena Clough, the author of the memoir, was her aunt's secretary for several years at Newnham. She had the assistance, in noting and estimating the traits of the elder woman, of the candid criticism of successive generations of undergraduates. The last chapters of the book are written with dexterity and lightness of touch; sympathy is blent with candor, and the result is a convincing presentation. The frontispiece of the volume is a reproduction of Mrs. F. W. H. Myers's excellent photograph of Miss Clough. By an odd blunder on the title-page the title of "Late Principal of Newnham College" is given to the author instead of to the subject of the memoir.

A Bibliography of British Municipal History.
By Charles Gross, Ph.D., Assistant Professor of History in Harvard University. [Harvard Historical Studies, Vol. V.] Longmans. 1897.

It is a question worth considering how it comes about that the best books concerning one country are so often written by the men of another. Germany owes the biographies of three of its greatest men—of Frederick the Great, of Goethe, and of Stein—to English pens; from a Frenchman and an Englishman have come the two most noteworthy expositions of the American political system. On the other hand, England has to turn to German scholars for critical editions of her early laws, and to French observers for the most reliable accounts of her present industrial life. Frequently the explanation is to be found in the fact that phenomena which na-

tives take for granted have for outsiders the keen interest of examples to be followed or warnings to be observed. But sometimes apparently no far-reaching explanation is discoverable; it has merely chanced that an able foreigner has turned his attention in a particular direction.

The work of Prof. Gross of Harvard is a striking instance of the sort of thing we have in mind. In his book on the 'Gild Merchant,' published in 1890, Prof. Gross revealed one whole phase in the history of the mediæval town life of England which had hitherto hardly been perceived; and, what was more, took up the task of investigating English municipal history to all intents and purposes at the point where it had been dropped by Madox more than a century and a half before. Other scholars have since thrown themselves with ardor into the field, notably the veteran Prof. Hegel and the brilliant Prof. Maitland; but it must not be forgotten that Dr. Gross was here the pioneer. And now, seven years after, the 'Bibliography of British Municipal History'—for which, it is no secret, he has long been waiting for a generous publisher—is given to the world by the Torrey Fund among the 'Harvard Historical Studies.' As one turns over its 461 pages, with its careful classification, its more than 3,000 entries, its model index, the imagination aches at the thought of the dreary and weary labor it has involved. But now here it is, with absolutely nothing to compare with it—or even to mention in connection with it—among previously existing bibliographies on the subject.

It is as complete a survey as anybody, save a Methuselah and a Croesus rolled into one, can ever hope to produce. Everything has been done to make smooth the path of the future investigator. For instance, not content to enter 'Reports of the Royal Commission on Historical Manuscripts,' Prof. Gross gives a page of references (p. 12) to the precise place in one or other of its sixty volumes devoted to each of seventy-four towns arranged alphabetically. Rymer's 'Foedera' (p. 23), the 'Rotuli Chartarum' (p. 25), the 'Rotuli Parliamentorum' (p. 26), a dozen volumes of seventeenth-century law reports, and, indeed, all the other considerable repositories of information, are laboriously indexed in like manner. And when we reach Part II., given up to modern histories of particular towns, we find just the one word here and there as to the relative value of this and that, that will set the investigator on the right road at the very outset. It is a book that every inquirer into British municipal history for the next half-century will have continually at his elbow as a matter of course.

And yet, in preparing this work, Prof. Gross has had apparently no thought whatever of the municipal problems of the day. He does not take the opportunity to hold up English municipalities as models for America; and Lord Salisbury would consult his pages in vain for hints how to treat the London County Council. As far as is humanly possible, his interest has been purely "scientific." But even here we are able to trace certain historical antecedents. One may go so far as to say that, but for the Hanoverian Succession, a Harvard professor would never have produced this book. For, but for the Hanoverian Succession, Göttingen would not have become the special centre in Germany for the study of English history,

and Dr. Gross would never have received from his master, Reinhold Pauli, the stimulus which has led to such solid performances.

Le Creature Sovrane. Da Adolfo Padovan. Milan. 1898. Pp. 300.

It is a fine thing to be young, to have high hopes and no doubts as to the future, to be sustained by a profound confidence in one's self, unshaken as yet by bitter and wholesome experience. And when the youth comes boldly forth with his little book, the captious graybeard smiles indulgently, seduced by so much freshness, touched by an evocation of "the days that are no more." And yet the book may be a very bad one; indeed, it often is; and whether good, bad, or indifferent, the critic is bound to express his honest opinion, whatever the cost to his feelings. Such at least is his excuse for plain speaking. It is therefore a pleasure when, as in the present case, he can truthfully say that the book is not so bad as it might be. It can be opened at random and read with a certain mild interest, since we are all curious about the lives of great men; and a collection of anecdotes and facts about them collected by a writer of culture, and recounted in smoothly flowing periods, may always occupy one of those half-hours that we give on occasion to the best authors. Sig. Padovan thinks, indeed, that he has given us more than mere stories; he has bound these together by a sort of natural history of the man of genius, or what he means to be such. Perhaps he will recognize the inadequacy of his performance when he is older.

He believes in heroes, but his worship is as water—yes, as milk and water unto wine—when compared with the fervor of Carlyle; and he sets out to supplement Lombroso, though he ends having demonstrated nothing, while his faith does not illuminate the horizon with its fires, but burns the modest dip before an image palpably graven, never of flesh and blood. He also believes that the genius has much more of sorrow than of joy in his life, but that his rare pleasures are, in proportion to his intelligence, greater than those of ordinary mortals. This may all be true, though the simple statement of it does not necessarily carry with it conviction. It may also be objected to the next article of his faith that pride—by which he sometimes means mere vanity, and sometimes a proper sense of the value of his work, quite consistent with personal modesty—is by no means confined to men of genius, nor is short life. The majority of mankind, even of the stupid, die young. The chapter on "Shipwrecks" is a puzzling one. E. g., Perin del Vaga is declared a shipwreck because posterity, not accepting his estimate of himself, places him below Raphael. They, too, made shipwreck who, while preparing the way for the great discoveries of science, did not achieve these themselves. Such failures, however, our author allows, are useful and, indeed, necessary. His last chapter is devoted to genius in the future; in it, with a courage which is of his years, but is scarcely of discretion, he gives himself freely to prophecy. It will gratify many to be told that the triumphs of the future are reserved for science rather than for art; but, outside of his own country, he will hardly find universal credence for his assertion that the land of these great men will be Italy. Still,

one cannot be sure that events will not justify his prediction.

The flowing style has a majesty—we are far from calling it a strut, even to ourselves—better adapted to the vaticinations of the seer than to the platitudes it too frequently embodies. The following passage from the chapter on "Death" is neither of the worst nor of the best:

"Io ti guido ora, lettore, nel regno tenebroso dove la Morte compie le sue stragi; tu udrà nuove voci, vedrai cose non vedute mai, e potrai cogliere in quel magico giardino qualche magnifico fiore solitario"—

which we translate, at the risk of spoiling what sense it has, as well as its melody:

"I now lead thee, reader, to the dusky realm where Death slays his thousands; thou shalt hear unknown voices, thou shalt see things never yet seen, and canst pluck flowers in that magic garden splendid in their loneliness."

Happily the author does not fulfil his promise, but simply goes on in his grand manner recounting his anecdotes and retailing his commonplaces, at once solemn and amusing. Sig. Padovan always takes himself seriously, and among his convictions he records one (p. 234) that his book will not fall into oblivion. We trust he may never lose this comforting belief, and that he will always keep the nameless something which makes us feel kindly toward him, and hope that next time he may do something more worthy of himself.

Old Virginia and her Neighbors. By John Fiske. 2 vols. Boston: Houghton, Mifflin & Co. 1897.

These volumes, though in one sense parts of a series, coming in between the author's 'Discovery of America' and his 'Beginnings of New England,' yet deal with a part of history that can be studied by itself as a sequence of causes and effects. After the destruction of Spain's overwhelming naval power by the almost miraculous catastrophe of 1588, there rushed into English minds the possibility of snatching the sovereignty of the seas, and the determination to do it. If Spain had planted and fortified herself along the coast of America from St. Augustine southward, might not Englishmen do the same further north? If the mines of Mexico and Peru had furnished the sinews of war to Charles and Philip, might not Englishmen hope to find similar sources of supply? The very names of the promoters of the first Virginia settlement show their designs and hopes, as the sagacious and alarmed Philip well understood.

But bitter experience taught the colonists their mistake, and Virginia became a plantation instead of a base of naval operations and a mining camp. From Virginia sprang Maryland, inheriting the peaceful plantation policy; and the Carolinas, and, later, Georgia, inheriting the military traditions of frontier outposts against the Spaniard; and thus these provinces, as illustrating special and consecutive phases of one movement, may be studied together. So the author closes the narrative, not with the American Revolution, but at the time when France, which (and not Spain) was now the arch-enemy, extending her cordon of posts west of the Alleghenies from the St. Lawrence to the Gulf, and threatening all the English colonists alike, aroused them to the necessity of combined action against the common danger, and awakened the feeling of essential

unity, or what Prof. Fiske calls "the continental idea."

To some readers the broad philosophical view which traces effects to causes and shows the successive stages in the advance of human progress, is the chief attraction of history; others delight in stirring incidents, vivacious narrative, and graphic details. Neither class will be disappointed in these interesting volumes. Prof. Fiske stoutly stands up for our boyhood's hero, Capt. John Smith, his three Turks' heads, his Lady Tragabigzanda, and his rescue by Pocahontas. The present reviewer, though strongly of opinion that (to put it delicately) a rigid herald might have insisted on Smith's adding a point sanguine to the blazon granted by Prince Sigismund, is yet glad to find his veracity so courageously championed by Prof. Fiske, partly because one hates to lose any romantic trait in so picturesque a figure, but chiefly because his map of the Chesapeake Bay and its shores is in itself a wonder that makes any other achievement credible.

The story of Virginia, through all its disasters down to the revocation of the charter and its reorganization as a royal colony, is rapidly but clearly told. Particularly suggestive is the account of the first American Colonial Legislature, which seems partly to have resembled a parish vestry and partly a Scottish kirk-session. They looked sharply after the minor morals, taxed husbands whose wives went too finely dressed, and enacted that whatever man or woman should be found guilty of "using words tending to a contract of marriage to two several persons at one time"—in modern phrase, flirtation—should receive corporal correction at the whipping-post. They should have defined more clearly what words did, and what did not, tend to a contract of marriage; or a gallant, for a compliment that would have won him smiles at Whitehall, might find himself summarily triced up for correction.

The interesting, though somewhat uneventful, history of Maryland is told with sufficient fulness, and the peculiar character of its palatinate government explained by an analysis of that of the bishopric of Durham, which was its model. The characters of George and Cecilus Calvert are treated with discriminating appreciation. On one point here we should have been glad of a reference to the writer's authority. He says (vol. i., p. 309), in reference to the "Act concerning Religion" of 1649: "This famous statute, commonly known as the Toleration Act, was drawn up by Cecilus himself, and passed the Assembly exactly as it came from him, without amendment." That it embodied his consistent policy, and, in the main, reflected his views, cannot be doubted; but that he himself drew it up in those very words would be extremely questionable unless supported by unimpeachable authority. Knowing Prof. Fiske's scrupulous accuracy, the present reviewer cannot doubt his possession of such authority, and only regrets that he has withheld it from his readers.

Having followed down the story of Maryland to the reestablishment of the Proprietary Government in 1658, the author takes us back to Virginia, now the Virginia of the Cavaliers. A chapter is given to Bacon's rebellion, which is justly characterized as "the first serious and ominous tragedy in the history of the United States,

a story preserved for us in many of its details with striking vividness, yet concerning the innermost significance of which we would fain know more than we do. It may fairly be pronounced the most interesting episode in our early history." Its deep significance lies in its being the first violent upheaving of underground forces which were to become volcanic in the next century. In Maryland it produced so powerful an impression as to add a word to the language: for a long time persons suspected of stirring up disaffection against the ruling powers were stigmatized as "Baconists." With Prof. Fiske's usual fairness, Bacon is shown us neither as a vamping demagogue nor as a second Hampden, but as one who injured a good cause by rashness and hot temper. Nor was Berkeley a mere truculent tyrant and butcher. It was the fate of these two courageous men that neither could understand the other nor his motives.

Referring to the charge of felony brought against Frederick, Sixth Lord Baltimore, Prof. Fiske says that he was acquitted "on a mere technicality." The official report of the trial shows that there was no technicality in the matter. He was acquitted because the jury did not believe the principal witness, and there can be no reasonable doubt that the verdict was just. Frederick was certainly not a moral man, but that is no reason why he should be painted blacker than he was.

One of the most entertaining chapters in these volumes is that devoted to the buccaneers and pirates. They and the colonies both sprang from the same root—the hostility to Spain. Drake and Raleigh begat Dampier and Rogers, and these begat Morgan and Kidd. These latter found in the peculiar conformation of the Carolina coast, with its guarding reefs and its intricate land-locked harbors, an excellent refuge; and their ill-gotten booty, cheaply sold or lavishly squandered, prevented the Carolinians from inquiring too curiously how or where it was acquired. "For at least thirty years after the founding of Carolina, nearly all the currency in the colony consisted of Spanish gold and silver brought in by freebooters." But when the pirates were so unwise as to turn against their friendly hosts, and the swaggering Blackbeard held Charleston itself to ransom, a new light as to the iniquity of piracy dawned upon the Carolinians. Ere many weeks had elapsed, Kidd was sent to finish his career at Execution Dock, and Blackbeard's shaggy head was hanging from the bowsprit of a Virginia cruiser.

Mr. Fiske, knowing that he studies the past to little purpose who does not draw from it some lessons for the present, occasionally points a very opportune moral. Thus, after praising that excellent institution and school of freemen, the town meeting, he adds:

"Under this form of government people are not so liable to bewildering delusions as under other forms. I refer especially to the delusion that 'the Government' is a sort of mysterious power, possessed of a magic inexhaustible fund of wealth, and able to do all manner of things for the benefit of 'the People.' Some such notion as this, more often implied than expressed, is very common, and it is inexpressibly dear to demagogues. It is the prolific root from which springs that luxuriant crop of humbug upon which political tricksters thrive as pigs fatten upon corn. In point of fact, no such government, armed with a magic fund of its own, has ever existed upon earth. No gov-

ernment has ever yet used any money for public purposes which it did not first take from its own people—unless when it may have plundered it from some other people in victorious warfare."

And again, apropos of the Navigation Act:

"Crude mediæval methods of robbery began to give place to the ingenious modern methods in which men's pockets are picked under the specious guise of public policy. Your mediæval baron would allow no ship or boat to pass his Rhenish castle without paying what he saw fit to extort for the privilege, and at the end of his evil career he was apt to compound with conscience and buy a ticket to heaven by building a chapel to the Virgin. Your modern manufacturer obtains legislative aid in fleecing his fellow-countrymen, while he seeks popularity by

bestowing upon the public a part of his ill-gotten gains in the shape of a new college or a town library."

There are some to whom these will seem hard sayings.

Most Useful Handbook

A Dictionary of American Authors

By OSCAR FAY ADAMS, author of "A Handbook of English Authors," etc. Crown 8vo, \$3.00.

"He aimed to prepare, and he has successfully prepared, a dictionary of authors, a work which should include about everything of American origin which has appeared in book form, and every one of American birth or adoption who has written books. The value and convenience of such a volume are apparent at a glance. It is not too much to say that Mr. Adams has filled what the newspapers would call a long-felt need."—*The Outlook*, New York.

Sold by Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.

11 East 17th Street, New York.

Economic History Since 1763.

Compiled by Benjamin Rand, Ph.D. Third Edition. with Bibliography. 8vo, \$3.00.

"This book may be said to mark an epoch in the teaching of political economy in this country, and to make possible a new branch of study in the curriculum of the universities of America."

A Bibliography of Economics.

By Benjamin Rand, Ph.D. 8vo, \$1.25.

This work embraces the more important English, French, German, and Italian authorities in general economic literature.

JOHN WILSON & SON,
UNIVERSITY PRESS, OAMBRIDGE, MASS.

American Ideals,

And Other Essays, Social and Political. By THEODORE ROOSEVELT, author of "The Winning of the West," "The Wilderness Hunter," etc. 12mo, gilt top, \$1.50

"These papers are of sterling merit, and well worthy of perusal. . . . Mr. Roosevelt writes in a direct and forcible manner, and shows a broad and intelligent comprehension of the attitude of the citizen towards the problem of municipal government."—*Detroit Free Press*.

"'American Ideals and Other Essays' is the sufficiently significant name Theodore Roosevelt has chosen for a pleasant little volume of papers which first saw the light in one or another of the monthly magazines. All of them, without exception, have an immediately patriotic purpose; all are instructive. . . . Written in a trenchant English which is masterly."—*Chicago Post*.

G. P. PUTNAM'S SONS, NEW YORK & LONDON.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing here. Special collections formed, and fuller information supplied than from any other house. Books, both old and new, and relating to any subject, can readily be supplied, at very moderate prices.

Agents for Clubs, Libraries, and all private collectors.

187 PICCADILLY, LONDON, W.

NEW EDITION.

The Story of Francis Cludde.

By STANLEY J. WEYMAN, author of "A Gentleman of France," "Under the Red Robe," "The House of the Wolf," "My Lady Rotha," etc. With four illustrations. Crown 8vo, \$1.25.

(LONDON: Kegan Paul, Trench, Trübner & Co)

PORTRAITS OF GREAT THINKERS.

THE OPEN COURT PUBLISHING COMPANY has in preparation a series of Portraits of eminent philosophical and scientific thinkers of the world.

The first series will be in the department of Philosophy, and the second in the department of Psychology. The portraits will be suitable for framing, printed on large paper with tint and plate and plate mark.

The following is a list of the portraits now in preparation:

PHILOSOPHICAL:

PYTHAGORAS, SOCRATES, PLATO, ARISTOT., E. EPICETUS, THOMAS AQUINAS, ST. AUGUSTINE, DUNS SCOTUS, GIORANO BRUNO, BACON, HOBES, DESCARTES, MALEBRANCHE, SPINOZA, LOCKE, BERKELEY, HUME, CONDILLAC, DIDEROT, LEIBNITZ, WOLFF, KANT, FICHTE, SCHELLING, HEGEL, SCHOPENHAUER, HERMANN LOTZE, REID, DUGALD STEWART, SIR W. HAMILTON, COUSIN, COMTE, ROSSINI, JOHN STUART MILL, HERBERT SPENCER.

PSYCHOLOGICAL:

CABANIS, MAINE DE BIRAN, BRNEKE, G. E. MUE LER, E. H. WEBER, FECHNER, HELMHOLTZ, WUNDT, HERING, AUBER, MACH, STUMPF, MUNK, EXNER, WERNICKE, BASTIAN, STEINHAL, HRENTANO BAIN, BULLY, WARD, C. L. MORGAN, ROMANES, PAUL JANET, RIBOT, TAINE, FOUILLEE, BINET, WILLIAM JAMES, G. STANLEY HALL, G. T. LADD.

There will be 68 portraits, 11x14, by photogravure process, and the price for the entire series will be \$7.50 on the best plate paper or \$11.00 on the Imperial Japanese paper. For either series alone, consisting of a selection of 34 portraits, the price will be \$5.00 on plain paper, \$7.00 on Imperial Japanese paper. Send for prospectus enclosing 25c. for sample portrait, which will be allowed on future order.

Some Books on Oriental Religion.

BUDDHISM AND ITS CHRISTIAN CRITICS.

By DR. PAUL CARUS, PH.D., EDITOR OF "THE OPEN COURT."

CONTENTS:

THE ORIGIN OF BUDDHISM.
THE PHILOSOPHY OF BUDDHISM.
THE PSYCHOLOGICAL PROBLEM.

Large 12mo. 310 pp.

ANCIENT INDIA: ITS LANGUAGE AND RELIGIONS
By PROF. H. OLDENBERG, of Kiel. Pages, ix., 110
Cloth, 50 cents; paper, 25 cents.

Contains (1) The Study of Sanskrit; (2) The Religion of the Veda; (3) Buddhism. A popular exposition by the foremost European authority.

"Matter divested of its technical form coming from so eminent an authority is certain to find a welcome reception awaiting it at the hands of the many who are interesting themselves in Hindu antiquities at the present time."—Chicago Tribune.

THE GOSPEL OF BUDDHA. By DR. PAUL CARUS. Fifth edition. Cloth, \$1.00; Paper, 85 cents.

Accepted as authoritative by numerous Buddhist sects, and translated into Chinese and Japanese.

"Admirably fitted to be a handbook for the single reader or for classes."—The Critic, New York.

KARMA: A Story of Early Buddhism. By PAUL CARUS. Third Oriental Art Edition. Flexible crepe paper, tied in silk. Delicate colored illustrations by famous Japanese artists. Price, 75 cents.

"Simply a gem."—Presbyterian and Reformed Review.

"A thing of rare beauty."—Boston Daily Advertiser.

"Most fascinating book of the year."—The Chicago Daily News.

"The drawings are very charming and will repay close study."—The Dial.

THE RELIGION OF SCIENCE LIBRARY.

A collection of standard works of The Open Court Press, issued bi-monthly. Yearly, \$1.50; single numbers, 15, 25, 35, and 50 cents (9d., 1s. 6d., 2s., 2s. 6d.), according to circumstances. The books are printed on good paper, from large type.

The Religion of Science Library, by its extraordinarily reasonable price, will bring a large number of important books within the reach of all readers. The following have already appeared in the series:

1. THE RELIGION OF SCIENCE. By PAUL CARUS. 25 cents (1s. 6d.).

2. THREE INTRODUCTORY LECTURES ON THE SCIENCE OF THOUGHT. By F. MAX MULLER. 25 cents (1s. 6d.).

3. THREE LECTURES ON THE SCIENCE OF LANGUAGE. By F. MAX MULLER. 15 cents (1s. 6d.).

4. THE DISEASES OF PERSONALITY. By TH. RIBOT. 25 cents (1s. 6d.).

5. THE PSYCHOLOGY OF ATTENTION. By TH. RIBOT. 25 cents (1s. 6d.).

6. THE PSYCHIC LIFE OF MICRO-ORGANISMS. By ALFRED BINET. 25 cents (1s. 6d.).

7. THE NATURE OF THE STATE. By PAUL CARUS. 15 cents (9d.).

8. ON DOUBLE CONSCIOUSNESS. By ALFRED BINET. 15c. (9d.).

9. FUNDAMENTAL PROBLEMS. By PAUL CARUS. Pp. 378. 50c. (2s. 6d.).

10. THE DISEASES OF THE WILL. By TH. RIBOT. 25 cents (1s. 6d.).

11. THE ORIGIN OF LANGUAGE, and THE LOGOS THEORY. By LUDWIG NOË. 15 cents (9d.).

12. THE FREE TRADE STRUGGLE IN ENGLAND. By GEN. M. M. THURMELL. 25 cents (1s. 6d.).

13. WHEELBARROW ON THE LABOR QUESTION. 85 cents (2s.).

14. THE GOSPEL OF BUDDHA. By PAUL CARUS. 85 cents (2s.).

THE MONIST.

A Quarterly Magazine Devoted to the Philosophy of Science.

Editor, DR. PAUL CARUS; Assistant Editor, T. J. MCCORMACK; Associates, EDWARD C. REIGLER, MARY CARUS.

Contents of No. 2, Vol. 8, January, 1898.

The Aryans and the Ancient Nations, a Page of Primitive History, Prof. G. SENAR; The Evolution of Religion, Major JOHN WESLEY POWELL; Love as a Factor in Evolution, Dr. WOODS HUTCHINSON; Causation, Physical and Metaphysical, Prof. C. LLOYD MORGAN; On the Philosophy of Laughing, EDITOR; On the Philosophical Basis of Christianity in Its Relation to Buddhism, A Letter from Prof. Rudolf Eucken of Jena; Literary Correspondence, FRANCE, LUCIEN ARREAT; Book Reviews.

Price, 50 Cents; Yearly, \$2.00.

DR. W. ROBERTSON NICOLL.

writing in the "British Weekly," says:

"The newly published volume of addresses by Prof. Drummond will, we do not hesitate to say, commend itself more to many readers than any of his other works. . . . But in his new book the air is warmer and kinder. We have a full and rich presentation of Christianity. He speaks wisdom among the perfect. The old winsomeness of presentation charms us again. We find here the fresh and unmanipulated view of truth, the perfect and unaffected simplicity of style, the singularly true and crystal fancy, the light and pliant treatment of great themes for which Mr. Drummond was famous. . . . Here no one can miss the depth and sweetness of the thought. Every page, almost every sentence gives a revelation, and the style fits so closely to the subject that the result is a miracle of light and energy and grace. . . . Nothing is more instructive about these addresses than their searching and intense style. There burns throughout them a powerful flame that can illuminate or melt, and we cannot believe that any one can study them carefully and rise from the perusal quite the same as he was."

THE IDEAL LIFE.

Addresses Hitherto Unpublished.

The Nation.

NEW YORK, THURSDAY, JANUARY 20, 1898.

The Week.

While the Senate considers in secret session the treaty for annexing Hawaii, it discusses in open session the question of restricting immigration. The measure is practically the same that was vetoed by President Cleveland at the last session, but it does not contain the section which prohibited the daily crossing of the border by Canadians who work on this side of the line. The most curious feature of the matter is the fact that legislation against the coming to the United States of Portuguese and other ignorant races is advocated by many of the very Senators who are most urgent for the incorporation into the United States of the Hawaiian Islands, with their tens of thousands of Portuguese, Kanakas, Chinese, and Japanese. Next to the shame of religious journals which condone the injustice of the annexation job, is the absurdity of the statesmanship which votes at the same time to keep out ignorant foreigners individually, and to take in a mass of them.

As was expected, the Senate passed the bill on Monday by a vote of 45 to 28, all the Republicans and some of the silverites supporting it. The salient feature of the measure is the application of an educational test to all applicants for admission to this country above the age of sixteen, excepting those who are wives, parents, or grandparents of people already here. The proposed test was ability to read and write, in English or in the language of the country from which the applicant comes, a passage of the United States Constitution selected at random; but this was changed at the last moment by dropping the writing qualification, upon motion of Senator Spooner of Wisconsin, who said that he had known men to rise to eminence in this country who could read, but could not spell, punctuate, and write with accuracy. It has been generally taken for granted that the Senate bill would pass the House without much trouble, but there have been signs of popular opposition to the policy of late, which may affect the attitude of Representatives. The Germans of Chicago have started a movement against the scheme which seems to take in practically all the leaders of the race, including the editors of 16 newspapers, 47 clergymen, and almost all of the 300 German societies. They not only object to the restriction proposed as unnecessary and unjust, and a revival of the old Know-Nothing spirit, but announce that they will oppose the

renomination and reelection of all members of Congress who shall vote for it.

The old divine of the Hawaiian Literary Bureau has got himself into trouble by denouncing the Tsar and the Emperor for seizing bits of China for their own emolument, while he was acting in precisely the same manner himself with regard to Hawaii. He has consequently been called on to explain by his Presbytery. He was at first disposed to be insolent and abusive, but was admonished by the Moderator. He denied that he was engaged in any scheme of conquest. He said he was merely trying to "annex." Being asked what he meant by "annex," he said it was to do the same thing to Hawaii that several distinguished Americans wanted to do some time ago. Being asked what that was, he said it was keeping Hawaii within the sphere of our influence, and not allowing any other Power to take or occupy it. Being asked whether the islands were not in that position already, he said they were, but that a closer connection was needed to develop them. Being asked for whose benefit they were to be developed, he said it was to be for the benefit of the sons of the missionaries. Being asked if it was right for sons of missionaries to take other people's land to develop for their own benefit, he said it was, if there was no other way of making the soil very productive. Being asked if this was the sort of morality he taught his congregation, he said it was, and he saw no harm in it if what was done was done for "America." After consultation the Presbytery suspended him from preaching for the space of three months. On leaving the room, he was heard to mutter, "We'll have the islands all the same."

The Senate committee on privileges and elections have decided by a majority of one that Mr. Corbett of Oregon is not entitled to a seat in that body. This must be regarded as a very unfortunate decision, since the vote of the committee will probably be decisive in the Senate itself. Mr. Corbett was appointed a Senator by the Governor to fill a vacancy caused by the expiration of the term of Senator Mitchell and the failure of the Legislature of Oregon to meet. This was not a case of failure to elect, but of failure to organize. It appears to be settled that a mere failure of a State Legislature to elect a Senator, when it has met and balloted for that purpose, is not the "happening" of a vacancy which empowers a Governor to fill by appointment, although even in that case it would be more in consonance with the spirit of the Constitution to adopt rules whose tendency would be to keep the

seats in the Senate filled instead of empty. In the Oregon case the Legislature did not organize at the proper time. In contemplation of law no Legislature existed. None exists to-day. The question, therefore, is whether a vacancy in the Senate has "happened" within the meaning of that clause of the Constitution which authorizes the Governor to appoint. It was shown that it had been the uniform practice of the Senate to admit members so appointed until the Lee Mantle case from Montana came up two or three years ago. Then the practice was reversed, and now the Senate committee decides the Corbett case in accord with the later precedent, although there are some differences which make the Corbett claim the stronger of the two. Mr. Corbett is a Republican of the sound-money type, and the loss of his vote and influence at this time is somewhat serious.

There has probably seldom been an occasion in the United States with which God, if the general estimate of his character and attributes be the true ones, had less to do than with the Hanna contest in Ohio. There has also seldom been an occasion in which, if the general estimate of his character and attributes be the true one, the Devil was more active, influential, and satisfied. There has seldom been an occasion in which the vices and defects in human character in which he most delights, more abounded and were more fruitful. Fraud, falsehood, corruption, bribery, treachery, indifference to public interests and to the character of public men, were the leading agencies in the struggle. The spectacle was altogether one which must have delighted the infernal regions. Yet when it was over, the message which it inspired Hanna to send to the President was: "God reigns, and the Republican party still lives." The comment on this of the pious President was that the victory was "not only beneficial to the country," but reflected credit on Hanna's "leadership." This incident, and the appointment of Saylor, the exposed swindler, to the consulship at Matanzas, Cuba, in spite of the remonstrances of all that is best in Philadelphia, personally made to the President, raises, in spite of us, the question, What religion is it that these men profess?

Commissioner Evans of the Pension Bureau continues to surprise the public. He began by exposing the great frauds that have been committed in the granting of pensions, and denouncing the swindling pension attorneys who are largely responsible for these frauds. He has now proceeded to apply reform methods to his own bureau by reducing

the force employed, of his own accord. He told the appropriations committee that he could do the work as well as it had been done in the past for \$100,000 a year less, by discharging 100 clerks, as "there are divisions that are overcrowded and the pay-rolls carry considerable dead lumber." Now he is going to discharge these unnecessary clerks, using the records of the whole force as the basis of his action, and dropping the most inefficient. The pension attorneys and the office-seekers are inclined to think that Mr. Evans must be crazy, while the general public is hardly less puzzled to find an official inclined to run a Government bureau as he would a private business.

One of the causes of embarrassment which always confront a new official, when he assumes charge of a Government department, is the large number of old men whom he finds in responsible positions, and who have really passed their period of usefulness. As they have grown old in the service and have accumulated no competency, to dismiss them is an act of inhumanity to which few heads of departments can bring themselves. Secretary Gage has grappled with the problem, and has established what he terms an "honor roll," to which he intends to transfer superannuated employees in the Treasury Department. They are to receive low salaries and do light work. Younger and more active men, who now actually do the work of the aged clerks, are to receive the rank and pay which formerly the latter enjoyed. This is a frank admission of existing conditions and a laudable attempt to mitigate them, with a saving to the Government; but Mr. Gage has already admitted that a difficulty which he finds it hard to overcome, arises from the importunities with which the friends of the superannuated clerks beset him, to prevent his carrying out his purpose. Even if he is successful, he has merely set a good example, which neither his colleagues nor his successors will be under the necessity of following. The importunities which he may resist, they may easily succumb to. There can be no satisfactory settlement of the question until a law has been passed to cover it.

Such a law was proposed to the last Congress, but never came up for consideration. It was a simple scheme by which the employees in the classified service might provide for their own superannuation with a saving to the Government and with benefit to themselves. Under it a small percentage—not more than 2 per cent., and eventually less—was to be withheld from each person's salary, and the sum thus acquired was to constitute a fund for the retirement, upon three-fourths pay, of minor officials

and clerks who had served the Government many years, and had reached an advanced age. It was estimated by the friends of this measure that the fund would be so large that it would permit of the repayment of the money he had paid in, to any one who might separate himself from the service, thus making it also in a measure a savings fund. The advantages of this scheme to the Government are obvious. It would be rid at once of its civil pensioners. The old men now encumbering its offices would be supplanted by younger and more efficient men. There would be quicker promotion and a greater movement of new life in the service. There would be opportunity for many more appointments, and the lists of those eligible for appointment would be relieved to some extent of their present congested condition. Strange as it may seem, this proposal met with some opposition from the clerks themselves, on the ground that they were unwilling that any portion of their pay should be withheld from them; but it is not probable that the opposition was extensive, or that it would not disappear in the light of intelligent discussion.

Monday's report of the Bureau of Statistics on the foreign trade of the United States during December completes the remarkable record for the calendar year 1897. Taking the twelve months' total, the comparisons are decidedly the most extraordinary in this country's history. In 1896, it will be remembered, the outward trade of the United States ran for the first time above one billion dollars; but the total merchandise exports for last year exceed those of 1896 by no less than \$93,292,278, which is a gain of more than 9 per cent. As compared with other years when the country's export trade was regarded as exceptional, it is interesting to observe that the trade of 1897 exceeds by \$128,000,000 that of 1891, and runs \$209,000,000 beyond 1880. Taken along with the heavy shipments of 1896, this extraordinary increase marks in many respects the progress of a new era in foreign trade. That some peculiar and not necessarily permanent agricultural conditions have played an important part in the increase during both of the two last years is sufficiently well known, but it has also been manifest that the great expansion in American exports has been limited to no branch of industry or production. That this invasion of the preserves of older manufacturing states should have evoked such warnings as Count Goluchowski's speech to the Austrian Delegation last November is not surprising. But the "prompt counteracting measures" urged on Europe by the Count against the "destructive competition with transoceanic countries" are no very probable solution of the question. In the present, as in the past, it is the

United States itself which must fetter or unloose American industry.

The total imports for December, it is to be observed, decreased \$7,465,000 from those for December, 1896. This decrease happened in the imports free of duty; but in the dutiable imports alone the gain over 1896 was only \$1,248,000, and it will be remembered that in December, 1896, such importations had fallen to by far the lowest level in a dozen years. December was the fifth month since the enactment of the Dingley tariff; it would appear, therefore, that if the reasoning of the tariff-builders of 1897 was accurate, "anticipatory importations" ought by this time to have been in a reasonable degree consumed. Yet here is a wholly insignificant increase during December, supplemented, during the opening fortnight of January, by foreign merchandise receipts at New York city smaller by 20 per cent. than those of the same period in 1897. Everybody knows that worshippers of the protection fetish are habitually blind to facts and figures; but, as Senator Aldrich proved last year, there are protectionists who still retain the use of their reasoning faculties. Have these men nothing to say on the question of the revenue?

The discussion over the reduction of wages in the cotton mills of New England is bringing out some interesting revelations. Ex-Congressman Crapo of New Bedford makes the important statement that the present situation ought to have been foreseen and provided against last summer. "By far the wisest thing to have done," he says, "would have been to shut down the mills in the summer, when it would have been least hard for the operatives." Mr. Crapo believes that the wisest plan now might be a general shut-down until consumption has reduced the accumulated stock of goods, but he considers a general agreement to do this on the part of the manufacturers out of the question, while "the reduction of wages is likely to force the issue, and by a general strike the desired curtailment will be brought about." In other words, the poor operatives must be driven to strike in midwinter as the means of securing a shut-down which the employers recognized was inevitable as long ago as last summer, but refused then to order.

Mr. Crapo holds that the tariff has nothing to do with the situation. He says that "we [the manufacturers] haven't any fault to find with the present tariff," which is an improvement on the Wilson tariff, and that even the Wilson tariff "took care of us better than the previous tariff." There could hardly be a more convincing demon-

stration of the humbug of the claims that have always been made for the tariff as an essential of prosperity. In the campaign of 1896 the employees in New England manufactories were assured that the enactment of another McKinley tariff would put an end to the existing depression. A man would have been denounced as a free-trader and a liar who should have suggested that no tariff, even if the manufacturers "hadn't any fault to find with it," could insure the successful operation of the cotton mills. As for a prophecy that within six months after the enactment of such a tariff 100,000 operatives would have to stand a 10 per cent. reduction of wages or strike, there was not a Republican organ or stump-speaker but would have denounced the idea as utterly incredible.

Mr. Platt has given the amateurs of the new Legislature, who supposed they had got into his good graces, a lesson in the science of government. They helped him to get his man into the speakership of the Assembly, with the confident expectation that good chairmanships of committees would be apportioned to them as rewards for their timely aid. When the committees were announced, however, they discovered that Mr. Platt's views of their deserts had not coincided with their own. In some way or other, there had been a radical misunderstanding. Mr. Hill of Erie, for example, who had it in his power, when the Legislature met, to secure the election of an anti-Platt man to the speakership, and thus make possible an organization of the Assembly which no boss could control, but who had supported Platt's candidate and elected him because he thought that by so doing he should obtain for himself the chairmanship of the committee on canals, was amazed when the committees were announced to find that Mr. Taylor of Oswego had that chairmanship, while he was assigned to the head of the committee on banks. Similar disappointment was the lot of the two "Independents" from Brooklyn, who joined at the last moment with Mr. Hill in putting Platt's man into the Speaker's chair. They got no chairmanships whatever, and only minor places on unimportant committees. This treatment would have been hard enough to bear of itself, but the Boss aggravated it by allowing the real Independents who refused to go into his caucus, and who refused to vote for his man after he was nominated for Speaker, to receive quite as good places as those assigned to the Independents who yielded to his blandishments.

There has been a good deal of unnecessary comment expended on the Mayor's denunciation of the city's gift of land to the new Public Library. He

ought to be thanked for his talk instead of being blamed. The hardest task good people have had to perform in this city has been to convince the majority which voted for Low, Tracy, and George, that Tammany is not a political party, though it goes through the motions and puts on the airs of one. It is a band of ignorant, poor, and utterly corrupt men, organized and led by cunning leaders, somewhat more knowing than themselves, and has for its object simply the seizure of the revenues of the city and their use, under the forms of law, to enrich themselves and support their families. They care no more for literature, art, science, and education than the forces who entered Rome under Alaric. They are after "the stuff" simply. It is a help, therefore, in bringing home this knowledge to the public, to have Croker denounce the Board of Education, and Mayor Van Wyck roar against libraries, and Grady against the Chamber of Commerce. They are all proving that Tammany is really a flood of modern barbarism beating on one spot, against the things which constitute civilization and national progress. The more of such talk the better.

Sir Michael Hicks-Beach's declaration that there shall be no closing of Chinese ports is, since Canning's famous acknowledgment of the independence of the Spanish-American provinces, the finest declaration made by any British Minister. Open ports, free to all the nations of the earth, are something worth fighting for. The British Minister is a splendid contrast to the two "war lords" who are wandering round the earth seeking ports to close, markets to monopolize, and commerce for themselves only. It is a lucky thing for civilization that England has enough "sea power" to make her declarations good, and it is a melancholy thing that we who, a century ago, stood far in advance of her in advocacy of everything that vindicated the "sacred rights of man," should now lag behind her as a friend of the race. If we took a port to-day, we should promptly put about 60 per cent. duty on all imports, search passengers' clothing for trousers and chemises bought abroad, tear sealskin jackets off the backs of women, and, in fact, do everything we could, short of violence, to make human intercourse difficult and disagreeable, to diminish the advantage of steam and electricity, and make travel seem immoral.

The Government of India has decided to issue gold notes. The demand for rupee bills in London to meet payments which English merchants have to make in India, has carried the price of the bills up to 16d. per rupee, which is the par of exchange as fixed by the Government when the mints were closed to silver in 1893. Any advance above 16d.

will carry gold from England to India; but as it takes a long time to move gold between those two countries, the Government proposes to issue its notes in Calcutta on receipt of telegraphic notice of the sale of council drafts in London, and deliver them to the payee in India. The notes will be redeemable in gold, but the demand for money in India is so strong that they will probably remain in circulation till the gold which they represent arrives, and even longer. This step points the way to a gold basis for the currency of India, the present currency being on an irredeemable silver basis. The silver rupee is now worth fourpence more than the silver contained in it would bring in the bullion market.

The rioting in Paris indicates only two things—French sensitiveness on the subject of "spies," and French dislike of the Jews. Why Celtic races are so suspicious about spies and traitors is a subject which has been much discussed, for Ireland is, in this matter, a match for France. Nearly all Irish misfortunes are due to some kind of treachery. There is nearly always a man who "sould the pass" in any political movement and an informer in every conspiracy. In France nearly all defeats have had a traitor who made terms with the enemy. Unluckily, this watching for men who try to damage the country from personal motives does not seem all delusion. Allegiance to any particular government sits lightly on Frenchmen, and any government, even if a Boulanger sets it up, is apt to take the place of the country with some party or faction. The Jew hatred is probably due to the enormous money power acquired by the Jews in a country which is wanting in the commercial and banking instinct and has few large fortunes. The indifference of the French democracy to what is called the "haute finance" and to the larger commerce, has naturally left a vacuum in French society which as keen a money-making race as the Jews has stepped in to fill. The result is that the bulk of French capital is, for all great enterprises, handled or controlled by Jews. The French prefer small savings, retail trade, literature, and military adventure to large money-making operations, and they naturally dislike the men who venture where they fear to tread. They blow the steam off, when the pressure becomes too severe, by "manifestations," and fastening on somebody as the personification of the hated thing, whatever it is. Our contrast to them in the matter of excitability is something curious. Were they exposed to one-half of the governmental failures and scandals under which we sit meekly, they would pass most of their nights in the streets, yelling, distributing "coups de bâton," and recommending that somebody should be spat upon.

THE LATEST HAWAIIAN PHASE.

The Hawaiian Literary Bureau has turned its attention from true religion to sugar. It found that the argument that the Hawaiian sugar would undersell the home beet-sugar in case of annexation, was making an impression in the Senate, so it dropped the Gospel like a hot potato, and has come down to business. It will not rely on sugar any more, but on "general productiveness." It says:

"Sugar production there [in Hawaii] may indeed thrive, but not by underselling of beet-sugar produced by farmers in this country. So true is this that the ablest advocates of annexation who have given the subject careful attention, no longer urge it as the acquisition of a cheap-sugar farm, but on account of the great potential productiveness of the islands in other respects, and far more because of the importance to the national defence, and especially to the defence of the Pacific Coast, of the complete control of the islands which annexation alone can secure."

You see the ablest advocates of annexation were at one time urging it as the acquisition of "a cheap-sugar farm," but, finding that this was not what was wanted, they now urge it as the acquisition of a dear-sugar farm. Having tried to sell their dog as fat, but finding that what the purchaser wants is a lean dog, they say their dog "is not so darned fat." So the islands, if acquired, will not produce sugar so cheap after all, but just cheap enough. It is its "potential productiveness" that constitutes its attraction. The Gospel does not say that you must not conquer and annex weak peoples at all. What it says is that you must not conquer and annex them if they are not "potentially productive," or if you do not want them for some purpose of your own. Therefore, although the Gospel covers the case of China and the Asiatics generally, it does not cover "potentially productive" Polyynesians. But Hawaii is "potentially productive," and we want it for the defence of our Pacific Coast; therefore, we ought to take it against the will of the people.

This seems to us pretty clear as an argument, but it would unfortunately justify fully nine-tenths of man's thefts committed on his brother man, because, when man takes anything unlawfully from his fellow-man, it is almost always owing to the thief's firm conviction that he needs it for his own comfort and enjoyment, and that it will promote both. The defence argument, we fear, will need even more elucidation than the sugar argument. Hawaii is 2,000 miles away from the Pacific Coast. There are only two ways in which an island at that distance can protect a coast. The first is by being towed and anchored so near the coast that it can cover a portion of the coast with the guns of its batteries. The other is by drawing off from the coast the ships and men which were going to attack it. If we mean to use Hawaii for coast de-

fence, therefore, we must either move it to the neighborhood of San Francisco or else make it so attractive that an enemy proposing to attack San Francisco would drop that enterprise and sail away to Hawaii.

But it is quite evident, and has been frequently pointed out, that, in order to have this move of his really benefit us, he would have to find a fleet of ours waiting there to receive him when he came. If we had no fleet there, he would land and take possession of the islands, and probably join the natives in disgusting heathen practices. This fleet, however, would probably have to be taken away from the defence of our coast and would have to fight the enemy off Hawaii. Were it defeated and sunk, the enemy would make straight for our coast again and lay it waste. So that to make the islands really effective as a defence, we should have to have two fleets, one to defend the islands and one to defend the coast. None of the defence arguments, however, assumes the existence of more than one American fleet in the Pacific, which seems to us a fatal dialectical error. Strict logic requires two fleets.

Nor is this all. We have the authority of Senator Frye, who spoke on this subject in the Senate on Thursday, for saying that we could not "control the Nicaragua Canal" without annexing Hawaii. Now, the only way that we know of for controlling a canal, is to have a fleet at each end to prevent the enemy from getting into it, and sinking in it impediments to navigation. This would need two fleets more, unless the islands can be made to protect the Pacific end by being moved nearer, so that their batteries would cover it. In this way, one fleet would do both for the islands and one end of the canal, but three fleets would still be required in order to protect both the canal and Hawaii—one for the coast and two for the canal; for we presume it will hardly be maintained that if the islands were moved down towards Nicaragua they would continue to afford protection to the Californian Coast.

There is another argument which we confess we cannot meet so easily as these two. It emanates from Mr. Thomas J. Mackey of South Carolina, who has been retained as counsel for the annexationists at Washington. He says, what everybody knew, "that British agents are actively at work to defeat annexation." Of course they are. What region is exempt from the devilish industry of these agents? But he draws attention also to something more important. He shows that "Juneau, the main depot from which supplies are distributed in Alaska, is 500 miles nearer to Hawaii than it is to San Francisco." Well, if we now reject this offer made by the Hawaiian Government, what will happen? Why, "England," in the Mackey judgment, "will secure the islands."

But why? "Because their government is controlled by an English-speaking race." What will England do then, when she holds "the key of the Pacific"? Why, she will "absolutely shut off supplies for Alaska, and secure that whole region, with its vast mineral resources." How will that come about? It will come about because the Americans in Alaska, being thus "threatened with starvation," must, in case of war, "seek British protection." What else will follow from the British possession of Hawaii? "Her acquisition of Alaska if not California." What, then, would be the only way in which we could save California? By "a series of fortifications" which, in Mackey's "judgment as an engineer," "would cost the Government not less than \$60,000,000." It is evident there are going to be terrible times in the Pacific. Private advices from London satisfy us that Mackey does not tell half the truth. Salisbury, Balfour, and Chamberlain are all lying low, but they lie on maps of the North Pacific.

THE LAST STEP IN CORRUPTION.

A very disagreeable sensation has been caused by the recent coming to light of two pieces of governmental incompetence or jobbery. One of them affects the navy, the other the army. The more the Brooklyn dry-dock is investigated, the more flagrant the fraud of it appears. Badly planned, badly built, badly inspected, it is about the most serious break-down in the Navy Department that we have seen. Still graver are the charges now made public by the War Department against Capt. Carter. Hard on to \$3,000,000 is the sum of which he and his confederates are accused of robbing the Government in connection with the public works near Savannah. True or false, the charges have given a serious shock to public confidence.

The first feeling is one of alarm. Our national defence, our national safety, seems endangered. We understand better the French hysterics, as we have been accustomed to call them, over their army scandals. If our dry-docks threaten collapse, how can we be sure that our ships are sound? Why should Government inspection in the case of building ships be more efficient than in that of building docks? In the latter instance it has proved worthless or fraudulent; how do we know that the armor on our battle-ships is not full of blow-holes, that our turrets will revolve as they should, our guns not explode at the first fire? Mr. Roosevelt has lately sounded a note of warning about some of our men-of-war; their batteries are not what they should be, he says, and he justly remarks that if any "disaster" should happen to one of them, after all the money spent in their building, the effect on the public mind would be very bad. Already the effect is bad, both upon the

public and upon Congress. All these revelations, coming one upon the heels of another, have certainly imperilled the big navy appropriations. Congressmen are irritable and suspicious on that subject, not unnaturally, and the fiercest Jingo has an inward dread of going to war, even with Spain, until some guarantee can be had that our ships are seaworthy, sound, and capable of inflicting more damage upon the enemy than upon their own crews.

But the uneasy sense of insecurity goes further than this. The country shivers to see public corruption spreading into regions which it thought certainly immune. We have become accustomed, in our good-natured, laughing way, to the spectacle of corrupt Congressmen. We even joke about the "exceptional business opportunities" which a man like Quay must have enjoyed in public life, to enable him, without a profession to supplement his \$5,000 salary, in a few years to be able to spend money like a millionaire—a discreet gift to a church being, of course, now and then thrown in. Seats in the Senate bought like seats in the Stock Exchange, and for very much the same reasons, and Representatives spending more than their salaries on their election, we have come to look upon without special wonder. But we have fondly believed that at least two branches of the public service were above suspicion. The army, offering an honorable and secure professional career, filled with graduates of our fine military school—surely that must be beyond the smutch of jobbery. The navy, more than ever in the public eye during the last few years as the home of gallant gentlemen, with the country's honor peculiarly in their keeping—impossible that corruption should stain its whiteness! But here are the cruel charges afloat; here are the suspect officers of either arm about to be brought to trial; and the American people feels that one of its last resources, one of its last treasures, is slipping away from it.

The strange thing is that we have not seen how all this was inevitable from the first. Corruption can no more be stayed in one part of the body politic than can cancer be confined to a single point in a vital organ. To spread is the fated nature of either. Naval officers and military men have no supernatural gift of virtue. They are mortal men, subject to like passions with Congressmen and heads of departments and bosses. If all the public world about them is filled with talk of wealth and its power—brute wealth and brute power—if every other official they meet is eager about the good things to be had out of a Government position, they cannot be expected to go through all this pitch undefiled. Indeed, there has long been plenty of evidence that "the jingle of the guinea" was coming to have

more power over some officers in the army and navy than the opportunities of their profession. We do not speak of bribery outright; but how many officers have resigned to take service with ship-builders and armor-plate manufacturers? How regular a thing is it for ex-Secretaries of the Navy, and ex-Assistant Secretaries, to become "counsel" for naval contractors? The immense money-stake which these contractors have in military appropriations has been large enough not merely to "retain" Congressmen and lobbyists of influence on account of their former official position, but to detach many an ambitious officer from the service. This has been well known. What distresses the nation now is to find reason to dread that officers still in the service have sold themselves for money.

If they have, they have only taken the last step—the legitimate and inevitable last step—in corruption. The technical, the professional, branches of the public service cannot for ever escape the creeping disease that is paralyzing all the others. China is the great example of how the evil works. The true "Chinese system," which the opponents of civil-service reform ignorantly cite, is simply their own corrupt system made perfect. In China every office is bought, every official steals, every dollar of taxes collected gets into the public treasury as only fifty cents. Well, what was the result of this corruption of civil China upon military China? The war with Japan told the story. Many a provincial governor, when called upon for the troops for which he had been drawing money from Peking, sent down a lot of sweepings from the slums, armed with bludgeons and worn-out rifles, with no equipment and rotten ammunition. The money to arm and support soldiers had all been stolen. Our worthless dry-docks, our fraudulent public works, warn us how swiftly we are going the same way. That we can no longer count securely upon the purity of army and navy is the logical result of being no longer able to count upon the purity of House and Senate and Legislature. What we see the beginnings of is simply corruption bringing forth its perfect work.

CURTAILING THE POSTAL SERVICE.

The order which comes from Washington to reduce the postal service in New York city and to discharge sixty-five letter-carriers in order to save money, invites attention once more to the kind of economy that prevails at the national capital. It adds somewhat to the force of what we have to say that the cities of Boston and Philadelphia are to have their postal facilities cut down in the same proportion. Thus the city which contributes the largest sum to the postal revenues, and the two cities

which, with one exception, contribute the next largest sums, are to be deprived in part of a service which has grown up naturally and has been found by successive postmasters to be necessary to an efficient handling of the mails; and this is to happen because a particular appropriation is short by the sum of \$100,000 and Congress refuses or neglects to make up the deficiency. This, it should be added, is a government which, ten or twelve years ago, was collecting a surplus revenue of \$100,000,000 per annum, and which actually passed a sweeping measure to reduce its income.

The country is richer than it was in 1887. Why is it necessary to deprive any portion of the people of their ordinary and accustomed mail facilities? This is a question which the cities affected by the reduction will wonderingly and perhaps angrily ask when they come to vote next fall. It will not be a sufficient answer to say that Congress refused to make an appropriation for the service. Congress will be the very thing that the voters will have to deal with at that time. It would not be at all surprising if every Republican seat in this city should be emptied at that election. If so, the result would be due not so much to the inconveniences suffered by individuals in the lessening of the number of mail deliveries, as to the evidence of incompetency in the management of public affairs, and to the sympathy excited by the discharge of hard-working letter-carriers whose services are really needed. It is not so much the frequency of deliveries in the up-town districts that will be missed as the congestion of matter at the general and branch post-offices that will be caused.

The science and the resources of the Post-office in all the large cities are tasked to prevent an accumulation of matter, for when once a blockade takes place the postmaster labors in vain to get rid of it. The service is like a river full of floating ice. If a gorge once forms, the accumulation in the rear heaps itself up higher and higher, and eventually overflows its banks or bursts with disastrous results. The need of frequent deliveries results from this pressure in the rear rather than from eagerness on the part of the inhabitants of the up-town districts for prompt service. We are a long way behind the cities of equal importance in Europe in the matter of local delivery. The whole of London is better served than any part of New York, and now it is proposed to reduce our service by one-fourth in the districts above Forty-second Street.

Supposing it to be necessary that this government, that was rolling in wealth ten years ago and striving eagerly for means to reduce its income, should now find means to economize, where should it begin? The very last place to save money should be the postal facilities of

the country; or if there must be a saving there, it should be in the branch of the service which is clearly an abuse and a fraud upon the department. The Loud bill, which has been before Congress three years, proposes to cut off certain excrescences which involve a needless expense to the Government of \$10,000,000 to \$15,000,000 per annum. Yet that bill was defeated because powerful private interests were affected by it. These private interests kept a lobby at Washington. They had "pulls" with Senators and Representatives. The public, who foot these unnecessary bills, do not send anybody to Washington to represent their common interests in a special but only in a general way, and so the abuse which the Loud bill seeks to eradicate goes on, and the parasites who fatten on the postal revenues are undisturbed. And now when the beggarly deficiency of \$100,000 exists in the appropriation for a single year, it must be taken out of the legitimate and paying service of three large cities.

If we cast our eyes outside of the Post-Office Department itself, what a waste of money do we behold in many directions. The fact that our military expenses, without having any army, but including pensions, exceed those of the countries which have the largest armies in the world, including also their pensions, is the first anomaly that presents itself. Next come river-and-harbor bills and public-building jobs, which have been repeated so many times that even the barest allusion to them sickens the reader. Just now we are spending \$100,000 to survey a canal in a foreign country, and the officer in charge of it writes that he wants \$100,000 more. Our dry-docks are not waterproof and we must have them rebuilt, or depend on Great Britain when we want to dock our warships. And now, too, we are seriously considering the annexation of a group of islands in the Pacific Ocean to fortify and defend which will cost an enormous sum of money, whereas those islands in their present estate and condition need no fortification, no navy, no civil list, no expenditure on our part except the salaries of a minister and a secretary of legation. Information has just leaked out that we have made a cash offer for the Danish West India Islands, to be followed by more fortifications and civil lists and miscellaneous expenditure. But we cannot continue the profligacy of our mail service. We must cut down New York \$40,000, and make the rest of the saving in Boston and Philadelphia. Surely this is a great country, and it is growing more famous every day.

DEATH TO HARMONY.

It is the avowed purpose of the Republicans of this city who are forming an organization in opposition to Platt's

machine, to extend their organization throughout the State, and to call an early convention in the autumn for the nomination of a full State ticket. Of course, this amounts to a declaration of war upon the regular party machine, and is, therefore, absolutely fatal to "harmony within the party." The immediate effect of the revelation of this purpose was to call forth from Mr. Platt a bitter denunciation of the promoters of the movement, as traitors who were planning the ruin of their party and inviting national disaster by taking the first step towards turning the country over to Bryanism in 1900. He maintained that the election of a new Congress this fall, with the currency question as the dominant issue, made it the duty of all Republicans who wish to save the country from the silver standard to stand together without regard to factional differences, for if Congress were to be lost through quarrels in New York, then Bryan would be certain to come in in 1900, and national ruin would follow.

This line of argument did not occur to Mr. Platt when he insisted upon running his family candidate for Mayor last November, thus putting into the hands of the Democratic party and the Bryanites the most stupendous mass of patronage any political party had ever been able to secure. Nothing that can happen in this State this year can either undo that incomparable public crime, or lead to a new political disaster which will approach it in magnitude. It is clear perception of this fact which leads the Republicans who are engaged in the new movement to scoff at Mr. Platt's appeal. At last they have reached the point where the old "harmony" bugaboo does not affect them. They can listen to it without qualms, and even jeer at it. This is a great step in advance, and if they can maintain their present attitude, without fear of consequences, and even in the face of defeat, we may in the near future escape from our present ignominy of "Bossocracy," so far as the State is concerned.

Jacob Worth, whose observations on politics always bear the hall-mark of an expert, and are consequently luminous and instructive, declares it to be his opinion that a combination of the forces in both parties which are disgusted with bossism might carry the State. He says, in a recent interview in the Brooklyn *Eagle*, that "there is no doubt now that all over the State, among Democrats and Republicans, there is a well-founded belief that Croker and Platt have been playing into each other's hands—playing a game of heads I win, tails you lose, with the people"—and suggests that there is a way of beating both of them, which he outlines as follows:

"Suppose that the Republicans and Democrats of this State who wish to prevent both

Platt and Croker from gaining State control should decide to hold a conference for the purpose of calling a State convention. That could be done. And a ticket could be named which would probably beat the machine candidates. The high-handed methods of Platt and Croker have disgusted great masses of voters irrespective of party. In the light of what has happened since election day, Seth Low, or the cause for which he stood, put it either way you want to, is stronger to-day in the State than ever."

Whether such an effort were successful or not, it should be made, for through it lies our only hope of relief. So long as we have these two bosses in full possession of the machinery of the two great parties we are deprived of all alternative. We can turn from one only to fall into the arms of the other. That they worked together in the late city campaign no intelligent man can doubt after the way in which Tammany has distributed the offices since coming into power. They cannot be defeated separately, but must be crushed together. It will be said that we tried to crush both of them last November and failed. That is true, but it is also true that we succeeded in polling against them the largest vote ever given to a purely non-partisan candidate, and that in order to win they were forced to reveal the fact that they were working together. Furthermore, what Mr. Worth says about the State as a more advantageous battleground upon which to fight them, is indisputable. No State in the Union has anything like so large a body of independent voters as we have here. Their existence has been shown repeatedly when a plurality of 75,000 or even 150,000 on one side in one election has given place to a plurality of like size upon the other side in a subsequent election.

This great independent body, numbering fully 100,000, has been rendered virtually powerless by the boss leadership of the two parties. Nothing desirable can be accomplished by turning from one to the other. An opportunity to support a ticket pledged to destroy bossism would be hailed with joy by these voters, and their forces would be reinforced by many thousands of other voters from both parties who have remained in the party ranks most unwillingly, and only because they could not help matters by going outside. How far this disgust with Plattism and Crokerism extends no man can say, but that it is deep and formidable is unquestionable. It is time that a fair test of its strength was made, and this is an excellent year in which to make it. Let us see whether or not the people of the State care to have, not merely a reputable government, but a constitutional government of the kind their fathers established. We have no doubt about their disposition in this matter, but it may be that the power of the bosses would be sufficient on the first trial of strength over it to defeat the real wishes of the people. The possibility of defeat must be taken into account by the

leaders of a movement for freedom, and the fight should be undertaken with the determination of continuing it till victory is won. Let us have an end of "harmony" for ever, in order that we may get in its place simple, plain, popular government, for it is as certain as fate that we cannot gain the latter until we have rid ourselves of the former.

THE EFFECT OF AMERICAN ON ENGLISH POLITICS.

LONDON, January, 1898.

The course of events in America has for more than thirty years exercised an influence which has been little noticed, but has been for all that important, on English public opinion, and therefore indirectly on English politics.

Forty or fifty years ago, it is true, it was far otherwise. In 1855 Lord Shaftesbury made this note in his Diary: "Just heard that Palmerston designs to make some lawyers 'Peers for life'—a step as pernicious as it is specious. It must eventually, and not remotely, destroy the hereditary House of Lords. It will begin by making us the 'French Chamber' and end by making us the 'American Senate.'" These words have in 1898 a touch of pathetic stupidity. Palmerston was the most Conservative Premier who has held office since 1832; his scheme for life peerages was as statesmanlike as it was Conservative. Lord Shaftesbury was, as regards high public spirit and intellectual capacity, a model English nobleman, yet Lord Shaftesbury opposed a salutary reform for the most inappropriate of reasons. He feared that the House of Lords might be transformed into an American Senate, and did not know that the Senate of 1855 exercised in the United States greater authority than has been wielded in England by the House of Lords since the Revolution of 1688. If Palmerston's reform could have endowed their lordships with anything like the weight of the Senate, English Conservatism would have obtained a new lease of power. The point, however, which for my present purpose is important is not Lord Shaftesbury's political blunder, but his ignorance about the United States. In the fifties America represented even to Englishmen of Conservative tendencies, whether they called themselves Conservatives or Whigs, nothing but a typical example of democratic vulgarity and rowdiness; and respectable politicians denounced with equal fluency, ignorance, and sincerity the Americanization of English institutions. 'Martin Chuzzlewit,' in which one may even now trace a singular combination of commonplace satire with flashes of the keen insight given only to a man of genius, had impressed the ten-pound householders and their leaders with an utter disbelief in American habits and American ways of thought. Nor did the Manchester school, which was constantly taunted with the desire to Americanize England, show any very profound insight into the conditions of the Republic for whose institutions Cobden and Bright entertained a sort of platonic affection based mainly on the idea that the absence of a court, of an hereditary nobility, and of a standing army must in themselves secure for American citizens the blessing of good and, at any rate, of cheap government. A small body of thinkers, of

whom John Stuart Mill was the typical and noble representative, tried to draw serious political lessons from American experience. But they looked at America through the eyes of Tocqueville; they accepted his pictures of local government in New England as a fair representation of the blessings conferred by local self-government on every State in the Union; they received with far too little examination his dogma that democracy in America, as indeed throughout the whole world, meant the supremacy of a uniform public opinion, which kept down at once the glaring vices which middle-class respectability reprobates, and the eminent virtues or talents which mediocrity envies. They did not know that Tocqueville, while nominally describing democracy in America, was really occupied in analyzing democracy in France, and that both the circumstances of the time when for a few months he visited the United States, and his own excessive tendency towards ingenious generalization, blinded him to the growth of the party system which has given a peculiar turn to American political institutions. The one class of Englishmen who were in truth keenly interested in American affairs were the English Abolitionists, and by a curious fatality the existence of the irrepressible conflict between slavery and freedom vitiated in England all speculations about the condition of the United States; and this in two different ways. Conservatives could plausibly deride Republicanism which countenanced the maintenance of slavery, and Democrats could believe, and did believe, that every defect in the public life of America was attributable to the existence of the Slave Power, and that Republican virtue was corrupted by the accidental and unnatural alliance between Democrats and slave-owners. If there was corruption at New York or a tone of braggadocio was assumed by the statesmen at Washington, the true cause of these faults was the influence of the Slave Power.

It was not till the outbreak of the Civil War that it became apparent how close might be the connection between the fortunes of the United States and the course of politics in England. On such a matter as this every man must speak from his own, and, therefore, from a very limited experience. But to the present writer it is as certain as any event known to him by recollection can be, that in England the War of Secession produced a greater division of feeling and a far greater amount of political bitterness than any occurrence, foreign or domestic, which has happened during the last fifty years. Some of the reasons for this excitement were trivial; there never was a political conflict which supplied partisans on either side with such an infinity of weapons with which to irritate opponents. The Conservative who rejoiced in the victories of Lee was called the defender of slavery. The Liberal who was cheered by any Northern success was asked what had become of his love for nationalities, and how he reconciled the subjugation of the Southern States with his respect for the voice of the People. But though accidental circumstances enhanced the bitterness due to a fundamental difference of convictions and sentiments, there was, as any one can now see, nothing unnatural and little that was blameworthy in the intensity of the party spirit aroused in England by the Civil War in America. Men saw in it a life-and-death struggle be-

tween Conservatism and Democracy. The early triumphs of the South were held by thousands of Englishmen to be the breakdown of popular government. The dictum attributed to Carlyle, "It is the dirtiest chimney which ever got set on fire," might have been taken as the watchword of English Conservatism. While the contest lasted the spirit of reform or of change was practically suspended in England. Nor is it a hazardous conjecture that had the seceding States made good their independence, the democratic movement in England and perhaps in Europe might have been arrested for a generation. The sympathy with the Northern States, which to the present writer appears now, as it appeared then, to be a sympathy with the cause of justice and of progress, was among English democrats the effect rather of instinct than of reflection. Bright, Mill, the artisans of Lancashire, the whole body of sympathizers with the North, backed the cause of the democracy. Just hatred for slavery gave a touch of religious fervor to their political enthusiasm; but at the basis of their sentiment and their action lay the conviction that on the issue of the war was staked the possibility of democratic progress, and their provisions were justified by the event. The surrender of Richmond was the victory of democracy in England. In 1859 Bright had in vain pressed upon the nation a reform of Parliament based upon the extension of the right of voting to householders. His oratory had kindled no popular emotion. Lord Palmerston jeered at him for "starring it in the provinces." He himself, it is believed, confessed that he found he was "fogging a dead horse." Some years later he was able to tell the workmen of England that the negroes would get the suffrage before the English operative. As an argument in favor of parliamentary reform this statement "left something," as the French say, "to be desired," but as rhetoric it was conclusive. In 1867 the Reform Bill was passed which introduced the system of household suffrage into the boroughs, and made certain that it would within a few years be introduced into the counties of England. Between 1859 and 1867 the War of Secession had made patent the power of democracy.

By a change of opinion which appears at first sight paradoxical if not ridiculous, Conservatives who in the middle of this century, and indeed after the middle of the century was well passed, dreaded nothing so much as the Americanization of English institutions, began some ten or twelve years ago to see much that was admirable in the Constitution of the United States. The writer who represented this alteration of view was Sir Henry Maine. His 'Popular Government' exactly represents a phase of Conservative sentiment. Nor is there anything really absurd in the altered attitude of English Conservatism. While democracy could be held, so to speak, at arm's length, it was natural that every man who wished to keep the social and political state of England in the main unchanged, should object to all measures of which the object was to imitate the democratic institutions of America. Now that the reign of democracy has begun, it is equally natural that Conservative thinkers should commend anything in American institutions, such, for example, as the rigid character of the Constitution of the United States, the limited power of every American Legislature, or the authority vest-

ed in the hands of the judges, which hampers, or is supposed to hamper, the rash action of the people. This at any rate is exactly what has taken place: the Conservatism of America recommends itself to English Conservatives. Nor is it the institutions alone of the United States which are now admired by Englishmen whose fathers for fifty years held up the example of the transatlantic Republic as a warning against the perils of Democratic Republicanism. In Europe democracy makes, in appearance at least, for Socialism, but the spirit, not only of the American Constitution, but of American society, has, so far as outsiders can judge, hitherto been the spirit of individualism. The rights of property are the rights of individuals; men who believe that the rights of property are in peril reasonably feel that they have much to learn from a country which has prospered under a constitution designed by men who had no tendency towards any form of Socialism, and who firmly believed in the right of each individual to use his own powers for the attainment of his own happiness.

That, again, the success of the Federal system in America reconciled many Englishmen to the proposal for the establishment of Home Rule in Ireland, is so patent to any one who has followed the stream of English politics that the subject does not require more than an allusion. What is better worth notice, because it has excited less attention, is the way in which the failure or success in the United States of the attempts to retain or establish good local government in great cities, is certain to react—I might almost say is at the present moment reacting—upon English opinion as to the solution to be found of one of the most difficult problems presented to modern statesmanship. This problem is, shortly, how to keep up good government in towns, and especially in large towns, such as London, at a time when it is generally felt by the mass of the electors that the proper source of authority is the will of the people expressed by a popular vote. It is easy enough to say, "Establish a system of local government." The fatal objection to this solution is that real local government cannot exist in any place where the persons who are supposed to govern themselves will not, and, to speak plainly, cannot, human nature being what it is, take a real part in the management of matters which are supposed to be their own affairs. Local government in the sense in which it may have existed, or, for all that is known to me, it may still exist in a New England township or in a small Swiss canton, never will exist in Westminster or London. It is simply idle to suppose that the majority of the busy inhabitants of Westminster will under any circumstances whatever take a vigorous part in the conduct of the business of Westminster. They will not do it, for the best of all reasons, namely, that each individual, supposing that he is a respectable man engaged in any serious profession, will lose far more than he can possibly gain by spending his time, which is his strength and his money, one might almost say his life, in seeing that Westminster is well governed. With many men the attempt to do this would mean nothing short of ruin; but supposing that for a time a few citizens of exceptional public spirit were, if Westminster were made a municipality, to treat the affairs of their city as their own, there would be nothing

whatever to encourage them in this course. There would, on the contrary, be everything to discourage their action. The larger the number of persons entitled to manage the affairs of Westminster, i. e., the more democratic the constituency which elected the Town Council, the less would be the influence of any one individual who was not able to make the municipal business the main occupation of his life. Plenty of persons no doubt would be found to do this, but these are exactly the persons who, because they had no reputable business of their own, would be certain in one way or another to manage or mismanage the affairs of Westminster for their own behoof.

But it is little better than folly to argue this matter with any citizen of New York. It were the stupidest form of English vanity for me to suppose that, either in public spirit or in capacity for business, the citizens of New York, or of any other large American city, are on the average a whit inferior to the citizens of London, Birmingham, or Liverpool. It would argue, on the other hand, the dullest ignorance in any one who professed to know anything about the condition of the United States, if he pretended to deny that New York suffered from a kind of misgovernment of which a parallel is not as yet to be found in any of the leading cities of England. These facts are certain. The point to be insisted upon is that Englishmen see that the progress of democracy, combined with the conditions of life in great modern towns, has already produced in the United States and tends to produce in England certain definite and gross evils. The natural result is that thoughtful persons are looking to see how the problems of municipal government are dealt with in the United States. Already one can perceive signs that American experience is, through its indirect action on public opinion, having some effect. People who never heard of the misgovernment of New York, but who are unconsciously guided by the thinkers who, so to speak, do their thinking for the mass of the electorate, have been making efforts in more places than one to elect as mayors men of known position and respectability. There is no reason to assume that a rich man is morally superior to a poor man, but there is every reason to suppose that a man of position and wealth will more rarely plunder his fellow-citizens than a man who has neither character nor money. Then, again, the notion is slowly spreading that in matters of government you had better leave well enough alone. There are many institutions in England which hardly square with any given political theory, but which work tolerably well. It is at any rate conceivable that in municipal matters people may learn from American experience that good working arrangements, however anomalous, had better be left to work.

What is certain is, that a great many more people than might at first sight be supposed, are watching the struggle for good government which is being carried on in New York with the keenest interest. One need be no optimist to believe that a temporary defeat is in the history of a great town a very small matter. If the many excellent citizens of New York earnestly wish to put down roguery and oppression, they will no doubt succeed. The matter of supreme importance for Englishmen is to observe the steps by which success is achieved. If, for example, it ultimately turns out that the

right course is to elect some honest man, give him extraordinary powers and a long tenure of office, there is no doubt whatever that such an example will tell upon the whole development of local government in England. But, for my present purpose, enough, and more than enough, has been written; my whole aim in this letter has been to insist upon the singular though unrecognized influence of the events in the United States on political speculation and action in England.

AN OBSERVER.

THE PAINTINGS AT CHANTILLY.

PARIS, December 30, 1897.

It is with a sad pleasure that I have gone through the new volume which M. Gruyer has just published on the collection of paintings in the Château de Chantilly. The first volume of this magnificent publication was written on the foreign schools, Flemish, Italian, English; the second volume was entirely filled with the description of the miniatures of Nicolas Fouquet, and with a study of this early French master. The editor was afraid that Nicolas Fouquet was not sufficiently well known to the public, and that the second volume would not easily be sold. He accordingly printed a small number of copies, and the consequence is, as the success of the volume was very great, that the edition is exhausted, and that the collectors of fine works are bidding high for a copy.

This third volume is worthy of its predecessors. It is illustrated by beautiful héliogravures by Braun, which remind me very exactly of the originals, which it has been my good fortune to admire so often in company with the Duke d'Aumale, who was never tired of going through the galleries of Chantilly, of making interesting remarks on all his pictures, which had become to him familiar friends. His enthusiasm did not diminish with time; his admiration was as keen as that of a young man, and he always found new reasons for it; his commentaries, semi-artistic, semi-historical, were incessant, and constantly renewed by an ever-increasing knowledge. And now these great galleries are deserted, and will remain so till the Institute is fairly in possession of Chantilly and opens its doors to the public.

I entered last summer only once the great gallery of paintings. It was in order to see a magnificent marble bust of the Duke d'Aumale which had been placed there. The history of this bust is interesting. Paul Dubois, our greatest living sculptor, who made the famous statues of the tomb of Lanierière, of the Constable of Bourbon at Chantilly, the Jeanne d'Arc, etc., attempted in the past few years to make a bronze bust of the Duke d'Aumale, and it was placed in the Château. Dubois, who is a very severe critic of himself, was not satisfied with it; bronze is not, perhaps, the best material to choose for the representation of old age—it gives a terrible reality to all the insults of age. Dubois undertook, without being asked to do so, to make a marble bust of the Prince, and he was finishing it when the Prince died at Palermo. It had been his intention to offer it to the Prince; he offered it to his executors, who, naturally, presented it to the Institute for the galleries of Chantilly.

I need not follow the chronological order here, as M. Gruyer has done, and I may as well speak first of the portrait of the Duke

d'Aumale painted by Bonnat. The Prince is represented in the costume of a general; he was then (1880) fifty-eight years old. Bonnat has painted him standing, with bare head, his red képi in his right hand, and his left hand on his sword. The attitude is simple, the resemblance is perfect. "What the painter," says M. Gruyer, "could not quite render, because it is probably untranslatable by painting, was the look of the eye, so penetrating and mild, so intelligent and so brave; those eyes, of a clear blue, which were darkened suddenly by emotion, passion, by sickness, too." This portrait, which is life-size, was placed, by the Prince himself, in the Salon d'Orléans, between a very beautiful and touching portrait of his mother, Queen Marie Amélie, and a portrait of his aunt, Madame Adélaïde, the beloved sister of Louis-Philippe. From the windows of this salon the Prince could look on the immense parterres, designed by Le Nôtre, on the grand canal, a river changed by the great Condé into a regular canal. In this room the Prince had placed all around the collection of his original drawings by the great masters and his choice engravings.

There is another portrait of the Duke by Bonnat, of small dimensions, the head only of the Prince, when he was older. It is a profile, full of life, and, in my opinion, more striking than the large picture of the Salon d'Orléans. The portrait, by Robert Fleury, of the Prince as a mere boy, at the age of nine, is in a room on the ground floor, called the Salon de Guise; it is of small dimensions. The young Prince is sitting on a bench in the park of Neuilly. He has the free-and-easy attitude of a child; in his round little head, so well constructed, in those clear blue eyes, you can already recognize the man. M. Gruyer contents himself with saying of this picture: "Very good little portrait." It deserved perhaps a little more praise; it is the jewel of the numerous portraits of the Duke d'Aumale.

The French school of the first half of the sixteenth century is represented by a portrait of Francis I., who was probably still Count d'Angoulême; by another portrait of Francis I., of small dimensions; and by a number of portraits which M. Gruyer attributes to Claude Cornille, commonly called Cornille de Lyon (born towards 1500, deceased after 1564). Brantôme tells us that Catherine de Médicis, finding herself with the Court at Lyons, in 1564, made a visit to the painter named Cornille, where she encountered the portraits of all the famous personages of the time, including herself; she was then forty-five years old and her portrait had been made when she was twenty-eight years old. She took great pleasure in seeing herself young and dressed in the fashion of Henri II. M. Gruyer gives many interesting details about this Cornille, who was in his time called the Flemish painter with reference to his origin. His best picture at Chantilly is a portrait of the Dauphin Francis, derived from the famous cabinet of Gaignières.

The Duke d'Aumale always took special care to collect all the portraits he could find made by Clouet, commonly called Janet, and the galleries of Chantilly are exceptionally rich in portraits by this eminent master. M. Gruyer was particularly well up on this subject, as he had published a study in the *Revue des Deux Mondes* on "Charles IX. et François Clouet." Clouet is invaluable for the history of the sixteenth century; his

portraits show us the actors of that time as they appeared on the stage; they are alive and have the merit of perfect realism. We find at Chantilly a painted portrait of Jeanne d'Albret, Queen of Navarre (the mother of Henri IV.), and two crayon portraits, a sort of specialty of Clouet's, whose hand is recognized at first sight. They are simply admirable; one represents Jeanne as a child of eight years, "the *mignonne des rois*," the other shows her at the age of twenty. It is interesting to compare these two crayons with a third by Clouet, preserved in the Cabinet des Estampes of the National Library. There Jeanne is old; she is the woman described by D'Aubigné: "Elle n'avait de la femme que le sexe, l'âme entière aux choses viriles." The best Clouet, perhaps, of the Chantilly collection is the portrait of Margaret of France, still a child. It is an aquarelle, with very light coloration, something between a painting and a mere drawing. This portrait of the famous Princess is of undoubted authenticity. Nowhere are the peculiar qualities of Clouet better recognized: the clearness, the exactitude of the features, combined with an admirable expression. The future Queen of Navarre is already apparent in this intelligent child. Among the other Clouets, we must cite Francis I.; the Duke d'Alençon, in the fine costume of the time, covered with pearls; Jacques de Savoie, Duc de Nemours, "the flower of chivalry," as Brantôme called him; Elizabeth of Austria, a repetition of the portrait which is preserved at the Louvre in the Salon Carré; King Henri II.; Odet de Coligny, Cardinal of Châtillon; Henri d'Albret, King of Navarre; Albert de Gondi; two portraits of Charles IX.

M. Gruyer is very strict in his attributions, and he enters a number of portraits which many collectors would have boldly attributed to certain famous masters simply as of the French school of the sixteenth century. Such are portraits of Charles IX., of the great Chancellor Michel de l'Hôpital, of Henri III., of Marshal Cossé, of Diane de Poitiers, of Catherine de Médicis, etc. If we proceed to the seventeenth century, we find first the Quesnells, who were, under the first two kings of the race of Bourbon, what the Janets had been under the Valois. They form a dynasty which extends from Francis I. to Louis XIV. They are represented at Chantilly by a portrait of Sully and a portrait of his brother, François de Béthune. The name of Philippe de Champaigne belongs to the French school, though he was Flemish by origin; he spent all his life in France. He is the master *par excellence* of Port Royal. He stands in history by the side of Pascal, of Sacy, of Nicole, of the Arnaulds, of Mère Angélique and Mère Agnès. His portraits have a gravity which belongs to the *grand siècle*. We see in the great gallery at Chantilly his life-size portrait of Richelieu, which was originally in the Palais-Royal, and a similar portrait of Mazarin, also from the Palais-Royal. These two pictures may be said to be historical monuments. The Mère Angélique is a real masterpiece. "Everything is sincere in it," says M. Gruyer; "painter and model are the friends of truth."

The Beaufrons (Henri and Charles), who lived together like the two Cornilles, were famous portrait-painters in the seventeenth century. They had the reputation of making a good likeness, though they embellished the person. As works of art their pictures do

not hold a very high rank; they are more interesting for the historian than for the artist. We find at Chantilly two portraits made by them of Madame de Longueville, who played such an important part in the troubles of the Fronde; she was the sister of the great Condé. Madame de Maintenon, who was not a bad judge, called her "la plus spirituelle femme de son temps."

Mignard, who lived from 1610 to 1695, made three portraits of Molière (see Mignard's 'Life,' by Grimarest). In one of them, which is in the foyer of the Théâtre-Français, Molière is transfigured; he is in the costume of a Roman Emperor, with laurels on his head. We much prefer the portrait of Molière which is in the gallery at Chantilly. There we see the real man, tired, worn, his eyes reddened by fatigue; his expression is one of resignation, of kindness, of sadness. Mignard, who had much difficulty in obtaining a sitting from Molière, had probably found him one morning only half dressed; Molière had merely put on a wig and thrown a mantle over his shoulders. I have always considered this portrait, which has been the subject of many discussions, a masterpiece, on account of its realistic character and of its expression. It is very different from Mignard's finished and elaborate pieces, and much more interesting. You would hardly think it from the same hand as the portrait of Mignard's daughter, which is at the Palace of Versailles, and the great allegorical picture called "Repentance," which is to be seen in the long battle gallery at Chantilly. This last picture is very interesting; it shows Condé receiving the book of History from Glory, and tearing out the pages on which are narrated the battles he fought while he was in rebellion against the King. The torn pages are lying on the ground, and you can read on them that at the battle of the Dunes, where Condé fought on the side of the Spaniards against Turenne, if Don Juan had followed his advice he would not have lost the battle.

Correspondence.

"PLATO SHELVED."

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, Mr. Shorey, who comments, in your last issue, upon the lucubrations of a certain "ingenuous youth" of the Leland Stanford Junior University upon the "passing of Plato," may be interested in a sentence which I find in John Stuart Mill's Autobiography, which is to the point:

"There is no author to whom my father thought himself more indebted for his own mental culture than Plato, or whom he more frequently recommended to young students. I can bear similar testimony in regard to myself" (chapter i.).

It is evident that, in the name of the university from which the "ingenuous youth" hails, the word "Junior" deserves a decided emphasis.

L. H. SCHWAB.

ST. MARY'S RECTORY, LAWRENCE STREET,
NEW YORK, January 19, 1898.

TENNYSON AND CRABBE.

TO THE EDITOR OF THE NATION:

SIR: The review in your paper of Hallam Lord Tennyson's memoir of his father justly calls attention to the interest of the

many criticisms passed by Alfred Tennyson on other poets than himself. Undoubtedly such interest is as often Tennysonian as intrinsic. May I venture a word concerning one of these criticisms, which at first sight appears crotchety? I refer to the very high estimation in which Tennyson held the poetry of the Rev. George Crabbe. This worthy has long been relegated to the limbo of minor poets, yet Jeffrey, who treated Keats with elegant condescension, and who drew on the black cap when he sentenced Wordsworth, was almost devout when he treated of Crabbe.

In some respects a greater contrast to Tennyson would be hard to find than George Crabbe. The latter had little sense of the music of words, little feeling for beauty, little architectonic power—qualities for which Tennyson is justly renowned. Crabbe, too, was an eminently narrow-minded man, which Tennyson certainly was not. Yet the laureate's praise was unequivocal. He attributed to Crabbe a "hard pathos." "There is a 'tramp, tramp, tramp,' a merciless, sledge-hammer thud, about his lines which suits his subjects."

It is not for its originality that this remark is specially interesting. "[Crabbe's] tramp is a little heavy, and one must remember that Mr. Tovell and his like were of the race who require to have a joke driven into their heads by a sledge-hammer." This remark of Leslie Stephen's is quoted in an essay by FitzGerald, the devoted admirer of Crabbe, the life-long friend of Tennyson, than whom he was a more delicate and discerning critic. Yet Tennyson's opinion is not due entirely to FitzGerald.

The ruggedness of Crabbe, no doubt, attracted Tennyson by its very contrast to his own poetry. Moreover, a remarkable fidelity in the description of English rural life is common to the two poets, and must have confirmed or originated Tennyson's admiration for Crabbe, a poet quite as interesting to the historian of manners as to the literary critic, who recognizes in him no mean master of realism and of the poetry of disillusion.

HENRY B. HINCKLEY.

NORTHAMPTON, MASS., January 15, 1898.

AN INQUIRY.

TO THE EDITOR OF THE NATION:

SIR: Several months ago I picked up a copy of an American edition of Marcus Antonius which seems to be unknown to such bibliographical works as are accessible to me. I should be glad to know something of the editor, C. L. Porcher, whose name is not in the ordinary cyclopædias. He was evidently a strong anti-slavery man, as the title-page bears the following inscription: "N. Eboraci, U. S., 1863. A. Liberatæ Reip. I." The last sentence plainly refers to the emancipation proclamation, which took effect on the 1st of January, 1863. On the reverse of the title-page are the words: "Londini: Typis Gilbert et Rivington, St. John's Square," which shows that the book was printed in London, though published in New York. The Greek text is without accents. The notes were written, partly at least, in Minnesota ("Ipse hic inter Minnesotæ deserta, libris, ubi desiderata impromptu, destituit," p. 138). He also refers to a sojourn on the Moose River, in Dakota (p. 103).

THOMAS M. JOHNSON.

OSCEOLA, MO., January 15, 1898.

Notes.

'A Century of American Statesmen: A Biographical Survey of American Politics from the Inauguration of Jefferson to the Close of the Nineteenth Century,' is the title of an ambitious work in four volumes which G. P. Putnam's Sons will publish for Prof. Moses Coit Tyler of Cornell. Prof. Tyler, not to be idle, has also in hand the 'Literary History of the American Republic during the First Half-Century of its Independence (1783-1833),' a continuation of his study of the Colonial and Revolutionary periods.

Other announcements by the same firm are the ninth volume, the last but one, of Paul Leicester Ford's 'Writings of Thomas Jefferson'; the 'Life of Charles Carroll of Carrollton (1737-1832),' by Kate Mason Rowland; 'Thirty Years of American Finance,' by Alexander Dana Noyes; the second volume of Prof. C. M. Andrews's 'Historical Development of Modern Europe from 1850 to the Present Time'; 'The Story of Modern France (1789-1895),' by André Le Bon; 'The Building of the British Empire (1558-1895),' by Alfred Thomas Story; 'The Bargain Theory of Wages,' by Prof. John Davidson; 'A Simple Grammar of English Now in Use,' by Prof. John Earle; 'Some Common Errors of Speech,' by Prof. Alfred G. Compton; 'Boston Neighbors; In Town and Out,' by Agnes Blake Poor; and a new edition of Ambrose Bierce's 'In the Midst of Life' (Tales of Soldiers and Civilians).

The Macmillan Co. report progress on the 'Dictionary of the Bible,' projected by the late Prof. Robertson Smith in conjunction with Dr. Sutherland Black. Prof. Smith has been succeeded by the Rev. T. K. Cheyne, and five-sixths of the material is already in hand. The volume will contain as much matter as nearly two of the 'Encyclopædia Britannica.' The same firm announces 'The Bible Story,' retold for young people, with illustrations and maps; Turgot's 'Reflections on the Formation and Distribution of Riches,' edited by Prof. Ashley of Harvard; and 'The Storage Battery,' by Augustus Treadwell, jr.

The committee on publications of the Caxton Club, Chicago, announce 'Some Letters of Edgar Allan Poe to J. B. Patterson of Oquawka, Ill., with Comments by Eugene Field,' a royal octavo volume of 32 pages, with six facsimiles of Poe's MS. Only 286 copies will be printed, and members can subscribe to but two each.

Subscriptions are invited by N. Murray, Johns Hopkins University, to a photographic reproduction of the famous and unique birch-bark manuscript of the Kashmirian 'Atharva-Veda' in the Library of the University of Tübingen, consisting of 287 leaves written on both sides. The work will be carefully supervised by Prof. Bloomfield, and 200 numbered copies will be issued at \$25 each.

The publishing section of the American Library Association, of which Mr. W. C. Lane of the Boston Athenæum is Secretary and Treasurer, makes the important announcement of its undertaking to print from this date catalogue cards for articles in current periodicals and society publications (all of a learned character, and numbering 184 at present). Two copies of each will be furnished, to serve one for author and the other for subject entry if desired. The cost

will depend on the number of adherents, and the subscription is provisionally fixed at \$3.00 per hundred titles for the complete set, \$4.50 for specified publications. This seems to rival the work of the international bureau at Brussels. The five libraries that have taken the initiative in it are Harvard, Columbia, Boston Public, John Crerar, and New York Public. As many more ordering the complete set would put the scheme on a sure footing.

Mr. Bernhard Berenson is engaged in the very laborious task of sifting and cataloguing all the drawings by the Florentine painters, with authentic criticism and appreciation. The illustrations will consist of about 200 facsimiles. The book will be printed in Berlin at the Imperial Press, and published in London by Lawrence & Bullen, probably next year.

A third, revised edition of Mr. Alfred R. Conkling's 'City Government in the United States' (D. Appleton & Co.) contains a chapter on the Greater New York charter of 1897. We noticed the book on its appearance in its original form. The new chapter describes the more salient features of the charter, and calls attention to the fact that the Legislature may at any time amend it; the buoyant optimism of Mr. Conkling leads him to predict that the constant interference of the Legislature with the government of the city will in time produce such a "strong public opinion" against interference that we shall be let alone (p. 223). He makes on behalf of the opponents of the charter another prediction—that "the time of the courts will be occupied for many years in the construction of this document"—which will probably be more speedily verified.

'Benin: The City of Blood,' by Commander R. H. Bacon, R. N. (Edward Arnold), is an account of the recent English punitive expedition in the Niger delta by its intelligence officer. It aims to tell the story briefly and from the purely military point of view, and especially to "leave on record certain details of organization and equipment" for the use of similar expeditions in the future. The general reader, however, cannot fail to be interested in Commander Bacon's narrative of the actual operations, the march through the dense bush during which volleys were fired regularly every one or two minutes at the invisible foe, the attack and capture of the "huge pest-house." The horrors of this place, in which there was a pervasive awful smell, "as if the grass had been watered with blood," defy adequate description, and its accidental destruction by fire was a fitting close to its frightful history. It is singular that neither gold nor silver was found, but there were some magnificently carved tusks, and "in one house were several hundred unique bronze plaques, suggestive of almost Egyptian design, but of really superb casting." In view of the criticisms on the lack of efficient organization displayed in the Indian frontier campaign just closed, it is worth recording as a remarkable feat that to collect 1,200 men from three places 3,000 to 4,500 miles distant, to march them by an unknown and waterless road, to capture Benin, and to reëmbark the force, with a loss of but ten men killed, took only seventy-five days. There are several appendices, giving lists of officers and casualties, and details in regard to the stores and the "kits" of the men, a map, and a few illustrations.

A. Parmentier's 'Album Historique,' published by A. Colin & Cie. under the direction

of M. Ernest Lavisse, reaches in its second volume 'La Fin du Moyen Âge' (14th and 15th centuries). As its name imports, this work is for reference rather than for steady reading. It is crammed with illustrations of buildings, costumes, furniture, weapons, implements, statuary, paintings, etc., etc., touching the secular and religious life of the various peoples of Europe for the period in question. Through this mass the text works its way as it can. Numerous admirable indexes provide a ready key to everything, with the least trouble; even ornamental initial letters being entered alphabetically as well as grouped under *majuscules*. A great mass of authentic information is here made accessible.

Count Goblet d'Alviella, well known as the author of 'La Migration des Symboles,' has published, through Ernest Leroux & Co., Paris, a treatise of 200 pages on 'Ce que l'Inde doit à la Grèce,' which contains a good summary of the latest researches on the relations between India and the West, in a wider sense than is indicated by the title. The author is inclined to be sceptical in regard to alleged religious loans of importance, though he admits that in minor points India may have borrowed from the West, as Greece has certainly influenced India in respect of art and later literature. Hindu astronomy and medicine have, he says, been perfected by Greek influence; but he sees no reason to suppose that the national epics of India owe anything to Hellenic examples. It is in the plastic arts and perhaps in the drama that the contact with Grecian culture "a agi comme un ferment pour vivifier les qualités natives de l'esprit indien, sans lui enlever son originalité ni sa souplesse." The little book, useful in plan and critical in execution, is not without minor errors. It is not true, as is stated on p. 153, that idols are not known in the Vedic age; and the drama referred to on p. 90 as having been written in the sixth century B. C. was really written in the corresponding century A. D. Those interested in the interchange of literary and religious ideas on the part of Greece and India may read the book with profit and rely on the author's fairness and general scholarship.

According to a recent report of the French Minister of Public Instruction, the number of elementary schools in France, exclusive of *écoles maternelles* (kindergartens) is 83,465, an increase of 223 during the past year. Of these schools, 15,909 are private establishments conducted or at least controlled by the clergy. The congregationalists (Jesuits and affiliated orders) have 5,649 educational institutions, whereas the public lay schools number 61,907; it will thus be seen that the latter are steadily increasing and the former constantly diminishing. There are at present 151,563 teachers of both sexes and 4,580,183 pupils between the ages of six and thirteen. The number of the latter is, however, constantly diminishing; from 1891 to 1895 this decrease was 16,000, and from 1895 to 1896 6,584, in the elementary schools, and a similar diminution is also perceptible in the higher institutions of learning. In the mixed schools there were 694,592 pupils in 1895 and 693,611 in 1896.

According to the official report just published by the Director General, Torraca, there are in Italy 56,126 common schools, of which 25,118 are obligatory and 25,017 op-

tional; 21,979 are for boys, 18,703 for girls, and 10,173 are mixed schools. Two-fifths of the school-houses are good, two-fifths tolerable, and one-fifth utterly bad. Of the 50,000 teachers, 19,000 are competent, 24,000 passable, and 7,000 wholly inefficient. The number of registered pupils is 2,300,000, of whom 162,000 are of a higher grade. The best elementary schools are in Piedmont and Lombardy; the worst in southern Italy, and especially in Sicily.

The Boston Public Library has put out a substantial volume of selections from its monthly bulletins from January, 1896, to October, 1897, inclusive, presenting 6,000 titles as the cream of about 9,000. Hereafter the publication will be yearly, in conformity with the title, 'Annual List of New and Important Books Added to the Public Library.' It is issued at the extraordinary price of five cents a copy (176 pages, octavo), which is partly made possible by the use of the linotype process in setting the original bulletins. The unloveliness of this process, by reason of want of contrast in the typography, is again noticeable. There are nearly two hundred titles of works upon money. A comparatively small space is given to fiction. In a somewhat careful examination we have noted but a single error, the placing of Nansen's 'Farthest North' under Africa.

'Class List No. 1, English Prose Fiction,' comes to us from the St. Louis Public Library, and reminds us, in view of so many similar catalogues, of the failure of economic coöperation in this direction. A feature of the present volume is "a reliable guide for readers and libraries" in the shape of "lists of the best novels, based on individual and collective opinions." We are afraid the reliability will appear rather dubious to minds ready to bow to authority, but counselled so diversely as here. In the supplementary list of "best novels published since 1884," Mr. A. S. Hardy's 'Passe Rose' is made a "back number" by being printed "Passe."

A large part of the Consular Reports for December is taken up with the new Cuban tariff. Among other subjects treated are the use of dogs as draught animals on the Continent, technical education in Austria, and the agriculture and industries of Thessaly. These last consist chiefly in the cultivation of grain, and in a few cotton and, apparently, grist mills, factories, and tanneries. Last year's harvest, amounting to nearly seven million bushels of grain, was wholly appropriated by the Turkish troops, who also took all the sheep and cattle which were not driven off before the invasion. From the 1st of January the most important reports will be printed as soon as they are received, and issued as advance sheets to the newspaper press and such as may desire them. At the end of the month they will be reprinted and published in their present form.

Garden and Forest has, we regret to say, suspended publication at the close of its tenth volume. Its public, necessarily a select one, has been found too small to give it adequate support. Prof. C. S. Sargent, on whom the pecuniary burden rested, whose conception this periodical was, and who was a constant editorial contributor, must console himself with the gratitude of those to whose intelligence and refined love of nature and of landscape art he has so disinterestedly ministered.

The second part of Dr. Moriz Hoernes's paper on the artistic sense of prehistoric

man, as shown in the bronze figures unearthed in various parts of Europe, is published in No. 4 of the *Mittheilungen* of the Prehistoric Commission of the Imperial Academy of Sciences of Vienna. Certain objects found in Italy are described, and their historical significance pointed out. In the same number is an account, by Jaroslav Palliardi, of painted pottery of neolithic times discovered in Moravia and lower Austria. Both papers are illustrated.

An appreciative notice of the late Dr. Benjamin Apthorp Gould, by Wilhelm Foerster, appears in the *Procs-Verbaux* of the International Committee of Weights and Measures for 1897.

The Royal Institution, London, is hardly a place where one would expect to find unpublished records of the American Revolutionary War. Nevertheless, at that establishment there are preserved about sixty volumes of original papers connected with the headquarters of the British Army, when commanded by Howe, Carleton, and Clinton. These embrace some sixty hitherto unpublished letters from Washington, memorials of the services of British officers, and documents concerning Loyalists. It appears that this mass of papers was originally in the possession of Maurice Morgann, the secretary of Sir Henry Clinton. At Morgann's death they got into other hands, and ultimately were left, by will, to the Royal Institution. The Historical Manuscripts Commissioners have, by a happy choice, intrusted the calendaring of the Morgann collection to Mr. B. F. Stevens.

A self-correcting two-fold error was made in our recent account of the *Biographisches Jahrbuch* and of the *Biographische Blätter* from which it springs. The only thing bibliographical about this valuable work is its list of biographies published during the year.

—In the preface to his post-graduate 'Lectures on the English Language,' delivered at Columbia College in 1858-'59, Mr. George P. Marsh expressed a hope that English studies were "soon to receive a new impulse and new aids from the publication of a complete dictionary of the English language—a work of prime necessity to all the common moral and literary interests of the British and American people, and which is now in course of execution by the London Philological Society, upon a plan, and with a command of facilities, that promise the most satisfactory results." At the expiration of thirty years, in 1888, this great enterprise culminated in the A-B volume of the 'New English Dictionary on Historical Principles,' since called for short the 'Oxford Dictionary'; and now, forty years after Mr. Marsh's "soon," we can point to the C and D-E volumes bound upon the shelf, while the current instalment (Frank-law—Gain-coming), just received from Henry Frowde, concludes the first and begins the second half of the F-G volume. Taking the 'Century Dictionary' for comparison, we estimate that the point now reached marks the accomplishment of one-third of the gigantic task; in other words, that eleven volumes will be necessary to contain the whole alphabet. That was the conclusion we arrived at when we last made such a calculation. In the next two quarterly instalments we are to have a generous portion of the letter H, from Dr. Murray, which will proceed simultaneously with Mr. Bradley's G.

—In the tailings of F there is plenty to

interest. How did Englishmen get along without the word *funny* before 1756? In 1755 *fun* was to Dr. Johnson a low, cant word. The first quotation for *fuss*, the noun, is no older than 1701; the verb starts in at 1792; Byron uses *fussily* in 1817, and Tom Moore *fussy* in 1831, while Arthur Helps finds *fussiness* ready made or convenient to make in 1851. To Scott, perhaps, we owe *free lance* (1820); to Cobbett *free trade*, as opposed to protection (1823). The exclamatory *fudge* of the 'Vicar of Wakefield' (1766) is the first literary instance of this usage. *Black Friday*, school slang in 1611, then applied to the day (December 6, 1745) when the news of the Young Pretender's landing was announced in London, was revived for May 11, 1866, when a commercial panic ensued upon the failure of Overend, Gurney & Co., and (but Mr. Bradley does not record this, though the 'Century Dictionary' gives it) when Fisk and Gould's gold venture broke the New York market on September 24, 1869. The dramatist Middleton supplies the earliest use of *freshman*, in the sense of novice (1627), and the sole example of *freshwoman*, "the analogue of a freshman in an imaginary university" (1627), now realized. A man's *frock coat* we read of in 1823; and Mr. Bradley says that "in the language of [English] fashionable society the use of *frock* for 'dress' has within the last few years been revived," after having been long relegated to children's wear. Masson, in his 'Chatterton,' imported the verb *function* from across the Channel (1856), and Mr. Marsh used it, with an "as the French say," in his 'Lectures on the English Language' (1862). "The blunder is somewhat common both in England and in the United States" of associating *fruition* with *fruit*—as if 'fruiting' or 'fructification.' Our American expression, "The moon *fulls*," is shared by the Suffolk dialect. "The plural forms *spoonsful*, *cupsful*, etc., which are still sometimes heard, represent," says Mr. Bradley, "either a survival of or (much more probably) a return to the older grammatical view; but though they have thus some appearance of historical justification, they are contrary to good modern usage, and are objectionable on account of their ambiguity." *Full*, which has relationships in *plenary*, *complement*, *plus*, *plethoric*, *polygamy*, occupies more than four pages of the present work. *From* requires one and two-thirds pages; its primary sense, 'forward,' we may recognize in Nansen's *Fram*. Mr. Kipling's gentleman in black who broke the British square at his "come in the Soudan," is embalmed under *fuzzy* in a quotation commendably up to date.

—Sainte-Beuve: Seven of the *Causeries du Lundi* is the title of a little book by George McLean Harper, Professor of Romance Languages at Princeton (Henry Holt & Co.). The essays are published in the original, with notes in English, and an introduction by Mr. Harper which is itself a pleasant contribution to the literature of the subject. In forty pages he has given an intelligent account of Sainte-Beuve's life and character, and a criticism of his work, good in both matter and style. In the latter the reader is tempted sometimes to think that the influence of Sainte-Beuve's own manner may be detected; the English seems to have acquired a French exactitude and conversational flow, a sanity, a rationality which are a little more delicate than one is wont to find in English. The effect,

however, is far from being that of imitation; it seems more like the natural result of much study of a master. Prof. Harper dwells on Sainte-Beuve's great urbanity, which always makes him something more than either a professor or a journalist (in the French sense); he is a man of the world also. When we listen to him we hear the conversation of a gentleman, addressed to other gentlemen. We are not in church, nor in a lecture-room, nor in a political assembly, nor in Bohemia; we are quite at home, in the best company in the world, that of those who have made history and literature interesting to us, companions who are never dull, never offend us, never quarrel with us, and always entertain us. Mr. Harper insists very justly that Sainte-Beuve's want of moral sense, if such it can be called, was a "defect of his qualities." Moral judgments would have been out of place in his conversations; his aim was literary solely. And yet, singularly enough, he is never more masterly than when he is elucidating a character. His essay on Lafayette, for instance, is a most delicate piece of moral analysis. He seems at times to dwell in a realm of intelligence which is above morality, because it detects the secret springs of moral action, and in which the end—*tout comprendre, tout pardonner*—might be really attained. The author gives a good account of Sainte-Beuve's attitude toward Lamartine and Chateaubriand; this recalls the anecdote of the conversation in which he said, after discussing them with an American visitor, "Mais, charlatan pour charlatan, je préfère Lamartine."

—The editors of the recently published Hebrew text of 'Ecclesiasticus,' Messrs. Cowley and Neubauer, of the Bodleian Library, Oxford, have issued in a pamphlet (Oxford: Clarendon Press; New York: Henry Frowde) the translation in parallel columns with the latest English Revised Version from the Greek (Apocrypha, 1895). This exhibits conveniently for English readers the noteworthy differences in detail between the Hebrew and the Greek, which until 1897 was the nearest known approach to the original. The translation of the Hebrew shows slight variations from that given in the original publication a few months ago. The principal ones follow: In xl. 16 we now have in place of "axes" "reed-stalks" (formerly given as a possible variant); xl. 26 "[treasure]" is now queried; xli. 2 now reads, "Unto a man that hath trouble, and that lacketh strength," for "Unto him that hath no might, and lacketh strength"; the marginal conjecture "turning away" is now substituted in the text for "reckoning" before "the face of thy friend," xli. 21, and the chapter-division between xli. and xlii. is also slightly changed; for the marginal reading "He [establisheth all things forever]" xlii. 23, we now have "He [liveth and abideth for ever]"; "like rottenness," xliii. 20, becomes "like crystal"; xlii. 15 is inserted from the margin; "the prophet of God," xlii. 13, becomes "by the word of God," and "he was [san]ctified a gazer," xlii. 15, becomes "he was [sepa]rated to be a gazer"; "the earth . . ." xlii. 15 in the editio princeps, now appears as "thou didst cover the earth with thy [soul]." The same care is used as in the editio princeps to indicate in the translation the precise state of the original text. The extent of the fragment translated is the same as that already published—xxxix. 15-xlii. 11. The facsimile

prefixed represents the last leaf of the MS. It is understood among scholars that other leaves have been discovered, and it is to be hoped that we may soon come into possession of substantially the whole book in the original Hebrew.

—The sun's total eclipse on Saturday morning, January 22 (early afternoon in India), will not be permitted to pass unobserved, although its duration is slight. No less than twelve separate parties are established in the field, and without doubt all are at the present moment in thorough preparation and training. By far the most distinguished astronomer who has gone out on this service is Sir Norman Lockyer, encamped on the west coast of India, nearly 200 miles south of Bombay, where the eclipse track first impinges, having previously crossed the Indian Ocean from the African coast of Somali. Mr. Lockyer has the efficient assistance of officers and men of one of the cruisers of the Royal Navy, told off from Ceylon for this especial service. Just before leaving England, he published a book to set forth his views on eclipse research, and he will probably be successful in securing the sort of observations requisite as corroboration of his favorite solar theories. As yet it must be said that Nature has kept well her secret of the sun's corona; for although many eyes have seen it, no one has been able to draw it completely, no camera has yet photographed it in all the wealth of filamentous detail, nor does any theory of its constitution yet propounded meet with general acceptance. The multitude of observers and the chance of good weather have excited astronomical expectation more than any other phenomenon of like character since the great totality of 1878, so abundantly observed in our Western States.

—Other parties under British official auspices are in charge of the Astronomer Royal, Mr. W. H. M. Christie, and Prof. H. H. Turner of Oxford, who, undaunted by their signal failure in Japan, have taken up a station in central India, with about the same programme as before; of Dr. Ralph Copeland, Scottish Astronomer Royal, who is provided with a telescope of unusual proportions, that he may obtain the corona on a very large scale; and of Captain Hills, Royal Engineers, with Mr. H. F. Newall of Cambridge, whose interest lies mainly in photographing the complicated spectrum of the corona, as was first done by Prof. Schuster in Egypt sixteen years ago. A thriving society of English amateurs, too, has dispatched an ample expedition, which is under the able guidance of Mr. Walter Maunder, and prepared with apparatus for much novel and ingenious experiment. The Great Indian Peninsular Railway from Poona to Madras penetrates the shadow belt, and is an immense help in locating expeditions. Prof. Naegamvala and Dr. Michie-Smith of the home observatories are both in the field; and the Japanese astronomers, who have failed to catch even a glimpse of the corona in both eclipses recently visible in their country, have an encampment in a very promising region of India, where, it is to be hoped, success awaits them, especially as they have had the foresight to provide themselves with one of the best instruments for coronal photography. America is represented by only two parties, both Californian in origin, but inferior to none of the foreign expeditions, in either material equipment or

experience in using it. Among other problems attacked will be the rate at which the corona turns round axially, this observation having been shown possible by M. Deslandres of Paris during the eclipse in Senegal five years ago.

PUTNAM'S BOOKS AND THEIR MAKERS.

Books and their Makers during the Middle Ages: A Study of the Conditions of the Production and Distribution of Literature from the Fall of the Roman Empire to the Close of the Seventeenth Century. By George Haven Putnam, A.M. G. P. Putnam's Sons. 1897. Vol. II. A. D. 1500-1709. 8vo, pp. x, 538.

Mr. Putnam's services in behalf of international copyright entitle his writings on the subject to respectful consideration. His collection of papers on "The Question of Copyright" appeared in 1891 (revised edition in 1896), and it was followed in 1894 by "Authors and their Public in Ancient Times," which serves as an introduction to the present work. The volume before us continues the historical sketch of book-publishing and book-censorship in Europe from the closing year of the fifteenth century to the enactment of Queen Anne's copyright statute in 1710. The author states in the preface to the first volume that he has "attempted simply to present a study of certain conditions in the history of the manifolding and distribution of books by which the production and effectiveness of literature was very largely influenced and determined, and under which the conception of such a thing as literary property gradually developed." It is evident that he has taken no small pains, under serious disadvantages, in gathering material and in putting it into shape. The plan of arrangement is good, and the subject is treated in an entertaining way. The sources of information, however, have not always been chosen with equal judgment, while in a number of instances the best authorities are not used at all. As the standard of accuracy for a publication of this character is necessarily set high, the critical reader will wish to have the test applied in statements of fact and date.

The volume opens with the introduction of printing into France, the year of which should have been given as 1470, and not 1469. The true date was fixed by the researches of Dr. Ludwig Steber, described in Philippe's 'Origine de l'imprimerie à Paris,' published in 1885, from which it appears that the three German printers were called from Basel (not from Constance) during Jean Heynlin's second priorate of the Sorbonne College, beginning March 25, 1470, N. S., and that their first book, the Epistles of Gasparinus Barzizius, was issued towards the end of the same year. Forty years after this event it is stated that there were in Paris over fifty printing concerns, and that even before the close of the fifteenth century the Parisian trade in books was the largest in Europe. Considerable space is given to the history of the Estiennes, or Stephani, who carried on their business at Paris and Geneva for five generations, or more than a century and a half. The most famous of the family was Robert Estienne, who succeeded to the establishment of his father Henry in 1526. Misled by Greswell, our author states that Robert began in 1524, and that his first publication was the treatise 'De Deo Socratis' of Apuleius in 1525

The edition referred to was really printed a hundred years later, in 1626, by Robert Estienne the third. The publishing house of the Estiennes came to an end not long after 1660.

Book-publishing in England is illustrated by an account of Caxton's undertakings, with sketches of other English presses. Of Caxton it is remarked that his experience as a publisher did nothing towards the development of any conception of literary property. In 1556 the Stationers' Company received their charter, and beginning with the following year the members of the guild had their books registered for copyright. R. Clavel's catalogue of English books from 1666 to 1690 is referred to as the "earliest catalogue of books published in England," but this is not the fact, for it was preceded by Andrew Maunsell's in 1596, an anonymous publication in 1631, John Rothwell's in 1657, and William London's in 1658-60.

The greatest publishing house of the fifteenth century was founded in Nuremberg by Anthony Koberger, who died in 1518, after a successful business career of fifty years. He did not limit his undertakings to his own presses, but gave contracts to printers in other parts of Europe. Jodocus Badius speaks of him as "that glorious Nuremberger, esteemed of honorable men everywhere as the prince of booksellers, the man who conducted his business with the most exact integrity and with the highest ideals." Another great German publisher was John Froben, established at Basel from 1491 to 1527. Erasmus, who was in his service as editor, and whose books were published by him, called him "the Aldus of Germany," and, writing from Basel in 1523, he says:

"I find here three methods of bringing a book into print. Sometimes Froben takes upon himself the entire risk and outlay. . . . In other cases the publication is undertaken for the account of some person interested, and Froben simply reserves a commission for his services; and under a third arrangement, the publication is undertaken by two or three firms, associated as a temporary company."

When Froben died, in 1527, Erasmus wrote as follows:

"To me his kindness was unbounded. What plots would he not lay, what occasions would he not seek, to force some present upon me! Nor did I ever see him better pleased than when he had prevailed upon me, either by artifice or by entreaties, to accept one. . . . Nor did I ever find more use for my rhetoric than to invent pretexts for declining the munificence of my publisher without giving umbrage to my friend."

The new conditions that were brought into existence by the Reformation are treated in the chapter on "Luther as an Author." One effect was to increase and popularize the work of the printing-press, and another was to develop a rigorous censorship, ecclesiastical and imperial. It is stated that, by 1520, more than 100 editions had been printed of the German versions of Luther's sermons and tracts. The first edition of his German New Testament appeared in September, 1522, and a second edition was ready before the end of the same year. The complete Bible was finished in 1534. In Luther's lifetime it is estimated that 100,000 copies of his New Testament were printed at Wittenberg alone. The restrictions upon publishers in regard to the printing of this version were gradually removed, and in 1564 it was formally declared free of privilege, and became common property for all Germany. Luther's experience did not help to advance

the recognition of the rights of an author in his literary productions.

The statement about the printing of Slovenian or Wendish literature at Tübingen requires correction. According to Schnurrer and Safarik, the first two books ever printed in this language (the shorter and larger catechisms) were issued from Morhart's press in 1550—not in 1529. Primus Truber, who was born in 1508, was author, editor, and publisher, but not the printer, of the books. Neither did he nor Morhart publish, in 1530 or at any other time, "an edition in Bohemian of Luther's New Testament." They did publish, in 1557-'60, the Slovenian or Wendish version of the New Testament; and in 1562-'63 two editions of the Croatian or Illyrian New Testament, one in Glagolitic and the other in Cyrillic type.

The publishing house of Plantin in Antwerp was founded in 1555, and came to a close only in 1867, in which year the entire establishment was bought by the city for 1,200,000 francs and opened as the Plantin Museum. In this place are exhibited all the details of bookmaking in the sixteenth and seventeenth centuries, including the presses, type, and other utensils. The account-books of the firm have also been preserved, and in them is found the record of payments to authors and editors for literary work. For the publication of his great Polyglot Bible, from 1569 to 1573, Plantin obtained a privilege from the Pope which gave the publisher exclusive control for twenty years, and which brought upon any reprinter excommunication and a fine of 2,000 livres. Royal and other privileges were granted for the same work, for twenty years each, in Spain, France, Venice, and Naples, and for ten years in Germany.

The most famous of all the Dutch printer-publishers were the Elzevirs. Beginning in 1580 at Leyden, branches were established at The Hague (1590-1661) and at Amsterdam (1638-1681). The Leyden concern came to an end in 1713. The relations between the Elzevirs and the scholars resident in the Low Countries, whose works they printed, appear to have been satisfactory. As far as the foreign authors were concerned, they took what material they thought they could use, without troubling themselves to make requests or acknowledgments. "They were, in fact, the most extensive piratical publishers that the world had as yet seen, and may be said to have reduced piracy to a business system." Credit must be given to them, however, for helping to prepare the way for interstate copyright. In extending the sale of their own publications in countries far distant from the "country of origin," and in finding sale for the works of widely separated authors, "they helped to develop in several communities the understanding that literary productions had nothing to do with political boundaries, that the readers of one country were of necessity dependent upon the literature of all countries, and that the boundaries of the world of literature were the boundaries of civilization."

Censorship of the press began as early as 1480, with the *imprimatur* or secular record of authorization, and the *testamentum* or ecclesiastical certificate of approval. In France it was urged that "to propagate the knowledge of the Greek and Hebrew languages would operate to the absolute destruction of all religion." An ecclesiastic is quoted as saying from the pulpit: "A new language has been discovered which they call Greek.

Against this you must be carefully on your guard, for it is the infant tongue of all heresies. There is a book written in that language called the New Testament. It is *un livre plein de ronces et de vipères*. As to the Hebrew tongue, it is well known that all who learn it presently become Jews." The first papal bull "contra Impressores Librorum Reprobatorum" was issued by Innocent VIII. in 1487, and in 1559 the first Roman Index was published. In the treatment of this subject Mr. Putnam has evidently not consulted the standard work of Reusch, 'Der Index der verbotenen Bücher' (1883-'85); and he misapplies throughout the term *Index Expurgatorius* to the *Index Prohibitorius*. Of the Tridentine *Index Librorum Prohibitorum* of 1564, he says, that "it was printed ten times subsequently between 1564 and 1593," when in fact there are on record nearly fifty editions for that period. In another place (p. 270) he twice confounds the name of the printer Francisco Ferdinand de Cordova with the name of the city Cordova, to which place he assigns the printing of two editions of the Index really printed at Valladolid.

Mr. Putnam is at his best in the last part of the volume, which treats of the beginnings of property in literature, as regulated by privileges or monopolies, in Italy, Germany, France, and England. The earliest recorded copyright to an author was granted at Venice in 1486, apparently for an indefinite term, and the earliest example of a copyright to an editor is one dated 1493. Until 1560 the average term of a copyright in Venice was ten years, but after that date the terms began to increase. One was granted to Ariosto, for his 'Orlando,' to last for his lifetime; and in 1535 a copyright was given to his heirs for a period of ten years for certain of the poet's works. At the close of the seventeenth century it seems to have been the general understanding in England that authors possessed in their productions a perpetual right of property, and that this right could be assigned. This stage of development in the conception of literary property had as yet been reached in no other country. The act of Queen Anne, which was passed in 1709 and went into effect April 10, 1710, gave a statutory protection for a term of fourteen years to the author of a literary production, and had the result of bringing to a close for Great Britain the period of common-law copyright.

The last chapter traces the development of the conception of literary property, from the period when monasteries controlled the copying of manuscripts, through the various phases of monopolies, privileges, trade-organizations, and legislative enactments, to the formation of conditions which led to the International Copyright Convention at Bern in 1887. The basis of copyright legislation in Europe and America, representing in substance the survival of the discussions of two centuries, is the theory that "property in an intellectual production is the creation of statute, and is subject to limitations depending not upon any natural rights of the producer, but upon the convenience or advantage of the community." Mr. Putnam is inclined to the opinion that the actual status of an intellectual production and the relation of its producer to the community would be more accurately expressed by combining with this theory the conception of "as comprehensive and unlimited a control for the production of the labor of the mind as that conceded by the community to the produc-

tion of the labor of the hand"; and he cites, as a practical compromise of the rights and requirements of the author on the one hand and the interests of the community on the other, the result of copyright legislation in France, by which, in 1867, the term of copyright was fixed, not for perpetuity, but for the life of the author and fifty years thereafter.

Bibliographical work is peculiarly liable to error, but this volume seems to contain more than its full share, for it has upwards of a hundred mistakes, many of which could have been corrected by an intelligent proof-reader. Wrong dates are frequent; e. g., 1576 for 1476 (p. 165), 1618 for 1518 (p. 208), 1552 for 1556 (p. 107), 1579 for 1597 (p. 84). Antoine Vêrard began publishing in 1485, not in 1495 (p. 8); the Lyons edition of Brant's 'Stultifera Navis' (p. 10) was translated—not published—by Locher, and the true date is 1498, although the book is misdated 1488; the date of Caxton's death (p. 101) should be 1491, as on page 125, and not 1492; the first publication of Aldus in Venice (p. 102) was in 1494, three years after, instead of one year after, Caxton's death.

Mis-spelled words are numerous: Polyæmus for Polyænus (p. 89), Perseus for Persius (p. 91), Veragine for Voragine (p. 118), Pencer for Peucer (p. 320), Blæu for Blæu (p. 325), Mersius for Meursius, six times (pp. 320-21), Maretus for Muretus (p. 321), Trochsover for Froschover (p. 141), Preschel for Trechsel (p. 13), Mæso-Gothic for Mæso-Gothic (p. 306). On page 117 the monk Roger, of St. Werberg, is transformed to Roger Monk, of St. Werberg. The Latin book-titles have suffered more than those in other languages, as when two are run into one, e. g.:

"Digestorum seu Pandectarum volumina quinque Biblia utriusque Testamenti Latina," etc. (pp. 31-32); or
"Thomas de Aquino, glossa continua super quatuor Evangelistas Biblia Latina" (p. 152);

or when two commentators are made one:

"Virgili Opera cum Commentariis Servil Valeriani Castigationibus" (p. 32).

The following specimen, with its six mispellings, is copied *literatim* from page 319:

"Drusii Ebraicarum quæstrinum, sive quæstrinum æ responsionum, libri duo, videlicet secundus æ tertius."

Among errors of statement requiring correction are the following: Koberger's edition of the 'Gesta Romanorum,' 1493 (pp. 118, 153, 161), is not the first, there having been twenty or more earlier editions. Tyndale's translation of the Pentateuch, instead of being printed after his death (p. 140), was printed six years before that event, or in 1530. It was not a Bible, but a New Testament, that was issued in 1538 at Southwark (p. 142), and the printer was not John Nicholson, but James Nicolson. Other statements on the same page are incorrect. The polyglot Pentateuch printed at Constantinople in 1547 (p. 260) is in Hebrew, Chaldee, Greek, and Spanish, and contains no Latin version at all. An edition in Hebrew, Chaldee, Persian, and Arabic was printed at the same place in 1546. On page 211, Heynlin and Fichet, the two French doctors of the Sorbonne, are called "the German printers," while Gering and Krantz, whom they induced to come to Paris, are termed "their successors." Richard Pynson was not the assistant, but the business rival, of Wynkyn De Worde (p. 138); he was not at any time associated with De Worde in the manage-

ment of the Caxton Press; nor is it correct to say (p. 139) that "after the death of De Worde, Pynson continued the work of the Caxton Press with his own imprint." Pynson died in 1530, and De Worde survived him four years.

It is unfortunate that in a work of so much merit there should appear so many blemishes.

Chronicles of a Kentucky Settlement. By William Courtney Watts. G. P. Putnam's Sons.

If the kaleidoscopic quality of Jokai's genius has sometimes made his fiction too fantastic to hold the interest, it at least gives to his historical novels a mighty life, variety, and rushing motion. Certainly the story of 'The Green Book' is one to cure deafness like *Prospero's* tale. 'The Green Book' was a list of the members of the far-reaching conspiracy for freedom in Russia in 1825. It was kept in a roulette-table in a secluded room at the house of the beautiful Finnish prima donna, Ilmarinen, in St. Petersburg. When the conspirators were in session, the table was open and the book in evidence. If danger threatened, in the approach of an outsider, the outer door slid the cover back over the table, concealing the book and warning the plotters, so that the uninitiated entered to find only a busy party playing roulette. Around the table sat many historic persons. Sometimes Pushkin the poet was present, and Turgeneff the historian, with nobles of Poland and even Russia conspiring for freedom with the people against the Tsar. The history of this, the last year of the reign of Alexander I., is a thrilling one even without the airy touch of Jokai's pen to give it dramatic embellishment. The great conspiracy and the

inundation of the Neva are the two historic events on which the novelist has draped his brilliant fabric of minor history, of plots, loves, terrors, even interweaving some threads of amusement. The translation is spirited, with an occasional lapse into ungrammatical English.

Mr. Crawford's novels rise and flow with a frequency and abundance and irrepressibility that recall the principal rivers of Europe and Asia, as recited in the school-days of an earlier generation. So, too, in the movement of each novel by itself: no hesitancy or friction stays the swift current of the ample stream; no snag gives pause; in ceaseless movement the flood of narration pours itself along. Never tired itself, it is yet sometimes the cause of being tired in others. Why not one volume rather than two? In the case of 'Taquisara' particularly, why not, since each volume is a complete and separate story? Each is full of Italian mysteries and terrors; and perhaps herein lies the explanation of the feebleness of the novel. Mr. Crawford knows his Italy too well. Under the spell of that familiarity which breeds a contemptuous attitude, he treats poison as only an episode, secret crime as a curtain-lifter. Perhaps, too, he commands the literary situation something too securely, and therefore pauses lingeringly to twaddle over intrigue, and babble over tragedy, with the prodigality of a pen that knows neither haste nor rest. There are two main situations in 'Taquisara.' In the one, a cat takes the poison meant for the heroine; in the other, the episode of the cat is, as it were, translated into humanity, and an accidental handclasp nearly marries the heroine to the right man instead of the wrong one. The third leading incident of the tale, the making a priest who is not a priest into a real priest without letting any one know, by suddenly giving a bishop's consecrating power to a third priest, with strict injunctions not to tell any one but the penitent and the Pope, seems quite like one of Gilbert's masterpieces.

In 'A Rose of Yesterday,' too (limited to one volume, however), the work of padding is at its deadliest height, the super-facile pen flinging off essay after essay, with which are interlarded a certain number of incidents. The Rose of Yesterday was a lady whose husband beat her; he also beat his son into idiocy, but left him one noble instinct—that of saving life, which induced the idiot to end his days as member of a life-saving station. The humorous touches in the book are almost more gloomy than the idiot episode. The hero is a fine, soldierly gentleman; the essays are upon the letter-writing bacillus, upon the tragic import of the slit in lamp-post boxes, upon youth, upon the real and the ideal, upon civilization, upon love, upon divorce. Some are good, and some already in 'Taquisara' dwell, and some leave us rather at sea. The Athenian of old criticised the physician who practised without science, but discoursed in the language of philosophy: "Foolish fellow, you are not healing the sick man, but you are educating him, and he does not want to be made a doctor, but to get well." Of Mr. Crawford we do not desire homilies, but a novel.

Anent 'Corleone' we will not quarrel with Mr. Crawford for his two volumes, nor accuse him of giving us essays instead of a story. A few discourses there are, but main,

ly bearing on the matter in hand. Story there is in abundance and in coherence, and not, as we have just complained, a series of disasters strung but not connected on a thread of irrelevant preaching. 'Corleone' is a story of love and bloodshed, of which all the curdle and intrigue are met in a real plot which thickens to the heart's desire as the narrative proceeds. It absorbs the reader in the good old-fashioned way with its rising and accumulating action and event. The Saracinesca family, with its descendants and branches, it is pleasant to meet again; and the Sicilian family, the Corleone, who lend the book its shadows, open the way for a deeply interesting picture of life in Sicily, and, even more than the life, of the national spirit which makes the extinction of brigandage not so much an impossibility as a contradiction in terms. It is, explains Mr. Crawford, "not a profession," but "the occasional but inevitable result of the national character under certain conditions which are sure to renew themselves from time to time." So, too, the mafia. "It is not a man. The mafia is the Sicilian character—Sicilian honor, Sicilian principles. It is an idea, not an institution." A revealing light is thus thrown on the difficulties in the way of governing Sicily, while yet the Sicilian sense of honor and of community of cause has much to command admiration. Nor is this lesson of the nations so imparted as to spoil a story; it stands in a just proportion to the persons of the drama, forwarding, not clogging, their fortunes and the phases of their character. Mr. Crawford, as in a former happy day, is to be congratulated upon and thanked for a thoroughly interesting, well-made, well-written novel.

Faint welcome awaits the compositions of undergraduates as general literature, however deeply the relatives of the writers may be interested in their amiable attempts at presenting scenes in "the human comedy of a co-educational college between the Missouri and the Mississippi." The hope, expressed in the prefatory note, that the collection of stories, 'On a Western Campus,' the production of the Junior Class of Iowa College, "may arouse attention, approval, and even somewhat of serious criticism," is destined, we should suppose, to be unfulfilled, so far as any public beyond the limits of Iowa College and its graduates is concerned. The stories are of four classes. As might be expected, the best are those which treat of athletics, the college student being naturally more at home in descriptions of races and ball-games than in "Portraits" or in tales "In Serious Vein" or those of "Co-education," which, according to the adage (not disproved by these stories), is the thief of time. If Juniors made the text, the illustrations must be the work of Sophomores.

A similar work is put forth by the Alumni and Students of the Woman's Medical College of Pennsylvania, in their volume of stories, wherein we find smoother writing and now and then an original idea. The preface states a belief that this is the first book of stories by medical women. But why should medical women, in groups and as such, write stories? Do figs grow on thistles or novelists in hospitals? The best two of the collection, 'The Genius Maker' and 'A Psycho-Physical Study,' are clever magazine studies, and one or two of the others give glimpses, not uninteresting, of the ways of life among medical stu-

dents. For the most part, however, a surfeit of crudity reigns, and suggests alarming questions as to the specialization of story-books of the future. What is to protect us from "Love among the Roses—A Bouquet of Short Love-Stories by Landscape Gardeners," "Out of the Depths—Sketches by Associated Clamdiggers," or "Hocks and Fetlocks: A volume by the Undergraduates of a Veterinary College"? Meantime, our course is to remember, with Burke, that "we must bear with inconveniences till they fester into crimes."

It is pleasant to turn to a real story by a real story-writer. Such is 'My Lord Duke,' by E. W. Hornung, whose other books have already proved, as Dr. Van Dyke's Highlander said, "ferry comforting whatever to the congregation." They are not to be called great; they are not purposeful; they are stories pure and simple, excellently constructed, well written, cleanly, humorous, kindly. The improbabilities, if not invariably convincing, are never irritating. The plot is always well managed, the telling of it lively, with no waste of irrelevant episode, and the untying is sure to be left to the last. Withal, the air of the bush is over all. There is plenty of oxygen and good sense, and no self-consciousness. 'My Lord Duke' is no exception to these general traits of merit, but its story is its own, both in plot and in characterization. It is a capital little novel.

Also adventurous, and unlikely also, is 'The Great K. and A. Train Robbery' of Mr. Ford; but a story which is well-nigh impossible is its own defence from the charge of improbability. Interest or the lack of it is the main point, and this story is lively and amusing and swift-moving enough to justify its own being.

Mr. Riccardo Stephens's earlier novel, 'The Cruciform Mark,' was far from dull, but much too long. We regret that in 'Mr. Peters' he has so misapplied his amendments as to leave his book both long and dull. It opens with an extremely graphic account of the lynching, in an American town, of a Swiss-Italian falsely accused of horse-stealing. This part, given as a prologue, is well done, and rouses expectation of something powerful; but the novel proper, the story of the revenge of the martyr's son in Edinburgh, after many years, is intolerably spun out. His revenge is so simple that there is not enough material in it for a fat four-hundred-page novel, so that it must needs be puffed out with a variety of unamusing devices—lodging-house amenities, tobacco-advertising poetry, bicycle adventure, and mooncalf courtships, a tenth part of each of which might have passed muster and not have left the reader lamenting. It is a disappointment, for the author's ability is through all discernible.

Miss Harraden's tale is a study of nostalgia, and a suggestive one, particularly to the Great British about to emigrate to Southern California. Her advice is not that of Punch, but it may well and wisely give pause to him (and especially to her) who expects Paradise in going to raise lemons in the New World. Her description of the double face of the landscape—that is, of its dismalness and its charm—is unlike any other we have read. We take this to be, not that her facts are seven miles from a lemon-grove, but that the usual written description is that of the winter enthusiast, without let or hindrance. In hers one keenly feels how

the absence of grass and great trees in the brown, dry summer would oppress the heart long used to the deep, leafy lanes of England. It is an expressive little study, not lacking Miss Harraden's characteristics of straightforwardness and distinctness, with the inevitable final touch of pathos pointing to the incompleteness of moral destinies.

Mr. Wells's 'Thirty Strange Stories' are uncommonly clever. Whether he writes scientific fairy tales (and these form the larger number of the collection) or scenes of perturbed domesticity, there is a clearness and at the same time a lightness of treatment that do not always go together, and that contribute conspicuously to the perfection of the short story. Details of aerial navigation, of blood-eating orchids, of prehistoric birds and fishes miraculously rediscovered, of age and youth exchanging personality, of seeing round the globe, and of diving to the bottom of the sea, are given with such technical minuteness that we fully accept the wonders for the time. With equal skill the author satirizes the inconstant man of letters, the drama-ridden critic, the scalp-hunter, male and female, in sketches healthfully stinging. Altogether a rare quantity and quality of invention and imagination are to be found between the covers of Mr. Wells's volume, and though many of the thirty stories are gruesome, for the stout of nerve they will furnish excellent entertainment.

It is almost a relief to have Mr. Richard Harding Davis's hero misplace his "wills" and "shalls," because in every other respect he is such an incomparable conqueror that the ordinary human eye falls, dazzled, before his radiance. However, with practice a cat may look at a king, and we poor mortals, when used to the light, find this sovereign gentleman a pleasant one to gaze upon. If there are in real life few such paragons, more's the pity. There is a deal of entertaining engineering and geography in the book, culminating in a brisk account of a South American revolution, in which all the characters in the story figure, having arrived from Fifth Avenue just in time, in their yachts and by train, like the second act of a society drama. The hero's attitudes towards the two heroines are visibly affected by the atmosphere of revolution, and his hypersensitiveness as to whether he is loved as man or as engineer is harder to follow than even his military exploits from the Nile to Peru via Zanzibar. Some men are satisfied if their Dulcineas smile upon them without subjecting the smiles to an X-ray. But Robert Clay was different, and, wishing to be beloved as an engineer, he told a charming woman that it was a little satisfaction to him to have her like him personally as to a woman to be congratulated on her beauty. No wonder that it was "some short time" before the beauty replied. There is, notwithstanding, no morbid strain in the book. Horses, hoydens, and boys impart wholesome cheer, and South America contributes a bright landscape. For clean stories of adventure and love, with no dull word, readers must ever be thankful.

Ellen Douglas Deland's 'Alan Ransford' is a story for girls with a novelesque ending. The children are good and naughty by turns. The parents are mild and non-combative under great provocation. The story will please and not hurt the children, but we should be afraid that parents might, by the

examples of extreme parental acquiescence, be led into mischief.

'The Meddling Hussy,' being "Fourteen Tales Retold," does credit to Mr. Ross's talent and to his sense of the picturesque in history. The tales of the American wars are perhaps the best in the book, and give, of several American episodes in history, a dramatic, first-person-singular view, such as Hope, Weyman, and their ilk have long since made familiar. Mr. Ross further seasons his Hope and Weyman with tincture of Stevenson, thus lapsing into phrasing which sounds forced and is tiresome. "Saddish" from the lips of Mary Queen of Scots makes us want to call Mr. Ross baddish if not beamish. A path "densened" by the rain is the path of transgression surely; "remonstranceful" is a hard saying; "the way fell a bit hilly and rutty" jars upon the love of simplicity. So do "the scurrying wet bit our faces brutally," "we followed with some amazement that the burning log seemed to give out no warmth," "the mouth put the expression of this gentleman's face." Be it repeated, to return to the merits of these stories, that they are full of manly stir and lustrous reality, and that it is where Mr. Ross trusts to himself that he is best.

Noteworthy, indeed, are the sketches in prose and verse of Thomas Wharton. Owen Wister's charming preface prepares one for an unusual quality in the stories, and, after reading them, one rereads the preface for the satisfaction of full and conscious agreement. "He belonged," says Mr. Wister, "to the rare tribe that writes *fabliaux*"; and, again, "His talent did not by nature wear modern dress, but moved fancifully in costume." This characterization is no less true than graceful. Such delicately original work we have not lately seen; so airily, fairly firm, so mediævally modern, so romantically humorous. To become acquainted with it is to share the regret expressed in Mr. Wister's tender lament that his friend's work is ended.

'Chronicles of a Kentucky Settlement' were begun, their author says in his preface, as sketches for his family, and grew through his own interest and familiarity with his subject, as such sketches will, to their present somewhat over-ample proportions. Now, romance is something of a stumbling-block in the way of the family-tree and the recollections of the pioneer. There are very interesting facts at the command of the writer, relating to early Kentucky history, which, in our judgment, would have been more interestingly presented if they had not been made into a novel—at any rate, into a novel of nearly 500 pages. The style, notwithstanding localisms, has a certain old-fashioned flow and form well suited to the history of a bygone day, and it was a day of romance and picturesque adventure.

Philip II. of Spain. By Martin A. S. Hume. The Macmillan Company. 1897.

The modern historian finds in Philip II. a repugnant, yet an alluring, subject. His political methods shock the conscience and discourage, in the case of the general reader, any proper judgment of personal motive or public policy. On the other hand, the catastrophes of his reign invite sympathy, and he has been misrepresented. Speaking from the standpoint of the modern historian,

to whom we are bound to ascribe the virtues of erudition and fairness, the difficulty may be put thus: How can one clear away the misrepresentations without appearing to be a champion? How can one reach the truth without appearing to condone those breaches of the moral law which remain when the rubbish has been carted off? The answer may be that, after Philip has been credited with the amount due him on the score of false accusation, he is still hopelessly bankrupt in character. But there is a further stumbling-block. This patron of the Holy Office, this slayer of Montigny, this religious politician, was also beyond doubt a man of conviction. Mr. Hume's happy phrase is, that he regarded himself as "in some sort a junior partner with Providence." How much allowance shall be made on this head when we come to pass judgment? Altogether it is a hard case, unless the writer be a Spaniard of sound Catholicity. The Dutchman, the Frenchman, the Englishman, must admit that Philip was not exactly a commonplace devil, a sort of sixteenth-century Santa Cruz or Carrier. Still, do one's best for him, he remains sinister and forbidding. Enthusiasm is out of the question. The attractiveness of the theme arises from the vast scale of the issues and from the scope which it affords both to psychological ingenuity and to mythicide.

M. Mariéjol, in publishing two years ago a just epitome of Philip's work, avows that the current tendency is towards lenience: "Sans doute, il faut résister à la tentation de le réhabiliter." Mr. Hume is on his guard, too. When one understands fully, whatever may be one's censure, the vindictive note is rarely heard. Mr. Hume is not blind to cruelty, and comes out strongly with the fact, *e. g.*, in connection with Caranza, that the Inquisition was a political tool even more than a means of destroying heresy. He recognizes the part played by political assassination under Philip's system—for instance, in the case of Escobedo. But he casts a pall of sadness over king and reign so dense that anger is forgotten. The tainted blood, the education in distrust, the futile toil, the growing melancholy, the patience under disaster, are made more vividly clear than the practices which stirred Motley's soul. Philip was at vespers when word came that Don Juan had destroyed the Turkish fleet at Lepanto. He "did not move a muscle when he heard the stirring news." Able to hear tidings of victory with perfect composure, he could sustain loss without flinching. "There was no defeat for such a man as this; and he could afford to be generous and magnanimous, as he was, to the men whose shortcomings were the immediate cause of the great catastrophe which ruined the power of the nation, but could not break the faith or spirit of a man who regarded himself as the fly-wheel of the machine by which the Almighty worked the earth."

Mr. Hume, whose authority is particularly strong on the relations of England with Spain, traces to a French source the panic which seized London in January, 1554, when Egmont came in state to offer Philip's hand to Mary. Charles V. was smarting under the loss of Metz, and wished to regain his prestige by a diplomatic triumph. The negotiations, at first carried on through Renard, came to the ear of the French Ambassador, Noailles. He was instructed to stop the match, and received large sums to lay

out in the right manner. Besides buying up individual politicians, he launched rumors upon the public ear. "The hatred and prejudice aroused against Philip by Noailles for purely political reasons in 1553 have left an abundant crop of prejudice even to our own times." The Marian persecutions run back for their origin, not to Spanish influence, but to English Bishops like Bonner and Gardiner. Philip, of course, could persecute if he had an object. With regard to England, he rightly thought that strong measures were sure to defeat the end they sought to serve. Nevertheless, confusion was bound to arise on this point in the popular mind. Spain was known to be cruel. Philip was the Queen's beloved husband. The fires of Smithfield blazed. The fallacy of *post hoc ergo propter hoc* seldom has so plausible a foundation. Then in Elizabeth's reign came colonial rivalry, religious foud, and the Armada. "The Spaniards, it was said, were bringing cargoes of scourges and instruments of torture, all adults were to be put to death, and 7,000 wet-nurses were coming in the Armada to suckle the orphan infants. Such nonsense as this was firmly believed, and the echoes of it have not even yet entirely died out."

Mr. Hume's sketch of Philip II. is a volume in the "Foreign Statesmen" series. It is a model book of its kind; brief, competent, and accurate. We have encountered no errors of fact whatever, and only one misprint: p. 160, *Piale* (for *Piali*) Pasha. Mr. Hume's Anglo-Spanish studies of the sixteenth century are always good. So long as he maintains his past and present standard, his writings will deserve a cordial reception on this side of the Atlantic.

Nippur, or Explorations and Adventures on the Euphrates: the Narrative of the University of Pennsylvania Expedition to Babylonia in the Years 1888-1890. By John Punnett Peters, Ph.D., Sc.D., D.D., Director of the Expedition. With Illustrations and Maps. Vol. II. Second Campaign. Pp. x, 420. G. P. Putnam's Sons. 1897.

This volume follows the first (reviewed in these columns in July last), at no long interval. It falls naturally into several distinct portions. The first hundred pages describe the operations of the second year at Nippur; a hundred and sixty more are occupied with an account of the results of the excavations, concluding with an historical sketch of Nippur; the final hundred are mainly a story of travel in other parts of southern Babylonia. Plans, drawings, and photographs are freely used in illustration. Appendix A gives plates of objects found, with careful descriptions. Appendix B consists of the weather record at Nippur during the second season. An index to both volumes completes the work.

The second season was much more prosperous and successful than the first. After a short visit to Philadelphia, in the summer of 1889, to consult the committee of the Babylonian Exploration Fund, Dr. Peters returned to the field. Mr. J. H. Haynes and Mr. Noorian again accompanied him to Nippur. Dr. Selim Aftimus, a Syrian physician, did the same, but only to be stricken with fever which compelled his immediate return. The rest of the party, not without some hardships, continued through the season. It was during this stay that the real possibilities of Nippur were disclosed, and the

selection of that particular mound for excavation brilliantly justified.

"Whereas the first year we had sent to Constantinople only four boxes, this year we were sending thirty-six, besides the coffin and the half-dozen door-sockets—over forty parcels in all, containing about eight to ten thousand inscribed tablets or fragments of tablets, and several hundred inscribed stones and stone fragments, among which were the oldest inscriptions theretofore discovered in Babylonia, or probably in the world" (p. 103).

The work of excavation extended from January 21 to May 3, 1890. At its conclusion Peters and Noorian made a tour to the southward, taking in the partially explored Tello-Sipuria, Ur-Mughair, Erech-Warka, and such untouched mounds as Bismya and Yokha. All of these still invite the spade, with good promise of rich returns. The narrative of this journey ends with interesting accounts of the sacred Mohammedan cities of Nejed and Kerbela. The concluding chapter of the book brings the explorers home.

The solid results of the expedition are described in the middle portion of the volume. In several chapters, illustrated by plans and drawings, the progress of the work is set forth and the chief discoveries are related. Most notable among these are the *siggest*—the artificial hill, in two stages, once surmounted by the dwelling-place of the god Bel, and surrounded by structures connected with worship—and the evidences gained by vertical shafts of the great age of Babylonian civilization. They do not enable us to speak definitely of years, or even centuries; the margin of uncertainty is still great, but as a result of discoveries, of which those at Nippur are for the present the crowning ones, it is no longer a wild improbability to speak of the foundation of that city as dating, perhaps, from 6,000 or 7,000 B. C. Results like this are of much greater consequence than the discovery of particular objects, however interesting these are. Nippur adds another to the sites which have been explored—partially, it is true, but scientifically—according to a careful plan, not mainly to stock museums with curious things, but to recover the history of a great population. Schliemann, Petrie, Bliss, Peters, and Haynes are honorable names in the roll of excavators who have thus excavated in the service of history. Their achievements will be more and more recognized by competent judges as of a far higher kind than those of mere curiosity seekers. They help to reconstruct, along broad and true lines, the life of the ancient world.

Within the great framework, of course, all attainable particulars have their place. Dr. Peters's chapter headed "Miscellaneous" reports the discovery of clay drains, phallic symbols, door-sockets bearing some of the finest inscriptions, and many other stone and metal objects. A large number of these are figured and described in the appendix. There is also a reference to the significance of the inscriptions from Nippur in relation to the origin and progress of the art of writing. What Friedrich Delitzsch has already done for the history of the cuneiform character on the basis of the inscriptions found by Peters and Haynes, and published by Hilprecht, is well known. The chapter on "Coffins and Burial Customs" is very instructive. Much other information, of the most varied description, is scattered through the book. The discovery of glass objects, dating from the 14th century B. C.; the reason proposed for the orientation of the an-

cient temple structures, with their angles towards the four points of the compass; the supposed evidence, from the weight of the door-sockets, for the employment of camels to carry them as early as 4,000 B. C.; the unearthing of Assyrian tablets (Ashurbanipal and his son in the seventh century B. C.)—these are a few of the incidental matters of interest, for which we must refer the reader to the book itself.

When it is considered that it was Dr. Peters who, of course after taking counsel with those whose opinion was worth having, chose Nippur as a site to excavate; that the misfortunes of the first season did not deter him from undertaking a second, nor occasion the withdrawal of the generous support of the committee at home; that the second season yielded such brilliant results; that the continuance of the work with adequate equipment, under Mr. Haynes, in subsequent years, was largely due to his persistent efforts and energy, and that he has followed the work with active interest in all its stages, putting his experience freely at the disposal of those who could make use of it—it will be apparent that Babylonian discovery owes no small debt to Dr. Peters. Mr. Haynes's account of his work will be eagerly welcomed. It illuminated and extended that of his predecessor, but that predecessor's work will remain entitled to the full measure of recognition and praise already accorded to it by those best able to appreciate its worth. We are glad to know that 'Nippur' has passed to a second edition. It is an evidence that wide circles value what Dr. Peters has done, and are attracted by the direct, manly way in which he describes how he did it.

American Contributions to Civilization, and Other Essays and Addresses. By Charles William Eliot. The Century Co. 1897.

Dr. Eliot's book consists of miscellaneous addresses and magazine articles written during the past twenty-five years. The reason of their being mainly social and political—a fact which at first strikes the reader with surprise—is explained in the preface; it is merely because the educational addresses and papers are reserved for another volume. There are, however, in this volume a good many passages relating to education, and one entire essay discusses the question "wherein popular education has failed." What is striking about the book, coming from the President of the oldest American university, is that his field of speculation and interest is so much larger than the mere field of education. Fifty years ago such a book would have been a narrow if not sectarian performance; to-day the essayist is no mere educator, but a man of the world, an administrator, the executive, representative head of a corporation so important, so closely connected with the life of the country, as to make him a public character; a man whose function it is to speak, not merely for Harvard University, but for the United States.

This Dr. Eliot does in this volume with a very representative and characteristic voice. Perhaps the best essay is the first, which attracted a good deal of attention when it was originally published. It is really polemical, though not contentious, in form; it is nothing more than an attempt to answer the question so often asked, What has America done for civilization? Dr. Eliot mentions five contributions—peace at home

and arbitration abroad, religious toleration, universal suffrage, proof of the fitness of man for political freedom, and the diffusion of well-being, material, moral, and mental. The real force and pith of the essay, however, does not lie in these answers so much as in a most ingenious criticism of the Jingo philosophy which advocates war as a school of virtue and heroism. Those who, with this idea, would have this or any country kill a million men, and destroy thousands of millions of property, make millions of wives widows and children fatherless, and let loose famine and panic on every side, he very neatly compares to those who "would set a city on fire in order to give opportunities for heroism to firemen," or introduce cholera or yellow fever in order to give physicians and nurses an opportunity of displaying disinterested devotion. This is a fatal criticism; it cuts the ground from under the feet of the philosophical Jingo, and is itself a contribution to civilization.

Dr. Elliot is a pronounced optimist, but it is precisely in this particular that we see how representative he is. Right or wrong, the wide diffusion of material well-being which he considers one of the five chief American contributions to civilization, tends to make Americans optimistic, just as the oppressive character of the struggle for existence in Europe tends to make Europeans more or less pessimistic. Such, at least, has been the case, speaking generally, for two generations. This optimism is incarnated in Dr. Elliot, and breathes lustily in every word he utters, and it is curiously illustrated in an address on "The Happy Life," delivered at Baltimore two years ago. The address is full of good advice on the conduct of life, but the determination with which the author minimizes the everlasting misery of the world, and makes the enjoyment of life an affair of the individual will, would make a pessimist foam at the mouth. Referring to the "highly speculative opinion" that external nature offsets every good with an evil, and that whatever purpose may run through Nature, we have no key to it, he replies that all science teaches us that knowledge is progressive, and the discovered is as nothing compared with the undiscovered. People cannot, they complain, discern the moral purpose of the universe. "Why," says Dr. Elliot in reply, "should they discern it?" A lawyer would criticize this as "not responsive"; but an optimist is logical only when he chooses to be so. He is not merely a critic, but a practical adviser, and he only obeys the law of his being when he meets a fatal objection by advising the su. to think about something else. Indeed, the author even goes so far as to suggest that happiness may be advanced by a "judicious selection of beliefs." Here he takes the clerical view, so commonly advanced nowadays, that as we really know little or nothing about life, and everything is entirely uncertain, the sensible thing for us to do is to believe what will make us happy. To this, of course, the agnostic would reply: How can I select a belief as to matters with regard to which I have no grounds for forming one? But such advice is not really addressed to agnostics; it is addressed to those who do not discriminate between hoping and believing, and to whom happiness is more important than truth. After all, what is Truth, that we should worship it and make it an end in it-

self? We can make no advances in knowledge without devotion to truth, but knowledge does not make us happy. Truth is in fact an ideal, while happiness is the only reality. Yet this would lead to a profession of faith which the author would be very much averse to selecting.

Industrial Freedom. By David Macgregor Means. D. Appleton & Co. 1897. Pp. ix, 248, 8vo.

The impossibility of equalizing the distribution of individual property, or, more specifically, of raising the real wages of free laborers at the expense of their employers' profits, by any legal machinery which shall not at the same time impair the incentive to industry and thus check the prosperity of society as a whole—this is the main thesis of Mr. Means's vigorous book. He contends that the efforts of the owners of capital to increase their total profits—a term which he uses, as Adam Smith did, to include interest—have led in the past to a gradual decrease in the rate of profits and to a gradual increase in the rate of wages. This tendency is likely to continue, but any attempt, in the supposed interest of laborers, to reduce the rate of profit by law more rapidly than, under industrial freedom, it will, in fact, be reduced by competition, is likely to discourage saving, and, by thus reducing the number of competing capitals, to check the process upon which the increase of wages ultimately depends. This general idea is familiar, but the author illuminates it with a wealth of fresh and apposite illustration, and applies it with ingenuity and force to many current "labor arguments." Especially noteworthy is his patient examination of the popular delusion which attributes to the mere corporate form of managing business a peculiar power of reducing wages below what individual employers would pay for like service.

Mr. Means's general conclusions are so reassuring in the face of much loose socialism and semi-socialism that it would be pleasant to find them supported by arguments as universally convincing in matter as they are entirely admirable in manner. But it is not clear that the conclusions are always so supported. The author does, indeed, make an obvious effort, throughout his book, to state fairly both sides of each question discussed. But in each case the emphasis of his discussion gradually accumulates upon one side with a weight which finally preponderates the other, and it thus becomes his conclusion. Now his may be in each case the right emphasis, and in general we believe that it is right; but what will be its effect upon the reader who at the outset believes otherwise? If open to conviction, he might be convinced by an enumeration of ascertained facts adequate to justify the author in placing his emphasis just where he has chosen to lay it. In the absence of such an array of facts, the reader is likely, as it were, to rewrite the book in accordance with his own prepossessions, reversing many of the author's conclusions by a simple shifting of the emphasis in the discussions which lead up to them. In other words, the problem with which Mr. Means deals, like most economic problems, can be solved, if at all, only by a quantitative determination of conflicting factors; and to those who differ from him Mr. Means will appear, as do most economists, to determine the rela-

tive magnitude of the various factors by a process largely subjective.

An Historical Greek Grammar, chiefly of the Attic Dialect as written and spoken from classical antiquity down to the present time. By A. N. Jannaris. The Macmillan Co. 1897.

This massive volume (787 pp.), by the lecturer on post-classical and modern Greek in the University of St. Andrews, is a monument of industry and scholarship, which will naturally attract few readers save specialists in dialect and syntax. When, therefore, Mr. Jannaris, with elegant modesty, informs us, in his preface (p. xi), that his work is intended, "not for specialists, but for the wider class of classical students, including clergymen, who would gladly have their memory refreshed by a summary repetition of half-forgotten details," he is making one of his few mistakes, and we are happy to state that his grasp greatly exceeds his reach. Why he should thus quixotically devote his profound and luminous scholarship to polishing the rusty accidence of the country vicarage, we are at a loss to imagine. The few though fit specialists who will find this grammar a mine of information in several branches of philological study, have good cause to regret that Mr. Jannaris did not decide to reduce the size of his book, and incidentally its price, by the omission of those elementary facts of accidence for which the clergy may well be referred to their half-forgotten Eton Grammar.

The author's main object is to show how much of ancient Greek survives in modern Greek, and how much has become extinct, with the how, why, and when of the losses and changes. This is a task that only a native Greek, who was himself a classical scholar, such as Hatzidakis, or Sophocles, or Jannaris himself, could undertake. Mr. Jannaris has too much of the scientific spirit of scholarship to be a partisan, and, while his treatment naturally brings out the numerous similarities between ancient and modern Greek, he nowhere gives the impression that he is holding a brief for the latter. He has limited himself to the Greek which has been evolved out of the Attic dialect—no narrow field, since, to use his own words, "the entire Greek language, from its 'classical' period down to the present time, forms an unbroken continuation of classical Attic." By modern Greek Mr. Jannaris means the living speech on the lips of the Greek nation of to-day, not the literary, partly revived Greek of Neo-Hellenic writers and journalists.

Of the three main divisions of the book into Phonology, Morphology, and Syntax, it is the first and the third that are of most interest to scholars. Under phonology Mr. Jannaris discusses the question of the pronunciation of ancient Greek, and gives his reasons for renouncing the Erasman method, to which he was, for a period, converted. We have not space to comment here on several new terms which must be mastered before one can use the book with ease; of these, "antectasis" for "compensatory lengthening," and "phonopathy" for Max Müller's "phonetic decay," commend themselves. The term "secondary subjunctive," in favor of which Mr. Jannaris would oust the familiar "optative," is a less happy innovation. We see no advantage whatever in calling the pure optative of wish the "de-

alderative secondary subjunctive," or the present optative the "imperfect subjunctive." The notation employed is, at first, bewildering. We are asked to remember that (\pm XIVth+) stands for circ. 1400 A. D. and a simple reference appears as (06" ff. .020 [z] & 20).

In his argument for the early use of writing in Greece Mr. Jannaris ignores modern theories so far as to speak, without qualification, of the *σμάματα λυγρὰ*—the tokens of woe—of the sixth book of the 'Iliad' as "a direct mention in the 'Iliad' of writing" (p. 22). It would be impossible to discuss here all the minor points on which Mr. Jannaris differs from orthodox grammarians. He is inclined to doubt the occurrence of the future optative in classical Greek, and would regard its presence in our MSS. as due to the innovations of later copyists (p. 452). He would not hesitate to read δ for ϵ in all cases in the New Testament where ϵ occurs as a direct interrogative particle, and would restore δ $\mu\eta$ for ϵ $\mu\eta$ in all cases where the latter opens an assertion, e. g., ϵ $\mu\eta$ $\lambda\epsilon\gamma\epsilon\iota$ $\epsilon\mu\epsilon\iota$. Here again he holds the copyists responsible. Let New Testament scholars see to it; classical scholars, we imagine, will be slow to assent to his unqualified assertion that in all cases of ϵ $\mu\eta$ with the subjunctive and future indicative they should cut the knot that Mr. Goodwin labored to untie and read ϵ $\mu\eta$, which has been corrupted by the copyists to $\mu\eta$. Few will be found equal to this act of faith. Mr. Jannaris is so confident that his is the true explanation that he devotes only half a page to this important construction, and practically confines himself to the bare statement that, "as a matter of fact, $\mu\eta$ in this complex stands for $\mu\eta$, or rather is a corruption of $\mu\eta$ " (p. 433). He does not discuss the opposed theories, but is content with remarking that " ϵ $\mu\eta$ cannot be reduced to any principle of the language." Some obvious objections to his theory which he omits to mention are (1) the fact that, in several cases, ϵ and $\mu\eta$ are separated by several words, e. g., Soph. Aj. 560 or El. 1029. (2) Prodelision occurs in verse, which puts $\mu\eta$ out of the question in such passages as Soph. Trach. 978, and Ar. Pax. 1302. (3) The $\mu\eta$ theory would introduce into classical Greek a large number of subjunctives used "prospectively in the room of the future indicative" on the model of the Homeric instances. Mr. Jannaris accepts this consequence, again without comment (p. 449), and does not feel bound to explain why they are all negative. Here is another heroic proposal which may serve the clergy as a counsel of perfection. The "Recension of Peisistratos" is a favorite field of exer-

cise with Homeric critics. Mr. Jannaris offers a perfectly new solution of the problem. His argument runs as follows: We hear of Peisistratos in connection with Homer. It is universally admitted that he did not institute a collection, redaction, or edition. But he certainly did something. "So we hear that he appointed a commission of scholars . . . with instructions to draw up a rational and practicable system of normal spelling calculated to facilitate the reading at school of the national or standard texts. . . . It is this orthographic normalization for school purposes that is alluded to . . . by Cicero" (p. 530). Mr. Jannaris then quotes the well-known *primus Homeri libros confusos antea sic disposuisse dicitur*, etc., in support of his argument. Surely if it is to be used as evidence at all, it tells against him. The *roz totius antiquitatis* is dumb before such dogmatism.

The appendices contain much important matter. That on Accent, in which Mr. Jannaris attempts to justify his belief in stress accent for both Greek and Sanskrit, is especially interesting.

In a first edition of such a work some inaccuracies were perhaps unavoidable. On p. 429 it would have been better to make a separate class of cases in classical Greek of the use of ϵ in the protasis of a conditional sentence such as Soph. Aj. 1131. This Mr. Jannaris regards as the classical prototype of ϵ $\mu\eta$ in such writers as Aristides and Aelian. The difference, of course, is that in the Sophoclean passage ϵ affects a single word, whereas in post-classical Greek it negatives the whole clause. It is not true that classical Greek "admitted only the infinitival construction after ϵ $\mu\eta$ and $\mu\eta$ (p. 571). In Xen. Hell., V. 4. 62, we find $\mu\eta$ $\mu\eta$ ϵ $\mu\eta$, and ϵ $\mu\eta$ $\mu\eta$ ϵ $\mu\eta$ occurs in Protog. 345 D. In what Mr. Gildersleeve calls "a case of especial temptation." The book is remarkably free from proof-reader's errors. We have noted the following: P. 410 mid., for "hew" read "new"; p. 459 footnote, for "participle" read "participles"; p. 485, for "requiring" read "requiring." We hardly think that Mr. Jannaris really means that $\kappa\alpha\iota$ connects words "in a free and easy manner" (p. 401); "stylish composition" (p. 564) is another slip of the same kind; in the phrase, "Each of these moods was of its own an exponent" (p. 552), there seems to be a lapse into French idiom. The admirable indices, covering 156 pp., add greatly to the value of the book.

NEW BOOKS.

The Secret of Hegel.

Being the Hegelian System in Origin, Principle, Form, and Matter. By JAMES HUTCHINSON STIRLING, LL.D., Edin., Foreign Member of the Philosophical Society of Berlin, First-Appointed Gifford Lecturer (Edinburgh University, 1888-90). New edition, carefully revised. Royal octavo, \$5 00 net.

"I congratulate author and publishers on the appearance of this new, improved, and more available edition of this important book. The 'Secret' has already done splendid service for the study of Hegel in England and America, and, in its improved form, it ought to secure for itself a new career."—JAMES SMITH, Sage School of Philosophy, Cornell.

Peerage and Baronetage.

A Genealogical and Heraldic Dictionary of the Peerage and Baronetage. Together with Memoirs of the Privy Counsellors and Knights. By Sir BERNARD BURKE, C. B., LL.D., Ulster King of Arms, author of "The Landed Gentry," etc. Edited by his Son.

Sixtieth edition, revised and brought up to date. Very thick royal 8vo, \$10.00 net.

An indispensable work to all those desiring full information respecting the lineage and families of the titled aristocracy of Great Britain and Ireland.

The Encyclopedia of Sport.

Edited by the Earl of Suffolk and Berkshire, HEDLEY PECK, and F. G. AFFALO. The first volume of this important work is now ready. Royal 8vo, about 600 pages, with many hundred illustrations in the text, and 20 full-page photogravure plates.

Cloth, \$10.00 net; half levant, \$15.00 net.

The illustrations have been designed especially for the work by well known artists, including J. G. MILLAIS, C. E. BROCK, J. G. KEULEMANN, ARCHIBALD THORBURN, and others.

"In the 'Encyclopedia of Sport' sportsmen have in a concrete form a veritable alphabet of sport worthy of the subject and invaluable as a book of constant reference—it is specially clear, concise, and full."—*Outing*.

"This work, which covers every branch of sport, is admirably conceived and ably executed . . . the contributors form such a representative body of sportsmen as is almost a guarantee for the quality and completeness of the text . . . the photogravure plates are a most attractive feature of the work, while many of the text illustrations are admirable."—*The Fishing Gazette*.

Inorganic Chemistry.

A Manual of Inorganic Chemistry. By T. E. THORPE, B.Sc., Ph.D., F.R.S. New edition, revised and enlarged. In two volumes: Vol. I., The Non-Metals. Vol. II., The Metals. 12mo, per set, \$4.50 net.

The Universal Cambist.

A Ready Reckoner of the World's Foreign and Colonial Exchanges of Seven Monetary and Currency Intermediaries, with the aid of less than 60,000 figures. By JOHN HENRY NORMAN, of the London Chamber of Commerce; Expert in the Science of and Practice with Money. 8vo, \$3.00 net.

This is the second edition of the author's "Ready Reckoner" of the exchanges of gold and silver issued in 1893.

Four Important Books

By JUSTIN WINSOR.

In addition to his great service to American History in editing the *Narrative and Critical History of America* in eight volumes, Dr. Winsor wrote four stout volumes devoted to Geographical Discovery in North America in its Historical Relations, crowded with the fruits of most thorough research, and enriched with full Cartographical Illustrations from contemporary sources.

Christopher Columbus

And How he Received and Imparted the Spirit of Discovery. With a great number of curious Portraits, Maps, Plans, etc. 8vo, \$4.00.

Dr. W. F. Poole, writing in the *Dial*, of Chicago, soon after the publication of this book, said: "It is only recently that the real facts concerning Christopher Columbus have been presented to the public, and Dr. Winsor's attractive work embodies the latest and most authoritative conclusions on the subject which the best European and American research and scholarship have reached."

Rev. Dr. George E. Ellis, then President of the Massachusetts Historical Society, commended the work in *The Christian Register* in very strong terms, and among other things observed: "The master work of industry and critical achievement is found in an appendix of one hundred and thirty pages, setting forth the geographical results of the discovery. This is a richly illustrated pictorial essay. In its text, its analysis of curious old books, pamphlets, and manuscripts, its photographic pieces of portraits, title-pages, and other relics, and in its reproduction of a series of maps, charts, and other gravures presenting the imagined and the verified locations on new oceans, continents, and islands."

Cartier to Frontenac.

(1534-1700.)

8vo, gilt top, \$4 00.

"The wondrous story has been told by Parkman in half a dozen volumes with a vividness and vivacity not likely to be surpassed, and which have given it a wide popularity. It remained a desideratum to knit together the scattered sketches into one whole body. This Mr. Winsor has done, and that admirably."—*The Nation*, N. Y.

The Mississippi Basin.

The Struggle in America between England and France. 1697-1763.

8vo, gilt top, \$4.00.

This volume takes up the story of American explorations where Dr. Winsor left it in his "Cartier to Frontenac." It traces the counter movements of the English and French in adventure, trade, and war, for the possession of the Great Valley.

"Dr. Winsor's work is of absorbing interest throughout."—*Cambridge Tribune*.

The Westward Movement.

The Colonies and the Republic West of the Alleghenies, 1763-1798. 8vo, gilt top, \$4.00.

"It is biographical and descriptive, as well as strictly historical. Mr. Winsor entered into this undertaking in the true spirit. He had enthusiasm, scholarship, tireless industry, vivid imagination, and sound judgment. His book is indeed a storehouse of knowledge, but it is much else. It is literature of an extremely fascinating kind. It occupies, if not precisely an untrodden field, one that has been greatly neglected, yet it is of prime interest and importance."—*Boston Advertiser*.

The Nation.

NEW YORK, THURSDAY, JANUARY 27, 1898.

The Week.

The Senate silver resolution, which was given precedence of Hawaiian annexation and all other business a week ago, bore the unmistakable marks of stock speculation. Stocks have been going up lately in a rather rapid way—perhaps too rapid for safety. If a clique on the short side of the market, or a certain number of speculating Senators wanting to “get in at a lower level,” were concerned in this movement, they would naturally bring forward a resolution to scare timid people, and they would frame it in such a way as to secure a large vote for it without committing anybody to the free coinage of silver. The larger the vote, the greater the scare. It is lamentable indeed that the business of the country should be exposed to such barbarian attacks, such wanton shocks, whenever a clique of stock speculators, or a political faction, think they can see a gain for themselves by giving a fresh blow to public confidence. Perhaps we shall always have a party of disorder in the commonwealth to prevent the sober and industrious classes from forgetting their political duties.

We hear the opinion confidently expressed by knowing observers in Washington, that if that eminent citizen, the President, would put into the business of currency reform even one-half of the energy and enterprise he is expending on the annexation of Hawaii, he would carry a satisfactory financial measure. But how can we believe this, seeing that we elected this eminent citizen for the express purpose of reforming the currency, and that if he had not promised to reform it, he could not have been elected? “Oh, but he is leaving the whole matter to the wisdom of Congress,” it is said. Then why does he not leave the annexation of Hawaii to the wisdom of Congress? Why is he so busy and earnest about that? He was not elected for that. No mention was made of it in that anxious summer of 1896. It was not in order to get Hawaii that tens of thousands of honest Democrats and of kicking, cantankerous Mugwumps fell into line and voted for the “Advance Agent of Prosperity.” Most of these disbelieved in the possibility of restoring prosperity through Dingley’s tariff, but they supported the Advance Agent just the same, being willing to let him have his tariff if he only gave them a stable standard of value. The conduct of the Agent, if it be really true that he is occupied by

Hawaii, and cares nothing, or seems to care nothing, about the currency, is inexplicable in an honest man, and we know Mr. McKinley is honest because he is religious, and religion includes honesty. He cannot have pretended to care about the currency when he did not. If in Canton he were to betray the confidence of his neighbors in this way—that is, “swear to his own hurt and then change” (Ps. xv. 4)—there would be a terrible row. Nobody would pray for him when he went away. He would depart with his gripsack, unwept, unhonored, and unsung. But how is it any less disreputable to do so to a great party, numbering millions, concerning a great public interest? The Agent may depend upon it that when he comes to his final account, and is asked what he did to fulfil his vow and reform the currency, his exertions about Hawaii will not be accepted as a set-off. Nor will Dingley be able to help him, for Dingley himself will be keeping out of the way, lest he should be asked about the deficit or about the proceeds of the clothing clause.

The whole subject of the strength of the Hawaiian Republic seems to be enveloped in obscurity. We have been told, and have believed for a good while, that if we did not take Hawaii, it would be sure to transfer itself to Great Britain; that, for some mysterious reason, this strong and wise republic could not consent to exist any longer under American protection; that it must be annexed by some Power, but would prefer being annexed by the United States. This is what the eminent Hatch, the Hawaiian Minister in Washington, says, and no one will insinuate that Hatch says what he does not believe. We were settling down comfortably in this somewhat odd faith, when the President of the Republic, Mr. Dole, reached our shores. Of course he is, *ex officio*, a better authority about the views current among the Hawaiian people than the eminent Hatch. After his arrival, while standing beside a radiator in a Chicago hotel, he made several important statements. One was that Hawaii was not at present prepared to wage war with any great Power. This was made simply to show that if any great Power made an attempt to conquer the Republic, it could not resist without help from the United States. He then took up the question, What will happen to the Republic if the United States refuses to annex? The Bureau holds, and has always held, that it will then offer itself to any of the Powers which stand waiting to see what we are going to do about the matter. President Dole denies this. “If the Senate,” said he, “refuses to

adopt the treaty now before it, I suppose the Republic will go on as before.” This admission was hard for Hatch to bear, but he bore it, merely shaking his head in sign of dissent. President Dole also admitted that “he could not say how many Hawaiians are for annexation, and how many are opposed to it.” We thus see that as the Republic is able to stand alone, and to “go on as before,” it would not be well to find out what proportion of the natives are in favor of annexation. What is the use of knowing? What have they got to do with it?

The gravity of Chairman Hitt’s speech on the Cuban question in the House on January 19 lies as much in its implications as in what he explicitly said. He is at the head of the House committee on foreign affairs. He spoke after repeated consultations with the President, and distinctly foreshadowed the President’s policy. When he affirmed that Mr. McKinley would “not disappoint the expectations of his countrymen,” and set the galleries applauding this sentiment, he made it clear that the Administration contemplates intervention—forcible intervention, if need be—in Cuban affairs. Indeed, Mr. Hitt’s speech was largely a glorification of the steps preliminary to intervention which the President had already taken. The actual communications of our Government to that of Spain have not yet been made public, but Mr. Hitt, who must have seen them, gave a summary of their contents. Mr. McKinley, he declared, had protested with emphasis and energy against Gen. Weyler’s conduct of the war, and had secured his recall in disgrace. Furthermore (and this is now said for the first time by authority), he had “informed the Sagasta Government that the war must cease and proposals for settlement be made within a reasonable time.” This is, of course, the blindest intervention, and plainly has the threat of force behind it. In fact, Mr. Hitt’s whole argument against action by Congress was that it would be unwise to hamper the President in the action which he was preparing to take. Congress was to remember that there was “a faithful pilot at the helm,” and was to be “patient and ready to support him if he takes the step which the honor and interests of our country may demand.” If that does not signify that Mr. McKinley contemplates forcible intervention, and that speedily, words have no meaning.

The authorities at Washington naturally seek to minimize the importance of the dispatch of a war-ship to Havana. It is only an ordinary routine naval assignment, they say. But time and

manner often make an ordinary thing extraordinary, and they seem to do so in this case. No American men-of-war have visited Havana for more than two years, and the reason has not been concealed. We wished not to offend Spanish sensibilities. We also wished not to provoke American inflammabilities. If the reason was good for two years, it ought to be good longer, unless some change has occurred in the situation, which is denied. What the step amounts to, therefore, is a willingness to disregard Spanish sensibilities and to risk the effect on American inflammabilities. What has moved the President to take the step? There is much guessing, but the strong probability is that he was told he had to do something to appease the Republicans in Congress. They have heroically consented to eat their own words of a year ago, and to go manfully into the "hole" which their own hands had dug, but they have not at all liked the operation, and very likely have notified Mr. McKinley that he must make haste to fulfil Mr. Hitt's prophecy that he would, in the Cuban matter, not disappoint the hopes of his countrymen. The open expressions of joy and relief uttered by Republican Congressmen when they heard of the sailing of the *Maine*, bear out this view. But they also contain a warning to the President. He must see that if he says A to the Jingoos, he must also say B, or, as one Senator expressed it, fill Havana harbor with war-ships. If the Spanish are excitable, what is our press, what are our Legislatures, our Congress? A war-ship is a curious kind of oil on troubled waters, though the Administration would have us believe the *Maine* to be about the most unctuously peaceful ship that ever sailed.

Mr. Dingley is terribly sarcastic at the expense of the "chatterers" about his beloved deficit. Customs revenues in January will be about double what they were in August; what have you got to say to that? Well, the obvious thing to say (which Mr. Dingley does not say) is that, double revenue or not, the deficit so far this month is more than \$8,000,000, so far in the fiscal year more than \$50,000,000. Now when we bear in mind that the tariff under which these glorious results have been obtained was passed in order to secure increased revenue "without delay, hindrance, or postponement," and that the tariff which it superseded showed a deficit in its last year only one-third as great as the Dingley deficit is in its first seven months, there seems to be still a good deal of chattering matter left. The way for Mr. Dingley to silence the chatterers is, not to bring out a fresh line of prophecies, but to produce his surplus revenue.

The people who expect any great fall-

ing off in immigration if the pending restriction bill shall become a law are destined to be disappointed. A record of the illiterates over fourteen years of age among those who arrived during the last year was kept, and the Commissioner-General reports that the number reached only 44,580. This included 1,572 who could read but not write, and the Spooner amendment would admit such. The total must also have included some thousands who would come within the excepted classes in the pending bill, as the illiterate wives or minor children, or parents or grandparents, of immigrants previously admitted. The "hordes" who are to be kept out by the educational test are thus reduced to pretty small proportions.

The Republicans who are fighting the Quay machine in Pennsylvania talk as though they "meant business." A conference of representative business men opposed to Quay rule in all parts of the State is to be held at Philadelphia on the 2d of February, and the leaders in the movement declare that they will then nominate a first-class man for Governor, whom they will support and whom Quay can support or not as he chooses. If this programme shall be carried out, Pennsylvania politics will be rendered extremely interesting this year. We observe, however, with some apprehension, that certain "conservative" members of the Business Men's League oppose the selection of a candidate who has been "aggressively antagonistic to Senator Quay," on the ground that the latter would not accept him as a compromise candidate, and that, if a split in the party should ensue, a Democrat might be elected, and the loss of the Governor to the Republican party would be blamed upon the League. For these reasons they are in favor of agreeing upon a candidate whom Senator Quay would be more likely to accept. If these "conservatives" get control of the conference, the anti-Quay movement in Pennsylvania will amount to no more than the anti-Platt movements in this State, which ended in agreeing to take candidates who suited the Boss.

The Croker Government is a good deal alarmed by the magnitude of its first budget for the administration of the city. Instead of being from \$60,000,000 to \$75,000,000, as was estimated before consolidation, the prospect now is that the appropriation for the first year will be nearer \$100,000,000 than \$75,000,000. The most portentous agent of increased expenditure seems to be the new borough system, which was looked upon during the charter agitation as one of the chief influences which were to transform human nature in this part of the world. Nearly all the department esti-

mates which have been made thus far call for many hundred thousand dollars in addition to the combined sums expended by the separate divisions of the city before consolidation, because of the new machinery created by the boroughs. Thus, the Health Department must have about \$350,000 more than previous Health Departments in the old divisions had, because of the new officials and higher salaries created, and the separate organizations required for the boroughs. The Park Board must have about \$250,000 more than the separate Park Boards had last year, chiefly because of the expense of setting up separate "administrative authority in the Borough of the Bronx." The Bronx Commission not only must have a "staff of engineers" at \$10,000 a year in salaries, but must have a borough building for them to meet in, and other necessary accompaniments. This is the way it goes all through the new system, and the only way in which the Mayor seems to be able to meet the rising tide of appropriation is to lose his temper and scold the persons who call attention to the charter's requirements.

There has been a struggle between the Mayor and the Council as to which should be permitted to exercise one of the most momentous of the features of the "larger measure of home rule" which the new charter bestows upon the city, and the Council has won. The Mayor, acting in accordance with the basic theory of his administration, to wit, that everything in the way of office or "plum" belongs to Mr. Croker, and should be dispensed in accordance with his personal wishes, caused an ordinance to be introduced in the Municipal Assembly giving him absolute control over the issuing of all licenses for street encumbrances, etc. The members of the Council took alarm when this first appeared, and sent a deputation to call on the Mayor with an ultimatum, which was, that they would not consent to the passage of the ordinance unless the Mayor would pledge himself to honor their recommendations in the exercise of his power over licenses. They demanded recognition, in other words, for all their men in the bestowal of licenses for news-stands and other privileges on the sidewalks of the city. The Mayor refused this, as he was bound to do, for it placed the wishes of the Councillors above those of the Boss. The Councillors have accordingly defeated his ordinance, and the distribution of licenses will be made on the broadest basis of home rule.

The sorrow and alarm which the Democrats of other boroughs than Manhattan are expressing over the conduct of Mayor Van Wyck in cutting off their share in the offices of the enlarged city are very moving. They did their utmost

to put Tammany in possession, and now that they detect strong evidences of a purpose on Tammany's part to grab everything for itself, they feel hurt, and even begin to suspect that their innocence has been played upon. They go to the architects and defenders of the new charter, and ask them if the Mayor has any right to refuse to carry that sacred instrument into effect in every detail, giving to the outlying boroughs all the offices and emoluments which are granted by it to them. The renowned De Witt of the Borough of Brooklyn, who is one of the fathers of the charter, says in effect that the Mayor is "all wrong," that the "provisions of the charter are mandatory," that "no man is above the law," that "the charter provides the boroughs with certain administrative functions," and that "to deprive them of these would, of course, be an attempt to defeat the aims of the charter and be a violation of its provisions." That is unquestionably true. There is not a particle of doubt that the "aims of the charter" provide a great flood of offices and expenditures for all the boroughs. That is the reason why all the politicians of all the boroughs were so hot in favor of consolidation. For Tammany to say through its Mayor that the Borough of Manhattan shall have everything and the other boroughs as little as possible, is a breach of faith which ought to be denounced by every man who voted to put Tammany in power. The idea of Mayor Van Wyck saying that he was not going to be Mayor of five cities, but of one!

Now that Germany has promptly agreed, on the British demand, to open any Chinese ports she gets hold of to all the world for trade, one begins to wonder why Brother Henry was sent out. Henry's parting with his sacred brother led the world to believe that he was to have encounters with somebody, and halfbreath escapes; but it now appears that his sole mission was to open ports, with the consent of everybody concerned, to the peaceful commerce of the world. In fact, it begins to look as if the whole affair was an attempt to bully England which was promptly nipped by Sir Michael Hicks-Beach's warlike speech. It looks, too, a little as if it was the prolonged gentleness and timidity of Lord Salisbury's policy which raised up so many enemies for England and created her much-talked-of "isolation." Sir Michael Hicks-Beach and Mr. Chamberlain have at last reached a comprehension, through the bye-elections, of the effect this policy is having on the public and of the disgust excited by "the Concert of the Powers." The "Powers" apparently used the "Concert" simply to humiliate England and make her feel helpless, and began to try to mine her colonial empire and block her channels of

trade, as soon as they had got the Turk into a position to defy her. It is pleasant to find that merely showing her teeth has sufficed to keep the peace. Pleasant-er than all, however, happier for man than any "Concert of the Powers," is the open declaration of the first of the sea Powers that she stands for open ports and for free trade. To be sure, it is for her own benefit, for she holds 80 per cent. of the China trade, but everybody is and will be at perfect liberty to take it from her if he can.

Mr. Chamberlain, whom Lord Farrer styles "one of the most powerful members of the [British] Government," having been beaten in his Zollverein scheme for the working of those "neglected estates," the colonies, has now propounded a plan for the relief of the West Indies. The first Conservative idea was to put a countervailing duty on foreign sugar—that is, the beet-sugar of France and Germany—the manufacture of which is promoted by bounties. A resolution recommending this was passed by a conference of Conservative delegates in November last. But this met with little favor, because there was no getting over the fact that duties on foreign sugar would increase the price of sugar to the Englishman, and the consumption of sugar by Englishmen is enormous. Mr. Chamberlain saw this, and has "gone them one better." He announced last week that the Chancellor of the Exchequer had consented to make a "very large grant in aid" to the West Indies "to enable the [sugar] industry and population to tide over a crisis, until Continental nations recognized the impolicy of the bounty system." This system of "grants in aid" is evidently to be, under Mr. Chamberlain's directing, the Conservative mode of getting round the popular hostility to protection. Finding there was no chance of the revival of a duty on corn, they made a remission of \$12,500,000 in taxes to the landed interest. They have increased the grant in aid to the denominational schools, and we may be sure that, once the ball is set fairly rolling, grants in aid will multiply. There is nothing like the appetite of "interests" for grants in aid. These grants are simply another mode of giving the taxpayers' money to particular classes to help them to carry on business which does not pay. Instead of allowing them to take their stand at the ports and get their money out of duties, the Government takes the money out of the Treasury and gives it to them as a "bonus."

The fact is that, in the present state of the world, all industries are exposed to the vicissitudes which have been introduced by improvements in production, by the increased facilities of communication, and by the increased mobility

of capital. Governments are everywhere being called to protect them against these vicissitudes—in other words, to prevent the operation, in their case, of the ordinary laws of trade. There is no proof that a grant in aid will set the West Indian islands on their legs. Their sugar would still have to compete with the sugar of India, of Queensland, of Mauritius, of Fiji, and elsewhere, all British possessions. If these countries find that the grant in aid enables the West Indies to take their market from them, they will have a still better claim to a slice of some kind of assistance from the British Treasury. Nothing has been made clearer by recent events than that sugar-growing is not the best industry for the West Indies to engage in. During the next few years, especially if Cuba should be pacified, the production of sugar elsewhere is likely to be greatly increased. The work before the West Indies is, therefore, not to stay in a losing business, by begging, but to find out in what industry it is that their soil, climate, and labor give them a clear advantage.

Whatever else the Paris rioting proves, or does not prove, it proves the mischief of secret trials. Suppose Jameson had been tried in England, as Dreyfus was in France, behind closed doors, and none of the evidence, only the verdict, given out? We might have seen in London such nervous excitement, fed on wild rumor, as Paris has been suffering from for the past week. The secrecy of the original Dreyfus trial was bad, and the semi-secrecy of the Esterhazy trial was worse. The public was permitted to know only of the evidence that looked black for Major Esterhazy; but the evidence on the strength of which he was acquitted and the guilt of Dreyfus practically reaffirmed, was kept secret. It is clear, however, that the case turns very largely on a question of handwriting, and the chances for deception in this are notoriously great. It must be said that some of the inferences of the French tribunal on this subject were uncommonly like the reasoning in the famous trial in 'Alice in Wonderland.' It will be remembered that there, too, a letter, containing a set of verses, was the chief thing:

"Are they in the prisoner's handwriting?" asked another of the jurymen.

"No, they're not," said the White Rabbit, "and that's the queerest thing about it." (The jury all looked puzzled.)

"He must have imitated somebody's else hand," said the King. (The jury all brightened up again.)

"Please your Majesty," said the Knave, "I didn't write it, and they can't prove I did; there's no name signed at the end."

"If you didn't sign it," said the King, "that only makes the matter worse. You must have meant some mischief, or else you'd have signed your name like an honest man."

There was a general clapping of hands at this; it was the first really clever thing the King had said that day.

"That proves his guilt," said the Queen.

THE PEDIGREE OF THE TELLER RESOLUTION.

Senator Vest, discussing last Thursday the Teller resolution which declares the public debt to be redeemable in silver, remarked that since the vote on a similar resolution, twenty years ago, "a new generation has come into existence and entered upon the active duties of life"; and he intimated that these younger citizens needed to have the past recalled to them. We agree with Mr. Vest that a useful purpose may be served by recalling to the minds of a younger generation, and perhaps of a forgetful older generation, the past history of this congressional resolution.

As the authors of the pending measure explain, it is virtually a verbatim copy of the resolution introduced by Senator Stanley Matthews, January 16, 1878. But in order to trace the Teller resolution's actual pedigree, we shall have to carry back the reader, not twenty years, but thirty. The bonds of the United States issued during the civil war were habitually made redeemable in coin; and for the express purpose of providing coin to meet the current interest, payment of customs dues was required in that form of money. In two or three of the early acts to authorize bond issues, the coin-redemption provision did not appear. This omission, as the Secretary of the Treasury observed in his report of 1864, "was accidental, as there could have been no intention to make a distinction between the different classes of securities in this regard." Such was the supposition at the time not only of the Secretary, but of everybody else.

But in 1868, seeking an "issue" under much the same circumstances and with much the same leadership as those of 1896, the Democratic party grasped at this omission in the bond statutes of the war, and boldly declared, in their Presidential platform, that "when the obligations of the Government do not expressly state upon their face, or the law under which they were issued does not provide, that they shall be paid in coin, they ought in right and in justice to be paid in the lawful money of the United States"—meaning by this, of course, in legal-tender notes. This resolution, we have no hesitation in affirming, is the true parent of the Teller resolution of 1898, as it was of the Matthews resolution of 1878. Indeed, this declaration of thirty years ago has much the same superficial argument to commend it to the shallow mind as is possessed by the more recent declaration for silver payment. Because the war bonds could not be sold at par for gold, the Government had consented to take notes for certain issues, and in other cases notes had been made explicitly convertible into bonds. Therefore, said the opposition statesmen of 1868, since the bonds were bought with

legal tenders, let them be redeemed in legal tenders.

The proposition, thus submitted to the people, was made the pivot of a Presidential canvass. Before the campaign was half over, the common sense of the American voter had pierced the cloud of sophistry surrounding the argument, and had grasped the salient fact, which any intelligent citizen could understand, that because a nation had chosen to give its bonds for its notes, there was not the slightest honesty or propriety in assuming that the bonded debt was payable in notes. With equal propriety might an individual, after placing a mortgage to redeem his notes-of-hand, coolly propose to pay off the mortgage in new promises to pay. The people's opinion of this impudent proposition found expression, in the 1868 election, by an electoral vote of 214 to 80 against the plan, and an adverse popular majority of 309,000. The term repudiation, then and afterwards applied to this plan of shirking honest payment of the public debt, had for many years after the vote of 1868 so bitter a taste as to make revival of the plan impossible.

The refunding act of 1870 provided for a series of bond issues payable, interest and principal, in "coin." It is under the provisions of this law, supplemented by the resumption act of 1875, that all subsequent bond issues of our Government have been made. But when this law was passed, in 1870, the only coin in circulation, outside the fractional issues, was gold. Dr. Linderman's Mint Report of 1870 showed that since the foundation of the Government only 4,291,640 silver dollars had been coined, and that of these 2,320,000 had been coined before the middle of the century. Up to and long after 1870, all our silver was exported; the suggestion that the public debt might be redeemed in silver would have been dismissed in that year as simply silly. But after 1874, when the enormously rich Nevada silver mines were opened up, came a sudden decline in the market price of silver. Before 1878 the metal reached a price which made the $412\frac{1}{2}$ grains of the former silver dollar worth on the bullion market less than one hundred cents.

Here was an inducement which brought simultaneously upon the scene the silver free-coinage agitators and the old repudiation leaders. Thinking that 1868 must by this time be forgotten, the repudiators introduced in January, 1878, the famous Matthews resolution, of which Mr. Teller's pending declaration is a duplicate. The case was as clear against the dishonest plan in 1878 as it had been in 1868. Indeed, there was in the later year an element of the ridiculous; for the Bland bill had not passed when Senator Matthews forced his measure to a vote, and yet the "bond resolution" calmly declared that, in the judgment of Congress, it was right and

proper to pay the public debt in a coin which not only did not exist except on paper when the funding act was passed, but which in 1878 did not yet exist even on paper. This extraordinary declaration Mr. Matthews and his friends so framed as to cover not only future bond issues, but the large issues placed by the Government between 1870 and 1878, for which gold had been required and received by the Treasury. The Matthews resolution passed both houses of Congress, and there it rested as an empty expression of the crude opinion of a single Congress—an opinion which Mr. Hayes and his Treasury administration were wholly at liberty to disregard. They did thus disregard it.

This second repudiation movement reckoned confidently that in a year of almost unparalleled industrial distress the people's angry discontent would applaud any such piece of sharp practice with the public creditor. Its authors reckoned, too, that if the Hayes Administration ignored the resolution, there would at any rate be cast in the congressional elections a heavy anti-Administration vote, based on the disputed title of 1876, and that the silver legislators might claim such a vote as their personal vindication. In both regards they reckoned without their host, and met the same fate as the political calculators of 1868. The sound common sense of the American voter again grasped the real facts in the controversy, and the outcome, in November, 1878, was in effect a sweeping victory, in the face of all these odds, for the anti-repudiation President and cabinet. The blow was stinging and severe enough to bury the Matthews resolution and its principles for twenty years.

But now at length Senator Teller, in his excursions through the political graveyards of American history, has dug up this mouldy corpse and thrust it before the faces of a new generation. Not a single new argument in its favor is adduced; the Senate finance committee's silver majority has not even had the wit to change the language which the people flatly rebuked in 1878. The only novelty in this clumsy congressional performance is the fact that the resolution now applies as well to \$262,000,000 bonds sold in good faith for gold since 1893. The proposed repudiation is a little more sweeping in its scope than it was in 1878; this is the only difference. It is proposed with a House of Representatives as certainly against the scheme as it was in favor of it during 1878, and with a people educated by a recent anti-silver Presidential canvass, as they certainly were not twenty years ago. What kind of politics this is, even from the point of view of an inveterate repudiationist, we find it hard to say.

MORE BUREAU.

The latest thesis of the Hawaiian Literary Bureau is that Hawaii would be a good place to fight in. The argument that if we got Hawaii as a place to fight in, we should have to have a fleet and fortifications to protect it, is met by the following piece of ratiocination, the massive strength of which we admit is discouraging:

"But there are some who argue that the possession of the islands would be a source of weakness to this country, because it would have to maintain fortifications and garrisons and a fleet there to protect them, and thus would have to divide its forces, instead of concentrating them all for continental defence. Yes. It is a pity, then, that we ever annexed California and Oregon, since that gave us two coast-lines to defend instead of one, and compelled us to divide our forces, instead of concentrating them all upon the Atlantic Coast. Perhaps it would be well to relinquish the coast altogether and be content with an exclusively inland domain. Then we should not have to maintain any navy or any coast defences at all. In fact, it might be the part of wisdom to abandon the whole country to some other Power. Then we should not have even to keep up a police force. But somehow or other such reasoning does not greatly commend itself to the average American mind. Perhaps because we are a stiff-necked and perverse generation."

It would seem, then, that if you cannot sally out and take something that does not belong to you 2,000 miles away, there is no use in holding or defending your own home occupied by your own family. The *reductio ad absurdum*, that, by parity of reasoning, if you cannot seize your neighbor's house, you might as well abandon your own, has a crushing effect. There is absolutely no answer to it. If you take your neighbor's property and cannot keep it by force, what is the use of keeping or defending your own? If you cannot take an island in the Pacific from its people against their will, why should you want to keep this continent? We really do not know.

The Bureau also has got the help of Mr. Frederick W. Seward, and prints a letter from him which it evidently thinks important, judging by the type. We have always considered Mr. Seward a quiet, conservative gentleman, but the Bureau has suddenly converted him into a sort of Genghis Khan, in favor, like Genghis, of indefinite expansion, right or wrong, moral or immoral—you-shut-up-and-get-out-of-the-way sort of man. He does not go quite so far as the Bureau, by showing that, if we do not take Hawaii, strict logic requires us to abandon the continent of North America, but he shows that every one who has ever opposed any sort of annexation has languished the remainder of his days in obscurity and disgrace. All this apropos of "the Louisiana purchase, the Florida cession, the Gadsden purchase, and the California acquisition," and the Alaska purchase. But, putting aside the fact that these acquisitions were large tracts of uninhabited territory on our own continent, which we desired to settle, and did settle, with our own popula-

tion, let us remind Mr. Seward of something really parallel to the proposed annexation of Hawaii. Has he not heard of the attempts to acquire San Domingo and St. Thomas? These attempts were pushed by the very same arguments as are now used to push the annexation of Hawaii—naval station, coaling station, commercial and military "key," other Powers waiting to purchase or seize, British agents intriguing, "people" eager to join us, and so on. Yet these attempts did not succeed, and the men who opposed them—including Sumner, Morrill, Edmunds, Schurz, Bayard—did not sink into either oblivion or ignominy.

Now, the bulk of sensible, sober Americans are glad these attempts did not succeed. We know several who were energetic and active in their opposition to them. Not one thinks this opposition was "the greatest mistake of his life." Not one is looked on as "a man who tried and failed to bar the national progress." On the contrary, they are well and hearty, and absolutely court publicity as men proud of having prevented the republic from making the hideous mistake of purchasing islands inhabited by a mongrel race unused to constitutional government, and quite used to assassination, revolutions, earthquakes, and hurricanes. They felt that besides the damage to our governmental system and national credit which would be wrought by having politicians keeping the admission of such communities as equal sovereign States constantly hanging over our heads, by having our newspapers filled every day with accounts of the fresh scandals created by the operations of the carpet-baggers among the negroes, the dagoes, the coolies, and so on, there would be the gross abuse of using the taxes to protect acquisitions which neither strengthen union, "nor establish justice, nor insure domestic tranquillity, nor provide for the common defence, nor promote the general welfare, nor secure the blessings of liberty to ourselves and our posterity."

Genghis Khan's position was, in fact, far more defensible than ours, as an expander. He was in favor of expansion because, as he openly avowed, he liked the fun of expanding. He enjoyed killing people who resisted annexation and piling their heads up in pyramidal form. He indulged in no hypocritical pretences about their wanting to be annexed, or about the good annexation would do them. He just annexed. He had no "instinctive pride" in expansion, and did not care a cent about "growing greatness." But he was a sterner logician than any of the dialecticians of the Bureau. He had a way of silencing opponents vastly more effective than theirs. No man who faced him in argument is known ever to have been heard of again. He did not even linger in obscurity.

' RESPONSIBILITY.

Gov. Black is being rightly warned of the "responsibility" he is incurring in providing simply for an investigation of his own into the canal scandal, and putting off any report on it till next year. Appeals and invectives are both being lavished upon him, to get him to be careful of what he is about, and vague threats are made of what will happen if he does the wrong thing. Well, in our belief, he knows better what he is about than his critics. The remonstrances addressed to him are interesting illustrations of the way in which, in politics, a nomenclature may survive after the things to which it was originally applied have disappeared. For instance, under the old government of New York, such things as the canal scandal would have lain entirely within the province of the Legislature. It is the Legislature which would have been indignant about it, which would have inquired into it, would have settled by whom the inquiry should be conducted, to whom and when the report should be made, and what action should be taken about it. The Governor would simply have called attention to it, and have made recommendations about it, but the Legislature would have considered his recommendations, and, in its wisdom or discretion, have accepted or rejected them.

Under the present government, the Legislature seems to have nothing, or very little, to do with the matter. The Governor has apparently complete control of it. It is he who decides whether it shall be inquired into, who shall inquire into it, and when and to whom the report shall be made. All the remonstrances addressed to him about it imply that it is his will which will rule, and not that of the Legislature. The rôle of the Legislature has, in fact, for some time been covertly that of the Parliament of Paris under Louis XIV., that of a body which simply registers edicts. There is, however, no longer any concealment about the matter, or necessity for concealment. The Governor is openly treated as the only person whose opinion as to the action of the State Government about the canals need be discussed. This is really an immense change in our system. It is nearly as great a change in the State as the Croker régime in the city, but it is disguised by the continued use of the old terms and forms.

The Governor is warned, however, that if he does wrong or makes a mistake, he will be "called to account"; he will be "held responsible." Disagreeable questions will be asked of him. The People will be angry. Something unpleasant will happen to him. Here again the whole situation is disguised by the use of the old nomenclature. We get no clear idea who will call the Governor to account, or in what manner he will

suffer, if he does not do his duty. He, however, knows perfectly well. What will happen will be simply what happened to Hill in 1894. He will be beaten at the polls by another Governor of exactly the same type and the same notions of expediency and responsibility. There will be no change whatever in the system. Croker will take Platt's place, and things will go on as before. The Legislature will be called "Democratic" instead of "Republican," but this will be the only difference. It will be composed of the same sort of men as this one, but more of them will be Irishmen. It will have the same ideas of duty, honor, patriotism, and expediency. It will be somewhat more hostile to our civilization, and more indifferent, if possible, to the fate of our democratic experiment, than this one. But this is all. The one relic of our old government we have preserved in the State is the power of punishing wrongdoers at the polls; but the power of mending the wrongdoing or preventing its repetition we have apparently lost.

How has this come about? Simply through our nominating system. The mind of the nation has been devoted for half a century to the task, not of selecting proper persons for our public offices, but of creating machinery for selecting them. We have acted as if the chief end of the American man was, not to fill offices fitly, but to get them filled; as if the greatest work of government was, not to secure competent candidates, but to secure candidates. The result is that the nominating system has grown to be a bigger and more important thing than our government itself, so that the man who gets hold of it becomes, *ex officio*, Governor. The Legislature becomes merely the recorder of his edicts. Gov. Black is not responsible to the people in any sense which makes his responsibility of any use to the people. He is only nominally responsible to the people. If we punish him, we simply make his punishment a reward for another man exactly like him, and he may make terms with this other man for shares in this reward. It is all very much as if a family were to be so much occupied in deciding what shoemaker they would employ, and thought the selection of such importance, that they never got time to leave their measure with any one, and went barefoot.

Under these circumstances, the continued devotion of so many people to the "primary"—that is, to the comparatively insignificant task of saying who shall run for the governorship or the Legislature—is something very odd. It is all the odder because the primary has shown an irresistible tendency to decline in efficiency as the work of nomination has become more important. We have had primaries for fifty years, and for fifty years the quality of the men they have selected for office has been

slowly but steadily running down. Attempts to reform have come only when primaries at last actually ceased to do any work at all and turned their function over to a man not elected at all. If any criticism on the work of the convention for primary reform now in session were called for, it would be criticism of the continuance of the work of "keeping the party together" by organization and rules and regulations—as if, in short, the creation of a huge nominating machine, were more important than the quality of the men nominated. What is most important in our politics is the free and untrammelled expression of the opinion of the citizen, both about measures and about men. Any nominating system, though it were sticking a card in his window, which makes this easy and convenient is good. Any observer of American politics to-day who knew nothing of our history might readily conclude that we cared nothing about the character of our public officers or the administration of our laws, as long as we were allowed the privilege of nominating them—if we chose to exercise it; and that generally we did not choose.

NEWSPAPERS AND LIBEL

The subject of newspaper libel suits is attracting as much attention in England as it is in this country, and for much the same reasons. We cited a few weeks ago some excellent observations which the Lord Chief Justice of England made in dismissing several newspaper suits which he fitly styled "trumpery." In a recent issue of the London *Daily News* we find a statement that at a newly opened sitting of the Queen's Bench Division the list of cases contained thirty actions for libel, mostly against newspapers, and in commenting upon these the editor says: "We know nothing about their merits; but of libel actions in the past, a considerable proportion have been got up by a low type of solicitor for the purpose of obtaining costs." We have the same variety of solicitor here, but his object in working up suits is not costs, but a verdict for damages in which he is to go halves.

The burdens imposed upon litigants are not nearly as great in this country as they are in England, and unless a court here grants the successful party to a suit what is known as an extra allowance, the costs in an action for libel are not likely to exceed \$200 or \$300 at the utmost on either side. Then, too, there is a limit to the amount of costs which a successful plaintiff may recover which is very annoying to the American "low type of solicitor." If the verdict in favor of his client be less than \$50 damages, he can recover costs only equal to the amount of the verdict. When, therefore, a suit for \$10,000 or \$20,000, as the case may be, has been brought

against a newspaper, and has resulted in a verdict for the plaintiff of six cents damages, all that the lawyer who has worked it up can get out of it in the way of costs is six cents. The invariable effect of a verdict of this kind in the past has been the prompt discontinuance of many other suits brought with a similar hope of mutual profits.

The English newspapers have no such protection as this, for they are liable to very heavy losses through the recovery of costs. If the plaintiff wins, the newspaper, being able, is compelled to pay the costs in full; but if the defendant wins, it often happens that the plaintiff is impecunious and unable to pay a penny of costs. His solicitor, like his American prototype, then fails to gain anything by his enterprise, since he undertook the suit on speculation. In other words, the English newspaper loses heavily, no matter in which way the suit against it may go.

It is not surprising that under such conditions the English press is urging a less stringent law of libel. In fact, agitation in this direction has been in progress for several years, and a bill which has been before Parliament since 1891 has been brought in again this year. This bill possesses several features that are of interest to us; and our libel lawmakers, including Senator Ellsworth, whose antics upon the subject are too grotesque for serious consideration, would do well to consider them. The English bill, which is supported by members of all political parties, provides in the first place that particulars of the libel or libels, with dates, must be endorsed on the writs. This is to give the defendants an opportunity of at once apologizing or paying money into court, without waiting for the next stage, which would be the statement of the claim. It is estimated in London that this provision would reduce the costs about 70 per cent. The second clause allows alternative pleadings, which are forbidden at present. As the *Daily News* says, under the present law, the "proprietor of a newspaper may not say, 'I deny that this is a libel, but if it be one, forty shillings are ample compensation.' Where is the justice of such a rule? A libel may be true, and yet the truth may be extremely difficult to prove. If the libel be a really bad one, so much the worse for the defendant. But if it be trivial, a small payment should suffice even though the alleged facts cannot be indisputably established." In this country the defendant may plead mitigating circumstances, notwithstanding he has pleaded, or attempted to prove, a justification.

A common peril to newspapers on both sides of the Atlantic lies in the publication of news matter from the regular news associations or agencies. A case which the *Daily News* cites could be

paralleled easily with many similar ones in this country. A solicitor was struck off the Rolls by the High Court of Justice for fraud. His name was read out in court. The reporter of a news agency supplied the address from a Law List. But unfortunately it was the address of another and perfectly innocent solicitor with the same name. To an action of libel in such circumstances there could of course be no defence, and it was right that the aggrieved person should receive reasonable damages. But the libel had been published in twenty newspapers, and the plaintiff proceeded to sue them one by one. The law furnishes a partial remedy for this situation by enabling the newspapers to unite in a joint defence, but this can be rendered useless by the plaintiff if he shall bring his suits one after another, instead of simultaneously. One English solicitor kept a libel in use in this way for three years, never bringing in a new action till an old one had been concluded. The new bill gives a judge power to direct in all such cases of simultaneous libel in several newspapers, that all actions in respect to it must be brought within a specified period.

Another clause of the bill provides that in all cases in which the court is satisfied that the plaintiff is a bankrupt, or will be unable to pay costs in case of losing his suit, it shall issue an order staying all proceedings unless within a specified time the plaintiff can give satisfactory security for such costs. A similar provision is not so necessary in this country as it is in England, because, as we have said, the burden of costs is much lighter here, but at the same time some provision which shall prevent bankrupts and other impecunious persons without character from bringing frivolous suits at the instigation of speculative lawyers would be a great aid to the newspapers, and spare them many thousands of dollars in annual expenditure for suits which never ought to be given standing in court.

ROSSETTI AND MILLAIS.—I.

LONDON, January 3, 1898.

We have heard only too much about the Pre-Raphaelites of late years. Those who knew them best have been at such pains to unload upon the general public all the facts and gossip of their private careers that the very man in the street could pass an examination in the story of their iniquities and weaknesses, their finances and friendships. Indeed, so great has been the attention paid to matters, surely, concerning no one but themselves, that we run the risk of forgetting that they could paint, among their other occupations and amusements, and that their pictures, as well as their old scandals and romances, have survived them.

Just at this juncture, fortunately, the two large exhibitions of the London winter are devoted chiefly to the two masters, the greatest exponents, each in his way, of the

Brotherhood. The Royal Academy, according to its announcement of last year, at the time of the Leighton show, has got together a fairly complete collection of the work of Millais. The New Gallery, though it attempts feebly to take over the duty of exhibiting the old masters relinquished by the Academy because art would not pay—a curious comment from a body that includes Mr. Sargent and Mr. Abbey among its members—would prove of no particular interest were it not for the room full of drawings and paintings by Rossetti, interesting in themselves, and doubly so exhibited at this appropriate moment. The series does not pretend to be exhaustive, as is the case with Millais, but it is delightfully representative, and has further the advantage of including nothing that should have been omitted for the sake of Rossetti's reputation; while, at the Academy, it would have been kinder to the memory of Millais had at least two-thirds of the pictures never been hung.

I do not mean that every Rossetti in the gallery is a masterpiece; that could not well be possible, since Rossetti's masterpieces were so very few in proportion to the amount of work he produced. But there is not one that does not reveal the artist, not one that does not give a clue to his overwhelming personality, not one that does not help you to understand the passionate love for beauty of color and form and line that was ever his inspiration—when he failed most signally no less than on those rare occasions when he came as near realizing his ideals on paper or canvas as an artist can. The series covers the years from his "Girlhood of Virgin Mary," his first oil painting, to several of his latest, "La Donna della Finestra," the "Blessed Damsel," the "Vision of Fiammetta;" from his studies for the illustrations to Allingham's "Music Master" and his own "Italian Poets" to the large crayon drawings, I believe with Mrs. Morris and Mrs. Stillman as models for the pictures of the "Proserpine" and "Pandora" type.

In the thirty or more years that elapsed from the first to the last he had time to change, modify, and develop his methods. In the "Girlhood of Virgin Mary" it comes as a surprise to find a cool, pale color-scheme, at variance with the more sumptuous harmonies his name now suggests, and there is an unaccustomed touch of naïveté in the funny little Holy Ghost perched in a halo overlooking the Virgin as she meekly embroiders her lilies, and the Mother who watches by her side; an unaccustomed breadth in the treatment of the peaceful landscape beyond, with its quiet waters and great stretch of green country sweeping away to the far blue hills. It is really a wonderful performance for a mere youth, and you can sympathize with his pleasure when he saw it again, almost twenty years afterwards. "I can look at it a long way off now, as the work of quite another 'crittur,'" he wrote to a friend, "and find it to be a long way better than I thought." In the water-colors that followed, there is more of an effort to give rich, gem-like hits of color, to make of the composition a decorative arrangement; as in the black-and-white drawings, the design fills the given space with amazing ingenuity—is well "packed," as it is sometimes put. At his best, the result is an exquisite piece of decoration, as in the "Lucretia Borgia," the "Paolo and Francesca," the "Sir Ga-

lahad, Sir Bors, and Sir Percival fed by the Sangreal," and a dozen others.

But Rossetti was not always at his best, and when, in another room of the New Gallery, your eyes happen to fall on a little picture of "Francis I. and Marguerite of Valois," you are forced to admit that a painter like Bonington brought to his work as fine a feeling for color as Rossetti, and produced his effects with a technical accomplishment Rossetti could never rival. In the same way, a drawing in grisaille of the "Procession to Calvary," by Dürer, in a third room, serves as a reminder that in the decorative fitting-in of the figures in a composition the Pre-Raphaelites, strive as they might and did, never approached the earlier masters of the art. In his larger paintings Rossetti seems carried away by such a passion for color that he would have outdone the Venetians in gorgeousness had he but shared their command of palette and brush, while chance lent him for models two women of a strange luxuriant beauty that, reproduced on canvas, suggested probably far more mystical and esoteric meaning than had ever entered into his original conception. The way he chose his titles shows that much of the symbolism with which his admirers are so impressed meant nothing in particular. One memorable remark of his is an excellent antidote to the insufferable rubbish written about him. He was painting a picture at Kelmscott, and of this he said, as he might have said of many besides, "I have painted the better part of a little picture, but don't know who is to buy it. I can't be bothered to stick idle names on things now—a head is a head; and fools won't buy heads on that footing." But in all these paintings, water-color, pen, pencil, and crayon drawings, differ as they may in medium, method, and quality, you are always conscious of the artist, the poet, at work, but struggling most of the time with a form of expression he had not mastered. He was never at home with paint as with words, and this is the reason why the picture often is better expressed in the lines he left on a margin or a frame. He was haunted by the beauty of color and form, but his accomplishment fell so far short of his intention that to feel his charm, as I have heard it said, it is best to be away from his pictures; to remember, not to see them. Take a picture like the "Vision of Fiammetta," now in the New Gallery—the large, enigmatic woman in flame-colored draperies, with the apple-blossoms trailing their white and rose glory about her—as it pales and grows dim in memory, or as one looks at it through his sonnet, it may come to seem as splendid in color as a Titian, as full of strange, mystic fancies as a Botticelli was to Pater. But in the painting itself, the plain truth is that the color is hot and unpleasant, the figure hard and wooden, the drawing absurd, and the flowers positively offensive in their metallic glitter. Indeed, in almost all the large pictures now exhibited, you are struck but with the unsuccessful effort to do that which was done really incomparably well in the "Mariana," only less well in the "Lilith" and the "Blessed Damsel." In the "Mariana" you have the warmth and richness and splendor that you are sure Rossetti was for ever striving after, the loveliness in the pose of the languid figure and the flow of her ample blue draperies, the exquisiteness in the embroidery

slipping between her idle fingers. Rossetti never painted a more beautiful picture.

I have not attempted anything like a list of the work exhibited, but a few drawings and pictures that have special associations to add to their importance ought to be mentioned. These are his portraits of himself, his mother, and sister, of Ford Madox Brown, above all of Mr. Swinburne, with a pallid face and masses of red hair, which the decadent youths of to-day would give worlds to emulate. Then there are two elaborate, primitive, and fine pen-drawings, inscribed to "Frederic G. Stephens, from his P. R. brother, Dante G. Rossetti," the words varying slightly in the two. It is also amusing to see the original design for the illustration to Allingham's 'Music Master,' about which Rossetti had so very much to say in his letters to Allingham, edited by Dr. Birkbeck Hill for the *Atlantic Monthly*. In these letters one reads how a drawing for it was finished on the block and then discarded, so that it is no surprise to find the first sketch absolutely unlike the published version. Amusing, too, is a remarkable picture of "Queen Guinevere," by William Morris, stated in the catalogue to be the only painting by him. But this can hardly be true. There is reference to another and altogether different picture in a letter of Rossetti's to William Bell Scott. Morris, it says—it was in the summer of 1857—"is now busily painting his first picture, 'Sir Tristram after his illness in the Garden of King Mark's Palace, recognized by the Dog he had given to Ysaelt,' from the *Morte d'Arthur*. It is being done all from nature of course, and I believe will turn out capitally." This helps to explain the distinction of the "Queen Guinevere," for it is not easy to conceive that such good work ever was done in a first and only attempt. In some ways, in the swing and movement of the pose especially, it is far more distinguished than anything I have seen of Rossetti's; it recalls really the grace and elegance of Millais's "Mariana," while the painting of the books, the draperies, and all the accessories is masterly. One ends by wondering if Morris was entirely responsible for any part of it except the face and hands, which are black and dirty. N. N.

THE PAINTINGS AT CHANTILLY.—II.

PARIS, January 12, 1898.

Mignard is represented at Chantilly not merely by the great allegorical picture "Condé's Repentance"; M. Gruyer attributes to him also a portrait of Cardinal Mazarin, which has sometimes been erroneously attributed to Philippe de Champaigne; a portrait of Henrietta, Duchess of Orleans, the youngest daughter of Charles I. and of Henrietta of France; portraits of Louis XIV., of his brother, the Duke of Orleans; of Marie of Bavaria, mother of the Duke of Burgundy; of Henriette de Coligny, Countess de la Suze, who was first married to Thomas Hamilton. The Countess de la Suze was granddaughter of the great Admiral Coligny. She turned Catholic in order to get separated from her husband, who was a drunkard, and whom she detested. Her salon rivalled that of Rambouillet. She was a poetess, and wrote elegies which Boileau pronounced to be "of an infinite charm"—a judgment which has not been ratified by posterity.

The famous Vanloo is represented at Chantilly by a portrait of Thomas Corneille, brother

of the illustrious Pierre Corneille. There is not much to say about a few portraits by Lebrun, Sébastien Bourdon, Claude Lefebvre, a pupil of Le Sueur and of Lebrun. Nattier deserves fuller attention; it was probably at Chantilly itself that he made a charming portrait of Mademoiselle de Nantes, daughter of Louis XIV. and of Madame de Montespan, just after her marriage with the grandson of the great Condé. The new Duchess of Bourbon was only seventeen years old; she is represented as a goddess, with a golden sickle in her hand, with light draperies, half-naked limbs, sandals tied with golden strings, a red drapery round her. Saint-Simon describes her as a very fascinating beauty. "Louis XIV.," says M. Gruyer, "gave her something of his majesty, and Madame de Montespan something of her very peculiar beauty."

Largillière, born in 1656, and deceased in 1746, occupies a very commanding place among the painters of the French school. We find at Chantilly a beautiful portrait made by him of the famous tragic actress, Mlle. Duclos. She is represented in "Ariane," a tragedy by Thomas Corneille, at the culminating moment of the dramatic action, when *Ariadne*, in love with *Thestus*, sees her own sister, *Phadra*, conquering the ungrateful and capricious hero. She is dressed in the style of the end of the reign of Louis XIV. We recognize the masterful art of Largillière also in a portrait presumably of Marie de Laubespine, wife of Lambert de Thorigny. There is, again, an excellent portrait by Largillière of an unknown gentleman, "one of the finest," says M. Gruyer, "of this painter's works." This picture was in the collection of the Palais Bourbon, and it is to be supposed that the personage was one of the familiar friends of the house; yet it is impossible to give a name to it with any certainty. "This brilliant picture, nevertheless, belongs to the seventeenth century—the solemn wig, architectural, orderly, belongs to Versailles; at the same time the picture has already something of the charm of free and independent life which is to characterize a new age. The time is already past of the Lebruns and Mignards. A new art begins, free and unrestrained, suitable to the gayeties of the French character, relieved of the solemnities of the *grand siècle*. Between the seventeenth and the eighteenth centuries Largillière has thrown a bridge of marvellous construction."

Hyacinthe Rigaud (born in 1659, died in 1743) may be said to belong more to the seventeenth than to the eighteenth century. The galleries of Chantilly show us some of his solemn, pompous, and theatrical pictures—a reduction made by him of his celebrated portrait of Louis XIV., which was executed for Philip V., King of Spain, and which can be admired now at the Louvre, and a life-size portrait of Louis XV. Rigaud had several copies made of this official portrait of the King, who is represented with all the attributes of royalty, in the grace of his adolescence. The original is at the Museum of Versailles. Chantilly has only a copy, but it is of a very good quality, and was probably retouched by the great master. We see also at Chantilly, from the hand of Rigaud, a portrait of Armand-Jean de Bouthellier de Rancé, Abbé de La Trappe, and a presumed portrait of the architect Mansart. M. Gruyer gives no special attribution to several

portraits of the school of the second half of the seventeenth century, among which are some very interesting ones, such as the portrait of the Count of Toulouse, a very handsome youth, in the costume of *novice du Saint-Esprit*.

The great gallery at Chantilly which goes under the name of "Galerie des Batailles," forms a part of the old château. It has six large windows opening on the lawn and the forest; on the wall opposite these windows are great mirrors, and between the mirrors are painted on panels the battles fought by the great Condé. There are other panels between the windows also covered with pictures; eleven of them were painted by Sauveur le Conte, one by Michel Corneille. From an artistic point of view the pictures of Sauveur le Conte are of secondary interest; from an historical point of view they may be said to have the place of honor in the house of Condé. On each panel there is a principal subject and beside it several complementary subjects; in all there are as many as seventy-two pictures which narrate, so to speak, the whole life of Condé. It was very interesting to listen to the historian of Condé, conducting his guests in this magnificent gallery, narrating before many of them incidents in the life of the hero, which he had studied in the most minute details, showing with pride on the chimney (which is in the centre of the gallery) one of the flags of the Spanish regiment beaten at Rocroy, torn and full of glorious holes.

When we enter upon the eighteenth century, we find first the pictures of Jean-François de Troy (who lived from 1679 to 1752). His "Déjeuner d'huîtres" is a very striking scene; among the personages who partake of this very gay oyster-breakfast there is probably some member of the royal family, and the colors of the liveries of the servants make us think that the breakfast took place in the Palais Royal. All the faces are portraits; the Duke d'Aumale heard his father give the names, but he was too young to remember them. Watteau is represented at Chantilly by four charming little pictures: "Love Disarmed," "Pastoral Delights," "The Serenader," "The Uneasy Lover." These pictures, especially the two last, are among the most brilliant and clever compositions of this master, who has only in our time acquired the great reputation which he deserves from the grace and freedom of his manner and the singular beauty of his light and transparent coloring.

There are two rooms at Chantilly which are called the "Singeries"—one of large and one of small dimensions. Monkeys dressed in various costumes have the principal part in the decorations which cover the panels, and which are caricatures, alluding to the various occupations of the inhabitants of the château, hunting, fishing, etc. These curious pictures, surrounded with ornaments—attributes of all sorts—produce a charming effect, together with their gilt frames in the style of the time. Goncourt attributed the *Singeries* to Watteau. "I find," says he, "in these arabesques the characteristics of the arabesques created by Watteau. I see in them his light decoration, a little thin, and traced, so to speak, with the end of a pen, his shower of little objects, his way of associating and grouping the attributes of war and of pastoral life. I recognize his lambrequins, his cameos, his fruit, his foliage, his trellises," etc. M. Gruyer gives his reasons for attributing the *Singeries* to the

painter Huet; they have also sometimes been attributed to Gillot, the master of Watteau.

Among the most agreeable portraits in the Chantilly collection are those of the second Nattier (born in 1685, died in 1766). He was well called by a poet of his time "the painter of beauty." He found an admirable model in Mademoiselle de Clermont, daughter of the Prince de Condé who married Mademoiselle de Nantes. She is represented as the nymph of the mineral waters of Chantilly; in the background is the pavilion of Sylvia, where there is still a spring which is said to have curative properties. The famous Venetian painter Rosaiba also made a portrait of Mademoiselle de Clermont, which is in one of the rooms of the château. The mythological portrait by Jean-Marc Nattier is in the great galleries. Nattier made also a charming mythological portrait of Louise-Henriette de Bourbon-Conti, who became Duchess of Orleans; it too is in the great galleries. The Duchess is represented as Hebe, with an eagle at her side. We further meet with a Princess de Condé (born Rohan-Soubise) by this painter.

Lancret (born in 1690, died in 1743) has a very important picture, known under the name of the "Déjeuner au jambon." Several gentlemen and a lady are breakfasting in the open air, in a fine park; the breakfast is very gay, as is shown by the disorder of the table and the attitudes of the guests. The name of Subleyras is almost forgotten in France; he remained in Rome all the active part of his life. We find at Chantilly one of his best pictures, a portrait of Lambertini, who was Pope under the name of Benedict XIV., and to whom Voltaire dedicated his tragedy of "Mahomet."

Duplessis (born in 1725, died in 1802) was not a great painter, but his portraits are curious historical documents, and have some merit. A certain importance must be attached to his Duchess de Chartres in view of the ship *Saint-Esprit*, which bore the Duke de Chartres into the naval engagement of Ouessant. We see the ship in the distance; the Duchess, who is admirably coiffed, is reclining on the seashore against a rock; she has dropped a novel which she was reading; her pretty feet are bare, and are shown under her beautiful white satin gown. She has engraved on the rock some sentimental lines expressing her grief at the departure of her husband. The picture is very characteristic of the spirit of the times; everything in it is false and yet agreeable. The sea is smooth; the Duchess is posed on the shore as she might be in a boudoir; her thoughts are less on her husband than on her coiffure and her dress. We cannot help thinking, before this portrait, of the contrast between the happy times in which it was made and the troubled years which followed. Duplessis painted the Duchess de Chartres when she was twenty-five years old. Her marriage was not happy; she was imprisoned during the Terror, proscribed, and conducted to Spain; she died in France in 1821, leaving only a son and a daughter. Her son, the Duke d'Orléans, became in 1830 Louis Philippe; her daughter never married, and was known as Madame Adélaïde. Two other portraits by Duplessis exist at Chantilly—one of the Count de Provence, who became Louis XVIII., an excellent portrait, full of life, and a portrait of the Count d'Angivillier, a mere sketch (the great portrait of M. d'An-

givillier, Comptroller of the King's palaces, is in the Museum of Versailles).

Correspondence.

FAULTY ADMINISTRATION AT THE LIBRARY OF CONGRESS.

TO THE EDITOR OF THE NATION:

SIR: Reports from scholars in Washington who are using the books of the Library of Congress in its new house indicate that the system of library administration is not working smoothly. It seems to require something more than half an hour for the untrained assistants to decide that the Library does not possess a special volume—one of a long series of publications of the Transactions of a famous European Academy, for example. A special edition (that of 1846) of the works of a world-renowned philosopher was asked for. On a first visit the edition of 1884 was produced at the end of twenty minutes' search, and the report made that the edition of 1846 was not in the Library. Accordingly, a copy of a few paragraphs was made from this edition and the book returned. On a second visit it was desired to verify an extract, and the edition of 1884 was inquired for, but that of 1846 was delivered after forty minutes' delay! As this edition was now of no use, it was returned and another quarter-hour lost in obtaining that of 1884.

Another reader, having only an hour to spare, asked for an ordinary book, not in the least out of the way, and was obliged to leave before it was found. Still another, asking for Blanc's 'Venetian Art,' received the volume on 'Dutch Art'; asking for a certain volume of Sismondi, received a different one—and all this with vexatious delays. Similar reports come from still another user of the Library. There are no end of attendants bustling around the central pulpit-desk, and the automatic delivery tubes keep up a great noise, but somehow the books do not come; or, when they come, they turn out to be volumes that have not been asked for. Conversation on the part of the readers is prohibited, but the crowd of employees and messengers do not scruple to speak as loud as may be, and the women clerks bustle about with rustling skirts and with loud-tapping boot-heels on the marble floors. The consumptive coughing of the pneumatic delivery tubes goes on continually, and the whole atmosphere of the nation's library in its gorgeous home is as far from scholarly as can be imagined. The placards "Keep Quiet" are hung at the pulpit-desk, from which comes all the noise! After years of possession there is no card catalogue, and if a book does not chance to be in one of the printed catalogues, readers must depend on the memory of the librarians. Altogether the condition of affairs at the new Library appears to be as unsatisfactory as possible, and with the present staff (selected by favor and "covered into the civil service" when the favors were given out at the hands of the Chief Librarian, himself no scholar, however eminently useful he may have been during the last Presidential campaign) there does not seem to be any immediate prospect of improvement.

When one reflects what such a library might be under good administration, actu-

ated by a high and scholarly spirit, it is somewhat melancholy to remember that this national institution has apparently been sacrificed to the smallest and pettiest political considerations. It ought to be possible for a citizen of any State to make an inquiry by mail on any subject, from Egyptian hieroglyphics to the manufacture of small arms or bicycle balls, and to receive a prompt answer, giving him the best information that the Library affords, or, at the very least, a reference to the books where such information is to be had. If one desires to find out how far the Library is from fulfilling such an ideal, let him forward such a letter, in good faith, and see what reply he will receive. Yet the Library will never be national, in the true sense, till it is a part of its regular business to furnish such information freely. The Smithsonian Institution has done so for years. Why not the nation's library?

The instances just cited also show that the wants of scholars who have made a special visit to the Library to consult its really splendid collections are not provided for. It is quite inadmissible that a half-hour of waiting should be consumed in order to decide that the Library does not own a required book or that a half-hour should be needed to bring one from the stacks, even to bring the volume asked for. When the wrong volume is produced at the end of such a delay, it proves that the system of administration is quite faulty. There is no excuse for wrong administration of the details of library work in America, where such matters have been fully worked out. The delivery of books at the Astor Library or at the Boston Public (to name no others) is as prompt as can be wished for. It is no valid excuse to say that the national libraries of Berlin or Paris are slower in their deliveries than our own. More shame to them, but no excuse for us.

It is, perhaps, worth while to call attention to these shortcomings at the Library of Congress, in the hope that some improvement may be made. If the present methods are allowed to crystallize into habits, the Library will have totally failed to meet legitimate expectations. Q.

NEW YORK, THE CENTURY CLUB,
January 20, 1898.

THE CONSTITUTION AND ITS RATIFICATION.

TO THE EDITOR OF THE NATION:

SIR: The current number of the *American Historical Review* contains, among other interesting matter, a letter written immediately after the adjournment of the Federal Convention by William Pierce, a member from the State of Georgia. Though the letter is not long, it adds considerably to our fund of knowledge concerning the aims and opinions of the framers, for Pierce doubtless expresses the views of others. I desire to call the attention of your readers to the light thrown upon two questions which, before the civil war, were of supreme political importance, and are still of much historical interest. The two questions may be thus stated:

(1.) When the Federal Constitution was ratified, was it the general opinion that by ratification each State was surrendering a portion of its sovereignty, or that each State was merely granting to the new government permission to exercise a few

functions which belonged of right to still sovereign States?

(2.) Was the Federal Constitution ratified by the States individually, or by the people of the United States *en masse*?

Upon the first question the letter speaks as follows:

"The great object of this new [federal] government is to consolidate the Union, and give us the appearance and power of a nation. The inconvenience of the different States meeting on the footing of complete equality, and so many sovereign powers confederated, has been severely felt by the Union at large; and it is to remedy this evil that something like a national institution has become necessary."

Plainly, the inference is that heretofore the States have been sovereign, but for the future, if the proposed Constitution is accepted, that evil is to be remedied by making them less than sovereign. The only possible obstacle to this interpretation appears to lie in the somewhat equivocal manner in which the new federal government is described—"something like a national institution" and as having "the appearance and power of a nation." But any doubt arising from this suggestion is removed by a passage occurring towards the end of the letter: "It requires very little wisdom or forethought to see into the consequences of the new federal government when put completely in motion." Then follows an enumeration of some of its powers and the significant comment:

"All this taken collectively forms such a power independent of the states as must eventually draw from them their remaining sovereignty. Whether such a thing is desirable or not, let every man appeal to his own judgement to determine. It is clearly my opinion that we had better consolidate than to remain any longer a confederated republic."

Regarding the second question, the evidence furnished by Pierce's letter is not so decisive of his opinion, but it seems to indicate that he thought of the Constitution as presented for ratification to the States and not to the people of the United States *en masse*. This conclusion is based upon the impression derived from the letter as a whole, and from the following passage in particular:

"It is a difficult point to concentrate thirteen different interests so as to give general and complete satisfaction. But as individuals in society (to use an old hackneyed and well known principle) give up a part of their national [natural?] rights to secure the rest, so the different states should render a portion of their interests to secure the good of the whole. Was this question proposed to each of the states separately, 'What kind of government is best calculated for the people of the United States?' there would be as many different opinions as there are different interests."

Here Pierce seems to have clearly before him the States as the ratifying constituency, for what follows is an illustration that each cannot be satisfied. It is true that other passages speak of the decision as lying with the people, but in none of them is there the slightest suggestion that the people of the United States *en masse* is meant; all these passages can mean the people of each State, while the passage above quoted can mean only the States.

Summarizing the points which I have been endeavoring to establish, the following conclusions seem warranted:

(1.) The States, in Pierce's opinion, gave up their sovereignty by ratifying the Constitution.

(2.) He apparently thought of the States as the ratifying constituency; or, if that be a trifle strained, the letter gives no countenance to the view of the "people *en masse*" theorists.

(3.) It is noteworthy that Pierce's opinions exactly coincide with Madison's views of what occurred in 1787-9. This may be seen by a study of the 'Federalist,' the proceedings of the Virginia ratifying convention, and Madison's correspondence during the nullification controversy. Madison's views, be it noted, do not agree with those of Webster and Story on the one hand, or of Calhoun on the other. FRANK MALLOY ANDERSON.

UNIVERSITY OF MINNESOTA, January 18, 1898.

ASSOCIATION FOOTBALL.

TO THE EDITOR OF THE NATION:

SIR: I have read with much interest the letter which you published recently, sent from England by the American football-player, Mr. Edward Brooks, and advocating the substitution of Association for pure Rugby, or the unfortunate American modification of it, rather than see this splendid game tabooed by public opinion and finally, perhaps, suppressed in our universities.

Though not a player myself—once this season, however, I was impressed as goal-keeper at a scrub contest—I enjoy immensely watching the game, and have attended many matches in the football fields in the Bois, at Vincennes, Billancourt, and Clichy-Levallois. I have remarked that nine times out of ten Association is preferred to Rugby, and I have never yet seen an accident of any importance. But last Thanksgiving Day an American game of football was played at the Clichy-Levallois grounds by former American college men residing temporarily in Paris, and, before the end, a man was carried off the field with a broken ankle. At the same time, in another part of the same enclosure, an Association game was in progress between two teams made up of Americans, Englishmen, and Frenchmen, but not a man nor a boy received any harm worth mentioning. Myself and many others preferred to watch the latter game from beginning to end. "I take no interest in that brutal American perversion," I heard several French and English onlookers remark, much to my mortification.

Why, then, do not our college presidents come together and declare that Association football shall alone be permitted? And if our State legislators insist upon interfering in such things, why might they not take similar action? In this way the serious objections to the American game would be removed, our college sports would be freed from what is considered in many eyes a stigma, and this admirable winter game would be preserved. T. S.

PARIS, January 7, 1898.

AN ACKNOWLEDGMENT.

TO THE EDITOR OF THE NATION:

SIR: Owing to illness, I was unable to attend to the last revise of my work, 'The Sultan and his Subjects' (Chapman & Hall). At the last moment, a number of pages (indeed, two or three entire chapters) had to be omitted in order to render the book sizeable. Among these abstracted pages was one containing the following paragraph:

"I am also much indebted to Prof. Gros-

venor's delightful work, 'Constantinople' (Messrs. Sampson Low & Co.; Boston: Roberts Bros.), which is one of the very best books on the Turkish capital I have ever seen. It should be the vade-mecum of every visitor to Stamboul, being full of every kind of historical and legendary information. The Chronological List of Byzantine Emperors and Turkish Sultans at the end of the second volume of 'The Sultan and his Subjects' is also derived from this admirable work."

It was only recently, when rereading my work in print for the first time, that I discovered this omission, and I hasten to call attention to it, through your columns, as an act of justice to Prof. Grosvenor, whose courteous forbearance in this matter I greatly appreciate.—I beg to remain, sir, Yours obediently, RICHARD DAVEY.

12 BUCKINGHAM ST., STRAND, W. C.
January 12, 1898.

Notes.

Herbert S. Stone & Co., Chicago, are about to bring out 'Plays, Pleasant and Unpleasant,' in two volumes, by Bernard Shaw; 'How to Play Golf,' by H. J. Whigham; and a volume of reminiscences by Mrs. M. E. W. Sherwood.

Thomas Y. Crowell & Co. have nearly ready the seventh volume, with index, of Sybel's 'The Founding of the German Empire'; 'Workingmen's Insurance,' by W. F. Willoughby; and 'Congressional Committees,' by Dr. Lauros McConachie.

Further announcements by G. P. Putnam's Sons are: 'The Writings of James Monroe,' edited in four octavo volumes by S. M. Hamilton, Librarian of the Department of State; the fifth volume of the 'Life and Correspondence of Rufus King'; 'Reminiscences of the Old Navy,' from the journals and private papers of Capt. Edward Trenchard and Rear-Admiral Stephen Decatur Trenchard, by Edward Stanton MacLay; 'A History of the Parish of Trinity Church in the City of New York,' edited by Dr. Morgan Dix, in three octavo volumes, printed from type; 'The Cross in Tradition, History, and Art,' by the Rev. William Wood Seymour, with copious illustrations; 'Renascent Christianity: A Forecast of the Twentieth Century,' by Martin Kellogg Schermerhorn; 'Led On, Step by Step,' autobiographical scenes from clerical, military, educational, and plantation life in the South, 1828-1897, by A. Toomer Porter, D.D.; 'Jewish Religious Life after the Exile,' by the Rev. T. K. Cheyne; 'Coffee and India-Rubber Culture in Mexico, together with Historical and Geographical Notes on the Country,' by Matias Romero; 'Bird Studies,' in Eastern North America, by William E. D. Scott; 'Open Mints and Free Banking,' by William Brough; and 'Republican Responsibility for Present Currency Perils,' by Perry Belmont.

Mr. W. H. Brett, of the Cleveland Public Library, announces that his Cumulative Index will be continued as a bi-monthly, but will appear in two series. "The first number will appear in February and will include periodicals for January and February; the second will appear in April and will contain those from January to April inclusive; the third will be published in June and will include all entries from January to June. This number will end the first series. The first number of the second series will appear in August and will include the periodicals for July and August. An Octo-

ber number will be published including entries from July to October inclusive, and the December number will form the annual volume, including all the matter previously published and all entries from magazines not indexed cumulatively, and will form a complete index for the entire year to all the periodicals included. This plan will make it possible to issue the annual volume in January, 1899."

Dr. Weir Mitchell's 'Hugh Wynne' and Gen. Horace Porter's 'Campaigning with Grant' were both concluded in the last volume of the *Century Magazine* (May-October, 1897), and are the chief features of that volume as it lies bound before us. In other respects it presents the usual variety, with prominent sporting papers and tales of travel in barbarous and semi-civilized lands. The poetic sum is made up of our elder and our newest bards, but throws no light on the problem of a new era for poetry in this country.

It is not easy to specify the leading features of *Scribner's* 21st and 22d volumes, but we shall name the series of articles on the conduct of great businesses; another on undergraduate life at Harvard, Princeton, and Yale, respectively; and Mr. Charles Dana Gibson's pictorial report on London. In illustration, we remark the full-page "Scenes from Great Novelists," in which Mr. Frost, for one, frankly adopts the conventional types of the Pickwick characters for a fresh composition. Some color experiments are more curious, perhaps, than satisfactory.

Girls count for very little in the bound volume of *Harper's Round Table* for 1897, the last of the weekly issues. It is true that Mrs. Wiggin, Mrs. Sangster, Miss Seawell, Miss Deland, and Miss Wilkins are among the contributors, but some of these furnish war stories. It is also true that the Rev. Edward Everett Hale, discoursing on the meaning of a vote, anticipates that the reading of the *Round Table* will enable "bright girls in the next generation," while waiting for the suffrage, to "understand the difference between Senators and Representatives"—a difference, surely, now without a distinction. On the other hand, Carl Schurz, defining "Party Allegiance and Political Independence," and Henry Cabot Lodge, inculcating the opposite doctrine in "What a Primary Means," are clearly addressing themselves to boys or young men. Much more so are Capt. King, James Barnes, and Theodore Roosevelt, with army and navy sensationalism. Even Mr. John Corbin, with his interesting descriptions of English schools, can have had only boys in mind. We trust that the belligerent monotony of the *Round Table* will be relieved by the change to a monthly issue, determined by the prospect of a British audience, on which our patriotic and Jingo stress must pall if it does not repel.

St. Nicholas, in its customary two volumes or "parts," is frankly for children of both sexes and of a considerable range in years. It changes little, and not for the worse. There is nothing in the varied contents for 1897 more to be singled out than Mr. Laurence Hutton's autobiographical "Boy I Knew."

Babyhood, as our readers know, is for mothers, and not for the children, whose care it alleviates and wisely directs. The thirteenth volume (December, 1896-November, 1897) testifies to the solid hold it has on

its proper audience, which yet must be capable of indefinite enlargement. The table of contents is a full one, grouped under Medical Articles, Miscellaneous Articles, Nursery Problems, and the Mothers' Parliament. The publication office is at 140 Nassau Street, New York.

A showy exterior characterizes the series of "Apollo Poets," of which the letterpress is English, the portrait photographs French, and the publisher of the copies before us (T. Whittaker) American. Small type and broad margins distinguish the Mil-ton and Burns; small type and narrow margins the Wordsworth. They are, however, well indexed and very moderate in price.

Mr. Bernard Partridge's illustrations to F. Anstey's "farical romance" 'The Tinted Venus,' which furnish the pretext for a handsome new edition of this ingenious and well-sustained extravaganza (Harper & Bros.), are noticeable for the consistency with which the recurring characters are depicted. The drawings are also academically clever and well composed. Taken by themselves, however, apart from the story, they would barely suggest a comic connection. This is no reproach to the artist. The absurdity which inheres in the very plausibility of the narrative could be conveyed only by caricature, and perhaps (with success) only on the scale on which Cruikshank was accustomed to work. Mr. Partridge has undertaken to present the plausible and realistic side of Mr. Anstey's humor, and has done this very well and sympathetically, while ornamenting the book.

The 'Students' Standard Dictionary' (Funk & Wagnalls Co.) has the merits of the parent work, and also inherits its unprepossessing typography. It contains, we are assured, 60,000 words, and, in view of the necessary compression, we can but think that space has been wasted by concessions to the "phonetic respellings recommended by the American Philological Association and the Philological Society of England." Cross-entries like *fonetic*, *fonograf*, *nevw*, etc., are cases in point. More to the purpose is the attempt to satisfy inquiry in the study of the works of eminent English authors required to be read either before or after admission to college. The appendixes are valuable, but that on "Faulty Diction" must be used with caution. We are glad to find conspicuously absent the old tirades against *reliable* and *had rather*, and to meet with an occasional defence of the richness of the tongue against those who condemn a locution because it is "superfluous." The doctrine conveyed under *all of*, *elder*, and *that*, *who*, and *which* is either wrong or misleading. This work is illustrated.

Mr. Herbert J. Davenport, whose 'Outlines of Economic Theory' we recently noticed, now offers us 'Outlines of Elementary Economics' (Macmillan). As the title implies, we need expect nothing but the skeleton of a science; but Mr. Davenport has done as well as his limits permit. His style is clear, and he shows a thorough acquaintance with his subject. He has inserted a very large number of questions intended to stimulate reflection among pupils; and as many of them are much easier to ask than to answer, the desired result may be obtained. But Mr. Davenport should provide the ordinary instructor with a key.

Many thoughtful readers will welcome Prof. George Harris's 'Inequality and Progress' (Houghton, Mifflin & Co.). While not

a reply to works of the class of Bellamy's 'Equality,' it is in substance a trenchant and destructive criticism of the shallow philosophy on which these are based. The fine scholarship of the author gives a delightful flavor to his essays, which are at the same time marked by complete fearlessness of the odium which, in a democratic community, attaches to all criticism of popular formulas and traditions. The chapters on the relations of variety and progress, the meaning of equality of opportunity, the resentment of inferiority, the two kinds of discontent, are especially forcible and suggestive. The whole book is to be heartily commended to clergymen and others who have been carried away by the visionary ideals of Socialism.

'Uncle Sam's Secrets,' by Oscar Phelps Austin, appears in Appleton's series of "Home Reading Books," which is edited by the United States Commissioner of Education. This book is classified as belonging to Division III., Social Science, is provided with an introduction by the editor, an analysis and an index, and consists of a trashy sensational story, the course of which is from time to time interrupted by the insertion of a page or two of statistical and miscellaneous information about various matters. Many iniquities are committed in the name of education, but this is, perhaps, in view of the office held by the editor, about as discreditable as any of them.

In the Macmillan Co.'s "Rural Science Series," edited by Prof. L. H. Bailey, a volume prepared by the editor appears under the title 'Principles of Fruit-growing.' The merits of Prof. Bailey are too well known to agriculturists to require exposition here, and we content ourselves with remarking that the modern arts of growing, storing, and marketing fruits on a large scale are the leading features in this book.

Mr. G. Paramaswaran Pillai, editor of the *Madras Standard*, one of the principal English-written Hindu daily papers, now gives us an interesting-looking volume entitled 'Representative Indians' (London: Routledge & Sons)—short lives, with portraits, of thirty-six of his countrymen who have most distinguished themselves during the present century. A preface is furnished by Sir Richard Temple, who, while candidly admitting "that although political talent, statesmanlike ambition, and administrative power fail to be fostered under British rule," allows that "still there are ample fields for learned research, for literary taste, for social reform, for poetic culture, for philosophic meditation—in short, for general culture." And here we have exemplars of the results of such culture as "tended in every possible way by the state." The book treats of names and events and subjects so foreign to the lives and thoughts of the average English-speaking reader that a wide circulation here cannot be looked for. Rammohun Roy is the only name likely to be familiar. The book is, however, of interest as forcing on our attention the brilliant capacities of a people whom too many of those administering the government of India and seeking to influence the theological belief of its inhabitants are prone to disparage.

The Italian Ministry of Public Instruction has permitted the resumption of the publication of the catalogue of Palatine MSS. in the Royal National Central Library under the direction of Prof. Luigi Gentile. The new issue is number five of volume II.

and extends from Nos. 792 to 887. The majority of the entries are scientific, but there are not a few appetizing titles in history and belles-lettres. No. 837 includes biographical sketches of fifty illustrious Pisans; No. 824 a history of Volaterra; No. 826 a treatise on the forum of Florence, etc. No. 809 is the *Poesie* of Tommaso Crudeli, dedicated to Sir Horace Mann, British envoy at Florence in the last century; one would like to dip into his apologetic, "Un uom già fu, della campagna amante," as into the sonnet of Lorenzo de' Medici, "Chiar' acque, io sento 'l uostro mormorio" (No. 816).

Signori Mariotti and Mestica, of the committee charged with examining Leopardi's literary remains; are busy with a calendar. One tid-bit is the poet's commonplace-book of 4,526 pages, closely written in his own elegant and minute hand, and equal to nine volumes of print in conformity with Le Monnier's edition.

The *American Naturalist* has obeyed the law of its being in removing back to the Massachusetts coast on which it was born, and its 32d volume, dating from the present month, will bear the imprint of Ginn & Co. Dr. Robert P. Bigelow of the Massachusetts Institute of Technology assumes the editorial control.

Current History, too, has gone eastward, from Buffalo to Boston, where it will be issued without change of management by the New England Publishing Co., at No. 3 Somerset Street.

The most curious information contained in the *New England Historical and Genealogical Register* for January is perhaps the list of the eight men first slain by the Indians in King Philip's war. Mr. Waters, in his "Genealogical Gleanings in England," gives a characteristic mass of wills illuminating the Juxon connection. We learn that the proposed complete index to the *Register* is under way on the strength of subscriptions already secured, but more will be needed to complete this important undertaking.

Statistics given in the *Revue Pédagogique* present a sad picture of the physical and mental condition of the male youth of Italy. Of 363,617 conscripts of the class of 1875 presenting themselves for medical examination, nearly 191,000, or more than 52 per cent., were found to be permanently or temporarily unfit for service. Of 176,400 young men enrolled, 60 per cent. were able to read and write, and 38 per cent. wholly illiterate. These last figures indicate, however, a diminution in illiteracy since 1867 of 26 per cent., but a strict enforcement of the compulsory school law of 1877 should have reduced the proportion to almost nothing. As things are managed, 800,000 children, or one-third of those of the obligatory school age between six and nine, were receiving no instruction in 1895; and it seems that many of those who have been in school relapse into ignorance almost as fast as they have been lifted out of it. In years gone by, partly with the aid of regimental schools, then well supported and efficacious, the percentage of illiteracy among *disbanded* soldiers had been brought down as low as six or seven; in recent years it has from various causes risen again to twenty-six.

—The municipal problem is prolific of books. Most of them have the feature in common of being thrown into the form, now so attractive, of a scientific treatise. In this class would seem to fall 'The Study of City Government,' by Delos F. Wilcox (Macmill-

lan). It cites three and a half pages of authorities, and is mainly descriptive in character, the author avoiding rather than endeavoring to reach conclusions. He divides the subject into three kinds of problems—those of "function," those of "control," and those of "organization"—and there is a great deal about "units"; which sounds more like chemistry or physics than anything relating to human government. This scientific jargon (for it is really little else) leads to curious results; thus, the author tells us (p. 15) that the task of political economy and sociology is "the assignment of functions" to the state and to individuals; on the next page he puts down religion as coming under the head of "external" functions of the state, and as connected with "foreign affairs"; and on page 20 he insists that any one who calls a city a "business corporation" ought to admit frankly his "close kinship to the Socialist." On the other hand, he makes here and there statements the truth of which cannot be questioned, as that "raising revenue is not undertaken for its own sake," which for scientific purposes should have been contrasted with the antithetical proposition, now admitted by all students of this branch of science to be true of the individual political unit—that it is not in politics "for its health." We must candidly confess that there is something a little depressing about science like that of Mr. Wilcox. His speculations read as if he had quite forgotten that city government is a product of human life, and that its functions, control, and organization depend on the human beings who produce it; consequently, the first qualification for a study of it is robust common sense and knowledge of life. A boss could give a clearer idea of what the "problems" actually are than a sociologist, and to him most of the discussion of this book would seem as irrelevant as the rural view of municipal life does to a bunco-steerer.

—The Jesuit Relations (Cleveland: Burrows Brothers Co.) involve so many topics that each part, as it appears in monthly sequence, has some fresh feature. The official letter of 1636, which has already run through two instalments, is now concluded in Vol. X. Brébeuf is the sole author, and his subject, after the list of conversions has been dispatched, is the life and habits of the Hurons. The novelty is that this race is more advanced, more settled, and more strenuous than the Siroquois of Acadia or the Montagnais of the lower Laurentians. Moreover, although Le Jeune's style and matter are both above the average and well suited to their purpose, we feel in reaching a long unbroken narrative of Brébeuf that we have before us the strong man in the whole band of Jesuit missionaries. After touching on the state of Christianity amid such barbarism, he passes to an outline sketch of events that have marked the year. A great drought in the spring had been the means of pitting the French and the native sorcerers against each other, with the result that the former gained credit for the opportune rain which came about the middle of June. But weather reports and a notice of Iroquois forays are of slight moment compared with Brébeuf's careful description of the Huron people. He had by this time overcome the language, and could eke out what he saw with the report of what he had gathered in conversation. The second

and by far the longest part of this Relation is entitled, "De la creance, des mœurs et des coutumes des Hurons." He begins *ab ovo* with the nation's theory of its origin, proceeds thence to its views of the soul and religion, comes in the third place to civil organization, and at the end describes the solemn funeral of the dead. The chapter on the conduct of councils shows the race at its best. We have more than once, in the course of notes on this subject, stigmatised the filth, cruelty, and other baser traits of the Indians. To do justice by the Huron braves we must quote what Brébeuf says of their public speech: "Quasi tous ses esprits sont naturellement d'une assez bonne trempe, ratiocinent fort bien, et ne bronchent point en leur discours; aussi font-ils état de se moquer de ceux qui bronchent; quelques uns semblent estre nés à l'éloquence."

—One of the most useful pieces of work by the lamented Prof. F. D. Allen was his little book called 'Remnants of Early Latin.' Its worth was speedily recognized, and since its publication, now nearly twenty years ago, it has served as a text-book in many colleges in this country, as well as in at least one German university. Its thorough revision, which the learned author had begun, was cut off at the very outset by his sudden death. In that very month, last August, is dated the preface of Mr. W. M. Lindsay's 'Handbook of Latin Inscriptions' (Boston: Allyn & Bacon), a book of about the same size as Allen's, and intended, like his, to treat of the history of the language through the medium of inscriptions, with brief explanatory notes. It is a curious coincidence that Mr. Lindsay, who is a Fellow of Jesus College, Oxford, should have recently accepted an invitation to give at Harvard, during the second half of the academic year, lectures on some of the subjects which Allen had expected to treat there. Mr. Lindsay's new book carries the history down much farther than Allen had gone, and discoveries of inscriptions since the publication of the 'Remnants' enable him to begin earlier; his examples extend, in fact, from the Praeneste brooch, which belongs perhaps in the fifth century B. C., to the "Judgment of Pepin" in the middle of the eighth century of our era. The selections are excellently made, and the book, used in connection with the author's 'Short Historical Latin Grammar,' from which much of the explanatory comment is drawn, will be a real boon to teachers and students. Here and there, perhaps, the tone is a little too dogmatic, and sometimes we miss a hint that there is another side to the shield; but such failings must always be whenever a man sets out to compass infinite matter in a little room.

—On January 6 Herman Grimm celebrated his seventieth birthday. Not long before, there appeared a new edition of his 'Novellen' (Berlin: Wilhelm Hertz), first published in 1856. This, after the lapse of more than forty years, is a gratifying evidence of vitality in the work of a man who, with unimpaired intellectual vigor, continues to exert a strong and healthful influence in the world of literature and art. During all this period Grimm has steadily resisted the gentle demand on the part of friends and admirers for the republication of these charming tales. He had in the meantime gained a wider fame as the biographer of Michael Angelo, Raphael, and Goethe, and as the author of the fine and suggestive essays to whose number

he is still adding year by year; he felt that his stories, the productions of his youth, appearing in the midst of a generation which had grown to maturity since they were written, might create the impression that the scholar and essayist had turned once more to story-telling. On the same ground he had repeatedly refused to allow them to be rendered into English. Throughout the first half of his life Grimm was exclusively the poet. The late Prof. Brunn has related how, at parting from Grimm in Rome, the latter announced his intention of winning a firm foothold in some special branch of scholarship. After several years of diligent preparation Grimm produced the 'Life of Michael Angelo,' but he has always remained essentially a poet; it was this poetic faculty that enabled him to reconstruct the Chaucercento. In all his work is observable the intellectual guidance of Goethe. Upon Grimm descended the afflatus of that august spirit, and in him were preserved the finer inspirations of the spiritual movement which began in the young enthusiasms of Herder and Goethe. In the 'Novellen' of Grimm this spirit and these inspirations are winningly manifested. They are the products of a mature but youthful mind which, as he says of one of his characters, "knew from hearsay that there was a future, and to which the past had already become an unknown land to whose shores memory never returned." They are the works of a poet who finds his materials in the everlasting now, using recollections of the past and seer-glimpses of the future only as diaphanous veils the better to reveal, as Schlegel said, the all too near actuality of the present.

—An appreciative notice of this reprint, by Anton Bettelheim, appears in the January number of *Cosmopolis*. "Even an indifferent reader," says the reviewer, "in reading the more impassioned scenes of these stories, is overcome by an emotion such as only the last scene of Goethe's 'Geschwister' calls forth"; and he speaks of Goethe's narrative manner as unmistakably evident in Grimm's style. Of these stories, the two most distinctively German both in subject and in treatment must also be regarded as the best, "Das Kind" and "Der Landschaftsmaler." The original of the "Child" belonged to the author's immediate circle, and the scene of the "Landscape Painter" is Wiepersdorf, the estate of the Arnim family, where Bettina von Arnim, Grimm's mother-in-law, now lies buried. Deep, true sentiment characterizes these tales, and Bettelheim confesses to a feeling of contentment and rest at finding himself "in this timeless world of peace, among noble natures of splendid uprightness and sincerity." And it is a pleasure in this "Jahrhundert der Verwelfung," as Grimm himself has called the present age, to see these gentle children of peace and beauty reappear by the side of Sudermann's and Hauptmann's disquieting creations. Meanwhile, the author pursues his philosophic way, living only with the best, perceiving the good in what is new and strange to him, and understanding even the worst that is thrown upon the shores of every new day by the restless wash of the intellectual tides.

—In a note in the *Monthly Weather Review* for September, Prof. Bigelow writes that meteorological observations are being made to ascertain the probable state of the sky at several stations along the path of the

total eclipse of the sun, May 28, 1900. The 1900 eclipse in this country passes from New Orleans northeastward to Norfolk, Va., and Prof. Todd's original plan for the observations has been followed. Beginning with May 15, 1897, continuing until June 15, so as to include May 28 centrally, observations were made at sixty-six stations, along the track covering quite uniformly the States of Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, and Louisiana. The general state of the sky at 8 A. M., 8:30, and 9:00 was noted, the instructions reading: "Observe carefully the state of the sky over the whole heavens, and enter the following notations: 0=sun entirely clear; 1=sun $\frac{1}{4}$ clear; 2=sun $\frac{1}{2}$ clear; 3=sun $\frac{3}{4}$ clear; 4=sun all cloudy." At the same hours the sky near the sun was observed, as "sun clear from clouds; in scattered clouds; in a mass of clouds; quite invisible," represented by the same figures. The observers are largely voluntary. An inspection of the tables already collected seems to show that conditions in the interior of Georgia and Alabama are better than in North Carolina, South Carolina, or Louisiana. Another table shows that a minimum of cloudiness prevails for May in the South Atlantic and Gulf States, this season of the year being therefore generally favorable for eclipse work. As these observations will be repeated at like hours and seasons in 1898 and 1899, the selection of stations for the 1900 eclipse can then be intelligently made.

RECENT LAW BOOKS.

The latest publication of the Selden Society, 'Select Cases in Chancery, A.D. 1364 to 1471,' though bearing the imprint 1896, belongs, so far as this country is concerned, to the succeeding year. It is edited by William Paley Baildon (London: Bernard Quaritch). The bill in chancery underwent less changes and vicissitudes than almost any other legal document from the earliest times down to its abolition in 1873. Most of the well-known heads of equity we find at a very early date, and one of the primitive illustrations presented in this volume is amusing. The battle of Agincourt was fought October 25, 1415. In this battle John Craven and Simon Irby took certain prisoners, names unknown. The prisoners were, however, wrongfully taken away and ransomed by one William Bukton, without satisfying either the King or their captors. The latter thereupon file their bill, informing the Chancellor of these facts, that a sum of two hundred marks, part of the ransom, is in the hands of the wife of the Treasurer of Calais, and praying for an injunction forbidding him from letting it be delivered to any one before trial, and for the discovery from Bukton of the names of the prisoners. The author of the writ of subpoena is not yet known, but it seems to be made out that his great achievement was the discovery of the possibility of substituting a definite pecuniary penalty for an indefinite threat of something terrible.

Mr. W. A. Watt is the author of an essay on 'The Theory of Contract in Its Social Light' (Edinburgh: T. & T. Clark). He says that he has attempted "to investigate the fundamental conception and chief social relations of contract." This suggests metaphysics, and so does the opening sentence: "The borderland between Ethics and Jurisprudence is full of interest." The author is

unaware of the danger which lurks in the attempt to define terms connoting a whole history in themselves. Sir F. Pollock, giving it up, avoids definition and describes contract in elegant terms. The Indian Contract Act, with audacious brevity, makes it "an agreement enforceable by law," which adds nothing to the term and gets us no nearer the "fundamental conception." Mr. Watt writes eighty-three pages about it, and reaches the conclusion that "we must endeavor to find an adequate theory, by making Philosophy and Jurisprudence criticize each other; by reading Hegel with the eyes of Savigny, and Savigny with the eyes of Hegel; by interpreting Drs. Caird and Sir Frederick Pollock each in terms of the other; by following for ourselves, so far as we may be able, all the currents of thought, from whatever side they may come, and striving to determine the total result." If we are not mistaken, this is not law, but what is often called jurisprudence. In order to criticize it at all, we are forced to turn to some practical question, such as "Is Marriage a Contract?" discussed in chapter iii. We find here that Mr. Watt regards marriage as properly an institution, or, as a Common Lawyer would say, a domestic relation, and we are entirely of his opinion.

The book is not for practitioners, and bears the same sort of relation to a practical book of the law that metaphysics does to science. Therefore, we have no doubt that it will be read by a number of people with much interest. The metaphysical stage in law, as a Comtian would say, is not by any means outlived yet. Socially, the book may be described as the work of an equilibrist, who balances so justly the conflicting claims of various theories that it is impossible to make out what his own, if any, are. How does it advance matters to be told that the woman question is one of "Applied Ethics"? (p. 37).

A 'Treatise on the Criminal Law as Now Administered in the United States' (Chicago: Callaghan & Co.), by Emlin McClain, is a compendium of the whole subject. The endeavor of the author has been to make use of every criminal case of general value decided in the courts of last resort in the United States and England, and in the course of his work he has cited some 20,000. Of course, under these circumstances it is impossible that there should be much discussion or examination of the reasons on which the law is founded; brief statements only of the rules are given. These are accurate and cover the field.

In 'Common-Law Pleading: Its History and Principles,' by R. Ross Perry (Boston: Little, Brown & Co.), the author gives the gist of Chitty and Stephen on Pleading, and Dicey on Parties. In addition to this, he incorporates many of the results of the researches of Maine, Pollock and Maitland, Bigelow, Holmes, Thayer, and Ames. The book consequently contains much of the substantive history of the common law. The production of a book of this kind for the use of students shows what a vital hold upon our law the old system of pleading, though nominally superseded and done away with, still maintains. This is, no doubt, owing partly to a fact which our energetic law-reformers of fifty years ago overlooked, and which accounts for many present anomalies—that while they abolished common-law pleading and practice, they forgot to abolish the common-law trial. Keeping

trial by jury, and the consequent separation of findings of law and fact, they preserved much of what they thought they destroyed. Common-law pleading doubtless might have been wholly destroyed, for we have in equity pleading, and in admiralty, a different system; but so long as trial by jury, or the peculiar system of which it is an integral part, is preserved, common-law pleading must be to a certain extent studied by any one who wishes to attain a thorough comprehension of the reformed system. Without some knowledge of the older system, it is impossible for the student to distinguish between the different kinds of actions and remedies, and it is still true of the distinction between these, as Mr. Justice Grier once said, that it "lies in the nature of things," and "is absolutely inseparable from the correct administration of justice in common-law courts." Even the Legislature "cannot compel the human mind not to distinguish between things that differ." Besides all this, the history of actions and pleading is the history of the law itself. Our legal storehouses are full of substantial rights, the common property of all. But the seed of this great harvest was nothing in the world but the writs and declarations and pleas and demurrers of the precise logic of a more primitive legal world.

A book of a very different sort is Charles M. Hepburn's 'The Historical Development of Code Pleading in America and England' (Cincinnati: W. H. Anderson & Co.). It is a valuable compilation, giving an historical account of the rise and progress of the modern system of pleading in the modern English-speaking world. It brings out the fact that the movement set on foot by Bentham has virtually resulted in producing one uniform system everywhere. Of this system the essential features are the single form of action (if that can be called a form which has none), the statement by the plaintiff of the facts of his case, and the requirement that these facts shall be admitted or denied specifically by the defendant, who then sets up any affirmative defence that he may have. Why, then, the reader will ask, is the system productive of such different results in different jurisdictions? Why does it produce simplicity and certainty in the courts of England and the colonies, and so much dissatisfaction in New York, the first American State which introduced the system? The author does not discuss the question in this aspect, but he points out the radical change which the present English and colonial system has introduced, and which we have thus far steadily refused to adopt. The English regulation of practice is judicial, while ours is legislative. What we call a practice act, or a code, consists, in the English system, in great measure of flexible rules of court which may be judicially modified whenever the interests of justice demand.

"The framers of the English system appear to have thought that the most direct course to the end which both systems have in view—a complete and final determination of a controversy in its entirety and according to its essential facts—was to put the least possible restraint upon the discretion of the court in dealing with a case; on the other hand, our codes have kept close to the common-law theory that judges should be required to exercise no more discretion than is absolutely necessary" (p. 200).

The result of this difference is that questions of pleading and practice in New York must be looked up in a book containing

over three thousand pages and an act containing 3,441 sections. After half a century's work, we are still endeavoring to get a good system out of a legislature, when all our experience shows that it cannot be done. We have confounded with the rules of pleading, which can be stated in permanent form, and which are now the same everywhere, the network of procedure, treating questions relating to it as if they were matters of substantive right, to be fought over at every step, to delay as much as possible the final decision of the suit, and make as much opportunity as may be for future litigation, instead of being mere matters of judicial administration, which judges only are competent to provide for, and into which legislation can only introduce disorder. The idea that judges cannot be trusted to deal equitably or conscientiously with the questions presented is so preposterous that it is difficult to treat it seriously. Every one knows that in our system it is the courts which preserve our rights and the Legislature which invades them. Can we put life, liberty, and property in the hands of the judges, and not their own practice? No good can possibly come of the American system as it now exists in the chief State in the Union, and we have no sort of doubt that just as England originally took the reformed pleading from us, so we must take the reformed practice as developed in England.

Among recent additions to the Hornbook Series is a 'Handbook of the Law of Private Corporations,' by Wm. L. Clark, jr. (St. Paul: West Publishing Co.). Mr. Clark, who is the author of three other Hornbooks, states in his preface that his treatise is not intended to deal with corporation law in its application to particular classes of corporations, but only to give general principles. To some unsettled points he says he has devoted more space than is given them "in the larger works," e. g., the doctrine of corporations *de facto*, of estoppel to deny corporate existence, of subscriptions to stock prior to incorporation, of watered stock, and of stock as a "trust fund" for creditors. Where we have examined his work, it seems to be conveniently arranged, and the author vouches for its having been written "from the cases themselves." Since the appearance of Mr. Morawetz's treatise, any writer must follow more or less in his footsteps, and accordingly Mr. Clark is at great pains to explain in his "corporation defined" that a corporation's personality is a mere legal fiction, introduced for the convenience of the corporation in transacting business. This makes his definition really a description. It is a page in length. Chief Justice Marshall, a pretty good authority in his day, defined a corporation in a dozen words: "An artificial being, invisible, intangible, and existing only in contemplation of law." This has never been improved upon, and Mr. Morawetz, who has a great gift of clear statement, opened his book with it. The definition does not conflict with the fact that all legal rights and duties really inhere in natural persons, and a corporation will necessarily remain a "person" in law to the end of time. To our minds, to say that this is a figure of speech is misleading. It is an abstraction, like a state, a church, or committee, and totally different from a real legal fiction, like those invented to give vitality to the old action of ejectment. The Erie Railroad is a true legal person; John Doe and Richard Roe were creatures of the ima-

gination, evoked from the shades. It is pointed out in Pollock and Maitland's 'History of English Law' that, in the case of a corporation, what we personify is not the associated group of men, but "the purpose for which they are associated."

A 'Treatise on the Law in Relation to Promoters and the Promotion of Corporations,' by Arthur M. Alger (Little, Brown & Co.), is an important publication. The subject is one of great and growing interest, and there is no other treatise on it. The reason why the matter has not been treated separately before is because the cases relating to promoters and the business of promotion do not constitute a special branch of law—the word "promoter" itself is not a legal, but a business term. Notwithstanding this, the promotion of corporations is sufficiently specialized as a matter of fact to make the principles of law applicable to it capable of being grouped under well-defined heads, and Mr. Alger has done this very well.

In order to understand the law of the subject, the mind has to be freed from the primitive idea of a corporation as a voluntary assemblage of small contributions of capital for a common purpose, and to conceive it as in many cases an artificial being, called into existence by persons who have objects of their own to advance, which objects may have little to do with those of the corporation. Thus, a man may promote the organization of an electric-light or gas company in order to dispose of patents which he has bought, a mining corporation in order to dispose of a mine, a fertilizer company that he may "unload" a phosphate island. To accomplish such objects, he must induce a number of people to contribute capital, and as these people will constitute the corporation, he is said to stand to them, or rather to it, in a "fiduciary" relation. But this term does not mean that the promoter is a trustee for the corporation.

"Familiarity with trusts and the language employed in connection with them has led to the description of the relation as a fiduciary relation; and although this is not a very happy expression, it is not easy to suggest a better. What is meant is, that although there is no actual relation of trustee and *cuius que trust* between a promoter and an unformed company, yet that when he has succeeded in forming it, he is liable to it, in respect of frauds practised by him upon it, planned by means of agreements entered into before its formation, and the real nature of which is carefully concealed from every one except those who profit by them. The frauds thus perpetrated are obvious when discovered, and the doctrine of fiduciary relation has been invented or extended in order to defeat them."

This is the language of Lord Justice Lindley, and it can hardly be improved upon. Promotion is one of two things: it either involves ordinary mercantile dealing between man and man, or it involves cheating. In the former case no question as to the liability of promoters arises; in the latter the promoter's liability is based on fraud. When we ask what is fraud, the law can give no other answer than that given by the moral sense and practice of mankind. A chancellor will hold that to be fraud which other people of the same degree of enlightenment hold to be fraud. He will not hold every advantage gained by man over man fraudulent, but he will as a rule follow the best commercial code of honor of his time. Thus, when Park and Stewart went to England to sell the Emma mine, they agreed with a

promoter, Albert Grant, to sell the mine for \$1,000,000, to a corporation to be organized for the purpose of buying it. But Grant was to have a commission equal to 20 per cent. of the capital stock, and this was kept secret. In other words, the real price was not the nominal price, and the company was accordingly held entitled to recover the secret profit (p. 78). Another well-known case is that of Erlanger vs. New Sombrero Phosphate Co. A syndicate of which Baron Erlanger, a Paris banker, was the head, purchased, for £55,000, an island said to contain valuable mines of phosphate. A corporation was got up by Erlanger (who managed the purchase) to take over the island and work the mines. He named five persons as directors, and they, or a sufficient number of them, were practically under his control. The island was put in at £80,000 in cash and £30,000 in paid-up shares, while the original price was not disclosed. On suit brought by the company, the contract was rescinded (p. 26), on the ground, as stated by Lord Cairns, that the directors' meeting by which the operation was accomplished was "little else than a mockery and a delusion."

"The Law of Mines and Mining in the United States," by Daniel Moreau Barringer and John Stokes Adams (Little, Brown & Co.), is the title of a new book on a subject of growing importance. It is preceded by a geological preface, with plates by Mr. Barringer—a "new departure" in a legal textbook, and one which, in this case, undoubtedly adds to its value. Without some knowledge of geology, neither mining terms nor mining law can be understood. The book is dedicated to Mr. Justice Field, and very naturally; his judgments forming the basis of the whole mining law of the country. This law is now mainly statutory, and the plan of the work, which seems well carried out, is to give the statutory regulations in a rational order, with gloss and cases. We are surprised to see (p. 178) that the effect of the authors' statement about the question of State ownership of minerals is to minimize the importance of Justice Field's great California decision on the subject. The Judge, in his privately printed reminiscences, says that the doctrine "perished"; the authors think that it is merely "extremely likely" that his opinion "would be followed"—a strange way of putting the matter. The fact is, that the decision represents the rout of the State of California in a great legal battle—a rout so disastrous that no mining State has since cared to revive the attempt. The value of the book is mainly that of a practical compendium.

Mr. Edward Lyman Short of the New York bar has added to the text-books on railway securities a volume on "The Law of Railway Bonds and Mortgages in the United States of America" (Little, Brown & Co.). Where we have consulted it, it seems full and accurate. The subject is a thorny one; we notice that Mr. Short points out (§§26, 286) that two theories under which railway frauds are often successfully practised, have no foundation in law. One of these is, that a railway mortgage is a sort of town meeting, in which anything that the majority favors must be done; the other is, that every bondholder is a law unto himself, and can consequently do what he pleases without reference to other bondholders. Directors or bondholders who act on either theory are badly advised.

"The Law of Sales of Personal Property,"

by Prof. Francis M. Burdick of Columbia (Little, Brown & Co.), is intended specially for students, and is confined to the discussion of the principles applicable to this class of contracts. It is assumed by the author that the general principles common to all contracts are already understood. It seems to be also assumed that the student knows what is needful about the Statute of Frauds. In fact, the book reads in places rather like the materials for a course of lectures than a completed introduction to the difficult topic of sales. It is a small magazine of learning which Prof. Burdick can no doubt readily use among his own students, but which others might not find so available. On the whole, we should say that, with sufficient oral explanation, it might as a hand-book be made very useful.

However, we must protest against the definition of sale on page 1, where we are told that the seller "engages to pass the general property in a thing, and to deliver possession thereof, to the buyer for a price." Neither Blackstone, nor Kent, nor the Supreme Court of the United States says anything of this sort. Delivery of possession is no necessary part of a sale. A may sell B his ship lost at sea, for what it may be worth if recovered from the bottom; but he is not obliged to deliver the ship. Benjamin's definition—"a transfer of the absolute or general property in a thing for a price in money"—can hardly be improved upon. That the author himself is at home with the subject, notwithstanding this slip, can be seen from the care with which he guards against one or two common mistakes (committed, alas! even by judges on the bench), *e. g.*, that of confounding an executed with an executory sale, and the almost criminal error of talking about a vendor's "lien on goods which still belong to him."

The annotated "Negotiable Instruments Law," by John J. Crawford (Baker, Voorhis & Co.), gives the statute as passed by the New York Legislature. In 1896 the conference on Uniformity of Laws held at Detroit took steps to codify the law relating to bills and notes. The matter was referred by a committee to the author as draftsman, and his draft was printed and sent to lawyers and judges both in this country and in England for criticism. In 1896 this conference, representing fourteen States, amended and adopted his draft. Since then it has become a law in New York, Connecticut, Colorado, and California. The fate of this experiment will be watched with interest. Will the Legislatures of the adopting States leave the law alone, or will they alter and make patchwork of it? Sec. 262 enacts that protest, if not made by a notary, must be made by a "respectable resident." Does this enable an issue to be made as to the social standing of a merchant who, in default of a notary, protests? The old rule appears to have been, that, by custom, merchants and officials other than notaries might sometimes protest. The rule never gave the courts any trouble; but we venture to predict that the statutory form of it will be found to open a way for contention and delay which would not otherwise have existed.

"An Outline of the Law of Libel," by W. Blake Odgers (Macmillan), consists of six lectures delivered in the Middle Temple Hall

during Michaelmas Term, 1896, at the invitation of the Council of Legal Education. It does not deal with the allied subject of slander, except where it is necessary to distinguish that species of wrong from libel. Mr. Odgers's well-known treatise or digest covering both topics is a proof of his competency to deal with them, and in two hundred pages he manages to give a key to the law of libel, condensing this again into a summary of twenty. In this outline he goes over the general principles governing libel, the question of "fair comment" on matters of public interest, of construction and justification, of privilege, and of malice, and concludes with a chapter on criminal law. The book is intended for beginners, and in many respects resembles Mr. Augustine Birrell's little hand-book of six lectures on Trustees. It is written in a popular style, and there are always difficulties in making a popular style adapted to a law book; but it is clear and to the point, which is the main thing. Some of the illustrations are very pat: *e. g.*, under the head of justification, wishing to illustrate the fact that truth in law does not mean mere adherence to the letter, the author says: "If Mr. Weller, sr., wrote to his son that 'the Rev. Mr. Stiggins drinks,' it would be idle for him to prove at the trial that the reverend gentleman occasionally sipped a glass of water, if the jury think that the words impute that he habitually drank to excess." In the chapter on privilege, he shows very clearly that "malice in law" is a fiction, and consequently, if the law is said to "presume" it, he can "only echo Mr. Bumble," that the law must be "an ass." This style evidently has its dangers. Speaking of the old dictum that "a seal imports consideration," he declares that "you might as well say that a man must have a handsome balance at his bank because he has a handsome knocker on his front door," which is amusing, but implies that the dictum is sheer nonsense or insanity, which is not true.

Mr. Odgers's levity of style is connected with a certain hastiness of judgment which is sometimes calculated to mislead the student. Out of his scanty space he gives up a page to the suggestion that a fair comment may become actionable, owing to actual malice in secondary publication. To clinch the matter he supposes that A and B are both suitors for the hand of the same lady. A writes a book which is severely, but fairly, criticised in a newspaper. B reads this, and maliciously sends a copy of the criticism to the mother of the young lady, intending to injure his rival. Mr. Odgers declares that he thinks an action will lie for this, but is able to cite nothing directly in point. Of course it may be that what is a fair comment as originally published by A may become actionable through being maliciously used by B, but the imagined case is far from a good means of strengthening the author's suggestion. To our mind, the illustration throws doubt on the proposition it is intended to fortify. Curiously enough, a real illustration of words originally innocent becoming actionable through misuse (though here the words originally were spoken) is given at p. 7, in the case of the man who told as a good joke a story of his having been taken for Jack Ketch, on which the defendant meanly published the story in his newspaper, and so led people to point at the plaintiff and call him Jack Ketch. The defence's attempt to prove that the story was

set in circulation by the plaintiff himself was unsuccessful. This little book may be strongly recommended to any beginner who wishes to fix in his mind a general outline of the subject, and he will find it, moreover, very entertaining. For the layman it is hardly intended.

RECENT NOVELS.

The Tower of the Old Schloss. By Jean Porter Rudd. G. P. Putnam's Sons.

A Pretty Bandit. By Frank Bailey Millard. New York: The Eskdale Press.

Clever Tales. Selected and Edited by Charlotte Porter and Helen A. Clarke. Boston: Copeland & Day.

The Stepmother. By Gregory Xenopoulos. Done into English by Mrs. Edmonds. John Lane (The Bodley Head).

A Story-teller's Pack. By Frank R. Stockton. Charles Scribner's Sons.

The Statement of Stella Maberly. By F. Anstey. D. Appleton & Co.

A Transatlantic Chatelaine. By Helen Choate Prince. Boston: Houghton, Mifflin & Co.

The Burglar Who Moved Paradise. By Herbert D. Ward. Boston: Houghton, Mifflin & Co.

Gold; A Dutch-Indian Story. By Annie Linden. The Century Co.

Tales from a Mother of Pearl Casket. By Anatole France. Translated by Henri Pène du Bois. New York: George H. Richmond & Co.

Sketches in Lavender, Blue, and Green. By Jerome K. Jerome. Henry Holt & Co.

The Express Messenger, and Other Tales of the Rail. By Cy Warman. Charles Scribner's Sons.

Uncle Lisha's Outing. By Rowland E. Robinson. Boston: Houghton, Mifflin & Co.

Lying Prophets. By Eden Phillpotts. Frederick A. Stokes Co.

'The Tower of the Old Schloss' is a pleasing little story of 'The Old Ma'mselle's Secret' type minus the mystery. There is no secret; only an agreeable amount of Austrian-Tyrolese landscape, a haughty Baroness, and the rest. The novelty in the book is the extraordinary rendering of Tyrolese dialect into a hodge-podge of English, German, and Scotch. For example: 'Hei, thee hat right now; as lang as I hae lived, an' I hae lived lang enough, I've nit-a seen the man yet as are worthy of it.'

'A Pretty Bandit' and the tales which accompany it are much, yet not over-much, lauded when it is said that, dealing with the interminable alkali plains, the eternal sage-brush, and the inevitable cowboy, they have yet freshness and crispness and newness enough to make a very entertaining and original volume.

Is it because we are making strides in story-telling that the French *conte* does not necessarily now strike us dumb with admiration and wonder? 'Clever Tales,' to which France, Russia, and other Continental countries have contributed, are clever, truly, for the most part, yet cause one to reflect that cleverness may become tiresome, as in 'The Phoenix,' 'Milton's Daughters,' and 'Newton's Brain'; and that, as shown in many of the rest, cleverness allied to ghastliness or to motiveless coarseness, is a combination of which by this time, let us hope, we are all heartily weary. 'Karen' is an honorable

contrast, humorous, melancholy, and not repulsive.

A tale of every-day life in modern Athens, by a modern Greek, put into English, is sufficiently a novelty to command the attention of fiction-seekers. 'The Stepmother' is, moreover, a story of some attractiveness, giving a glimpse of the Athenian home, and having as its motive the question of the advantages of early marriages. That the hero is only twenty years younger than his father, leads to a serious situation which only just does not wreck the family. The story may be read with interest, whether or no it is persuasive as to the desirability of keeping one's parents as old as possible.

When Mr. Stockton returns to his short stories, he comes again into his own and we into ours. Therefore, for 'A Story-teller's Pack' we thank him. If in one or two instances the humor hovers on the edge of that steep which falls away into flatness, there is the saving grace of a speedy ending to the matter, and we pass on, finding, all told, very little from cover to cover that does not sustain Mr. Stockton's unique and enviable reputation.

In no disparagement be it said that Mr. Anstey's books recall the remark of the Tennysons' family servant, that 'you might coomb hell with a fine-tooth coomb, and you would not find their likes.' 'Miss Maberly's Statement' is, no less than his others, a case in point— weird, wild fancy costumed as common sense. If one does not believe in his magic, it is not his fault, for all is systematically and logically elaborated and set down in plain good English. To tell the story would be to dull the surprise for the reader, to whose personal inspection, therefore, we commend the puzzle.

'A Transatlantic Chatelaine' is written in a fine and lofty style, and teaches a rare and noble lesson—that of fidelity to duty without story-book reward. Its effectiveness as a novel is marred by the inconsistencies of the heroine's character, who, with a pure, cold, rarefied soul, is imposed upon by unworthies whose detestable qualities cry aloud at the first glance. The villain is not only so, but a cad, and would hardly have deceived such a nature as Sylvia's, even for an hour. The circumstances which lead to her wealthy widowhood (and wealthy widowhood, of course, was imperative if she was to become a French chatelaine) are a tax on credulity, and the detailed account of her father's career a tax on patience.

In light, bright, and charming vein is Mr. Ward's 'Burglar Who Moved Paradise.' If there is a suspicion of Stockton in its composition, surely none will object (unless Mr. Stockton does); there is, to boot, a composite quality, compounded of fun, sentiment, and salt water, which is almost to be called a new combination and which is thoroughly pleasing.

'Gold,' so far as known to the present reviewer, is the first Dutch Indian novel that has seen the light of day. It has the merit of absolute originality in its scenery and its figures. There are the Dutch Indian islands, there are Orientals of every sort from Chinese to Javanese, and the dwellers in Moa. The hero, a perfectly commonplace young Amsterdam merchant, falls a prey to the gold craze, through reading in old Malay manuscripts of the Mountains of Moa; he persists in a crazy expedition, and only his lady-love's devotion saves him from destruction. There is a good deal that is interest-

ing in the accounts of people and places, even though the latter are filled with poisonous horrors and the former have 'manners which are none and customs which are disgusting.' The story needs an oiled feather, for the imaginative and the realistic are not welded with skill. It is at moments horrible, at other moments flat. Yet it is striking and readable, and serves to make one grateful not to have had his lot cast in Dutch India.

The tales of Anatole France have much of the mother-of-pearl texture of the casket whence they are taken—its firmness, its smoothness and finish, its variety and delicacy of tint. They are the tales of a scholar, and range from Roman Judaea to Revolutionary France. Of the sixteen the sketch of Pontius Pilate is the most learned and one of the best. There is a very good one of the first French Republic, the journal of a recruit, and a charming one or two based on monastic legends. In others we find the historic sense rather over-keen for the sickly; and the mystical sketches are very mawkish. In a tale of spiritualism, referring to the well-known William Crookes of England, a sentence runs: 'Moreover, William Crookes was deprived suddenly of the aid of the incomparable dead lady who had gracefully granted to him several spiritualistic séances.' The translator, obviously a Frenchman, has a copious vocabulary and a command of construction, but has not escaped the snares which await the foreigner who tries to master our *will* and *shall*, our *has been* and *was*. An occasional sentence reminds one of Madam Eve, as when the young hermitess, Oliverie, is not frightened by having a unicorn enter her kitchen, 'one day that she was weaving wool'; knowing that 'the unicorn never does any harm to misses who are wise.' Misses will please note the fact in case of unicorns in or out of kitchens.

Of Mr. Jerome's nine tales and ten 'character-scapes' there are good, bad, and indifferent, but the greatest number is good—good in the Jerome style, let it be understood, with his well-known alternations of the ingenious with the commonplace, the clever with the cheap, the fanciful with the sordid. A well-edited Jerome might be a book of real diversion; and, by the way, will the maker of that edition kindly omit illustrations?

Locomotives and Indians, separate and combined, have found an eloquent biographer in Cy. Warman. He knows his locomotive as Howells his Venice, as James his international heart. And he makes the reader know it in a series of sketches which are certainly not void, though they have little form. They read like synopses rather than accomplished work, with their lists of characters, engines, Pawnees, Sioux, firemen, drivers, and road-agents, and their galloping recapitulation of disasters and escapes. The language is an odd fusion of scenery-English and the slang which came with electricity and the development of the West, and which is not ill-suited to the theme, though 'stroking his long gray Peffers' may well contract the heart of the stoutest patriot. But it is the nature of the engineer to use local color in his speech, of the Indian to scalp, and of the locomotive to lead an errant life when it is not sulking; and these are stories of the rail, and as such fulfil amply and ably their promise.

'Uncle Lisha's Outing' is chiefly interesting

as a study in early Vermont philology; and of its gems of speech there are no two of purer ray serene than Antoine's "Jonesick," and (in response to "I druther") Uncle Tyler's "You'll get your druther." We do not underrate the joys of camping and hunting in Vermont wildernesses of half a century ago, nor the never-falling thrill of a glimpse of the underground railroad, nor the felicity of meeting again our old friends the Danvis Folks—old Uncle Lisha, for ever young; Joseph Hill, for ever cautious; Ann Twine, the French Canadian, for ever amusing; yet we confess that, in lieu of six days of the landscapery, the dialect, and the duck-massacring, three would have contented us.

Landscape and dialect abound also in Eden Phillpotts's book, 'Lying Prophets,' but as accessories to a heavy-hearted story of no little power. The novels that come up out of Cornwall are ever woful and tragic. From Isolde's time to this, so has it been. The Cornish coast is cruel, the melancholy of the sea touches life at every point, religion is as sombre as the granite crosses on the moors, and even joy and sunshine seem only will-o'-the-wisps leading to doom. Such is often the impression from Cornish tales, and such particularly comes from this one, where we meet, austere of the austere, the "Luke Gossellers," compared with whom Calvinists are freethinkers. Against their doctrine comes clashing nature-worship as practised by a London artist, but practised solely in the interest of his own art, and between the two forces the tragedy is struck into pitiless flame. "Lying prophets both" who preach these two religions, says to poor little Joan the good Uncle Chirgwin, who "has the faith that moves mountains." It is a painful and a moving tale, full of sad orthodoxies and sad heresies; told with a force which would have been heightened, to our thinking, by abbreviation of many scenes and descriptions. The characterizing is extremely well done; every person stands out strong and alive. For the time one lives in Newlyn and shares the common lot. The talk of the village fisher folk among themselves has the living and often the luminous quality of that of the country people in 'Adam Bede' and 'The Mill on the Floss.' And the beautiful Cornish dialect—can one have too much of it? "The auld stones speaks to me solemn, though they can't talk. They'm wise voiceless things and brings God closer. An' me an' all the world o' grass an' flowers, and the lil chirruping griggans do seem so young beside 'em; but they'm big and kind."

WORKS ON MUSIC.

Pianoforte Study. By Alexander McArthur. Philadelphia: T. Presser. Pp. 141.

Portraits and Silhouettes of Musicians. By Camille Bellaigue. English by Ellen Orr. Dodd, Mead & Co. Pp. 302.

Kritik der Tonwerke. Von Julius Fuchs. Leipzig: F. Hofmeister. Pp. 552.

A Pilgrimage to Beethoven. By Richard Wagner. Translated by Otto W. Weyer. Chicago: Open Court Publishing Company. Pp. 39.

Stories of Famous Operas. By H. A. Guerber. Dodd, Mead & Co. Pp. 258.

Alexander McArthur knows more about the life and art of Anton Rubinstein than any other writer on music, being the author of the best biography of him so far issued, and one based on a friendly intercourse of many

years. The new book from the same pen has the sub-title of "Hints on Piano-Playing," and it may be said at once that, large as is the list of instructive works for students of that instrument, no other will do so much and in so pleasant a way to open their eyes and ears to what is essential in their art. It is not a mere treatise on technique, on which most pianists waste most of their time, but it pays special attention to the intellectual and emotional sides of the art, without which, in these days of rampant virtuosity, the most brilliant manipulators of the keyboard fail to command applause. In modern concert-halls brains are more important than nimble fingers. "It is better," says the author, "to practise an hour daily with your thoughts concentrated on your work than to practise five hours with your thoughts rambling." Some mothers would do well to read this book and note the damage done by injudicious flattery, as described on page 27. "All the geese become swans, and the number of young Paderewskis now flourishing would be amazing, were one to take a census from mothers only." "Of course it is lovely to be told that one has played a piece as well as, or even better than, Paderewski, but one should never forget to measure such praise by the ability and knowledge of the bestower."

The advice that Paris should be avoided by students of the pianoforte, because piano-playing in that city is at the lowest ebb, is perhaps hardly needed, as the great Mecca of students at present is Vienna, where dwells Leschetitzky, who is supposed to have the magic gift of converting sparrows into nightingales. Leschetitzky, the author points out, undoubtedly sends forth pianists perfect in technique, but very often defective in poetry. Paderewski was his pupil, but what is poetic in his playing was born in him, or is due to his own studies; his readings are his own. Paderewski is justly classed by the writer as one of the world's three greatest pianists, Liszt and Rubinstein being the other two; but the statement that there are just four great pianists to-day—Paderewski, Carreño, D'Albert, and Rosenthal—is questionable; there are many who would say that MacDowell and Joseffy have greater claims than the second and fourth in that list—in some respects greater than the third. Rosenthal is properly characterized as a mere virtuoso, and censured for his arrangement of Chopin's waltzes, "an atrocious example of musical taste, at the same time a brilliant exhibition of his grasp of counterpoint—but Rosenthal plays Chopin's Berceuse and Barcarolle too abominably for words."

Hans von Bülow recognized his own limitations. His playing of Beethoven was a revelation, but he had none of Rubinstein's fascination of touch or tone, and Chopin's poetry was beyond him. "I was never more struck by Hans von Bülow's wonderful critical powers," writes the author, "than when he said one day, during the lessons at the Raff Conservatory, to a pupil who wanted to play the A flat Chopin Ballade to him: 'I cannot show you how to play Chopin's Ballade, because I myself do not understand Chopin.'" Bülow owed his success as a teacher largely to his insisting that compositions should first be carefully studied with the eyes alone, away from the instrument. He himself "could play any piece—so highly had he himself developed this talent—after a short mental study." A musical

student must also make experiments. Rubinstein once told the author that he had spent thousands of hours in trying to find a particular tone he wanted. Many of his most wonderful tone-color effects were combinations of the pedals—which few pianists know how to treat properly. Excellent as the remarks on the pedal in this volume are, we must take exception to the recommendation that it should be used very little in Bach's Preludes and Fugues. There is in those pieces a dreamy, romantic spirit which can be revealed only with the aid of the pedal. There is also a slight misconception (p. 97) as to Wagner's attitude towards the piano. He did, indeed, at one time, speak of it slightly; but in his later essay on the Munich Conservatory he placed the piano in the front rank.

If a reader of the second book on our list should happen to open it on page 300, where it is stated that Wagner "passed by the beauty of the human voice almost without recognition. Despising, sometimes insulting human speech, he neglected," etc.—he would be likely to toss it into his basket as trash. But the judgment would be too severe, as there is nothing else equally foolish and antediluvian in the book. It is a series of rambling essays on fifteen composers—Palestrina, Marcello, Pergolesi, Haydn, Mozart, Gluck, Beethoven, Rossini, Weber, Mendelssohn, Schumann, Auber, Berlioz, Meyerbeer, and Wagner. There is little in them that might not be found in more condensed form in the encyclopædias and musical histories, but lovers of Italian and French music, to which the bulk of the volume is dedicated, may find it to their taste. It must be said that there are other French books much more deserving the compliment of a translation than Bellaigue's; for instance, the 'Harmonie et Mélodie' of Saint-Saëns, or Julien's 'Musiciens d'aujourd'hui.'

Extremely silly but very useful—thus paradoxically might be summed up the criticism of the third book on our list. Herr Julius Fuchs undertakes the amazing task of classifying 2,576 composers mathematically in the order of their value—not individually, of course, from No. 1 to No. 2,576, but according to general divisions. These divisions are arrived at with the greatest ease. Following the ludicrous precedence of Naumann, Herr Fuchs puts the great composers up to Beethoven, and those only, in class I. 1; there are four of these lucky ones—Bach, Beethoven, Handel, Mozart; then in class I. 2 comes Schubert, all alone by himself. Class I. 3 comprises Gluck and Haydn. These are the first-rate composers—no romanticists admitted in this category. Then come the second class, II., 1, in which we find this happy family: Brahms, Mendelssohn, Schumann, Wagner, Weber. Herr Fuchs seems to be down on foreigners. So far, all the masters are Germans. At last, under class II. 2, he admits them—twenty-one of them, in fact; among them, Chopin and Mascagni, on the same rung of the genius ladder! It is to be feared that Herr Fuchs is lacking in a sense of humor; and what is more, he threatens to print another volume justifying his classification. Yet the present volume, as we have said, is very useful. The comic classification takes up only thirteen pages; the rest of the volume is divided into two sections; one (152 pages) gives a list of pieces for various instruments, or the voice, classified according to their degree of difficulty. This is followed by a list of the works of the 2,576

composers—very convenient for reference. The rank marks recur in this division, but they can do no harm.

When Richard Wagner was starving in Paris, he found that he could earn a few pennies by writing musical essays and novelettes. One of the best of the latter was a novelette entitled "A Pilgrimage to Beethoven," which, in a semi-autobiographic vein, describes a poor musician's journey to Vienna to see his idol, Beethoven. In ensuing conversations some of Wagner's own ideas are put into Beethoven's mouth; for instance, "If I were to compose an opera after my own taste and views, people would run away from it. There would be no arias, duets, trios, nor any similar stuff in it, with which they patch operas together nowadays." There is a good deal of pathos, too, in this novelette. It has been translated several times, but Mr. Carus's convenient edition is none the less welcome.

Some time ago Miss Guerber issued a volume on the "Stories of the Wagner Opera." Its success has encouraged her to write another, outlining the plots of the principal French and Italian operas, omitting those based on Shakspeare as being sufficiently familiar. The stories are not mere "arguments," as the opera-house programmes call them, but are told at some length; in 258 pages only fifteen operas are disposed of. They are "Faust," "Carmen," "Aida," "Huguenots," "Fidelio," "Don Juan," "Barber of Seville," "Martha," "Il Trovatore," "Lucia," "Norma," "Mignon," "Figaro," "Cavalleria," "Le Cid." There are also a number of pictures.

Life and Letters of John A. Roebuck, P.C., M.P. Edited by Robert E. Leader. Edward Arnold. 1897. Pp. vi, 375, with portraits.

These memoirs of a man who for a generation occupied a distinct place in British politics and died eighteen years ago, are judiciously written, and are likely to be of interest to those who remember his times. The public character of Mr. Roebuck is honestly brought out. It is one not particularly lovable or calculated to inspire enthusiasm. Mr. Leader admits Mr. Roebuck to have been "the sebra of politics," "a man of angles and peculiarities, uncomfortable to friends and dangerous to opponents." A leading journal is quoted as writing of him, after his decease, as having been

"a thorn in the flesh of the party to which he nominally belonged. Whatever good he did in public life—and he did some very good things, especially in the earlier part of his career—he did by well establishing himself as a thorn in the tenderest region of his party's organization, and shifting about there freely as that party moved."

If he believed that, in following the interests of England, he advanced "the interests of the whole human race," the manner in which, according to a newspaper of the day, "he put Roebuck first and England second, and the magnificence with which he was able to trace all his country's greatness to a judicious obedience to the Roebuckian behest, were characteristics which often proved irresistibly tempting to the satirist and the scoffer."

The Life should be interesting of any man born amid the purple of Anglo-Indian officialism, brought up in the backwoods of Canada, and who, not altogether without the use of fists and pistols, fought his way up

to the position of "Right Honorable." The reader will find himself somewhat bewildered in endeavoring to follow his tergiversations: a redhot Radical, a crusty Conservative—desiring the abolition of the Lords' veto, regarding them as the bulwarks of the state—the coadjutor of O'Connell and a lover of the Irish, their despiser and contemner—in favor of the abolition of all State churches, the supporter of even the Irish Church—a professed lover of freedom, the admirer of the Southern Confederacy. In Mr. Roebuck's case, as in that of other British politicians who have gone over to the Tories, we find it difficult to reconcile the Queen's sudden appreciation with the bearing of a constitutional monarch supposed to stand neutrally above party. "I have sent for you," said her Majesty, on Mr. Roebuck's reaching Osborne to be sworn on the Privy Council, "so that I might be able to express to you personally my high appreciation of what you have said and done upon the late trying occasions. I consider your conduct to have been that of a true patriot, and I am glad to have this opportunity of expressing to yourself my approbation and thanks."

We find many interesting notices of distinguished people. Judging of Mr. Roebuck, as we were accustomed, by his later career, it is curious to think of him as a sworn Benthamite, the associate of John Stuart Mill, the companion of the Taylors and the Grotes. We have a circumstantial account of his version of the causes that led up to his sudden breach with Mill. It varies essentially from that given in the Autobiography of the latter, where it is attributed to differences concerning the respective merits of Wordsworth and Byron. If this book has any special message to latter-day politicians, it is that seasons of discouragement such as that which came after the great Reform Act have before supervened apparently as deep as that through which they are now passing.

The Quest of Happiness. By Phillip Gilbert Hamerton. Boston: Roberts Brothers. 1897.

Disbelievers in hedonism are likely to derive more happiness than other people from this book. Its general effect is undeniably dreary and depressing, and this fact will be appealed to as demonstrating the unsatisfactory nature of the author's philosophy. It is substantially an atheistic stoicism; and stoicism without faith in divine rule seems to many but a broken reed on which to lean. The great practical rule of the Stoics was, Don't want what you can't get; and if this rule could be carried out, much unhappiness would disappear. The world, however, has never been able to adopt it, and even the virtuous Epictetus must have encountered serious difficulties in practising what he preached. To profess stoicism, as Gibbon, with Seneca's purse, was to enjoy at once the advantages of fortune and philosophy; but Seneca's soundness in the faith may be doubted. Man's nature is so full of longings and desires that he cannot tell beforehand which of them it is hopeless to try to satisfy, nor is the process of repressing feeling unattended with unhappiness.

There is, of course, as Lucretius observed, a pleasure in contrasting our lot with that of others less favored. As the worthy deacon put it in saying grace before his Thanksgiving

dinner, We are grateful that so few families will sit down to-day to so good a dinner as that which is on our table; and every one remembers Marjorie Fleming's list of reasons for thankfulness. There is certainly more of happiness in this state of mind than in envying those who are better off than we are; but happiness of this description is not of a particularly edifying character. Mr. Hamerton was scarcely consistent in admitting that the Pharisee in the parable ought not to have been proud of his supposed superiority to the Publican, although he might fairly be glad that he was not an extortioner, nor unjust, nor an adulterer. Might he not get as much happiness out of the first reflection as from the others? And if he could, why shouldn't he?

But such queries as this would soon lead us into the sloughs of casuistry, which Mr. Hamerton, to do him justice, avoided. With his definition of happiness it is not hard to prove it attainable. It means simply such a degree of satisfaction with our existence as makes us willing to live on as we are without any important change. "So long as we prefer conscious to unconscious existence, . . . there must be some degree of happiness in our lot." A small enough degree, however, as Mr. Hamerton not only held positively that the happiness hitherto enjoyed by the human race would not compensate for its sufferings, but also looked upon the sure extinction of life in the course of nature "without the slightest disapproval and with very little regret." But the fact that living was a poor business did not prevent Mr. Hamerton from courageously, and even heroically, trying to make the best of it, and his maxims not only will commend themselves to such as hold to his philosophy, but deserve the attention of those to whom it is repugnant. For, as he pointed out, no one practically disregards utilitarian considerations. Even those who do not make their own happiness an end, struggle to promote that of others; and if such a struggle is to go on, it is desirable to know how to carry it on successfully. Certainly no safer advice can be given than to avoid dwelling on unattainable ideals. "The power of seeing things as they really are, without being biased by the desire to have them as we think they ought to be, is, of all gifts, the most desirable, with a view to a rational though not an intoxicating kind of happiness." This is not the most elevating of doctrines, but Mr. Hamerton did not forbid us to dream of an ideal world, nor are those who think it base to seek happiness deliberately obliged to follow his precepts.

The most suggestive part of his book is that which illustrates the distinction between positive and negative happiness; but no doubt the whole of it will commend itself to his admirers. Perhaps it can be criticised no more justly than by quoting one of its sentences: "Happiness is much more nearly akin to self-satisfaction than is culture, and self-satisfaction is usually found in its highest perfection in narrow minds and in narrow lives."

Magic, Stage Illusions, and Scientific Diversions; including Trick Photography. Compiled by Albert A. Hopkins. New York: Munn & Co. 1897. 8vo, pp. 556.

This book has a distinctive character. Probably not fifty pages of it are filled with the stock of such publications, drawn from

Jerome Sharp and Ponsin. It is not a manual for amateurs, like Hoffmann's excellent volumes. It treats neither legerdemain nor the psychology of prestidigitation—a branch of the psychology of art which merits systematic discussion. Mr. Hopkins's main purpose seems to be to collect descriptions of mechanism for public illusions and stage-effects. These are eked out with photographic and other tricks, and with sundry contributions by Mr. Henry Ridgely Evans; so that on the whole the contents are somewhat promiscuous. There is a bibliography of white magic by Mr. Evans—naturally, a mere selection of titles with a few notes. It records the principal publications, as well as many others. That it is specially meagre in its English department is significant. For example, Baptista Porta's 'Magia Naturalis' is entered; not, however, the complete work, but only the first four of the twenty books which appeared in 1561, when the author was a boy. The popular English translation is not mentioned. Though Ozanam's 'Récréations' is given, the similar works written and translated by William Oughtred are omitted, even the somewhat celebrated book which pretends to be by Henry Van Etten. It is not in the French list, which ends with the letter R, so that

Salverte and all authors later in alphabetical order are missing.

As a sample of the contents, take that trick in which the rise of the curtain discloses two large cages made of slats, like hen-houses or drying-rooms, but raised upon legs, so that the spectators can see under them as well as through them. Indeed, the performer happens to have occasion to pass to the back of the stage, when he can be seen as he walks behind the slats, and his feet can be seen below. A brilliantly dressed odalisk, or Mohammedan lady, appears upon the scene and enters one of the cages. Shades, like those of a carriage, are attached to it, and are pulled down; but no sooner is this done than instantly the door is thrown wide open, showing the whole interior, and in place of the lady there is a "caliph," or man in old Turkish costume. Just then the odalisk enters the parquette by the regular entrance in the rear. The curtains of both cages are now pulled down; the caliph enters one and the odalisk the other. The latter is then hoisted midway to the ceiling. The doors are now shut, and a shot is fired; whereupon the doors fly open, the odalisk's cage is empty, while she is in the one where the caliph, who has disappeared, was seen an

instant before. The two cages stand open, and the audience can see right through them. The very simple secret is given.

The volume is rather handsome with its gay binding and 400 excellent illustrations. It will interest boys and amuse men.

Grant Allen's Evolution of the Idea of God.

8vo, \$3.00.

"The style is bright and attractive. . . . Shows an enormous amount of thought and ingenuity. . . . deserves careful study. . . . abundant matter for thought presented strikingly and fearlessly."—Prof. Frederick Starr, in The Dial.

"A wealth of information gathered from a world-wide field . . . it cannot fail to be very useful to the student of anthropology and comparative religions."—The Literary World.

Guyau's Non-Religion of The Future.

8vo, \$3.00.

"M. Guyau is already known as one of the clearest and most thoughtful writers on sociological questions in France. . . . The excellence of the book consists first in the fact that it has largely stated a problem that our age cannot avoid, viz.: Does man need religion? This problem it has discussed on many sides, and although the discussion is marred by strong bias and lacks philosophical power at times, it is illuminated by many brilliant suggestions."—Dr. Arthur Fairbanks, in Educational Review.

"Valuable from its brilliancy, its boldness, and its learning . . . the literary merits of the book are of a very high order."—The Hartford Courant.

Books and Their Makers

During the Middle Ages. A study of the conditions of the production and distribution of literature from the fall of the Roman Empire to the close of the seventeenth century. By GEORGE HAVEN PUTNAM, A. M. SECOND EDITION. Two vols., sold separately. 8vo, each \$2.50. Vol. I., A. D. 476-1600; Vol. II., 1600-1709.

Of the Second Volume the New York Nation says:

"Mr. Putnam's services in behalf of international copyright entitle his writings on the subject to respectful consideration. . . . The plan of arrangement of the present work is good, and the subject is treated in an entertaining way. . . . The author is at his best in the last part of the volume, which treats of the beginnings of property in literature, as regulated by privileges or monopolies, in Italy, Germany, France, and England."

"For all persons of literary tastes, for all librarians and collectors, for all authors and publishers, for all readers who would like to follow the evolution of thought into manuscript, and from manuscript into books, and of books into literature, and of literature into a profession and a business, the work will have an irresistible fascination. The amount of original research that has gone into it is simply enormous, and the materials have been most thoroughly assimilated and methodically presented."—Literary World.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 3, 1898

The Week.

The exhibition made by the United States Senate on Friday was, on the whole, the most discreditable yet seen. The Teller resolution, declaring that the Government may pay its bonds in silver dollars, which are intrinsically worth not half as much as gold, was passed, after a long discussion, by a vote of 47 to 32, or, allowing for the pairs, 52 to 37, if every member of the body had been present, one seat from Oregon being vacant. The affirmative included one Senator from New England, Chandler of New Hampshire, while only one Sound-Money Democrat, Caffery of Louisiana, was recorded in the negative. All the other Democratic representatives of sound-money States, Murphy of New York, Smith of New Jersey, even Gray of Delaware, voted with the Bryan Democrats and the Silver Republicans. Their excuse seems to have been that in their opinion the resolution was not equivalent to a declaration for free coinage (although some of its supporters claimed that it was), but was a mere legal statement of a right which the Government has always possessed, and which does nobody any harm so long as silver dollars are on a parity with gold, as now. This is a pretty weak excuse, but the attitude of men who are ready to vote on one side or the other is respectable compared with that of Allison of Iowa and Burrows of Michigan, who sat silent while their names were twice called on the proposition that all bonds are payable "in gold coin or its equivalent." The best that can be said of the day's work is the remark of Mr. Aldrich in closing the debate, that the "financial eccentricities of the American Senate have ceased to interest the American public to any appreciable extent."

There was a certain dramatic quality in the promptness with which the House took up the challenge sent over by the Senate in the shape of the Teller resolution, and there was something inspiring in a record of years from the Republican side which was broken only by a single nay from one North Carolina member of the party, and the shirking response of "Present" from another Republican Representative of that State. Leaving North Carolina out of the account, the Republican party in the House is now unanimous in taking the right side on a question involving silver. This is the first time that such unanimity has been reached since the silver craze broke out. It was almost exactly twenty years ago

that a vote was taken in the House on the same resolution, which had been pushed through the upper branch by Stanley Matthews, then a Republican Senator in good standing, 18 of the other 33 Republicans recorded standing with him. When the roll was called in the House on the 29th of January, 1878, a decided majority of the Republican Representatives, 75 out of 131, voted in the affirmative. Among them were such prominent men as McKinley of Ohio and Cannon of Illinois, with every other Republican member from Ohio, Indiana, Illinois, and Iowa, except Garfield of Ohio. Even after fifteen years of "fooling" with the silver issue, the Republican party was far from being united on the right side when President Cleveland convened Congress in extra session during the summer of 1893 for the repeal of the silver-purchase act. On the final roll-call, August 28, 1893, twenty-five Republicans recorded themselves against repeal, among those on the wrong side being again Cannon of Illinois, with Hepburn of Iowa, and the three Republicans from Kansas.

Evidence steadily accumulates that public sentiment in favor of the gold standard, and in favor of currency reform based on that standard, is far stronger than the politicians suppose. A Wisconsin Senator voted on Friday for the Teller resolution declaring the bonds payable in silver, but the Legislature of that State is on record by an overwhelming majority in favor of the gold standard, and the silver candidate for President in that State was beaten by over 100,000 votes in the last election. An Iowa Senator sat silent in his seat on Friday while the roll was called on a proposition that all Government bonds are payable "in gold coin or its equivalent," but the Indianapolis convention last week was attended by fifteen delegations from that State, numbering sixty of the most prominent business men, who unanimously adopted a resolution requesting the Iowa Representatives in Congress to "use their best efforts to secure currency reform based on the gold standard," and the Governor of Iowa presided over the convention. Even more significant and encouraging is the announcement from Cheyenne that the State Treasurer of Wyoming has resigned the chairmanship of the Laramie County Republican central committee, because Senators Warren and Clark voted for the Teller resolution. He holds that the Republicans of Wyoming will not be forced by these leaders into a position antagonistic to that of the President and the national Republican party, and his resignation is believed to be the beginning of a fight by the gold-

standard Republicans of the State to take control of the party organization out of the hands of Senators Warren and Clark and make this year's State campaign on a gold-standard platform.

Senator Turpie's carefully prepared speech of Monday week on the Teller resolution, now at hand in the *Congressional Record*, shows that the need of information on our past financial legislation is not limited to the "younger generation" about whom Mr. Vest is so solicitous. Mr. Turpie's entire argument is based on one positive historical assertion. "Prior to the passage of the act to strengthen the public credit in 1869," the Senator begins, "the bonds of the United States were payable in any lawful money. . . . The public credit had successfully passed" through the strain of war "without any law that our bonds should be payable in coin." This is strange history to spread before the "younger generation." If Senator Turpie is so ignorant of the financial incidents of 1863 as to suppose his statement to be true, we will refer him to the recent compilation, by the Register of the Treasury, of the provisions inscribed on the successive bond issues of this Government. From that official summary he will learn that something over one billion dollars in bonds, issued between 1862 and 1869, bore on their face the superscription, "payable, interest and principal, in coin," and that these words were in the act of March 3, 1863. Mr. Turpie seems to be equally unaware of the fact, familiar to most readers of history, that the public-credit act of 1869 applied primarily to the legal-tender notes, and in the case of bonds merely reaffirmed the already publicly declared purpose of the Government.

But in what coin were principal and interest payable? Let the Senator himself inform us. "There was at that time," says Mr. Turpie, speaking of this very period, "only an inconsiderable amount of standard silver dollars in existence—not enough to pay interest on the bonds." The simple-minded reader might then imagine that a provision for coin payment was to all intents and purposes provision for settlement in gold. But it seems not; for in the next breath Mr. Turpie tells us that when the act of 1873 discontinued the further coinage of the standard silver dollar, "there was nothing left but the gold dollar and its multiples with which to pay the bonded debt," and that "this transmutation of paper bonds into gold exceeded anything in the history of the Rosicrucians of the Middle Ages." That is to say, the Senator first declares, what we have shown not to be true, that the war debt

was all payable in notes, and then assumes, what he himself admits to be untrue, that it might have been paid in silver, and from these two premises arrives at the conclusion that the "syndicate of debt and gold" has somehow been cheating the Government out of its fair share of a contract. If we were not so familiar with this method of reasoning on this subject, we should say that we have no patience with it. But patience comes with long practice, though we are sorry to see, from Senator Turple's case, that knowledge sometimes does not. We thank the Senator, however, for his plain confession that there was virtually no such currency in circulation prior to 1873 as silver dollars.

Senator Platt of Connecticut and Senator Chandler had a colloquy last week on the subject of bimetallism, the former contending that we have bimetallism in this country now because we use both gold and silver in our currency. Chandler maintained that bimetallism exists only where unlimited coinage is allowed to both metals. Chandler happens to be right in this instance. If Mr. Platt's contention could be sustained, we should have not merely bimetallism, but trimetallism or quadrimetallism, since we use nickel and copper also in our coinage. We use these metals in substantially the same way that we use silver; that is, the Government purchases and coins the metals, and then sells the coins to the public at prices much higher than the cost of production. It does not receive any such metals from private individuals for coinage, although it receives gold for that purpose in unlimited quantities. The phrase bimetallism is of comparatively recent origin. It was invented by Cernuschi about twenty years ago as a substitute for the phrase "double standard," to avoid confusion. There cannot be two standards at the same time and place, although there may be two metals admitted to unlimited coinage. Bimetallism means double legal tender rather than double standard.

There seems to be no doubt that the treaty for the annexation of Hawaii is beaten as it stands to-day. The best authorities at Washington agree that it lacks at least three votes of the necessary two-thirds, and some say as many as five. The opponents of annexation are ready to have the roll called without further delay, while the advocates of the scheme are pressing for postponement, on the chance that they may win over the votes which they now lack. Meanwhile they are resting their hopes upon the efforts of the two Presidents. Mr. McKinley is using all the influence of the Administration to carry through his personal policy (for control, and not annexation, was the policy demanded by

his party in the platform upon which he was elected). President Dole is doing his best to help Mr. McKinley, but the advocates of the scheme do not seem at all sure that his visit to Washington is really helping them.

Senator Frye, in his speech at the dinner of the Manufacturers' Association on Thursday evening, admitted that the treaty is lost unless there is a change in sentiment among his colleagues, and urged his hearers to "exercise your influence upon the Senate of the United States to help us get the two-thirds vote there." Mr. Frye brought out all the old bugbears. He declared that we should lose the Hawaiian market unless we annexed the islands, though we have never had to own them in order to enjoy this trade. He predicted that, "if the treaty is not ratified by the United States Senate, in less than a year the Hawaiian Islands will be under the protectorate of Great Britain," although there is no reason why we should not continue to exercise the same control hereafter as heretofore. He brought out the "key" argument, and asked, "Where are you going to get your coal?" suppressing the fact that we have a perpetual right to the use of Pearl Harbor as a coaling station. There was, of course, "applause," and cries of "No, no!" were raised at the appropriate place, but proof is still lacking that the business men of the country are frightened by the bugbears or convinced by the arguments which the advocates of annexation bring forward. If the treaty shall ever be carried, it will not be public sentiment that does it, but the power of patronage exerted by the President.

That misunderstanding in Nebraska about the price of sugar-beets is made public at a most unlucky time for the waning fortunes of the Hawaiian treaty. It seems that the refiners are offering the farmers contracts for the year's product of sugar-beets at \$4 the ton, as last year, but with a proviso that if Hawaii is annexed the rate shall be \$3.50. This is dastardly. It also is really something very like *lèse-majesté*. Has not the Secretary of Agriculture officially declared that Hawaiian sugar will not compete at all with American beet sugar? Has not Morgan announced it, Lodge asserted it, Frye roared it, Allison rather guessed it might be so? Yet here are mere private business men cruelly offering contracts which show that Hawaiian sugar will compete, and will drive down the price of beets fifty cents a ton. The rascals should be prosecuted. Senator Thurston has been accused of being lukewarm on the treaty, and the President has labored with him; but his constituents are the chief offenders. Such nefarious methods as theirs would defeat any treaty. But we

are confident that the annexationists are not at the end of their resources. They will insert in the treaty a provision to give every farmer \$4.50 a ton for his beets, to be paid out of the contingent fund, and then where will these miserable \$3.50-a-ton refiners hide themselves?

The House committee on appropriations is evidently not going to war along with our bellicose assistant-secretaries and second-lieutenants. We judge this from an inspection of the fortification bill as reported by the committee on Saturday. It carries only a little more than \$4,000,000, instead of the \$13,500,000 which the War Department authorities had declared to be "absolutely necessary." But Chairman Cannon ruthlessly cut off more than two-thirds of these absolutely necessary appropriations. The department asked for \$5,000,000 to construct gun and mortar batteries to protect our "defenceless coasts." It got \$1,000,000. The department begged for at least ten rounds of powder and armor-piercing projectiles for each gun and mortar expected to be in position by the end of the fiscal year. It would be too humiliating, it said, to have the ammunition give out just as it had a "hostile fleet" half whipped. But the committee voted money for only about three rounds. So it went all along the line. The eminent military authorities solemnly told the committee that they would not answer for the consequences to the country if their \$13,000,000 was not voted. But the committee replied that it would not answer for the consequences to itself if it did vote such a sum, and remorselessly cut it down to less than one-third.

The best thing about the election of Mr. McComas as United States Senator from Maryland is the fact that the opponents of machine politics in that State are pleased with it. It is not the Democratic party only which has suffered from the evils of boss rule. The Republicans have had leaders who were anxious to establish a system which would be quite as offensive as Gormanism. Wellington, who was elected Senator two years ago, believes in the boss system, and set out to run the Republican party in just the same way as Gorman has so long run the Democratic. Wellington was unhorsed when the State convention met last September, but the lesson was lost upon Malster, the new Republican Mayor of Baltimore, who controlled several members of the Legislature from that city, and tried to dictate the choice of Senator. The election of Mr. McComas, who was clearly the favorite of the majority of his party, thus not only secures an excellent Senator, but shows that the people of Maryland know how to protect

themselves against the substitution of Republican bossism for Democratic.

The retirement of Mr. Preston from the office of Director of the Mint will be universally regretted by the friends of sound money, although we have every reason to think well of his successor. Mr. Preston had risen by his merits alone to the head of this important bureau. He had no political "pull." His work was the only testimonial and the only cause of his promotion. He ought to have been retained in the position of Director because of eminent and proved fitness. In any other government than ours he would have been retained. The bureau of the mint is peculiarly a bureau of details. It calls for special knowledge and acquaintance with a multitude of facts which cannot be picked up in haste. Moreover, Mr. Preston's term of office had not expired, and that adds something to the bad manners of his removal. It is evident that the demands of politics caused his retirement, yet, as we have said, his successor, Mr. Roberts, seems to be an uncommonly good selection if for any reason a change was to be made. We observe in the *State Register* of Des Moines of January 22 an address by Mr. Roberts before the Iowa Bankers' Association on "Banks and Modern Business," which evinces much careful study and accurate knowledge of the subject of which he treats, and a very pointed way of presenting his ideas to his hearers.

The *Wool and Cotton Reporter* tells us that "the foreign woollen manufacturers are, for the most part, in excellent spirits," are buying "large amounts of wool," are not conscious as yet that "they have lost our market," and are looking forward to a profitable business in light woollens in China and Japan. The rascals even think they will "sell us large orders in the future." Under these circumstances the *Reporter* naturally warns "American manufacturers to be on their guard." It is not this prophecy which affects us, but the cheerfulness of these scoundrels. We always thought one of the most attractive effects of a good tariff was to make foreigners feel miserable. We have now what all concerned admit is a model tariff, which has been in operation over half a year, and yet a leading trade journal tells us "the foreign manufacturers are in excellent spirits." The deficit is bad enough, but we should think this foreign cheerfulness would fill poor Dingley's cup to overflowing. Foreign misery is as essential a part of the protective system as home prosperity. There can be no true prosperity at home without weeping foreign operatives and "busted" manufacturers. Is this a consequence of having the tariff lower prices about this time?

The present comparative quiet in Cuban affairs should not blind any one to the really critical nature of the situation. Two things are absolutely necessary for Governor-General Blanco to do, and to do quickly. One is to set up anew the autonomous government; the other is to reduce the insurgent bands to submission. What progress is he making in either? Very little. The elections which were to have been held in February are now adjourned till April. It was felt, doubtless, that in the present condition of the island to hold a general election would be a little too facetious. Occasional successes over the insurgents in the field are reported; here and there a rebel leader has been induced to surrender. But the Eastern provinces seem to be almost at the mercy of the revolutionists, and everywhere else roving bands are to be found. The death of the insurgent general reported on Friday took place in the province of Havana itself, which Gen. Weyler had asserted to be "completely pacified." Señor Canalejas, the ex-Minister who has been studying the situation in Cuba, goes to Spain to report that there is no immediate prospect of ending the war, as the insurgents have the means to prolong their resistance. At any rate, there is no likelihood of the war being ended before the beginning of the next rainy season in May, and if it is not, President McKinley, if we may believe what Mr. Hitt said in his name, is committed to a policy of intervention.

The Committee of Fifty-three, speaking for the anti-machine Republicans of the city, has put forth a statement in regard to "harmony" which is one of the most encouraging documents laid before this community in recent times. What could be more refreshing than the following passage, which is the keynote of the deliverance?

"The machine and all sympathizers with it may as well understand, now and for all time, that the supporters of the new movement can no longer be fooled by worn-out tricks and promises of reform within and by the machine. We have walked too often into their parlor. We believe in treating the present machine in the same manner in which honest men treat rogues. Therefore, all talk of 'harmony,' so far as it can affect us, is absolutely wasted."

That puts the movement against Platt on the only basis upon which success is possible. He and his associates are not politicians in the proper sense of the term, but rogues, political gamblers, who use the party name only to enable them so far to conceal their real trade as to permit it to succeed. As Cornelius Blies said of Platt, they act deliberately "so as to make it impossible for self-respecting men to be allied with them even for a good purpose." When all the honest men of the Republican party reach the position now taken by the Committee of Fifty-three, that they cannot hold any relations with rogues, can-

not even treat with them, the end of Platt as a power for evil in politics will have arrived.

John Morley, as was to be expected, has vigorously assailed Mr. Chamberlain's plan of giving a "grant in aid" to the West Indian sugar-planters. He characterizes the proposal as only one more attempt of the Conservative Government to bestow a dole upon favored classes at the expense of the taxpayers. First it was the landlords, then the Church of England schools, now it is the sugar-planters. This is going only a little further in the way of condemnation than did that stout supporter of the Government, the *London Times*, which said that it was not "greatly enamoured of the system of doles to which, by some fatality, the present Government has resorted with unusual frequency." But the "fatality" is only that of following a leader who makes all sorts of grandiloquent promises to all sorts of people, and then asks them to let him off with a small cash payment on account. Chamberlain may yet drop his grant in aid as abruptly as he did his famous imperial Zollverein, to which Lord Rosebery referred in a recent speech, saying that it behooved the audience to observe that solemnity which was expected in the presence of a corpse.

The frequent recurrence of fights in legislatures is not helping the reputation of democratic government. The scenes in the Austrian Reichsrath were scandalous enough, but the last prolonged fight in the Assembly in Paris was worse than any. But the sort of dry rot which seems to have overtaken nearly all democratic legislatures does not act on ours in the same way. In Europe they fall to, and smash each other offhand. Ours do not feel enough to indulge in any violence about anything. They sit still till they hear from their boss or "old man." The last thing in the world they think of is fighting. Nobody could get them into a rage. We have no "scenes" in our legislatures, because there is little or no debate. There can no more be confusion in our legislatures than in a man-of-war. Every man has his duties assigned to him, and knows exactly what he is to do. Then, in the minds of our politicians there is neither envy, hatred, nor malice. Every man knows his duty, and is content with the place his boss has assigned him. The idea of having any views of his own which he cannot change or surrender at a moment's notice never enters his head. Why, then, should he fight or assault anybody? This is a feature of the boss system which has not received the attention it deserves. The rows which occur in the foreign parliaments are clearly due to want of discipline.

THE PRESIDENT'S SPEECH.

The rumor that the President intended to put the currency rather than the tariff foremost in his speech at the banquet of the Manufacturers' Association in this city proved to be correct. He not only gave the currency question precedence over the tariff, but, it may fairly be said, made it the sole topic of his discourse. Whatever else he uttered was merely introductory to that subject. His remarks on this theme were highly significant, as accentuating a division of parties which has been a long time under way, and for which the campaign of 1896 was a preparatory step. There has been a struggle within old party lines from the close of the war till the present time over the money question, one faction in either party desiring to prevent the currency from advancing to par with gold, or to debase it after it had reached that standard. The very first political campaign after the war, that of 1868, was of this character. Both parties were rent in the same manner. Gen. Butler headed the soft-money Republicans and George Pendleton the soft-money Democrats. Both were worsted for the time being, but the struggle went on. Other issues, such as reconstruction, carpet-bag government, and force bills and tariff bills, held the parties together. They prevented the disintegration that the money question was tending to produce, but the poison was at no time absent. It worked more persistently and insidiously in the Democratic than in the Republican party, but was prevented from reaching maturity by the wisdom, influence, and courage of a few strong men, notably Horatio Seymour, Samuel J. Tilden, and Grover Cleveland. Two of these men have passed away, and the third is no longer in public life. The Democratic party now stands for nothing else under the sun than a depreciated currency. The debate just closed in the Senate is the best evidence of this. Even the men who supported Palmer and Buckner in 1896 are now yielding more or less to the soft-money pressure behind them.

What has been going on in the Republican party all these years? In the campaign of 1868 it triumphed on a platform which declared in favor of bringing the currency to par with gold, and would probably have remained true to those principles but for the unexpected decline of silver in the world's markets. This accidental circumstance, coupled with the fact that a section of the Union, destined to have considerable political power, was a producer of silver, threw the party off its balance, and it helped to pass the first silver act of 1878 (the Bland-Allison bill) over the veto of President Hayes, Mr. McKinley voting in the affirmative. From that time to this the party has been struggling with itself over the same question in one form or

another, but mainly trying to dodge a direct issue, to carry water on both shoulders, to produce a deadlock in one way and another, and to gain time. This is the meaning of the various schemes for international conferences, including the last one, headed by Senator Wolcott. In 1896 there came a time when dodging would no longer serve. The Democratic party, released from the influence of its Seymours, Tildens, and Cleverlands, went to the bad altogether, and adopted a platform which, with very little disguise, proposed to reduce the dollar of commerce to fifty cents, with all the disastrous consequences to public and private credit which that act implied. The Republican party was forced to take a stand against that policy, and it did so, but not without violent internal commotion. The representatives of the silver-producing States formally seceded, carrying from the party the electoral votes of that section. The loss was more than balanced by gains in other places, but the cleft in the party was permanent and without remedy.

Mr. McKinley has been slow in recognizing this fact, but he has faced it at last. What he said at the banquet on Thursday evening was that the fight of 1896 must be fought to a finish, that there can be neither backward steps nor standing still. He tells his party friends that the St. Louis platform commits it to a reform of the currency, or at all events to an honest effort to do so. "It will not suffice," he says, "for citizens nowadays to say simply that they are in favor of sound money. That is not enough. The people's purpose must be given the vitality of public law. Better an honest effort with failure than the avoiding of so plain and commanding a duty." For saying something like this we have been accused by well-meaning newspapers in various parts of the country of over-stepping the mark of the St. Louis platform, and of imputing to the convention that adopted it more serious purpose than it ever entertained. We will let that pass, however. It is enough that their own President sees the duties and necessities of the hour in the same light. Of course, he will be accused of inconsistency. His past votes and sayings will be quoted against him, just as those of Secretary Carlisle were; but the battle will not be decided on grounds of individual consistency, but rather on those of national expediency and morality.

We might dwell upon separate phrases and paragraphs in the President's speech, but that would be a task of supererogation. The main purpose is to bring the supporters of the gold standard and of the national honor upon a common platform, to arm them with a common purpose, to drive all cowards out of their skulking-places, and compel them to take one side or the other. This is what the nation has stood most

in need of for a full quarter of a century.

THE TYRANNY OF GOLD.

Throughout the debate in the Senate on the Teller resolution, and in many other debates, near and remote, a phrase has been of frequent occurrence implying that certain persons are "trying to fasten the gold standard on the country." This phrase, or something akin to it, was employed by Senator Chandler in the depth of his grief against Secretary Gage. The implication is that Mr. Gage and the opponents of the Teller resolution, including President McKinley, are seeking to introduce something new into our monetary system—that the act of fastening the gold standard on the country not only is wicked in itself, but is a novelty and an innovation. Lest they should create this impression in the minds of people who are liable to be imposed upon by gigantic impudence, we shall recapitulate the facts in the case, although they have often been repeated in our columns.

The truth is that the gold standard was fastened upon the country sixty-four years ago. It has been our monetary standard *de facto* for that length of time, and for twenty-five years it has been the standard both *de jure* and *de facto*. Consequently, Secretary Gage and the opponents of the Teller resolution, and President McKinley are not aiming to produce a new state of things. They are not seeking to bring about an innovation. On the contrary, they are resisting an innovation which Teller and Bryan are trying to introduce. Whatever merit belongs to conservative aims and tendencies belongs to the former. Whatever discredit attaches to radicalism and the spirit of change is the portion of the latter. We apprehend that it will be found in the long run that conservatism is the stronger force of the two. We believe that when the people come to understand that the silverites are the ones who are seeking to turn things upside down, while charging that intention upon their opponents, these gentry will be put upon the defensive, and that the task of defending themselves will not be an easy one.

Now, we invite their attention to a few well-known and oft-repeated facts of history. Prior to 1834 we had the double standard, as it was called, of gold and silver at the ratio of 15 to 1, which had been adopted in 1792. This was the true commercial ratio at the time when it was adopted, but it did not remain so. The commercial ratio changed, just as the values of wheat and corn vary with reference to each other. An ounce of gold came to be worth more than fifteen ounces of silver. Consequently it was exported or melted or hoarded. It disappeared from circulation. The people were left with an inconveniently heavy and cumbrous coin. They endured this

affliction as long as they could. Then in 1834 they changed the legal ratio to 16, although the commercial ratio was about 15½, and although the latter was then the legal ratio of France. It is not to be doubted that the object of adopting the ratio of 16 to 1 was to expel silver from circulation. The so-called "dollar of the fathers" was not wanted. It was driven out indignantly, or at all events effectually. The gold standard was thus established *de facto*. Less than two and a half millions of silver dollars had been coined from the establishment of the mint to 1853. The smaller coins were, however, of proportional weight and fineness with the dollar, and were full legal tender, and of these there had been upwards of \$76,000,000 coined.

The next step was taken in 1853. Gold was then plentiful, and the silver dollar had passed out of men's minds as well as out of circulation. The only kind of silver that people were familiar with consisted of foreign coins and our own pieces of a half-dollar and less. In this year Congress passed a law demonetizing these pieces, *i. e.*, prohibiting their coinage on private account and making them legal tender for only \$5 in one payment. This was in practice the demonetization of silver, because the act of 1853 demonetized the only silver coins that the people had any practical acquaintance with. A few foreign silver coins had been made legal tender for a limited period, which expired in 1857.

We now come to the "crime of 1873." It seems a long time since we saw that phrase in print or heard it from the lips of any public speaker. Perhaps the silverites have become ashamed of it. Perhaps its falsity has been so thoroughly exposed that it is no longer available. A crime implies the intention to commit a wrongful act. Whether the act of 1873 demonetizing silver was harmful or not, it is now sufficiently established in the minds of all candid persons that it was performed without any harmful intent, and simply in the way of public duty and supposed necessity. It came about in a revision of the laws relating to the mint, at a time when the silver dollar was worth two cents more than the gold dollar, and when no person could have anticipated that it would ever be worth less than the gold dollar. So innocent was it of any evil intention that some of the most vociferous silverites of the present day, including Stewart of Nevada, voted for it. The act merely carried to its logical end and conclusion the previous one of 1853 by placing the silver dollar, a practically unknown and unused coin, in the same category as the halves and quarters. A further and necessary step in the act of 1873 was the passage of a clause making the gold dollar the unit of value, in the words following:

"Sec. 14. That the gold coins of the United States shall be a one-dollar piece, which, at

the standard weight of 25.8 grains, shall be the unit of value," etc.

The moral character of the act of 1873 is not now in question. We are only dealing with the false and misleading phrase, so often in the mouths of public men, that Secretary Gage and those who agree with him are trying to fasten the gold standard on the country, or, as it is sometimes phrased, are "fastening the tyranny of gold on the country." What is the meaning of the words we have quoted from an act of Congress passed nearly a quarter of a century ago? What is a unit of value? Manifestly it is the one thing in comparison with which all other values are to be measured and determined. It can have no other significance. Has there been any law passed since that time repealing or changing it or making anything else the unit of value? Nobody pretends so. Various attempts have been made to change it, notably in the last Presidential election. All such attempts have failed. It follows that the "tyranny of gold" has been upon us since 1834 *de facto*, and since 1873 both *de facto* and *de jure*. It follows also that the phrase imputing to certain persons a design to fasten this tyranny on the country is untruthful in its implications. It conveys the idea that those persons have some revolutionary design in dealing with the currency, whereas they are merely standing by and defending a condition which has been in force for two generations. The number of men who have seen more years than the gold standard has been in force in the United States are relatively few. They are those, and only those, who are more than sixty-four years of age. The only revolutionists and subverters of our ancient and established monetary system are the silverites themselves.

Something might be said about the phrase "tyranny of gold," implying that gold is a cruel despot and an injury to mankind. It is strange that we never heard of this tyrant until silver fell below par. If the despotism of gold is so cruel to the human race, it is strange that all other nations one by one are rushing to its embraces. Since the controversy became hot in the United States, Italy, Austria, Rumania, Chili, Japan, Russia, and even San Domingo have welcomed the tyrant, and now India is taking steps to the same end. The tyranny of gold is of the same nature as the tyranny of railroads in comparison with lumber-wagons, of telegraphs and telephones in comparison with post-boys, of gas and electric lights in comparison with tallow dips, of the United States in comparison with Mexico and China, of coined money as against wampum, of civilization in general as against savagery.

LOVE OF COUNTRY.

Mrs. Siddons, said Brougham, in reply to Talleyrand's question if Fox had

not been *très occupé* with her, was too great to inspire affection; the East India Company might perhaps have dared to love her—nothing short of that. Of a truth, the magnitude of an object does affect the sentiments with which we regard it. Lovers dilate on the greatness of their love, but all tongues are full of the diminutives which they apply to its objects, and his suit would doubtless prosper ill who should address his beloved with the superlatives of dimension. The children of Israel were a stiff-necked people, but it cannot be called unnatural that they should seek some being more commensurate with their religious emotions than the awful Jehovah; a golden calf, even, or a brazen serpent might be much more comfortably worshipped than a deity whose greatness oppressed their imaginations. The worship of the Virgin Mary is not permitted to Protestants; but it would be uncharitable to deny that many millions of humble Christians have found the love of the Virgin something much more compatible with their limited capacities than that of an infinite being whom no human eye has ever seen or can ever see, and whose very perfections seem to elevate him beyond all relation to the petty turmoil of human passions.

If patriotism be defined as the love borne to a country by its inhabitants, it would thus seem reasonable to recognize the existence of some relation between extension on the one hand and intention on the other. There have been people who professed to love all men equally, but, granting their sincerity, we may question the heartiness of their attachment to millions and thousands of millions of their fellow-creatures whom they have never seen, and who would perhaps decline to reciprocate their amiable sentiments if the existence of such sentiments were disclosed to them. Love is no doubt an immaterial essence, but it must be susceptible of some kind of quantitative estimate, and the most large-hearted philanthropist can hardly maintain that he loves a million human beings severally with the same intensity with which another man loves a dozen. Established principles of psychology settle the matter, and it could be settled *a posteriori* as well. If we take a look into history, we find that the small states can make altogether the best case as regards the patriotism of their citizens. The Jews were plainly better patriots than the Egyptians or the Assyrians; the Greeks than the Persians. Lacedæmon was a very small state, but its soldiers have an exalted name for patriotism, and the Athenians were a notoriously patriotic people. There was more patriotism under the early Roman republic than under the later one, and under the Republic than under the Empire. The Chinese empire is perhaps the greatest in population in the world,

but it does not look as if the ordinary Chinaman were affected with patriotism in a very intense form. How much patriotism is there in the "vast and squalid empire" of Russia, compared with that in France, or England, or even Ireland? Is there any people of its size so dangerous to attack as the Swiss?

There is, perhaps, a dim metaphysical notion that patriotism consists in the love of one's country, rather than its inhabitants. Such is probably the idea of those newspaper writers and statesmen who profess to be inflamed with patriotism, while they are at the same time busily denouncing one another and large classes of their fellow-citizens as scoundrels. The sincerity of their feeling is best known to themselves, but if they have any affection for their countrymen, it must be confined to those who agree with them. But it would never do to define such affection as patriotism; the case would be worse than that of the Irish peasantry—

"fighting like devils for conciliation,
And hating each other for the love of God."
He who sets up as a patriot must yield his own tastes and preferences, and comprehend all his countrymen in the broad expanse of his affection. The Almighty, we are told, hates sin, but loves sinners; but no mortal can be allowed to pose as a patriot by proclaiming that he loves his country, but hates all his countrymen, or all that do not agree with his views. He must save his hatred for foreigners, and make his love cover all his fellow-citizens; otherwise, the most perplexing distinctions would be introduced. For, if a patriot denounces large classes of his countrymen, they may denounce him, and how can the dear People distinguish the genuine from the spurious article?

Since we Americans now number seventy millions, it can hardly be denied that our patriotism is in danger of becoming too diluted. It requires some effort to arouse the patriotic glow over a horde of Italians, Russians, Jews, Bohemians, Poles, Greeks, and Armenians just landed on our shores, but we must open our hearts to them, for they are just as much Americans as the rest of us so soon as they are naturalized. Length of stay counts for nothing. Some of our loudest patriots are of recent arrival, and if we are to take account of pedigrees, where should most of us be compared with the negroes and the "Indians not taxed"? If they can embrace us with patriotic emotion, we surely ought to fall on the necks of more recent immigrants; and if we do not love the negroes and Indians and the Populists of the South and West, how can we expect the recent importations to develop true "Americanism"? Such requirements, however, may pass beyond the powers of ordinary people, and even stretch those of newspaper and congressional patriots to a painful degree. Be-

fore enlarging our borders and taking in a considerable number of people of heterogeneous race, it would be prudent to allow our stock of patriotism to catch up with the demands upon it. When excessive strains are put on love, it is sometimes converted into aversion, and it cannot be denied that a country may become populated with individuals largely of an unlovable description. It is encouraging to find that the vociferous patriots are not having it all their own way in Congress, and that one leader, whose gifts of wit and good sense have made his lack of political courage and foresight a regret to his country, should openly say: "I don't want Cuba and Hawaii. I've got more country now than I can love."

THE MAYORAL CURIOSITY.

We must express our great satisfaction at the performances now going on daily at the city hall. To make Tammany and the Tammany régime thoroughly understood by simple-minded people, especially the people who proposed to "coöperate" with it, we needed just such a Mayor as Robert Van Wyck. No amount of speaking and writing about Tammany would do in ten years, for the elucidation of our situation, what he has done in one month. Ten years ago, when Tammany for the first time elected a real Tammany man—none of your "prominent merchants," or Chamber of Commerce "hypocrites," but a genuine Boy, fresh from the barroom and the race track—we took the liberty of pointing out that the city had entered on a new phase in its downward course, that simply bad and inefficient government had at last ended in an attack on our civilization itself.

The election of Grant, we held, and hold, was the first sign that our rulers were not going any longer to be content with corruption, bad police, and general maladministration, but were about to make an assault on the very foundation of modern American civilization—the necessity of science, education, training, and experience to national progress. The triumph of the theory that ignorant and inexperienced men were fit for the highest offices of state, that character was of no consequence, and that offices were simply "plums," was probably the worst blow that was ever struck at popular government, and it was struck in New York. A. D. 1868. It, however, produced no reaction. Grant was reelected, and one of his confederates succeeded him through the votes of many decent people. In order to get rid of the Tammany régime, to have the great principles of modern civilization reaffirmed by the second city in the world, we had to have "the carnival of crime" that was exposed by the Lexow committee. In due time, after the effect produced by the "carnival" had worn out, we had

Tammany back again, in defiance of press, pulpit, and platform. We found last November that we were dealing with a foe against whom all the instruments of persuasion were powerless.

For these reasons, because writing and talking apparently have no more influence in the city, we are grateful to Robert Van Wyck for giving us an actual demonstration of what Tammany rule, in its full development, means. It chose for its latest Mayor a judge of a minor court of small jurisdiction, more known for his conviviality than for his law or justice, with apparently no knowledge of city affairs, and without even the civility of manner for which Americans of every class are noted. There probably never have been in the civilized world such exhibitions as are going on in the city hall every day. There is probably no mining camp or low lodging-house in which can be witnessed such displays of unprovoked rudeness to any one as Van Wyck displays to high officials who come to see him on business. He is paid \$15,000 a year for being what is known and has been known for ages as a "Mayor"—that is, a man who administers a city with a knowledge of its affairs, who represents it with dignity and urbanity to other officials or to visiting strangers, and keeps quiet about things he does not understand, knowing that any exposure of his own ignorance reflects discredit on his constituents. Not one of these obligations, however, does this Van Wyck acknowledge. He never appeared in public during the canvass, for reasons which are now very plain; but in this he was within his right. His seclusion was the affair of those who voted for him. But, once he secured office, he came under the ordinary obligations attaching to his office to keep sober, or else to carry his liquor meekly; to dress decently, to treat every one coming to his office on business with civility; to remember constantly his representative character, that he is not simply an ignorant, unmannerly, and convivial Dutchman, but, by the grace of God, the chief executive officer of no mean city, and therefore responsible for its fair fame among the civilized nations of the earth.

We, for our part, are glad he is disregarding these obligations. He is saving us the trouble of exposing Tammany and denouncing Tammany, work of which we were weary years ago. He is bringing home to the people of the city what Tammany really is, in a way in which no articles, or pamphlets, or indignation meetings could do it. He takes the place of Mugwumps, Garoos, City Clubs, Good Government Clubs, leaflets, sermons, and all the paraphernalia of free, civilized, and Christian government. He stands forth as a real Tammany Mayor, without any ornament or disguise. This is what we have been seeking for years and what both parties have been helping to procure us. No

better illustration of what "the party" lunacy brings a people to, could be devised. We are "the heirs of all the ages, foremost in the files of time," and a nice figure we cut to-day. We have to submit to the vulgar insolence of one of our own officials, who plays the barbarian to us in such fashion that the only thing he could further do to complete our humiliation would be to strip to the waist and sit at his desk in red ochre and feathers.

THE VACATION SCHOOLS FOR FRENCH IN FRANCE AND SWITZERLAND.

YALE UNIVERSITY, January 17, 1898.

Vacation schools for French are of late being founded in considerable number in Europe. They are for the benefit of foreigners, and the natives are debarred from attending them. I had occasion to visit most of these schools the past summer, and printed reports from several have now come in. The courses given are usually divided into two series; as, at Paris, one includes the month of July and the second the month of August, and at Geneva one extends from the 17th of July to the 30th of August, and a shorter one follows from October 1 to the 31st. Each is complete in itself; they mean to cover about the same ground, but at the same time the texts and other matters are not duplicated, so that any one might profitably follow both. I could not help being favorably impressed with the doings at all of these schools alike. Too much should not be expected from so brief a period of study, but all of them present an excellent opportunity to find out what the language is in its real dignity and importance, in its traditions and its literary development, as contrasted with the light smattering—to which no disparagement, as far as it goes—usually got from the ordinary French teacher abroad.

The course at Geneva, founded in 1892, claims priority in date. It was established by Prof. Bouvier of the Faculty of Letters of the University. He had been lecturer in French at the University of Berlin, and while there had seen the demand there was for supplying some such facilities as this, especially to the native instructors. It is now the requirement in the progressive European countries, as it will perhaps become the requirement some time with us, that the instructor in a modern language shall be able to conduct a recitation in that tongue itself. Some of those in attendance at Paris, during the last summer, were Russian and Bulgarian teachers sent at the expense of their own governments. The majority seemed to be connected with education; the college principal from Copenhagen would elbow the English governors from Allahabad; but there were also army officers, doctors, editors, and some business men.

The vacation school at Paris under the auspices of the Alliance Française, though founded only in 1894, has become the most important of all, as is natural enough, considering the advantages of the great metropolis. The Alliance Française is a patriotic association—with many distinguished persons in its management, and branches in all parts of the world—for the propagation of the French language. It seems to be a pretty lively part of that latent "conspiracy" which Brunetière affirms the French writers have entered into, from the beginning of their

literature, to make the French language the second mother tongue of all mankind. So, too, Baron de Coubertin, acting upon a like impulse, has established valuable prizes for essays upon French subjects in our leading American universities. There is something rather fine about this plan of spreading the fame of one's country abroad. It seems worth any quantity of the bullying method by "pike and gun," and might give the cheap Jingoos food for reflection.

The exercises were held in the bright new edifice of the École Coloniale, which is on the quiet Avenue de l'Observatoire, close by the Luxembourg gardens. The cheery look of the building was a pleasant augury that was not belied by the event; from the first a very cordial and considerate spirit, which is by no means the invariable rule at Paris, was manifested towards the large group of strangers. There was a desire to entertain as well as instruct. After the speeches at the opening session, on July 1, it was announced that there was going to be, among other things, a shower of theatre tickets. Although this shower never reached such dimensions that it was precisely necessary to put up an umbrella against it, there were in fact a considerable number of theatre tickets distributed. Each nationality chose its own syndic, who dealt with the central authority in this and other matters. The ladies of the student company were received socially by wives of several cabinet ministers. There were 370 persons in attendance, considerably more than half of them women. The August session drew together 170 more. They represented every sort of nationality: Russians, Danes, Hollanders, Italians, Bulgarians, Czechs, were all there. The bare list shows the cosmopolitan character of the assemblage, and its great possibilities, in consequence, for good. Germans were largely in the majority, as I found to be the case in all these schools. They were 216 out of the 370. There were 54 English and 44 Americans; the Russians followed next in order.

A busy round of lectures began, at the rate of about three a day, with conversation classes by small groups of persons, in the evening, and also (thrown in, during the day) visits, under a competent conductor, to the monuments and other art works of Paris. The French language of the seventeenth century and of the nineteenth were treated of, Gallicisms and popular speech; classic literature, and contemporary literature; Larmaine, by himself; the dramatic theories of Diderot; comedy after Molière; the Romantic drama. There were besides recitations in diction and dramatic reading and in elocution and pronunciation. The series is divided into two courses, elementary and advanced, according to the ability of the student, and there is also a common course, open to all alike, treating of the institutions of France and of art. At the end of the term, examinations were held and diplomas issued. As to the matter of expense, it is moderate: the whole two hundred exercises, of all sorts, can be subscribed for for the sum of 150 francs, or twenty-five tickets can be taken for 25 francs—this is required as a minimum—and, after that, such single tickets as may be desired.

Prof. Brunot of the University, author of an historical grammar of the language, was the lecturer best known among scholars. He is spoken of, too, as the soul of this

work, on account of his great interest in it from the first. He gave us his regular product in all the minute details, so that the result was as if one had had a month's section or supply of what he would have taken a year or more to develop at the Sorbonne. René Doumic of the Lycée Stanislas, but also the distinguished literary critic of the *Revue des Deux Mondes*, was the most interesting of the lecturers. The amphitheatre was large—for the purpose in view—and the front seats were much in demand, but he was the one who could always be heard without difficulty. It is gratifying to know this, as he is coming here in the spring to lecture at some of our universities, following in the footsteps of Brunetière, last year. He seems to have formed himself upon Brunetière in many ways, but his sentences are much shorter than Brunetière's, and hence easier to follow. He has also much humor. He dwelt on the need of actually being in a foreign country and knowing it, in order to try to understand its literature. All the speakers were not as entertaining as M. Doumic; some of them mumbled under their breath, and some of them were dull. But this was to be said of them all, that it was improving to listen to them, no matter what their material or their delivery, for one does not master talking French by listening to only a single speaker, any more than translating it by reading only a single author.

The conversation classes were really very well done. I could not but admire the polite ingenuity with which the bright young professor, in one of those sections, combated the reluctance (or the native slowness) of some of his auditors in being led into talk. Some of them had had very little previous practice in speaking. "And you, monsieur," he would say, extending a courteously appealing hand towards, for instance, the dark South American, "will you tell us something about the system of suffrage in your country?" "And you, mademoiselle," again, to the blonde Swedish girl, whose pleasant high color at once became more rosy still with a flush of modesty, "have you been to the theatre sometimes in Paris?" The theatre was always a resource; Richépin's play "*Le Chemineau*" was on at the time, at the Odéon, and nearly everybody had seen it. He would have the plot of it narrated and commented upon. Again, Zola, what with the differing moral ideas from so many parts of the globe, proved a source of such lively discussion that all self-consciousness was, for the time being, thrown off.

The final examinations consisted of the writing of a dissertation, in French, on some subject based upon the work gone over. One of those for the superior course was: "What was the end aimed at by Molière in writing '*Tartuffe*'?" One of those for the elementary course: "An interview between the King and a critic belonging to the classic school, who wished him to forbid the representation of Victor Hugo's plays." I note that but one American passed the examination for a diploma, while sixteen diplomas were awarded to the English; but I think this merely shows that the Americans have not yet begun to enter for the examinations; they content themselves, for the present, with the incidental improvement.

The Alliance Française issues a list of boarding-houses for its students. I visited many of these *pensions de famille*, and—perhaps from having formed at an early day

the idea that living abroad should be both cheap and somewhat romantic—I cannot say that I found them attractive. They were not always very cheap, nor cheerful in outlook, nor free from odors as if the drainage had not been properly attended to; and then again it might happen that they would be so full of miscellaneous foreigners, or of other Americans, that very little good French would be heard there. Still, it must be possible to find the right sort of accommodations; I can only say that one will have to use all the ingenuity he is master of in getting himself agreeably placed.

The only other vacation school in France at present, though Grenoble is talking of having one soon, is that at Nancy, belonging also to the Alliance Française. Nancy has 80,000 people, and retains many of the stately features that belonged to it when it was the court-city of the Dukes of Lorraine. One is quite astonished, on alighting there, to see all those palaces, statues, gardens, fountains, triumphal arches, and high gilded gratings. Charles the Bold of Burgundy, that historical bull in a china-shop, was killed under its walls. The vine-clad slopes about it make pleasing scenery, and, so far as surroundings are concerned, I do not see why one could not be quite content to live and study in the quiet town of Nancy. I used to feel all along at Paris that the ideal vacation school should be held where one could combine some of the pleasures of the country with the purpose in hand; indeed, that was the basis of the search on which I set out. The lessons were given at the University. There are but five a week, and, as at Paris, the price comes to a franc a lesson. I found about thirty persons comfortably assembled about a long table, with the professor at one end. There were two English and one American, the latter a young woman from Arkansas. The course was followed by seventy persons in all last year. It is not here merely a vacation course; it runs throughout the year—as the prospectus announces, “*même pendant les vacances*.” The examinations take place in April, July, and October, respectively. The University is open gratis to those who may desire to attend there, the whole certainly making an excellent opportunity. Board and lodging is quoted as from 100 to 150 francs a month.

I have said that at Grenoble they are planning a school of the same kind. They desire to have it throughout the year, as at Nancy. They would be very glad, too, to draw foreign students to their University. This small city, of 60,000 inhabitants, will most likely have a programme of studies arranged for the coming season, and then it should present great advantages. My attention was first called to it by the statement of Michel Bréal, the distinguished philologist of the Collège de France, that, if he had his life to live over again, “he would be a student nowhere but at Grenoble, within sight of the Alps, beside the swift waters of the Isère.” I spent some three weeks there, and came to know it very thoroughly. It is the centre of a variety of charming excursions. You have Chambéry close by, with the house of Madame de Warens and Rousseau; Aix-les-Bains, with its stir of fashion; the Lakes of Laffrey, where Napoleon first fell in with the Royalist troops on his escape from Elba; the springs of Uriage, and the remarkable glaciers of Bourg d’Oisans. I found M. Mar-

cel Raymond (who, with M. Zeller, the very agreeable rector of the University, has this movement especially in charge) living at quite a little earthly paradise, his summer home, up in the village of St.-Ismier, embowered in rose and fruit trees, and looking off to the snow-topped range of the Belledonne. It was thought that students might be placed by twos or threes in private families, at moderate prices. Another idea was that the fine buildings of the Lycée should be used for this purpose during the vacation; they could be free, however, only after the month of July.

Grenoble is fortunate in the fresh, beautiful edifice of its University, uniform in architecture with the Public Library and the Prefecture, around a handsome square. I was there when it was dedicated by the President of France, under the new law which gives each university a separate existence; but lately they were mere “academies” of the central direction at Paris. The professors were very brilliant in their rich gowns—crimson, scarlet, violet, or canary-yellow, according to the faculty, with the *épitoge*, barred in ermine, over the shoulder. They surpassed even the gold-laced generals; learning here does not leave to the less worthy occupations the monopoly of mundane pomp. There are some 600 students; the faculties of law and science are stronger than the others. Grenoble has a Committee of Initiative, charged with advancing the material interests of the place, and a town of our own Far West could scarce be more active in distributing circulars, to draw in new population. What with this, a students’ committee for the benefit of strangers, and the hospitable disposition of the professors, an American going there to study would certainly find himself well received, and in such a place he ought to be able to turn his time to very good account, both in the language and in other ways.

From there I went on to Geneva. I found some two hundred and twenty members in the summer course, with every appearance of being actively interested. The greater number were still Germans. There were but two from England—more exactly, Scotland—and none from America, though there have been Americans in former years. The fees are a little lower than in France—that is, forty francs for six weeks, at the rate of eleven lessons a week. Modern French was rather emphasized in the programme. The purpose here seemed to be to devote as much time as possible to the actual spoken language, leaving out the appeal to French pride and patriotism which was a natural part of the proceedings at Paris. But is Geneva French enough? Why, so far as language is concerned, it is a thoroughly French city; it is the birthplace of many great French writers, the source of most excellent French books, and its leading newspaper, the *Journal de Genève*, is among the best in Europe. The University buildings are in a new part of town, well linked in, however, with the older part that contains the Cathedral and the Hôtel de Ville. They look out with a fine stately air on a lovely public garden, made on the site of some old ramparts.

The studious audience in their spacious halls had a rather more hard-working air than that at Paris; there were many elderly persons present—one grave turbaned Oriental among them—and the shirt-waists and sailor hats might have been a trifle less trim

than in Paris. The instruction was imparted by groups of not more than fifty, a feature which made it quite personal, easy, and practical. The instructors, chiefly from the government lycées, were young, energetic, and very competent in their subjects. Prof. Bally dealt very clearly with synonyms and with those slight differences of form that so much puzzle the stranger, and often the native, too—as, *en travers de* and *au travers de*, *s’amuser à* and *s’amuser de*. Prof. Thudicum had in connection with his class in Phonetics a successful Section de Chant, in which the popular ballads of Switzerland were sung; singing being an excellent promoter of accurate pronunciation. Prof. Bouvier, the founder and director, was admirable. Still young, of a fine and thoughtful appearance, a man of ideas and an excellent speaker, he had, too, that obligingness of manner, combined with force and efficiency in management, that constitutes the highest type of deportment for the civilized man. His own department was the French literature, with classes in “Analytical Reading” and in “Improvisation and Discussion.” He read French poetry beautifully, without any of the cheap artifices of the elocutionist. The members of the school used to hold social reunions among themselves, and at the end there was a banquet, and Labiche’s comedy “*Les Deux Timides*” was played. Saturdays were kept free for excursions, and surely there was no lack of excursions when you could go one day, for instance, to see Voltaire’s fine château at Ferney, and another down the lake to Madame de Staël’s charming home at Coppet.

Further along on the lake, at Lausanne, housed in the new chemical laboratory of the quaint University, high on the very steep hill, is another of the vacation schools. And still another is at Neuchâtel, on the lake of the same name, the town where Agassiz was once professor. I have no report on the latter, and I fear to transcend due bounds if I add more than a word or two about that of Lausanne. Some 3,000 English people, it is said, live at Lausanne, and by learning to deftly catch the tramways and the cable road down to the shore at Ouchy, have adapted themselves to the back-breaking hill, which, with all its picturesqueness, at first sight seems quite impossible. The courses here were two of three weeks each, but with fifteen hours a week, and the numbers were modest. If ten students make the demand for more than is contained in the programme, a special seminary will be formed for them. The programme, however, covered a pretty wide range—comparative literature, a comparative study of French and German, the movement of ideas in contemporary France, questions of modern history, and the like. The latter, by Prof. Rossier, was made, through discussions, as stimulating as possible to conversation; but considerable tact was sometimes necessary to avoid the rise of unpleasant feelings between rival nationalities.

WILLIAM HENRY BISHOP.

ROSSETTI AND MILLAIS.—II.

LONDON, January 3, 1898.

If Rossetti was the poet of the Pre-Raphaelite Brotherhood, sharing with the others his great gift of imagination, Millais was the painter, the perfect craftsman. Of this, you can never have the shadow of a doubt from the moment you look at the surpris-

ing little "Cupid Crowned with Flowers," the most romantic flight of his whole working life perhaps, painted when he was twelve years old (?), until you turn in despair from the popular "Cherry Ripes" and "Bubbles," with which, in his maturity, he stooped to pander to the public taste. Even in the worst of the banalities he produced with so much misdirected ease, you will come upon a beautiful bit of color, a lovely bit of form, a painter-like quality, that makes the foolish Christmas supplement a tragedy to you. So terrible does it seem that the accomplished painter he was should have been willing to prostitute his powers and play down to the populace. The collection displays him in all his strength and his weakness—the strength that lay in his extraordinary talent or genius, the weakness that came largely from his curious want of what I must call, for lack of a better word, pictorial sense. Where Rossetti hesitated and bungled, he triumphed, for in paint he found ever his one and only sympathetic form of expression. But where Rossetti looked out upon the world with the eyes of a poet, Millais saw things just as they are, all plain matter-of-fact prose. When left to himself, his portraits and landscapes were seldom more than exact transcripts of nature, making no demand on the intelligence or the imagination.

In the beginning, he fell under the spell of Rossetti. That he was ready to fall under anybody's spell seems likely. A "Cymon and Iphigeneia" I have now seen for the first time, ascribed to the years 1848-'51, when he was painting the most characteristic of his Pre-Raphaelite pictures, is absurdly like a sham Mulready or Etty, while a little "Conjuror," presumably an early work, though the date is not given, is strongly reminiscent of Bonington and Delacroix. But Rossetti's influence happened to be dominant; it asserts itself in the "Mariana" and "Isabella," in the "Ariel" and the "Ophelia," in the "Blind Girl" and the "Sir Isumbras," while the "Carpenter's Shop" suggests Holman Hunt. But, the subject or motive once found or borrowed, Millais could carry it out with a power and distinction all his own. Rossetti never surpassed the brilliancy of color in the "Mariana," nor the exquisite detail of the embroidery on the table, the jewelled girdle about her waist, the dim lamp before the shrine, the gay flower-garden seen through the window. He never approached the truth of the little hillside village under the vivid rainbow arch that makes a background for the "Blind Girl," or the blossoms and foliage bordering the stream where Ophelia floats, chanting snatches of old tunes. The "Girlhood of Virgin Mary" is not more naïve than the "Carpenter's Shop," nor the "Sir Galahad" more deliberately primitive than the "Isabella." These early Millais are the masterpieces of Pre-Raphaelitism, and, at the Academy, if they are not hung in chronological order, they are placed so close together that they can be seen almost by turning your head, certainly by walking a few paces: an opportunity for study which will never be offered again, at least to our generation.

But the bewildering thing is that, even at the time Millais was busy painting these great pictures, he was perpetrating such odious sentimental trivialities as the "Order of Release" and the "Rescue" and the "Conclusion of Peace." This last, but little known, luckily, represents a family scene,

and reeks with all that is sickliest and most cloying in early Victorian sentiment, so indelicate in its self-conscious delicacy that you hurry away from it with something like a feeling of shame. And when, gradually, he threw off altogether the romance he had borrowed from Rossetti, this sentiment clung to him, asserting itself with more and more force in the many subject pictures that have delighted the English Christmas audience, so that you cannot help asking if, in the "Conclusion of Peace" rather than in the "Mariana" or the "Ophelia," you have not the real Millais.

He had his splendid intervals, when, for instance, he painted his "Stella" and "Vanessa" in 1868, his portrait of Mrs. Bischoffsheim in 1873, of Mrs. Heugh in 1872. In the "Stella" and "Vanessa" he seems to have exulted, like a Veronese, in the gorgeousness of the gowns he was rendering and their rich, extravagant patterns; he seems to have let himself go, to have abandoned himself to the joy of creation, of seeing the lovely, sensuous forms and lines spring into life at his bidding. There is in them all the quality and color of his first pictures, together with a far greater freedom and force. The "Mrs. Bischoffsheim" has much the same luxuriance, the same gorgeousness; but it has also a stateliness and dignity he too seldom, alas! troubled to give to a portrait. The painting of the flesh, too, is admirable, and the modelling of the large, full, firm neck and bust. It is the very pride of life he has seized and fixed for ever upon his canvas. Then, to learn the range of his powers when he chose to exert them, you have only to leave the "Mrs. Bischoffsheim" for the "Mrs. Heugh," the old withered woman, bent and relaxed under the burden of years, her skin like parchment, marked with innumerable lines and wrinkles, her eyes sunken and watery with age; no less a marvel, no less beautiful in its truth and reverence. It is incomprehensible that the same man could have knocked off without a scruple a whole gallery of cheap tawdry Little Miss Muffetts and Cinderellas; of Salisburys and Gladstones and Tennysons, with the eyes of a Landseer dog, crammed, jammed full of sentiment, of plain, insignificant women, the Frenchman's caricature of the English lady—De Maupassant's "Mees Old Maid." There are exceptions. The "Mr. Gladstone" has some good points, and so has the "Cardinal Newman." Nor can one ever forget the little portrait of Mr. Ruskin, standing in the rocks by a waterfall painted with pre-Raphaelitic minuteness, complete and honest, if untrue. But all the exceptions taken together would not fill a small gallery. I admit that many of the people who came to Millais to be painted must have appeared to him discouraging enough; but the really great artist, with respect for his art or his reputation, will find an interest in ugliness, or else not paint it. Rembrandt made a masterpiece of a Jew in rags, Velasquez of an Infanta in crinoline. But Millais did not care, and he was sure the British public neither knew nor cared so long as it saw his signature; and, understanding the tastes of his patrons, he gave them what they wanted.

There are, of course, other pictures not to be overlooked altogether: the "Yeoman of the Guard," now belonging to the National Gallery; the "Eve of St. Agnes," theatrical, but preserving something of the early truth

and loveliness of detail; the "Ester," with its marvellous rendering of silks and embroideries. Of his landscapes, famous as several are, I say nothing, for the reason that, to see them now at the Academy, is to acknowledge that Millais was not a landscape painter. There are here and there very charming passages: the hedge in the "Old Garden," the reeds in the "Sir Isumbras," the flowers in the "Ophelia," the rocks in the "Mr. Ruskin," the hillside in the "Blind Girl." But, as a rule, nature provided him merely with subjects of study. He put down what he happened to see, without any effort to select or leave out, without any sense of beautiful line, of decoration, of composition. For effect, he depended on the sword-blade cypresses and pines black against the sky that he and Mr. Leader got from Linnell, and that are supposed somehow to express pathos; or else on the scrawly, wriggly tree-forms that are the backbone of Fred Walker.

The drawings are disappointing. One knows the fine work Millais did as an illustrator, but most of his illustrations were drawn on the wood block and cut to pieces by the engraver. The "Pearl of Great Price" is here; it was redrawn on wood for the Parables, and engraved by Dalziel, and is the only unengraved drawing for this book that I can remember. There is also a "St. Agnes' Eve," another version of the design used in Moxon's Tennyson. And two or three studies and sketches complete the very imperfect display of important drawings.

Finally, I must say a word in praise of the most excellent catalogue published by the Royal Academy. It contains a chronological list of the pictures that, hereafter, all students of Millais will find indispensable.

Correspondence.

THE LOUD BILL.

TO THE EDITOR OF THE NATION:

SIR: In a recent issue, you made the following statements in regard to the Loud bill:

"Yet that bill was defeated because powerful private interests were affected by it. These private interests kept a lobby at Washington. They had 'pulls' with Senators and Representatives. The public, who foot these unnecessary bills, do not send anybody to Washington to represent their common interests in a special but only in a general way, and so the abuse which the Loud bill seeks to eradicate goes on, and the parasites who fatten on the postal revenues are undisturbed."

Since these statements are liable to give the public a wrong impression of the merits of the bill, and of the character of those who oppose its passage, I beg of you a small amount of space for reply. If you will kindly refer to reports of the Loud bill hearings before the Senate committee at Washington last winter, you will find that private interests were represented on both sides of this question, and not on one alone. Among other powerful interests which sent able advocates to Washington to work for the bill were press organizations claiming to represent three-fourths of all the daily circulation of newspapers in America, and three-fourths of the circulation of legitimate agricultural papers. On the one side you will find those private interests which seek to secure a mo-

nopoly of low postal rates, and on the other those which, claiming equal rights, object to being discriminated against. You will find favoring the bill, on the ground that it is opposed to those who issue libraries, the —, a paper which gives for 10 cents 9½ ounces of advertisements and 3¼ ounces of reading matter; and on the other side of the question you will find the publishers of Longfellow's 'Evangeline' in the Riverside Literature Series, which contains 4½ ounces of reading matter and no advertisements, with the claim that good literature without advertisements should receive as low postal rates as papers which devote 72 per cent. of their space to advertising matter.

You say that the public do not send any one to Washington to represent their common interests, except in a general way; this is true, and it is to be regretted that our State Superintendents of Public Instruction, our college presidents, and other educators cannot go to Washington and state their views on this important subject. Mr. Booker T. Washington, the representative of the colored people of the United States, says:

"In my opinion the passage of the Loud bill, now before Congress, will prove a great disadvantage to education, especially in the southern part of our country, where our people are now beginning to take advantage of the cheap rate at which literature is now being furnished by the various publishing houses. The passage of the Loud bill would set back the South, in my opinion, in its educational work most effectively, and I very earnestly hope that the said bill will not pass."

A. S. Draper, President of the University of Illinois, says:

"It seems to me there is but one side of the question presented. The postal laws should, so far as practicable, discriminate in favor of standard literature and of reprints of the same, as against matter which is of only passing interest or infinitely worse."

Of ten State superintendents of public instruction who have been heard from, nine have expressed themselves as emphatically opposed to the passage of the bill. W. R. Jackson, the Nebraska State Superintendent of Schools, says:

"As I see the matter now, the enactment of the bill into law will cause a great setback to the diffusion of choice and wholesome literature among the people of this great country."

The educators referred to above represent a very large portion of the population of the United States.

Since I am one of those who have appeared at Washington before the Senate committee in opposition to the Loud bill, and, therefore come under the ban of your criticism, I beg leave to give very briefly my reasons for what I have done. The principal objects of the Loud bill are: (1.) To exclude from the privileges of low postal rates all periodicals "which are merely books or reprints of books, . . . whether they be bound or unbound"; (2) to exclude all sample copies, and (3) to require each periodical to "have a legitimate list of subscribers who voluntarily order and pay for the same." My objection to excluding books and reprints of books is, first, that it was contemplated by the framers of our present law that such material as they contain should receive the highest postal privileges if issued in a periodical form. In the *Congressional Record* of February 3, 1888, may be found a speech of Mr. Cannon, one of

the framers of the present law, in which he states that the policy of such legislation is "to encourage the dissemination of sound and desirable reading-matter among the masses of the people of the country at cheap rates, both as to the cost of the books themselves, and as to postage." He goes on to state that under this legislation the best classes of literature, for instance, the Waverley novels, Dickens's works, etc., etc., have been sent out so that they could be sold to the people at 10 cents a volume. Moreover, Judge Devens, when Attorney-General of the United States, decided that the admissibility to pound rates of reprints of books was in accordance with the law.

Since the passage of the present law the taste of our people for good reading-matter has very materially improved, so that today there is a large demand for the writings of leading American and English authors in cheap periodical form. In this form will be found the writings of Locke, Pope, Mill, Spencer, Longfellow, Whittier, Emerson, Lowell, Holmes, and many other authors of equal note. Moreover, in periodicals containing reprints there will not be found so large a proportion of trash as is to be found in those papers the contents of which are hastily prepared between two successive issues. Lists of reprints which have been condemned by those who favor the Loud bill have been carefully gone over by one of our prominent librarians, who has found in them a larger percentage of material suitable for permanent library use than would be the case with even the best of our literary magazines. Some of these libraries have become so extensively used by the children of our public schools all over the United States that to exclude them from the privileges of pound rates would be even more detrimental than to exclude the weekly paper or monthly magazine.

Those who oppose the passage of the Loud bill do not wish for any lower rates on second-class matter than the Post-Office Department can afford to give. They are willing that the rates should be doubled or trebled, if necessary, but they are wholly unwilling that material of the sort mentioned above shall be discriminated against, while poorer material, of a more ephemeral nature, or papers consisting almost wholly of advertising sheets, continue to go through the mails at the present low rates.

Other arguments against the passage of the Loud bill have been brought forward, especially in the *Outlook*, pointing out that if the Post-Office Department were to secure the same rates from the railroads as can be obtained by private individuals, the annual deficit would be materially reduced or perhaps entirely eliminated. The argument in favor of the Loud bill appears to be as follows: There is an annual deficit in the Post-Office Department; a deficit is a very bad thing; the Loud bill proposes to do away with this deficit; therefore, we should all favor the Loud bill. The same reasoning would require the amputation of an arm because of a sore finger, but the patient would object, and ask whether there is not some simpler remedy, and that is the question which we who oppose the bill are now asking. We believe that the enforcement of the present law in regard to the exclusion of advertising sheets, coupled with better arrangements with railroads, would more than do away with the present annual deficit. Should this result not be reached,

however, we are perfectly willing that the postal rates on second-class matter should be raised as much as may be necessary, our only contention being that the good literature which forms so large a part of so-called libraries, and which is every day increasing in quantity, as compared with poor material, should not be compelled to make way for other material of an inferior quality.

I regret that from lack of space I cannot take up the question of sample copies and other matters in regard to which much might be said.

H. N. WHEELER.

Boston, January 25, 1897.

[As Mr. Wheeler does not ask for lower rates on second-class matter than the Post-Office Department can afford to give, controversy with him is unnecessary. For reasons which need not be recapitulated, the Government has always discriminated in favor of the circulation of bona-fide newspapers and periodicals through the mails, to which policy we infer that Mr. Wheeler makes no objection. With this understanding, all that any reasonable person can ask is the establishment of an equilibrium between post-office receipts and expenditures by an increase of rates on that portion of the service which causes more outgo than income.—ED. NATION.]

THE ALFRED MEMORIAL.

TO THE EDITOR OF THE NATION:

SIR: In England signs are not lacking of a certain interest in a project for celebrating the thousandth anniversary of the death in 901 A. D. of King Alfred the Great. The hold which Alfred's memory has upon all the English-speaking peoples of the world, and the widely diffused realities of their characteristic life—laws, liberties, commerce on land and sea, the faculty of combination with the least sacrifice of individual initiative, their specific temperament in religion and in art—these are in some sense one and the same thing. That common something which lives in the life of all who use the English mother-tongue to-day is impersonated for all of us most happily and with surprising adequacy in the glorious figure of the ancient Wessex King; in the goodness and greatness, cavilled at by none, of Alfred—the first and ultimate "organizer" of our victories, and the promoter at their earliest outset of our enterprises. But a light radiating far beyond the confines—large though they be—of what we may call "Anglo-Saxondom" centres in Alfred's life. His noble enthusiasm for learning and piety gathered around him many who were not Anglo-Saxons. And his commemoration is one in which Irish-Americans—without whom American participation would be incomplete—may loyally join. Nor should either we or our brother Americans of German and Scandinavian stock forget that Alfred is one of those heroes whose memory associates us as of kindred origin. It is not easy to overestimate the degree in which King Alfred was stimulated in his work of enlightenment by what he saw as a youth when staying at the court of Charles the Great, and it is a manifest token of the real harmony of purpose underlying the successful endeavors of

all the early civilizers of Teutonic stock that Knut, the great Danish successor of Alfred, reënacted solemnly the laws established more than a century before by Alfred, who thus led captive a triumphant foe.

Those who feel that the common ties uniting the scattered sons of Alfred are stronger than the accidents of time and place that have sundered them, must certainly be appealed to by the general drift of Mr. Frederic Harrison's presidential address delivered three months ago at the October meeting of the Birmingham and Midland Institute on "The Millennium of Alfred the Great," though they may very possibly feel misgivings as to the particular form of monumental commemoration—a mausoleum to contain the remains of Alfred, now buried at Winchester, and to be a place like Westminster Abbey for the monumental commemoration of great men. Mr. Harrison's words were certainly well chosen when he said: "On the 26th of October, 1901, a thousand years will have passed by since the death of our greatest King. We are a little overdone with anniversaries, and those not always of the worthiest. But this is no ordinary occasion, for it will be the thousandth anniversary of him to whom England owes an incalculable debt of gratitude." By England is not here meant solely Great Britain and her empire, colonial and other, for we must include all the debtors of Alfred in our accounting; America has hardly a smaller score against her than the mother country where Alfred was King. Nor does Mr. Harrison think otherwise, for he goes on to say:

"Alfred's name is almost the only one in the long roll of our national worthies which awakens no bitter, no jealous thought—which combines the honor of all. Alfred represents at once the ancient monarchy, the army, the navy, the law, the literature, the art, the poetry, the enterprise, the industry, the religion of our race. . . . No difference of church arises to separate any who would join to do Alfred honor. No saint in the calendar was a more loyal and cherished member of the ancient faith; and yet no Protestant can imagine a purer and more simple follower of the Gospel. Alfred was a victorious warrior whose victories have left no curses behind them; a king whom no man ever charged with a harsh act; a scholar who never became a pedant; a saint who knew no superstition; a hero as bold as Lancelot, as spotless as Galahad."

It is not, I think, an accident, but one of the most significant features in the history of our race, which places only one other of our great men on anything like these pinnacles unvisited by the blame or scorn of men, and makes of Washington, the father of our country, the only figure in Anglo-Saxon history who may fitly be enshrined alongside of Alfred, the founder and father of that body, politic and social, from which our country sprang. Who has not felt the need of a type of heroic and national character so fashioned as to mediate between the blameless and generous, but still more or less definitely aristocratic Washington, and Lincoln, who was anything rather than of the aristocratic temperament? Whatever stress we may lay upon points in common shared by our two greatest men, I take it for granted that their divergent temperaments are recognized by all. Alfred's career and character give us something very like the missing link with which to bridge over the distance separating the two, and to frame a just appreciation of their diverse excellence. Indeed, the versatile genius of the great King of Wessex was developed by

circumstances and surroundings which we may call American rather than English. By this I mean that Alfred's surroundings had much to remind us of the situation of the early colonists in Virginia and New England—not to speak of the more recent founders of the great West. His vein of "Yankee inventiveness" is well known, as is also his resourcefulness in the face of "irregular" military situations. In this last we can hardly fail to recognize a trait that has characterized the typical American management of the wars by which our national existence has been achieved and assured. There are, then, important aspects of King Alfred's career which Americans as such can understand and appreciate far more completely than Englishmen. Hence, perhaps, it is that no Plutarchian parallel could well be drawn between the two types of American greatness without some reference to the pioneering genius of King Alfred, who forms what we may call a living hyphen between the statelier moods of Washington and the homelier gifts and graces of Lincoln.

These considerations certainly suggest the appropriateness of some American manifestation of interest in the London meeting announced to be held in the course of next March at the Mansion House. Why should not the feelings of Americans in this matter, supposing them to be at all definite, find some sort of expression in time to make themselves known at this meeting? Anything of the kind would certainly be welcomed, since it would serve to make the proposed commemoration more truly an affair of the whole Anglo-Saxon race. The definite suggestion has already been made of a committee to include representatives of public services, universities, municipalities, learned societies, literature, art, and science, without any distinction of church, nationality, race, or party. A suitable representation of the United States would certainly be secured by American expressions of interest, and it has been intimated that persons who desire further information, and who wish to join the movement, are invited to communicate with any of the following: The Mayor, Guildhall, Winchester; the Dean, Deanery Winchester; the Headmaster, Winchester College.—Yours very truly,

LOUIS DYER.

OXFORD, January 18, 1898.

Notes.

Roberts Bros., Boston, will have the American market for the complete illustrated limited edition of Charles Lever's Novels, edited by his daughter, Mrs. Neville. It will be in thirty-seven octavo volumes, and be limited to sixty numbered sets. More than six hundred etchings and drawings from the original plates of "Phiz" and Cruikshank will be inserted, besides the wood engravings of Luke Fildes, M. E. Edwards, and others, and some new illustrations by Gordon Browne, a son of "Phiz." The manufacture will be Messrs. Constable's, and the printing from type.

Houghton, Mifflin & Co. will shortly have ready the tenth and concluding volume of the late Prof. Child's 'English and Scottish Popular Ballads,' under the supervision of Prof. Kittredge. They announce also the second series of Victor Hugo's Letters, and 'Birds of Village and Field,' by Miss Florence A. Merriam.

Nearly ready are 'H. R. H. the Prince of Wales' and a new and enlarged edition of Edmond Kelly's 'Evolution and Effort,' from the press of D. Appleton & Co.

Fresh announcements by the Macmillan Co. are 'Pasteur: his Life and Work,' by Percy Frankland and Mrs. Frankland; 'France,' by John Edward Courtenay Bodley, a work emulating Bryce's 'American Commonwealth'; 'Southern Soldier Stories,' by George Cary Eggleston; 'The Gospel of Freedom,' by Prof. Robert Herrick of the University of Chicago; 'Sources of Greek History,' by Anna Boynton Thayer; and an English translation, by Dr. Nicholas Murray Butler, of Dr. Kronenberg's 'Kant: sein Leben und seine Lehre.'

Charles Scribner's Sons will soon publish 'A National Church,' by the Rev. William R. Huntington, D.D., and 'What is Good Music?' by W. J. Henderson.

M. F. Mansfield issues immediately 'The Story of the Potter,' by Charles F. Blinn, of the Royal Worcester Porcelain Works.

A Burton Society is organizing in Denver "to promote the study of Oriental literature by publishing English translations of Oriental classics." It seeks a membership of one thousand, excluding "any person of immature years," in view of the first and perhaps only work to be undertaken, viz., a reprint of the Benares edition of Sir Richard F. Burton's translation of the 'Arabian Nights,' in sixteen volumes, "without omission or alteration." In short, this is a new form of publication by subscription. The society, whose temporary office is at No. 19 Barth Block, Denver, is provided with a President, Secretary, and—attorney.

T. Fisher Unwin, London, is reprinting from *Cosmopolis* the letters of Turgeneff, under the title, 'Turgeneff and his French Circle,' translated by a niece of Matthew Arnold. They range from 1850 to 1877, and are addressed to Flaubert, Daudet, Zola, George Sand, Taine, Renan, and Guy de Maupassant. Mr. Unwin will bring out in the spring 'Through Tibet Unknown,' by Capt. M. S. Welby and Lieut. Malcolm, with illustrations by Mr. McCormick. He has also in hand 'The Gladstone Colony: An Unwritten Chapter of Australian History,' by James Francis Hogan, M.P., and 'My Life in Two Hemispheres,' by Sir Charles Gavan Duffy.

In his preface to the eleventh volume of 'Book-Prices Current' (London: Elliot Stock), Mr. J. H. Slater shows how the exceptional prices fetched at the Ashburnham sale disturbed the lot average for the year (December, 1896—November, 1897). For the five previous years this average ranged from one pound six to one pound thirteen; last year it touched two pounds thirteen. Mr. Slater has given a real distinction to this volume by quoting all the Ashburnham cataloguer's bibliographical and descriptive notes, and has himself added not a few nor brief. The scheme of this useful record is unchanged. The arrangement is by sales; there is a table of subjects and an index of authors. There are 6,218 entries, or nearly 400 less than last year. The publisher still invites subscriptions at a guinea to a proposed general index to the first ten volumes.

Arthur C. Downer's 'Odes of Keats' (Oxford: Clarendon Press; New York: Henry Frowde) must be thought rather wooden treatment of so spontaneous a poet. The biographical and bibliographical apparatus is all very well, and makes the book con-

venient for reference. The analyses are deadening, and the beginners for whom they seem intended should be warned against them. The way for such to approach Keats and his verse is through his Letters. From these (Letter to Reynolds, March 25, 1818) the editor might have borrowed the graphic sacrificial scene which foreshadows the action in the "Grecian Urn," and possesses a charm scarcely inferior. There are three portraits of Keats and two views of the Holland House urn.

A most welcome publication is that of 'A Legend of Camelot,' by the late George Du Maurier, not so much for the "legend" itself, an amusing burlesque of the Pre-Raphaelite manner in picture and verse, nor for "The Rise and Fall of the Jack Spratts" and other literary and artistic fragments which the Harpers have been gathering from the pages of *Punch*, as for the inimitable "Vers Nonsensiques," with their equally inimitable illustrations. It must be about twenty years since these rhymes and drawings were first published, and, while they have been lovingly remembered by a few, they will be entirely novel to the many. Du Maurier the society draughtsman has caused Du Maurier the caricaturist to be forgotten, and the delightful grotesqueness and good-natured fun of these sketches will come as a revelation even to many sincere admirers of their author. Of the verses it is hardly too much to say that they are the drollest, the wittiest, and the best of all the nonsense verse that has been written. Their audience must ever befit though few, for a pretty thorough knowledge of two languages is as necessary for their comprehension as is a sense of humor; but to those who are capable of appreciating them they are a joy for ever. There are thirty-two of them, and from the "Beau Gendarme" at the beginning to the "Portrait de l'Auteur," who sings tralala and loves his mamma, at the end, there is not one that does not contain some astonishing bi-lingual perversion, some *tour de force* of alliteration, some shrewd thrust at national characteristics, some extravagant jingle or topsy-turvy piece of fantastic foolery.

It is difficult to find a reason for the republication in book form of 'Cartoons by Homer C. Davenport' (De Witt Publishing House). Some of the portraits show a kind of power in the retaining of a likeness in spite of the wildest exaggeration, and doubtless the political cartoons more properly so called served their purpose when published; but the effect of the whole collection gathered together between covers is intensely painful. We have never seen the work of a caricaturist in which ugliness was so overpowering and fun so absent. Many of our would-be comic draughtsmen are apt to mistake mere hideousness for humor, but Mr. Davenport has gone further than any of them on that road, and, if his work is popular, it speaks ill for the public taste. True caricature is an enjoyable art, but it is hardly conceivable what kind of being could enjoy these caricatures of caricature.

Dr. Justin Herold's 'Manual of Legal Medicine' (Lippincott) has unfortunately "been written during brief intervals of leisure." Nevertheless it is a fair working volume, covering toxicological and forensic medicine sufficiently to give the general practitioner reasonable guidance as to his duty in emergencies where the law may ultimately be invoked, until the case falls into the hands of an expert. The most interesting, and po-

tentially the most immediately important, chapter is that discussing electricity in connection with the death penalty. While there is no distinct assertion, doubt is left with the reader as to the actual cause of death following the judicial use of electricity.

'The Origin of Disease,' by Dr. Arthur V. Meigs (Lippincott), is a purely medical work of the higher grade which would better be named 'An Origin of Disease,' for those affections afflicting man which have an acknowledged external cause are expressly excluded. After much contact with the sick, the author recognized the unsatisfactoriness of the precise classification of diseases in the text-books, and the failure of the teaching faculty to appreciate certain general causes that he believes bind together apparently dissimilar pathological states. He intimates that, even in scientific medicine, as certainly in the popular view, the group of symptoms known as a disease is regarded too nearly as an entity; and he offers here at least one generalization pointing to a kinship among the disabilities of different organs and among diseases that are nominally distinct. This generalization is that fibrosis, which is the growth and increase of fibroid material, and is the essential change incident to age and leads to its necessary consequence, death, is also concerned in earlier years in bringing about a long chain of troubles, variously named, but all tending to premature and fatal decay. The large octavo is copiously and excellently illustrated on steel directly from the author's own specimens. Dr. Meigs would be untrue to his profession did he not add chapters on diagnosis and treatment; and while his colleagues may not accept all his conclusions, they certainly will find many valuable and stimulating suggestions in this thoughtful work.

A valuable contribution to a subject of psychological interest and practical importance is August Löwenstein's 'Aberglaube und Strafrecht' (Berlin: Röde), in which he traces the influence of popular superstition in promoting crime. Germany is especially rich in material of this sort, partly the survivals of paganism and partly the results of Christian teachings concerning demonolatry and witchcraft; and it will be impossible to eradicate this evil so long as the Catholic Church prescribes formulas and performs rites for the exorcism and expulsion of devils. The introduction to the volume is by Prof. Joseph Kohler of Berlin.

'Michael v. Münkacsy: Erinnerungen—Die Kindheit' (Berlin: Fontane) is the first volume of the distinguished artist's autobiography, in which he describes his childhood. He was by no means one of those precocious infants who begin in the nursery to reveal the talents that make the man illustrious, unless perhaps the distinct recollection of his admiration for the colors on his father's Turkish tobacco-pipe may be accepted as a presage of the painter's career. His earliest bent seems to have been in the direction of "bold emprise"; for one day, when he overthrown the inkstand and left its contents on the writing-desk, he ran off into a neighboring forest to join a band of robbers. He was left an orphan at a tender age and came to his uncle, who afterwards apprenticed him to a joiner. This life, as he imagined it, "running through the streets barefoot, with sleeves rolled up and an apron on," struck the boy as most fascinating, but the illusion was soon dispelled by the real-

ity under a rude master. After his apprenticeship was finished, a German painter named Fischer discovered his genius and gave him the first instruction. How the mechanic developed into the masterly painter will be related in a second and concluding volume. The work is written in a simple style that lends additional charm to the narration.

The fourth volume of the 'Bismarck-Jahrbuch,' edited by Dr. Horst Kohl, and just published by Goetschen in Leipzig, is an octavo of 421 pages, and consists of three parts, of which the first contains various documents and letters never before printed. The correspondence between William I. and Bismarck, between Bismarck and Roon and other persons, covers the period from 1864 to 1887, and comprises more than a hundred letters. The second part is composed of speeches, dissertations, and poems, and the third part is a chronicle of events, consisting of telegrams, letters, and newspaper articles, and extending from September 17, 1896, to December 31, 1896. There is no doubt about the value of the material here collected as a source of information for the future historian. The editor, however, laments in his preface the purely "platonic affection" of the German public for his work, and declares that unless there is a great increase in the number of subscribers and purchasers, it will be impossible to continue the publication.

A German 'Poole's Index' makes its appearance with 'Bibliographie der Deutschen Zeitschriften-Litteratur,' Vol. I., being an alphabetical topical index of 8,500 contributions to about 275 (mostly scientific) German periodicals for the year 1896, with author's name, number of pages, and price of volume (or number if to be had separately). Medicine and Technology are excluded. The publishers are F. André's Nachfolger, Leipzig (New York: Lemcke & Buechner), and the price \$2.50.

The most notable feature of the *American Historical Review* for January is the Notes of Major William Pierce on the Federal Convention of 1787, to which body he was a delegate from Georgia. These Notes are printed from the lately discovered manuscript, but three-quarters of them have appeared in print, though so long ago and in such a way as to make them now all but inaccessible to students. They do not add much to the familiar reports, and they are wholly occupied with discussions on the form of government. Slavery is not mentioned in them, and there is only a slant at it in a prefatory letter to St. George Tucker, when, apologizing for the absence of a bill of rights, Pierce says: "I believe it would have been difficult in the extreme to have brought the different States to agree in what probably would have been proposed as the very first principle, and that is, 'that all men are born equally free and independent.' Would a Virginian have accepted it in this form?" This shows how far the Declaration of Independence had already been left behind; or, rather, how far it was still in advance—as it is to-day. But much the most interesting and valuable portion of the Notes is the concluding fourth division—"Characters in the Convention," a personal description of each delegate. Here the most striking revelation is the comparative youthfulness of the body, and the large number of men under forty. Pierce exhibits no sectional antipathy whatever, and gives the impression of a fair-minded man.

Field Columbian Museum Publication No. 24 (Chicago) contains the annual report of the Director, who gives an account, with illustrations, of the arrangement of the natural-history collections of the institution and the manner in which they are preserved and exhibited.

A report on 'The Fossils of the Galena-Trenton and Black River Formations of Lake Winnipeg and its Vicinity' in the Museum of the Geological Survey of Canada constitutes part three of the third volume of "Paleozoic Fossils" now in course of publication. The text is by J. F. Whiteaves, and includes descriptions of several new species. The drawings for the illustrations were made from nature by L. M. Lambe.

"The Causes of the Ice Age" is the subject of a paper by Warren Upham of St. Paul, Minnesota, published in the twenty-ninth volume of the Transactions of the Victoria Institute of London. The writer asserts that it is practically demonstrated that the ice age ended not longer than 6,000 or 10,000 years ago. In the discussion of the paper by the Institute, there was read a letter from Sir Joseph Prestwich—interesting as being the last communication received from that eminent geologist—in which he endorsed the views of Mr. Upham as to the end of the ice age, but not as to its cause. The volume also contains a paper, by Mr. T. G. Pinches, on Babylonian inscriptions, and one by Sir J. W. Dawson on an extinct people of the Canaries.

The Royal Academy of Sciences of Bologna has begun the publication of a new series of 'Rendiconti.' The first volume consists of four numbers, and contains an account of the proceedings of the Academy from November, 1896, to June, 1897.

The Zurich Observatory has been enabled, by the bequest of its late director, Prof. Rudolf Wolf, to begin a new series of publications. The first volume contains an account of Prof. A. Wolfer's observations of the surface of the sun during 1887-'89. The observations for the five following years will appear in 1898.

"The Danger from Experimental Psychology" is a title not likely to attract every reader, but the article in the February *Atlantic* which bears it will be found of more than common interest by all who care about questions connected with the theory of education. Many a well-informed man may not know that the "new" psychology is now taught in "laboratories," the apparatus in which consists of chronoscopes, and chronographs, and kymographs, and sphygmographs, and pneumographs, and myographs, and ergographs. Of these laboratories Harvard possesses one, and Mr. Münsterberg is the director of it; yet out of his psychological pulpit he lifts up a voice of warning, and declares that he feels impelled to say that he has "never measured a psychical fact," and never expects to do such a thing. The new psychologist, it seems, brings his system under the headings, not merely of memory, attention, feeling, emotion, perception, and volition, but of space, time, and energy, and on this new basis he proposes to build up a new system of pedagogics. Mr. Münsterberg has no objection to his measuring as much as he pleases, and is quite ready to measure with him, but warns him against supposing that he is measuring the states of the soul or mind. The headquarters of the pestilent fallacy which is exposed

would seem to be Yale, which has produced a book, written by some one who brings in a report of experimental psychology under the titles Space, Time, and Energy, for all the world as he might have brought it in "under the titles Iron, Wood, and Hard Rubber after the different physical instruments we need for the study of psychical facts," "pretending that, therefore, the mental facts themselves are of hard rubber, wood, or iron." The conclusion of the whole matter is, that the laboratory work of the new school is of no use whatever to teachers as such. Mr. T. W. Higginson, in his reminiscences "On the Outskirts of Public Life," brings up the old question whether literary is compatible with oratorical success in the same career. He quotes Wendell Phillips as having decided the question for himself in the negative, but thinks he was wrong. That is, he thinks that Phillips might have been as good a writer as he was an orator, had he so applied himself. But Mr. Higginson's own analysis of the conditions of oratorical as compared with literary success is rather at war with this reminiscential fancy. Mr. Russell Sturgis has a readable article on Architecture. He thinks, among other things, that if architects knew more about building, they would be better architects. We have heard many householders express the same opinion.

—*Scribner's* opens with an illustrated article by Mr. Avery D. Andrews, on the "Police Control of a Great Election"—i. e., the election of the present Mayor of New York. Mr. Andrews, having been Police Commissioner under Mayor Strong, is thoroughly familiar with the subject, and imparts a good deal of curious information. One fact which should not be overlooked is, that it is only in the last three years that the thousands of election officers (in 1897 there were 12,196) have had to pass any proper examination as to fitness. The introduction of this reform in 1895 so disgusted many candidates that one out of every ten declined to qualify, while a still larger proportion either failed to pass or were removed for cause. Capt. Mahan has a valuable illustrated article on the naval campaign of 1776 on Lake Champlain, to the delay caused by which he attributes the capture of Burgoyne and his army at Saratoga in 1777. The precise difference between Benedict Arnold's galleys and gondolas the author says he has been unable to ascertain, but he thinks that the former were probably keeled. Helen Watterson Moody, in her fourth paper on "The Unquiet Sex," considers the "case of Maria," who, it seems, was discharged from domestic service for insisting on playing the banjo. We must protest against the treatment of this as presenting a "problem." Maria had to be discharged, though she was a good servant, because the principle of equality, or, as it is sometimes called, justice, must be applied in the kitchen as in the drawing-room. If Maria the maid plays the banjo, it is impossible to deny Bridget the cook the right to play the violin, Mary the laundress the tambourine, and Sam the "useful man" the bones. But the noise and discomfort produced by this equality of opportunity would obviously impair the domestic peace of the rest of the household, and, therefore, as we say, Maria really has no case at all. Family magazines like *Scribner's* ought not to promote domestic disorder in this way. It is only fair to add, however, that Maria is brought in to serve as an illustration for

an argument in which she is irrelevant. The drift of the argument itself is to show that servants, in order to lead full and free lives, ought to go out of the house and be masters of their own time as soon as their work is done. There is nothing that we know of in the way of such an arrangement in either laws or Constitution, provided an agreement is made to that effect; but in actual life there are many difficulties in the way which do not appear to have been fully considered by the writer.

—In *Harper's* "An Incident," by Sarah Barnwell Elliott, is sure to be read by everybody, for it is an inherently interesting and well-told story. Students of "realism" will notice that it has none of the usual machinery; the locality is vague, and there are no bright red sounds, nor low murmuring neutral colors, nor violent black-guardism to make us say how true, how exactly like life! What makes the story real is what, as Shakspeare noticed, makes a play real—the behavior and speech of the characters, and the self-effacement of the story-teller. Her only intrusion is in the last four lines—lines which, to our mind, impair a climax already perfect in its simplicity. A most entertaining bit of critical writing is Du Maurier's lecture, now published for the first time, on "Social Pictorial Satire." It is the first of a series, and deals with Leech, being illustrated by some of his best caricatures. Du Maurier (who was Leech's successor) ingeniously contrives to give, not merely his view of Leech, but a sketch (through the medium of a contrast between English society and life as drawn by himself and his predecessor) of the social changes which have come over England in the last fifty years. He makes Leech the caricaturist of the world of which Thackeray was the satirist, and which has been almost suddenly superseded under our eyes by a world new in aims and theories, and fashions, and morality, and society, and belles and beaux, and even snobs. Times change, and we and the comic papers with them, but it is seldom that the slides for the show are prepared for our entertainment successively by two such masters of the craft. The Hon. David Turpie furnishes the inevitable article on the "Isthmian Canal," for which we sincerely trust that readers may be found. "Some Americans from Oversea," by Kirk Munroe (illustrated), ought to encourage those who are trembling for fear lest America should be spoiled by immigration.

—The success of the "Workers" brought out by one magazine will not let editors of the others sleep; hence, perhaps, we have in the *Century* the adventures of H. Phelps Whitmarsh as a gentleman steerage-passenger. His "Steerage of To-day," illustrated by some clever pictures by A. Castaigne, belongs to the same family with the "Workers," and derives, as the lawyers say, directly from our old friend the "Casual" of a quarter of a century since. We doubt very much whether the multiplication of such studies will add to their interest, partly because few writers have the art to make us believe in the reality of the tale; and this we say without the slightest desire to impugn the veracity of any one. We have no doubt that Mr. H. Phelps Whitmarsh has really crossed in the steerage, but it is only too evident that it was a case of a good man gone wrong. We resent the idea of any one who so clearly belongs in the first cabin un-

dertaking to interpret the steerage to us, on the strength of a masquerade trial of it for six or seven days. In nine cases out of ten what will impress him, and consequently his readers, is the very disagreeable nature of the trip undertaken under such circumstances; while, to the ordinary steerage passenger, the voyage is very often a rather enjoyable holiday in a life of toil. Mr. Jacob A. Riis's "Heroes Who Fight Fire," with pictures by Jay Hambidge, is a very interesting account of wonderful feats in saving life performed by firemen in the ordinary course of duty. No one who has seen even an ordinary rescue with scaling ladders will doubt the stories told; they come from eyewitnesses. What is most remarkable about it, perhaps, is the fact that these feats should have become so much a part of the routine of a fireman's life that they attract no attention, and are taken as a matter of course—and this in a city in which two generations ago firemen were "toughs," who fought each other at fires, and were sometimes suspected of setting them. Tweed, if we remember right, was a graduate of the old fire service. Mr. Riis notices that one trait of the most daring and heroic life-savers is their modesty. They do not boast or bluster or rant about exploits which require the nerve, strength, and skill of an acrobat and the contempt for death of a martyr.

—The second volume of the second series of the great 'Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A.' contains the letter B. As was observable in its predecessor, there has been no relaxation in procuring the earliest medical works. Johannes Bavaricus's 'Consilia' (1489) is at the head of these, so far as we have detected. There is a noticeable cluster of ancients under Bloodletting, though one and a half pages of periodical references show that neither the practice nor the discussion is extinct. Among the fuller sections are *Bacillus* and *Bacteria* (35 pages), and *Bibliography* (11 pages). Bible medicine has a page, Beer one and a half pages. Bicycles, a rubric unknown to Volume 2 of the first series (1881), now exacts a page. New, also, is Baseball (with its baseball-pitcher's arm), and no doubt Football is lying in wait for the cataloguer to assert its rights. Beri-beri would appear to be on the increase, or attracting more attention, since 1880, when a page was enough for it in Volume 1 of the first series; now four are needed for this disease. Hardly any title surprises us in the present collection, where Baby-jumpers, Baking-powders, Bread, Bees and Wasps, and Botacudos (of Brazil) jostle each other. Even "Betrayed by his Thumb," a newspaper clipping, is given its line or two. Sir Thomas Browne's 'Religio Medicus' (1683) is not out of place; nor S. Smith's 'Lecture delivered over the remains of Jeremy Bentham' (1832); nor John Bartram's 'Observations' of travel in this country, beside his 'Descriptions' of certain American plants for their medicinal uses. Less to be expected is Ely Bates's 'Rural Philosophy; or Reflections on knowledge, virtue, and happiness, chiefly in reference to a life of retirement in the country' (1807). Retirement is the word for Alexander Graham Bell's pamphlet 'Upon the electrical experiments to determine the location of the bullet in the body of the late President Garfield,' in view of the searching applications of the X-rays. History and philology and criminology go hand in hand in the case of Burking, with its eight entries

(1828-1831). It should be noted that in many if not the majority of cases the publisher's name, as well as the place of publication, is affixed to book-titles—a concession not common in catalogues.

—'Celebrated Trials,' by Henry Lauren Clinton (Harpers), contains much matter that was, some that still is, of thrilling interest, but smothered with an intolerable deal of padding. In many of these cases Mr. Clinton simply gives his own addresses to the jury, from which, of course, no one would think of drawing an inference as to the facts or the merits. Thus, of the case of the People against Richard Croker, for murder, the public would probably just now like to know something, but Mr. Clinton merely gives his own summing up. He assured the jury that his effort was entirely a work of supererogation; that all the evidence was conclusive on the side of the defence. But as the jury were out twenty-four hours without being able to agree, nearly half of them holding out for conviction, the reader naturally suspects that there may have been more in the case than Mr. Clinton admits. Half the book is given up to the Burdell murder case, of which a moderately condensed account would still arouse interest, but the pages of tedious and diffuse stuff that Mr. Clinton prints are largely unreadable. More tolerable is the account of some of the legal proceedings following the downfall of Tweed; but as the criterion of celebrity in this book is Mr. Clinton's participation in a case, we get rather one-sided views. He informs us that during the first twenty years of his practice he defended about a hundred murder cases and succeeded in them all; but if he would arouse the interest of the public, he should tell it how many of these defendants really deserved to be hanged.

THE BATTLE OF FRANKLIN.

The Battle of Franklin, Tennessee, November 30, 1864. A Monograph. By Jacob D. Cox, late Major-General Commanding Twenty-third Army Corps. With maps. Charles Scribner's Sons. 1897.

The dramatic quality of Sherman's great progress through Georgia, opposed but not interrupted by Wheeler's ill-disciplined troopers and by occasional armed but inefficient forces, has left upon the popular imagination the impression that it was the natural reward of the serious campaign that culminated at Atlanta. Hood had been defeated, the strategic objective had been occupied, there was no great army to oppose the Union columns that might at will move upon Selma or Mobile, upon Charleston or Savannah, reasonably free from anxiety until the new goal should come in view. In fact, the March to the Sea was in the nature of a military picnic until the defences of Savannah were reached, and Hazen's assault of Fort McAllister on the lower Ogeechee was practically the only fighting required to establish a base on salt water. It was all the fruit of the strategy and the hard knocks that pushed first Johnston and then Hood out of the way. But the intelligent soldier and the historical student know that that was not the whole story. The equation was one of two unknown quantities. Sherman disposed of one, but the very troublesome other one he left behind him. Thomas and Nashville, with many anxious warring prelimi-

nary days under sombre skies, were as necessary to the solution as were the confident and well-organized columns that swung out gayly on their famous tramp.

Hood had been outgeneralled and out-fought, but his army was not destroyed. Atlanta had been evacuated, not surrendered, and the aggressive Confederate had led thirty thousand men against Sherman's line of supply. When he had been driven off, he moved, with the consent of President Davis and under the supervision of Gen. Beauregard, into northern Alabama, and announced with some bravado that Sherman's departure into the interior was to the military advantage of the South. In one sense it might be. At least it divided the Union forces and left Hood free to attempt, what the Confederate President asserted would be done, to carry the war again toward Kentucky. To capture Nashville, and to approach if not pass the Ohio, was the ambitious but not impossible task he had set himself. Joined by Forrest with more than ten thousand cavalry (or, properly, mounted infantry), he had forty-two or forty-three thousand men present for duty. This was a command that some one must put out of action beyond any recuperation, and the march to the sea must be justified on the watersheds of the Tennessee and the Cumberland.

Hood's delay at Tusculum and Florence until late in November enabled Gen. Thomas, from his headquarters at Nashville, to concentrate at Pulaski, seventy-five miles south, a considerable force under Gen. Schofield. His general instructions were to retard the rebel advance as much as possible, without running too great risk of sacrificing his smaller army as it retired on Nashville. Strictly complying with those injunctions, which were reiterated at every point of contact, Schofield carried out a vigorous defensive in his retrogression, and by a brilliant march, which our limits forbid discussing, moved his command into Franklin on the south bank of the Harpeth; twenty miles from Nashville, in the morning of November 30, 1864.

The troops immediately under Schofield were two divisions of his own corps (Twenty-third), three divisions of the Fourth Corps under Major-Gen. Stanley, and Wilson's cavalry division. But the cavalry had lost touch since the previous morning. There had been a sharp engagement at Spring Hill, twelve miles south, and it was imperative to break the immediate contact of the enemy and to hold the crossing of the Harpeth for the passage of trains. It was hoped that the fight, if Hood forced it, would be with the river in front; but there must be a strong defence south of the river, to gain time for the passage of the impedimenta. Brigadier-Gen. Cox, commanding the leading division (Third Division, Twenty-third Corps), accompanied by Gen. Schofield, reached the outskirts of Franklin about two hours before daylight, and halted his troops on both sides of the main road. After personal observation of the defective bridges and imperfect ford, Schofield determined to give his personal attention to their repair, and gave Cox temporary command of both divisions of the Twenty-third Corps and ordered him to hold the enemy at all hazards. The Twenty-third Corps artillery was sent to the north bank, with the promise (which was redeemed) of replacing it by the Fourth Corps batteries as they came up. A fair natural line of defence was selected, and, with the skill

and energy developed by the perpetual fighting of the previous six months, a rough but effective infantry parapet, without revetment but with a ditch on both sides the greater part of its length, was promptly thrown up. Stations for the guns were prepared, and as the turnpike must be left unobstructed for the incoming trains and troops, a short second line crossed it about seventy yards to the rear. Later, this retrenchment was prolonged somewhat to the right by voluntary labor. In rear of much, but not all, of the main line was a reserve. Wood's division of the Fourth Corps passed the river, and was posted with the Twenty-third Corps artillery to protect the final crossing, or to move by either flank should the enemy make his way to that bank above or below the town. Kimball's division of the Fourth Corps had already been ordered to report to Gen. Cox for position on the line, and had been placed in echelon to the right and rear of the right division of the Twenty-third Corps (Ruger's), thus interruptedly connecting the right flank with the river just at the edge of the town. Two brigades of Wagner's division of the Fourth Corps were detained by Gen. Schofield's order about half a mile outside the line to delay Hood, but Opdycke's brigade of the same division came within the works as a reserve and as such did splendid service. It was contemplated that the remaining brigades should also form a reserve within the lines when their temporary duty was completed.

The hastily constructed defences, reasonably strong in some parts, necessarily weak in others, proved the salvation of the defenders. They were the military precautions a soldier would take, in this instance had taken admirably; but it could not be anticipated that Hood would actually assault when he found the lines were manned. As long as his forces crowded upon the immediate trail of the wagons, he would naturally seek their capture. But the superb rear-guard work of Wagner's division had brought in all the transportation and all the stragglers, and not only had the trains entered the defences, but nearly all of them had crossed the river before Hood's columns came within striking distance. With his overwhelming cavalry, and with fords available above and below the town, Hood might cross the river at will, and again, as at Pulaski, at Columbia, at Spring Hill itself, get upon the flank of the retreating army. But he assaulted. The fighting was terrific, the slaughter frightful, and the result to the Union was a victory whose full fruit was gathered a fortnight later at Nashville, when Sherman's audacity was vindicated by the moral courage and the splendid generalship of Thomas, before which the Confederate army of the Tennessee melted away.

While the responsibility for a lost battle is frequently the subject of controversy and crimination among many and for years, the poems of victory are rarely marred by the discord of complaint. But Franklin is an exception. First, it has been charged repeatedly that Schofield's conduct of the campaign was bad, that more than once he barely escaped defeat because of too persistent lingering in the presence of a superior foe, that he neither planned the defence nor commanded on the field at Franklin, and that the battle fought itself so far as he was concerned. Secondly, it has been claimed for Gen. Wagner that his rash challenge of the whole Confederate army was devoted

heroism in compliance with direct orders, and that whatever happened in connection with his division followed distinct obedience to and not disregard of the commands he had received. And, thirdly, a bitter discussion has arisen in regard to Gen. Stanley's share in the engagement, and, depending thereon, as to Gen. Cox's authority at the time and the credit due him.

To take the second point first: Gen. Wagner, whose division had been an admirable rear-guard, held with two of his brigades a position a half or a third of a mile south of the main body, under orders to keep certain heights "until dark, unless too severely pressed." By any ordinary interpretation this would mean that, if too severely pressed, he was to fall back in an orderly manner upon the main body. It is perfectly conceivable that, by making the old rear-guard an outpost, Gen. Schofield intended to give the rebel line something to play against, while he used it as eyes for his defensive front (in addition to Wilson, who was again in touch on the flanks) to observe whether Hood, encamped in line of battle, would cross the river above, or, most unlikely, would assault directly. When he saw that the enemy would certainly advance in great force, it was Wagner's duty to withdraw, for the pressure upon which his retiring was contingent could as well be moral as physical. Moreover, he had been reminded by his superiors and was warned by his subordinates to fall back. But the fury of fight replaced his judgment, and he attempted to hold his two brigades behind the slenderest extemporized shelter, against numbers so overwhelming that they disdained to halt and return his fire, but swept away the outpost by their sheer momentum and poured around both sides of the arrow-head it had formed. Wagner's brigades retired when too late, in confusion, with the enemy swarming among their ranks, and the heterogeneous crowd rushed pell-mell over the centre, whose fire was masked by the retreating Unionists. The enemy effected a lodgment within the lines, while the troops, displaced by the shock of the onset, scattered to the rear. The right and left stood firm. Opdycke was equal to the occasion; and, after an heroic conflict, the enemy was finally driven back over the parapet, to whose outer slope then he clung, where successive reinforcing waves broke in vain. It was the narrowest of rescues, a hairbreadth escape.

Wagner's obstinacy imperilled Schofield's army, whose defeat would seriously have compromised the campaign. Hood's success, even in part, would by that much have meant Sherman's discomfiture. Wagner's fault was not only a lack of judgment, but a violation of instructions equivalent to a disobedience of orders. Nor can there be any doubt that the retrograde movement into which his men were forced became a rout. Yet such is the leniency which victory inspires that grave errors may be glossed over, and Gen. Cox, in a preliminary report, dated two days later (December 2), says that Wagner's two brigades, "in accordance with orders, fell leisurely back within our lines" (p. 218 Off. Rec. xiv., pt. 1, p. 349). This friendly acceptance of Gen. Wagner's own version is contradicted by an entry in Gen. Cox's journal, under date of December 1, " . . . in Wagner's division, which was driven in from the front, in confusion . . ." and in his more formal

report six weeks later, where he says of the two brigades that "before an order [to retire] could reach them, they were so hotly engaged that they could not be withdrawn in order," and, "after a short and brave though useless struggle, [they] broke to the rear in confusion."

Of Schofield's generalship at Franklin we shall say no more than that after crossing the river in the manner and for the purpose already described, he established his own headquarters on an eminence overlooking the entire field, whence he controlled the troops on both sides of the stream. There can be no doubt that Schofield carefully confirmed and accepted every defensive arrangement that Cox as his lieutenant had made, just as he sent to him portions of the other corps, and that through his staff he was in direct communication with his entire army. It has never been doubted that Hood actually commanded the Confederates, although for a good part of the engagement the combatant lines were out of his sight. Schofield commanded with his divisions before his eyes, and, when the enemy had been repulsed, he withdrew his forces according to a carefully prearranged plan. There can be no question that, as the culmination of an important movement, Franklin was Schofield's battle, nor that his commission as a brigadier-general in the regular army was appropriate reward for the high service he rendered there and previously.

Thirdly: What were the respective functions of Generals Cox and Stanley at Franklin? Gen. Cox was a brigadier-general and division commander, to whom, very early in the morning, Gen. Schofield transferred temporarily the immediate command of his own corps (Twenty-third), and intrusted the erection of certain field-works, with which and with the forces under him to hold back Hood at all hazards until the trains were safely out of the way. There is nothing to show that at the beginning it was contemplated that he should have more infantry than the Twenty-third Corps. Gen. Stanley, who reached the field later in the morning, was a major-general in permanent command of a corps (Fourth). Both corps commanders were under the immediate command of a superior, Gen. Schofield, who was present. The two divisions of the Twenty-third Corps had been in advance and the three divisions of the Fourth Corps followed and covered the rear, while the consolidated trains of both corps were escorted between them. Ruger's division (Twenty-third Corps) arrived about seven A. M., and was placed on the right of Cox's own; but, as it could not extend the defensive line to the river, Gen. Cox called Gen. Schofield's attention to the deficiency, and the latter ordered Kimball's division (Fourth Corps) to report to Cox "for position." Kimball was placed by Cox on the extreme right to fill the gap. By three o'clock nearly all of the transportation was out of Franklin. As they arrived, the Fourth Corps batteries reported by Gen. Schofield's order to Gen. Cox, and were assigned by him to firing positions. Two brigades of Gen. Wagner's division (Fourth Corps) remained (by Gen. Schofield's order, conveyed through Gen. Stanley) without the lines for a temporary purpose, and Opdycke's brigade of the same division was in reserve within the works behind the centre. Gen. Schofield notified Gen. Cox that when Wagner's other brigades came in they also were to act as "a general reserve." Gen. Stanley

was at Gen. Schofield's headquarters within the lines in the morning; but, except at 11:30 A. M., by Gen. Schofield's direction to Wagner yet without the line, he does not appear to have issued any order, nor was there occasion. About two o'clock in the afternoon Gen. Stanley accompanied Gen. Schofield to the north bank, and, while there, gave commands for the movement and the escort of the Fourth Corps trains. When warned by the unexpected severity of the firing that Hood was making a serious attack, he rode rapidly to the front, reached Opdycke just as he was charging, and a few minutes later was severely wounded. The wrangle is over two points: Was Cox in sole immediate command along the whole defensive line; and, if not, what was Stanley's rôle?

In a volume on the same subject ("The March to the Sea, Franklin and Nashville"), published in 1882, Gen. Cox, narrating events before action was joined, several times referred to himself at a certain stage of the defence as "the commandant on the line" (pp. 85-87). To this Gen. Stanley took urgent public exception. Nevertheless it appears to be strictly appropriate as a paraphrase of the historian to avoid directly naming himself. As soon as Stanley is present, Cox refers to them both as "the commandants of the two corps." An article in the *Century* war papers by Col. Stone, asserting that all the troops in the works were ordered to report to Gen. Cox, assigned to command the defences, was the occasion of a further protest by Gen. Stanley, who made a positive claim for the active command of the Fourth Corps present, on the ground that, had such troops been detached, it would have removed him from the command of his corps. That is untenable. It is within the province of a superior to detach companies, regiments, brigades, what he will, from one organized command, and attach them to another for a special purpose and during a certain period. The real question is, were the parts of the Fourth Corps behind the defences of Franklin under Gen. Cox's orders, and did Gen. Stanley's presence change their status in that respect? Or, to put it in another way, what position, if any, did Stanley fill as a general during the battle?

Both Cox and Stanley have changed the expression of their views within the thirty-three years that have elapsed since they scored the hostile bullets together. In two reports of this battle, made December 2 and January 10, Gen. Cox states that Gen. Stanley assumed command of the troops of the Fourth Corps at a certain time, after which he disclaims authority over them, Opdycke's brigade excepted. Again, in 1881, when Gen. Cox was preparing his earlier book on Franklin, he had an amicable correspondence with Gen. Stanley, who assented to certain premises as exactly correct. These included a statement that Opdycke was Cox's reserve, that Wagner was to come in for the same purpose, and that Opdycke and the artillery acted under Gen. Cox's orders until midnight, but that orders to the rest of Wagner's division and to Kimball went from Stanley's headquarters. But in the present volume it is Gen. Cox's contention that all the troops within the defensive line were under his command, and his alone, that his authority was recognized at the time by all the officers ordered to report to him in the presence of Hood's formidable array, and that Stanley's presence, whether for a short-

er or longer period, did not affect this relation. He explains the discrepancy between this position and that taken previously by stating that, sympathizing with an officer wounded doing a gallant act, but in no official position, he understated his own authority, and attributed to the other a command which he did not exercise (p. 300). Gen. Stanley's views also underwent a change. In his report of February 25 he speaks of going towards Cox's position as though it were an independent one, after the line had been restored, and he refers to Gen. Cox as his neighbor who had gallantly helped him. In other words, he assumes as a matter of course his active and important command over the parts of the Fourth Corps present, and only casually refers to the Twenty-third Corps and its position. But in 1881 he acknowledged that Opdycke, who made the fiercest fighting, and the batteries were under Cox, which is relinquishing the underlying principle of his original report; and subsequently he reverted to his original view and denied that Cox commanded more than the Twenty-third Corps troops.

The facts are these: The Fourth Corps batteries had been substituted for those of the Twenty-third Corps, and thus became integral parts of its divisions, from which they could be relieved only by the army commander. Kimball's division (Fourth Corps) had reported by Gen. Schofield's order to Gen. Cox "for position on the line." The phraseology is the same as that used for the batteries and for Ruger's division of the Twenty-third Corps. Although Gen. Cox, in his official report, disclaimed the authority, nevertheless, while the fighting was heavy, he actually exercised it by calling for a regiment from Kimball to reinforce Ruger, which was sent without demur. Gen. Cox, not Gen. Stanley, was notified that Wagner's division would be assigned as a general reserve, and Opdycke's brigade was so placed. Opdycke in like manner responded to Cox's call of warning when the danger became imminent, but went into action before Cox's order to attack reached him and without an order from Stanley. To Wagner's disorganized brigades Cox issued no order except a request that they would not block the bridges against teams, which was complied with. But, while they were yet in advance, he warned Wagner with authority not to tarry too long without the line. He specially commended Opdycke because of his services while he, Cox, had commanded the line. His facts are therefore at variance with his original theory. He was a *de facto* commander without doubt, although he appeared at the time to recognize that Stanley had a *de jure* control over the parts of his own corps, notwithstanding that, as already shown, of his own motion he transferred a regiment from a Fourth to a Twenty-third Corps division after Stanley reached the field.

If Gen. Stanley's contention is correct, that Kimball's relation to Cox ceased when once placed upon the line, as it would have been had he reported to an engineer charged with the arrangement of troops for defence, then necessarily he remained under Gen. Stanley's orders. He must have been under some one, for no division would lie contiguous to a corps without superior direction when two corps and an army commander were accessible. But there can be no reasonable doubt that Gen. Schofield meant Gen. Cox to have the immediate command of

the defences he had laid out, and that he did have such command, nor that everything within that line properly belonged to him. The selection may not have been, and probably was not, made deliberately as against Gen. Stanley, but it was made. Cox was put in immediate command because he was there, and he, not any one else, was ordered to hold the line at all hazards. When the later assignment was made, there were the confusion and pressure incident to a running fight in temporary abeyance. Chalmers's cavalry was already in sight on the right, and Schofield, harassed to make safe the crossing, ordered Kimball to Cox "for position." Had he intended him to be independent of Cox he would have ordered Stanley to assign him to a place, or would have specified it himself. Under the order, Cox might have placed Kimball anywhere and have moved into the gap brigades already placed. So Wagner was ordered to form a general reserve when he came within the line, and Cox was notified to that effect. A general reserve could only mean one assignable at the will of the commander of the defences. There can be no question that the Fourth Corps batteries were incorporated within the Twenty-third Corps so intimately that they could not be displaced by Gen. Stanley, any more than Gen. Cox could have recalled the Twenty-third Corps guns for which they had been exchanged.

It might, nevertheless, be contended that Kimball and Wagner remained administrative units under the commanding officer of the Fourth Corps, subject to the limitations of specific positions designated by the Twenty-third Corps commander. In other words, it is conceivable that a corps commander might personally "fight his divisions" when under the direction of another general, although he himself had not been required to report to him. But it is hardly conceivable that he could be required to, or that he voluntarily would, fight under a general of inferior grade, and under either condition he certainly would be powerless to divert those troops from the duties to which they had been assigned by the army commander. It is the duty of every officer not otherwise engaged, irrespective of rank, to rally troops broken on the field, and it may be the duty of any officer to encourage by speech and to stimulate by example troops in a place of peril. But that does not imply the assumption of command. It was most laudable, as well as natural, that Gen. Stanley should desire to show himself to his own men about to make a countercharge, but in the nature of the case he could not of his own motion supersede the general on the spot. The question that he has raised is, after all, academical rather than practical. No one denies that Cox commanded before Stanley came on the field; Stanley himself says he gave Opdycke no order, whatever the reason; Cox exercised active command over Kimball in the transfer of one of his regiments to another point of combat; and there is no evidence that Stanley found any occasion to give any order to any one, however he might suppose himself authorized. Many of Wagner's routed men attached themselves to other organized commands and fought admirably, but the broken organizations themselves clung to the village whence no one brought them back.

The importance of the battle and the very curious technical complications that have

entangled its history, have carried us beyond all ordinary limits, and we can transcribe no part of the voluminous official records to support our view. But it seems perfectly clear that at the time both Cox and Stanley were actuated by the most patriotic motives and were filled with military esprit. Cox showed foresight, intelligence, courage, and perseverance; Stanley exhibited dash and valor and a challenge to danger so that he barely escaped death. He left the active front very soon after he was wounded, although there was severe fighting much later. Cox believes that he crossed the river immediately. Stanley asserts that, after leaving the centre, he rode first to the bridge and then to Kimball before going to the north side, and that is probably the fact. Gen. Cox's position in the unfortunate controversy has been maintained with dignity, and it is cause for great regret that Gen. Stanley has so violently resented Gen. Cox's original moderate statement of the case, and has gone beyond the matter in discussion to assault, as it seems ungenerously, this officer's record in other particulars. The reports do not show it, but it is probable that there was a rivalry closely approximating jealousy between the two corps, and that a consciousness of Stanley's actually superior rank to Schofield as well as to Cox required much diplomacy in administration. The unhappy outbreak we have had to notice may illustrate a lack of poise that Gen. Thomas may have had in mind when, reporting to Gen. Halleck that he had accorded Schofield rank over Stanley because he was a department commander, explained further that he was "much the more reliable commander of the two."

This Country of Ours. By Benjamin Harrison, ex-President of the United States. Scribners. 1897.

Mr. Harrison has written an informing and entertaining book. Without attempting to provide either a school manual on American government or an elementary treatise on constitutional law, he discourses pleasantly and instructively about the various departments of national administration, treating with particular fulness, as would naturally be expected, of the executive department, as the one with which he is most familiar. Of the twenty-one chapters, seven are devoted to the President and eight to the executive departments, while Congress and the judicial system are dismissed with but two chapters each. Of course this is all out of proportion, so far as an all-round treatment of the subject goes, and gives the impression that Mr. Harrison regards the executive part of the government as four times more important than all the others combined; still, the executive side of affairs has thus far received rather scanty treatment in the books, and what Mr. Harrison has to say, if not very profound, is at least readable and entertaining. The substance of the volume appeared originally as a series of articles in the *Ladies' Home Journal*; in its present form it gives a better idea of the daily life of a President than any recent book which has come to our notice.

So far as the solid part of the matter is concerned, it may be said at once, though without reproach, that the volume contains nothing new; the facts are the same that have been presented again and again in works of similar size, and the outline, at

best, is slender. But one does not, as a rule, turn to books by men in Mr. Harrison's position so much for new facts as for interesting points of view and indications of the author's personality. Books on public affairs by those who only yesterday were leading participants, are interesting partly from what they include, partly from what they omit; and this is quite true of Mr. Harrison's volume. A careful reading of 'This Country of Ours' shows no changes of importance in the political notions of the author, which four years of Presidential service and frequent public utterance have made tolerably familiar. There is the same vague comment on the currency situation and the same commendation of the civil-service law. A curious endorsement of the diplomatic service as, on the whole, a somewhat important part of the national machinery, and worthy of respectable maintenance, together with a plea for reform in the consular service, go hand in hand with a condemnation of political speech-making by our foreign ministers; the reference here to Mr. Bayard being so thinly disguised that the Ambassador himself might as well have been named. We ought to push on our coast defences as rapidly as possible as a good means of giving international arbitration a lift; while the new navy is our pet and pride, and ought to be in every way encouraged. "There are two views of the pension question," Mr. Harrison tells us (p. 285); "one from the 'Little Round Top' at Gettysburg, looking out over a field sown thickly with the dead and around upon bloody, blackened, and maimed men cheering the shot-torn banner of their country; the other from an office-desk on a busy street, or from an endowed chair in a university, looking only upon a statistical table." We are not, to be sure, quite clear as to what this means, but Mr. Harrison leaves us in no doubt as to the point of view he would have us take.

It is interesting to find the author endorsing Speaker Reed's action in counting a quorum, and favoring the adoption of some form of closure in the Senate, as it is to find him protesting, with evident sincerity, against the time-consuming applications for office, and the inability of the President to secure even a small measure of privacy. Very straightforward, too, is his approval of the use of the army in suppressing domestic disorder. The reference to the office of the Supervising Architect of the Treasury Department as a place wherein may be found "some sketches and models that are at least suggestive of art," is grimly humorous. But what does Mr. Harrison mean (p. 277) when, after explaining the steps by which a State is admitted to the Union, and pointing out that from "this habit of dealing with the public domain has come the common thought that all territory that we acquire must, when sufficiently populous, be erected into States," he adds, "But why may we not take account of the quality of the people as well as of their numbers, if future acquisitions should make it proper to do so?" Is Mr. Harrison "hedging" in regard to Hawaii, or fixing the status of Cuba in advance?

We remarked that the book, like others of its kind, derives some interest from what it fails to say. We miss a discussion of several matters on which the author could, without doubt, throw a good deal of light. If we read the introduction aright, the volume is intended not so much to impart knowledge as to kindle patriotism. Now there are a num-

ber of things about the conduct of our national affairs that many fervent patriots would like to know. They would like to know, for example, about the composition and methods of the lobby at Washington. They would like to know how appropriation bills, and especially tariff bills, are made up. They would like to know why the House of Representatives allows itself to be stripped of its legislative functions and made to register the decrees of one of its members. They would like to know some of the causes of the degeneracy of the Senate. Very many would like to have explained to them, in a popular and intelligible fashion, the subjects of national expenditure; surely an ex-President could unfold, with telling effect, the real significance of the appropriations for rivers and harbors, for naval vessels, or for pensions. It will be matter of regret to many that Mr. Harrison has refrained from a discussion of any of these things.

As was said at the beginning, Mr. Harrison's book is chiefly important for the information it furnishes about the life and duties of the President and the department of the government with whose oversight he is particularly charged. The reader will find here a hundred details of official life—the dull and exhausting routine of daily work, the conduct of cabinet meetings, the preparation of official papers, departmental red-tape, and the like—set forth amiably and instructively. To any one, young or old, who cherishes the notion that the time of the Chief Magistrate of this republic is mainly occupied with the study of great public questions and the formulation of great national policies, we recommend a perusal of 'This Country of Ours.'

Haliburton: A Centenary Chaplet. Toronto: William Briggs. 1897.

This book resembles the World's Fair in that it lags a year behind the date which it celebrates. It is no great matter, however, that circumstances should have delayed the publication beyond December of 1896, when its appearance was due. Windsor, Nova Scotia, the place of Haliburton's birth, is also the seat of King's College, the oldest institution of its kind in the Colonies, and in 1884 the affectionate remembrance of Sam Slick's words and characters led to the founding there of a Haliburton Club. This society now publishes, under the title we have mentioned, three sketches, biographical and critical, of its patron saint. The authors are well qualified for their work, one, Mr. R. G. Haliburton, being a member of the family; another, Mr. H. P. Scott, the first President of the Haliburton Club, and the third, Mr. F. Blake Crofton, Provincial Librarian of Nova Scotia. They have evidently prepared their essays in complete independence of each other—so much so that we can point to a case where division between them relates not to opinion alone, but to a matter of fact. Mr. Haliburton, referring to Sam Slick's jokes (p. 30), says: "In all he has written there is not the slightest trace of impropriety, even by the most remote implication." Later on (p. 62), Mr. Crofton, who calls Judge Haliburton "an Epicurean philosopher, modified a little for the better by Christianity, and for the worse by practical politics," states that "his keen relish for the ludicrous has sometimes made him stoop to unmistakable double entendres. In palliation of some of

these, at least, it may be urged that their wit preponderates over their grossness." Are we to praise this candor, or hint that there has been some looseness of editing?

One point which these three tributes have in common is insistence upon Haliburton's imperial views and propaganda. One seldom sees a motto on the cover of a book. In this instance the following sentiment is put forward with all the emphasis that a prominent place can give: "It shouldn't be England and her Colonies, but they should be integral parts of one great whole, . . . one vast home market from Hong-Kong to Labrador." Mr. R. G. Haliburton lashes the "Disintegrationists" who gave the tone to colonial policy when the Judge was member for Launceston in the British House of Commons. He flings first at Gladstone, "who has retired from public life, leaving behind him the fragments, not of a great Empire, but of a shattered party." We expect this kind of language from men of Mr. Haliburton's school, but he proves his freedom from party bias by quoting a snub Disraeli gave to Imperialism in 1852: "These wretched Colonies will all be independent in a few years, and are a millstone around our neck." Had Sam Slick's convictions on the subject of a close bond between the islands holding British allegiance been less strong, we might accuse his centenary admirers of connecting his name with a movement which happens to be popular. As it is, they may claim for him what credit may accrue from a forecast of the policy pursued by the Colonial Office under Chamberlain's guidance. Our own opinion is that the rôle of political prophet hardly comports with Haliburton so well as that of literary artist. His long experience on circuit and on the bench showed him human nature, and especially that part to which "soft sawder" appeals. His discourses and descriptions are often tedious. It is in dialogue where common sense, humor, and observation can be made to blend, that he excels. Sam Slick is an undoubted creation, and Artemus Ward called its author the father of American humor. The cleverest Canadians come from the Maritime Provinces, and that part of the Dominion can number among its representatives few so able and none so witty as Haliburton.

Some Unrecognised Laws of Nature: An Inquiry into the Causes of Physical Phenomena, with Special Reference to Gravitation. By Ignatius Singer and Lewis H. Berens. D. Appleton & Co. 1897. 8vo, pp. 511.

The purpose of this work is to revolutionize physics by showing that the cause of forces is a tendency to equalization, an action of which viscosity is a familiar example. Viscosity equalizes the velocity of the different layers of a stream. Now this, as is well known, is not a conservative force—that is, neglecting effects of heat, it appears to violate the law of energy; so that to make an action like viscosity the fundamental cause of all forces is to set up a theory in opposition to the doctrine of the conservation of energy. The principle of equalization is represented as one of four—persistence, unequal resistance, reciprocity, and equalization—from which the whole play of nature may be deduced. This formula was first remarked by the authors as governing the growth and development of

animals and plants, and is now extended to pure physics.

All this might have been maintained, one would suppose, without calling in question the majority of the great discoveries, or propositions accepted as discoveries, which during the last three centuries have been so laboriously, and, as it would seem, so successfully, elaborated by physicists. But, as the discussion is conducted in this volume, substantially the entire body of established dynamics and physics is proposed to be swept away as worthless. Comprehending these circumstances, no person of good sense will undertake to read this book, unless as a study in psychology, without being thoroughly versed, at least, in every branch of mathematical physics; and those persons who really are competent to discuss questions of this kind will soon discover that neither Mr. Singer nor Mr. Berens is among their number.

What, for instance, is to be thought of authors who calmly remark that "not sufficient notice has been taken by physicists" of the law of action and reaction? That law, as everybody knows, is insured of thoroughgoing application by the aid of the conception of mass. But these authors are capable of saying, "Whether a pendulum set swinging *in vacuo* and having no friction would actually keep on swinging for ever, . . . the matter of doubt in our mind is whether the downward pull of gravitation would not have to be regarded as another retarding element, besides friction and the resistance of the air." This betrays utter want of grasp of the principle of the pendulum, connected with a failure to distinguish between mass and weight. And, accordingly, we are informed that *mass*, in its last analysis, is nothing but *gravity*. Now this is not so. There might be no such force as gravitation, proportional to mass, and yet the action of bodies under magnetical and electrical forces, and under impact, would still proclaim the reality of mass so long as the law of action and reaction continued to operate.

We meet with equally gross misunderstandings when we pass to thermotics. For instance, we are told (pp. 24, 93) that the doctrine of the absolute zero rests upon nothing except "on the theory that at that temperature a body would be practically annihilated"; that is, the authors suppose the air or hydrogen thermometer is its only basis. One would find it hard to invent a remark which should more manifestly betray total ignorance of the theory of heat. Yet the following beats it: "The late Professor Tyndall held that heat was 'a mode of motion.' It is not quite clear whether the phrase is to be understood," etc. A man who does not know what the kinetical theory of heat is, and supposes Tyndall the author of it because of his popular book, and who nevertheless presumes to speak of the greatest physical speculator of our time except Helmholtz thus: "Thomson's error consisted in confounding the common or industrial meaning of the term 'work' with its philosophical meaning," cannot expect to make a favorable impression upon the scientific world. The book is simply chock-full of blunders quite as bad as the above few specimens.

The work is not entirely one of ratiocination. Various experimental results are announced which are supposed to support the theory. These are, for the most part, old

mare's-neats which have already been sufficiently investigated. Some of them might be worth reëxamination with all our modern appliances of precision, but none of the experiments herein described appears to have been conducted with any extraordinary refinements. A few of them are rather curious, though probably not important.

The first words of the preface are these: "At last, after years of patient plodding in dim regions where the footprints are few and the pitfalls many, the time has arrived when we are enabled to place before the world of science the first-fruits of our explorations." No doubt a great part of two men's lives has gone into this enterprise, and it is tragic to see that the result is good only to fill a page in some supplement to the 'Budget of Paradoxes.'

The New Africa: A Journey up the Chobe and down the Okovanga Rivers. A Record of Exploration and Sport by Aurel Schuls, M.D., and August Hammar, C.E. With a map and seventy illustrations. Charles Scribner's Sons. 1897. Pp. xli, 406, 8vo.

The delay in the publication of this interesting account of a journey made in 1884 is the less to be regretted since a large part of the country traversed is still comparatively unknown. The object of Dr. Schuls and his companion was to explore the Chobe, a branch of the Zambesi, to its source, and from thence to cross to the west coast. They were able to trace this river for only some two hundred miles from its outlet near the Victoria Falls, the hostility of the natives preventing their further progress. Turning southward, they crossed a succession of sand-belts, and, after much suffering from hunger and thirst, succeeded in reaching the Okovanga. This stream, which is also called the Cubango, they were compelled to follow to Lake Ngami, in order to clear themselves before the King of the Baros and his council from the suspicion of having Matabele spies among their followers. After a most interesting trial, marked by dramatic incidents and indicating an unusual intelligence and sense of justice in the King and his chiefs, their innocence was established, and, after a long delay, they were permitted to return to Natal.

A considerable part of the volume is taken up with an account of the hunting adventures, which were numerous and exciting. It would be difficult to find in all the annals of African travel a more thrilling story than that which Jan Veyers told of his encounter with a lioness. Their "bag" included nearly all the large game of Central Africa, with the exception of the elephant, though the slaying was almost always for the sake of meat and not simply for sport. There are many interesting observations on the appearance and habits of the fauna of this region, as well as useful hints to travellers and sportsmen. The theory, for instance, that the *aasvogel*, or vulture, finds its prey by sight and not by scent, is supported by some convincing facts from the authors' own experience. On the Chobe the party shot the "mysterious situtunga," a water-buck whose feet "are abnormally long and slightly webbed at the base of the toes." This adapts it for swimming, and for walking on the dense masses of tangled reeds that float over the deep water, but gives it a clumsy, waddling gait on land. Like the hippopotamus, it stays long under water, and

it also appears to live in perfect amity with the crocodiles which swarm in that part of the river in which it is found.

Of the people who inhabit these regions Dr. Schulz says little that is especially noteworthy. The raids of the Matabele had made the natives suspicious of strangers, and it was difficult to enter into friendly relations with them. The tribes living along the Chobe had been driven to the inaccessible swamps and islands, but the Baros of the lake region had just succeeded in repelling an invasion. Very striking was the contrast presented between the timidity, craftiness, and degradation of the former, and the self-reliance, intelligence, and comparative prosperity of the latter. We regret that our author has not given some information as to the recent history of the young King Moreni and his brave followers. His country is described as containing marvellously fertile districts, adapted for the cultivation of corn and of cotton, which grows wild, as easily irrigated, and as having a dry and healthy climate.

Dr. Schulz appears to have been a typical explorer. He had great powers of endurance, with perfect health, and he showed much tact and forbearance in dealing with the natives. Though often placed in circumstances extremely provocative of violence, there is no instance of his having injured any native, while his services as a doctor were in constant demand. The attachment which some of his followers felt for him is pleasantly shown in the account of their parting:

"Chiki held my hand long in his, and a tear rolled down his cheek as he said: 'Kol-wani, I am only a black man, but my heart has grown white towards you. When you come to Panda Matenga again, shout out my name, 'Chiki,' and the trees and the birds will tell me you are there, and I, Chiki, will come to you, without stopping to eat on the road until I have seen your face.' 'And I also, and I also,' came from all the boys in chorus. Then some seized hold of both of Hammar's hands, and others of mine, and they danced around us, singing the farewell-song of their nation; then, as it came to an end, they seized their packs and hurried off at a run, never turning round, as if not trusting themselves to take a last look at us."

The volume is very attractive in its appearance, with excellent illustrations and a map drawn from observations by Mr. Hammar, but it unfortunately lacks an index.

Gleanings in Buddha-Fields. By Lafcadio Hearn. Boston: Houghton, Mifflin & Co. 1897.

Mr. Hearn, who has left the interior of the Princess Country for the capital, is now lecturer on English literature in the Imperial University in Tokyo. He has gathered in a fresh volume his "studies of hand and soul" in the Far East. "A Living God" is the title of a chapter which tells of what is daily seen in front of a Shinto shrine. Two other papers worthily preserve a number of specimens of those brief stanzas of song which have for over a thousand years been popular favorites. The street songs are as short and evanescent as flowers, but are also as entrancing. The more permanent folk-songs are rich in allusions to the Buddhist traditions and dogmas which underlie the popular faith. Mr. Hearn shows his keen sensitiveness and amazing power of discrimination and appreciation in catching and analyzing these fugitive, yet ever-reappear-

ing, "swallow-flights of song." Kyoto and Osaka are brilliantly described in the author's characteristic style and with his own peculiar power of insight.

Probably the chapter that will excite the most interest and challenge opposition and provoke unbelief is that "About Faces in Japanese Art." To the average Westerner, "Japanese art is utterly wanting in facial expression." Even art critics who have lived awhile in "what to them is the country of topsy-turvydom" believe that the native artists' treatment of faces is fantastic and unnatural. Mr. Hearn, on the contrary, stoutly upholds and commends the Japanese limner. He beholds in the actual life around him "every normal type of face to be found in a Japanese picture-book." We agree with Mr. Hearn. To appreciate thoroughly, or even to qualify one's self to understand, Japanese art, one must have lived entirely away from European people and things. He must have looked long and impartially upon art and life in Japan in order to interpret these; and this, we may say, Mr. Hearn has done. So long as a drawing or other reproduction of the Japanese hand and soul is something other than a photograph, so long as the brain and culture of a Japanese are what they are, the artists of Nippon had better make haste slowly in imitating their foreign teachers.

Several other chapters treat of Buddhism, but here we confess that Mr. Hearn is less edifying and illuminating. Having read most if not all of this brilliant author's writings, we are impressed more with his dislike to missionaries and his devout adherence to Mr. Herbert Spencer's philosophy than with his grasp upon science, or philosophy, or original Buddhism. Here he displays or unskillfully conceals his animus. Surely no "hired converter" in all the empire is so persistently zealous in propagating his cult and dogmas as is the lecturer on English literature in preaching at all possible seasons the doctrine of the "Unknowable Reality." Apart from this tendency to polemic which vitiates his conclusions, and constantly compels question of the sanity of his judgments, one may enjoy Mr. Hearn's consummate literary art and exquisite gloss of style, while heartily grateful for the work of so subtle an interpreter of the most promising people in Asia.

BOOKS OF THE WEEK.

A Fiery Ordeal. Appletons. \$1.
Arnold, Sarah L., and Gilbert, C. B. Stepping Stones to Literature. Fourth Reader. Boston: Silver, Burdett & Co. 60c.
Aulme, F. E. The Flags of the World. F. Warne & Co. \$2.

Given free as a reward for a few hours' work among your friends. Easy, sure. No money required. If not interested confer a favor on some friend by calling attention to this offer. For full particulars address THOMAS M. UPP, P. O. Box 2572, New York city.

APPLETONS' Popular Science Monthly.

FEBRUARY, 1898.

The United States Forest Reserve. CHARLES D. WALCOTT, Director U. S. Geological Survey.

Giving the history of the movement in favor of forest reserves, showing their great importance from a commercial as well as aesthetic standpoint, and describing the reserves at present existing.

Scientific Progress in the Closing Century. Prof. LUDWIG BÖCHNER.

A brief historical sketch of the most fertile period in the world's history from a scientific standpoint.

What is Property? (Principles of Taxation, XV.) Hon. DAVID A. WELLS.

Showing the loose notions that prevail regarding the meaning of "property," and the vicious results which this ignorance has brought about, through taxation.

The Primary Social Settlement. KATE KINGSLEY LOR.

A discussion of the "Home End of the Social Problem—the Family," including a brief historical sketch, showing the place it has occupied in various stages of human progress.

School Gardens. HENRY LINCOLN CLAPP.

Shows the happy results which have followed their introduction in the common schools of many European cities, points out their various advantages, and describes one which was started in Boston several years ago.

Evolutionary Ethics. HERBERT SPENCER.

Mr. Spencer's reply to Huxley's famous Romanes Lecture, of which this is the first authorized American publication.

Other Articles: The Evolution of the Mind; Modern Social Problems (Racial Geography, XIII); Feet and Hands, II.; Education in the Animal Kingdom, and Sketch (with Portrait) of Charles D. Walcott.

Editor's Table; Scientific Literature; Fragments of Science; Notes.

50 cents a number; \$5.00 a year.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 10, 1898.

The Week.

Mr. Dingley, leader of the House, is a quite different gentleman from Mr. Dingley, author of the law to prevent a deficit (his own deficit to date being more than \$52,000,000), and issuer of bulletins to show that we shall soon be just wallowing in surplus revenue. All the dispatches agree that the programme of severe economy in the House is exciting vast indignation among the rank and file who so dearly love to go in for the old flag and an appropriation. The big spending bills are to be cut to the quick. No river and harbor bill is so much as to be thought of, and public buildings are to be kept down in most miserly fashion. Why is this? The answer given the angry private members, with their beautiful private bills up their sleeves, is that Chairman Dingley says the state of the revenue is such that not a dollar can be spared which is not strictly necessary. Thus does Dingley the chairman act as if he did not believe a word that Dingley the statistician and prophet says. Certainly the raging Congressmen, robbed of their appropriations, cannot be blamed for asking what kind of surplus revenue it is that cannot be drawn upon. They are a little slow, but in time they will understand that the surplus revenue which Mr. Dingley sees pouring in upon him is for oratorical and electoral purposes only; when it comes to actually counting the money and voting it away, the creator of the deficit is as painfully conscious of the work of his own hands as any other man.

The attempt to make annexation a Republican party measure has failed, because the last national platform expressly avoided the recommendation of that policy, declaring only that "the Hawaiian Islands should be controlled by the United States, and no foreign Power should be permitted to interfere with them." Such "control" is entirely practicable and is consistent with our policy for many years. The Senate four years ago adopted a resolution which well represented the feeling of the nation on this question:

"Resolved, That of right it belongs wholly to the people of the Hawaiian Islands to establish and maintain their own form of government and domestic polity; that the United States ought in no wise to interfere therewith, and that any intervention in the present affairs of these islands by any other government will be regarded as an act unfriendly to the United States."

This resolution was reported on the 31st of May, 1894, from the committee on foreign relations by a unanimous vote,

and was immediately adopted by 55 yeas to no nays. Senator White of California has now brought this proposition forward as a joint resolution, and although the annexationists in the Senate may lay it on the table, its introduction is a good thing as showing the right policy for our Government to pursue in the matter.

Naturally the Chinese situation connects itself with the Hawaiian situation. In a remote contingency we might find it necessary to fight for the rights secured to us by treaty in Chinese ports. In that event, would the possession of Hawaii be of service to us or not? We answer this question in the negative. Without Hawaii, all our naval force in the Pacific may be employed in attacks upon the enemy or in defending our own coast. With it, we must expend some part, and probably a large part, in defending the islands. But, say the annexationists, we shall be much nearer to the objective point—the coast of China. Not much nearer. The islands are as far out of our course for operations in Chinese waters as the Azores would be for operations in the Baltic. Moreover, we have treaty rights in the islands now giving us all the naval advantages we could acquire by owning the islands. We are in the lucky position now that we are not bound to defend Pearl Harbor, but we can use it to any extent we choose.

Nobody is surprised to find many of the Republican politicians in Congress shrinking from the proposition to make an issue of a definite currency-reform policy. Senator Frye of Maine says that "it was all right for Secretary Gage to submit his scheme of finance, but it was hardly politic to be so specific about the single gold standard." Senator Aldrich of Rhode Island says of the President's recent declarations in favor of positive action, that "they are good principles, but bad politics." The proceedings in the House when the Teller resolution was voted down have been called "the slaughter of the innocents," because so many of the Western members fear that their votes will be counted against them at the next election, from thirty to fifty sharing this apprehension, and the personal influence of Speaker Reed had to be used in order to keep several men "in line." All such Representatives and Senators are, of course, strongly opposed to going a step further, on the ground that it would be "bad politics," or, at the very least, "hardly politic."

The action of the Chamber of Commerce on Thursday on the report of its delegates to the Indianapolis conven-

tion was most gratifying. Without a dissenting voice it ratified the report of the Monetary Commission, both in general and in particular—the gold standard, the gradual retirement of the gold obligations of the Government, and such changes in the banking laws as shall conduce to the good of all business interests, and which the experience of our own and other countries has proved to be efficient and secure. Condensed in the fewest words, the Chamber of Commerce has declared its platform to be the gold standard and banknote issues on banking assets. These were the conclusions reached by the Monetary Commission, and now they have received the endorsement of the most conservative body of business men in the country. An issue is thus made up which must engage the largest share of public attention until the momentous questions involved in it are decided. In ordinary circumstances this ought not to be a political issue, but it has been made such by the action of one of the great political parties of the nation, and the other party cannot avoid it. All the property interests of the country are involved in it. Every man and every woman is vitally concerned in the decision of it. They may have mistaken views in reference to it, but nobody who is sane can be indifferent to it.

President McKinley has just given a fresh illustration of his disregard for all other considerations when a Senator insists upon the nomination of one of his henchmen to an office, by sending in the name of George M. Bowers of West Virginia as Commissioner of Fish and Fisheries. He had already shown, notably in the case of the swindling State Senator of Pennsylvania, whom he made Consul at Matanzas, Cuba, upon the demand of Senator Quay, that objections on moral grounds counted for nothing. He has now demonstrated that statutory obstacles to a nomination are no more effectual than those based on the moral law. A provision of the Revised Statutes calls for the appointment as Fish Commissioner of "a person of scientific and practical acquaintance with fish and fisheries," the object being to insure the selection of fit successors to Prof. Baird and Prof. Goode. Instead of picking out such a man, Mr. McKinley has nominated (upon the demand of Steve Elkins) a politician who never paid any attention to fish or fisheries, until he decided, a few months ago, that he wanted the \$5,000 salary attached to this commissionership, and for whom the most that can be said by his friends is that he "is a smart man and catches on soon."

The nomination of Edward B. Thomas

as United States Judge for the Eastern District of New York is a happy end of a struggle which had become very discreditable. The death of Judge Tenney was no sooner announced than a number of lawyers who were prominent in the Republican "organization," but nowhere else, began to work for the place thus made vacant. Congressman Fischer "set the pace," the first step in his campaign being to seek the endorsement of the members of the Republican executive committee of Brooklyn, in which he was extremely successful. But his opponents ruined his chances by pointing out that his appointment to the bench would involve a special election for Congressman, and that his management of "the organization" in the district had been so bad that "no Republican nominated by Fischer could win, and Fischer would not allow a nomination by anybody else." One candidate after another of the Fischer type was put forward by either the local or the State organization, only to have his unfitness demonstrated when any inquiry was made as to his judicial qualities. President McKinley at last became thoroughly disgusted, and assumed the executive prerogative, which he has so generally surrendered, of making the choice himself and requiring the machine to accept it. Mr. Thomas is a lawyer of high character and excellent standing, who has the making of a good judge in him, and his appointment is especially grateful because it involves no subserviency to the machine.

The most encouraging demonstration against boss rule which has been seen anywhere in this country for a long time was made in Philadelphia on Wednesday of last week, when about 400 leading Republicans from almost every county in Pennsylvania organized a movement to end the sway of Matthew S. Quay over their party. Never before has the tyranny which bossism involves been so clearly pointed out; and as a study in modern politics, the picture drawn of government in a great State during the closing years of the nineteenth century under the domination of one man deserves the attention of everybody who is interested in the development of democratic institutions. The spirit which animated the conference was that of men who had been slaves, and who had at last revolted against a servitude which had become intolerable. The character of this domination was set forth with the utmost clearness in the resolutions which were adopted. The first of these portrays the disgraceful methods by which Quay has made himself absolute ruler of the Republican party. Proceeding from generals to particulars, the resolutions declare that "a large majority of the members of the General Assembly of 1897 were nominated and elected by questionable methods, the chief end

in view being the election of United States Senator in accord with the dominating influence in State politics; but the corrupt bargain carried with it the absolute control of legislation for all purposes." Attention is called to the extraordinary fact that "it was not an unusual thing, during the session of last year, for the citizens of this commonwealth to witness the humiliating spectacle of their representatives wasting days and weeks neglecting public business, because of the delays of their chief in giving them instructions as to what he wished them to do."

Responsibility for what the last Legislature did and failed to do being thus fixed upon the boss, the resolutions summarize its record. In the organization of both branches no member was allowed a place upon any important committee who differed from the machine regarding the United States Senatorship. So many places were promised for the support of the machine candidate that the pay-roll was padded with so-called officials without authority of law, and appropriations for payment of such officials failed of becoming law only by the interposition of the executive veto. Attempts were made to take from the public Treasury thousands of dollars for pretended expenses and for junketing trips of the members, which also failed only by reason of the Governor's veto. In order to create new offices and extend the power of patronage, the "mercantile-tax bill" was passed, imposing burdens upon and crippling almost every business interest in the commonwealth, already overtaxed, and this bill would have become a law but for the executive veto. In order to punish the Mayor of Philadelphia, whom the machine could not control, a bill was passed which, had it been suffered to become a law, would have destroyed many of the most important features of the city charter, and which was universally disapproved by the people to be affected. Finally, "numerous bills were introduced for the mere purpose of extorting large sums of money from the corporate and other interests of the State as the price of preventing their passage."

The opinion of the Corporation Counsel that the new charter, rather than the Black starchless law, fixes the civil-service regulations for this city, has sent deep gloom through the Tammany ranks. The view is general there that the Mayor has made a mistake in his choice of a Corporation Counsel, since this is clearly not a Tammany "opinion," and what is the use of a Tammany Corporation Counsel if he cannot furnish Tammany law when it is wanted? The holders of this view do not reason so far as to perceive that if an opinion had been

supplied which would not have been sustained by the courts, whither the Civil-Service-Reform Association had declared its intention of carrying the matter in case it had been contrary to what it is, the outcome would have been disastrous to the Corporation Counsel. There seems to be no way in which the "places" in the city service which are now held by the hated reformers can be captured except through the passage of the Grady bill making the Black law applicable to the city, and there is little hope of this. Possibly the new Municipal Civil-Service Commission may formulate new regulations which will help matters somewhat, but even they cannot remove incumbents from office without danger of getting into trouble. A curious fact about this commission is that it has succeeded in getting from the Board of Estimate and Apportionment an appropriation more than double the size of that which the late reform commission required. The latter body did its work for about \$30,000 a year, whereas Mayor Van Wyck's commission has asked for and obtained \$86,000. Its work has been increased somewhat, it is true, but the additional expenditures entailed by that increase could be covered easily with from \$5,000 to \$10,000.

The suit for libel which ex-Mayor Oakey Hall brought in the English courts against James Bryce because of the latter's allusions to him in a chapter of the 'American Commonwealth' on the Tammany Ring, has been dismissed because of the failure of Mr. Hall to prosecute it. The dismissal was accompanied with an order upon Mr. Hall to pay the costs, but as he has left England, there is no means by which Mr. Bryce can recover the heavy expenses to which the suit subjected him in preparing his defence. As we pointed out recently, the English law of libel, while permitting the levying of heavy costs upon the unsuccessful party to a suit, makes no provision for the collection of costs from bankrupts, and other impecunious persons, who institute frivolous suits which they either do not press to a verdict or lose when they do so press them. An amendment is pending before Parliament in which it is provided that the court may, when it is satisfied that the plaintiff is a bankrupt, or will be unable to pay costs in case of losing his suit, issue an order staying all proceedings unless within a specified time the plaintiff can give satisfactory security for such costs. In this country the costs are not heavy, unless the court grants to the successful party what is known as an "extra allowance"; but a provision like that proposed in the English amendment would be very valuable here, for it often happens, after an impecunious plaintiff has forced the defendant to carry through one or more courts a case which never ought to have

been in any court at all, that extra allowance is granted only to be found worthless because of inability to collect it. If every bankrupt and political or other dead-beat who is now induced by a speculative lawyer to sue a newspaper for libel "on shares" in the possible result, were compelled to give security for costs in advance, a great deal of frivolous litigation would be prevented.

The time of the English courts continues to be occupied largely with what the Lord Chief Justice calls "trumpy libel suits." Two decidedly amusing suits were dismissed without much ceremony recently, one by the Lord Chief Justice and the other by Justice Hawkins. In one instance, in an account of a proceeding in court, the word "defendant" had been printed in place of "plaintiff," with the result of making a lawyer in his address charge his own client with being an "extortioner." The client had sued the paper for damages as the result of this blunder, but when the Lord Chief Justice heard the facts in the case, he at once said he doubted if there was any cause for action, since any one reading the account would see that it was a mistake of the reporter or printer. Furthermore, a correction had been made by the newspaper, but of this it was complained that it was "not prominent," and was not accompanied by an apology. The Lord Chief Justice held that no reader of intelligence could fail to see that a mistake had been made, and when counsel for the aggrieved person urged that there "might be careless or foolish people who would receive a different impression," he declared: "But legislation and law are not intended for foolish people"—a view which precipitated the collapse of the case. In the other instance a lawyer brought suit against two newspapers for conspiracy and libel in habitually leaving his name out of their reports of court cases in which he appeared as counsel. Justice Hawkins made short work of this, saying to counsel for the plaintiff, who wished to cite decisions in favor of his novel plea: "If you want anything to put a final extinguisher upon you, that will do it," and adding, when counsel said in defence of the claim for damages that all persons engaged in any way in public had occasionally to complain that what they said was not reported, "What a godsend it is to the public that they are not always reported!"

The speech of Sir Richard Webster, Attorney-General in Lord Salisbury's cabinet, on the Chinese trouble, in which he said that it would be better for Great Britain to fight and lose now than to perish of slow starvation by the loss of trade, is in harmony with the recent declaration of Sir Michael Hicks-Beach on the same subject. It shows

that whether there has been a back-down or not in reference to the port of Talienwan, the main purpose of Great Britain has not been abandoned. The world is still in ignorance of the terms of the secret treaty by which the port of Talienwan was ceded to Russia at the end of the war between Japan and China, when Russia intervened in behalf of the latter, and prevented Japan from getting a foothold on the continent. Why Russia wanted that port or some other on the Liau-Tong peninsula it is easy to see. She is building the great Siberian railway, and must have a port that is not ice-bound several months in each year. She has no such port of her own. She must seek it in Chinese territory. The war between Japan and China and the discomfiture of the latter gave her the chance to secure this desideratum. Her claims on the port may be such that it is not worth while to have a war over them. There is plenty of territory left to negotiate for, or even to fight for, after conceding Talienwan to Russia to do what she pleases with. It is desirable, in the interest of civilization and progress, that the great Siberian railway should be finished, and that it should have an outlet in open waters, even though its terminus be not strictly a free port. It is not desirable or even tolerable that the whole northern Chinese frontier should be shut up by land-grabbers, whether Russian or German or other, or that treaties now existing should be set aside to the detriment of third parties merely because two or three German missionaries have been murdered or because a German sailor has lost his life in a street riot.

Secrecy, mystery, alarm, vague insinuations, desperate attempts to stifle inquiry and suppress facts have marked the official conduct of the Dreyfus affair from its inception to the present trial of Zola. One guarded statement after another has been given out, only to be disproved. Dreyfus had confessed his guilt, it was boldly said in order to stop the clamor. But instantly evidence was made public that he had never confessed, but was stoutly protesting his innocence. Well, there was the famous *bordereau*, in his own handwriting, offering to sell the secrets of national defence. But once the *bordereau* was published in facsimile, as many experts decided against the Dreyfus origin as in favor of it. Mr. David Christie Murray, who, with the zeal of a fellow-novelist, or a fellow-advertiser, has taken up the cudgels for Zola in England, sets forth no less than twenty particulars in which the incriminating document differs from the confessed handwriting of Dreyfus. This looks bad for the evidence on the strength of which, and on the sole strength of which, according to Gen. Mercier, Dreyfus was condemn-

ed. "Oh, but there was other evidence," now say the French generals and ministers. "Very well," replies Zola, "come into court and tell us what it was. Come and testify in secret, if necessary." The answer to this is an order of the Council of Ministers forbidding any testimony to be given! It is not strange that Zola and his counsel cry out upon such a travesty of justice.

Among the recent consular reports is one from our consul at Mainz, Germany, on the subject of the exports of German wines to the United States and, strange to relate, the import of American wines to Germany. In the year 1895 the latter amounted to 24,494 cwt. Exportation of German wines to the United States for the same year was 118,604 cwt., but the German wine-growers are becoming nervous and are beginning to demand protection. Accordingly, says our consul: "In order to commend themselves to the wine-growers of the western and southern parts of Germany, those members of the Reichstag who are the champions of the agrarian cause are beginning to agitate a campaign against the importation into Germany of American wines by advocating a higher import duty on them." It is interesting to know that a part of our wines come back to us after undergoing manipulation and mixing in the cellars of the Rhine country. Thus to German industry they stand in the relation of a raw material. A California wine which has been subjected to a protective tariff at Cologne and again at New York ought to be considered a very patriotic drink.

Late advices from both Costa Rica and Nicaragua indicate that there is a revolution in progress in each, and that the canal-surveying party from the United States will not be able to go on with its work until the country is pacified. One report says that the gunboat Newport may be obliged to land a body of marines to protect the surveyors. It may become necessary for us to invade the country or both countries and restore order before we can get a thoroughly reliable survey. This shows how much better it would have been to follow the lead of Morgan of Alabama and pass the canal bill of last year without any survey and in the face of the protest of the Government of Nicaragua, because in that event we should have had a *casus belli* at once. We could have prevented the present revolution, with its tedious and exasperating delays, by simply landing a sufficient number of marines at both ends of the line to maintain order and enable our surveyors to finish their work in peace. If there should be a simultaneous demand for ships and crews in Cuba or Hawaii, Morgan would undoubtedly be prepared to meet both emergencies.

RETALIATION IN TARIFFS.

The news that Prussia has excluded all American fresh fruits from her markets, on the ground that they are infested with insects which make them dangerous to German orchards, is irritating, of course; and as it comes at a time when Germany is suspected of hostile designs against our commerce in China, it may lead to new legislation at Washington, although that which we now have would seem to be ample for all purposes. The law of August 30, 1890, is applicable to such emergencies:

"Section 5. That whenever the President shall be satisfied that unjust discriminations are made by or under the authority of any foreign state against the importation to or sale in such foreign state of any product of the United States, he may direct that such products of such foreign states discriminating against any product of the United States as he may deem proper shall be excluded from importation to the United States; in such cases he shall make proclamation of his direction in the premises, and therein name the time when such direction against importation shall take effect, and after such date the importation of the articles named in such proclamation shall be unlawful. The President may at any time revoke, modify, terminate, or renew any such direction as in his opinion the public interests may require."

Under this section the President can, if he chooses to do so, exclude all imports from Germany. Suggestions have already been made that he exclude German wines on the ground of their unhealthfulness, or German sugar on the ground of adulteration, or German woollens on the ground of shoddy, etc., etc.

There is one general objection to this kind of retaliation, namely, that it is a weak imitation of the very thing that we complain of. We contend that our fruit is not buggy, just as we contended that our pork was not wormy. We say that this exclusion is for the protection of the apple-growers of Prussia; that it is a concession to the demands of the Agrarians, who complain that American farm and orchard products are an injury to them. We cannot very consistently say that we have just discovered that German wines are unwholesome, after drinking them for a century or more without any deleterious consequences. To exclude them would be a loss to Germany's vine-dressers, but it would be a gain to her wine-drinkers. It would deprive the former of one of their markets, and would thus lessen the price of wine, but that would be an advantage to the buyers of wine in Germany and England and elsewhere. The effect in our own country would be to punish the consumers of German wines, who are not sinners above other people in the premises. Thus all such schemes of trade-exclusion rob Peter to punish Paul, not to pay him. To exclude German sugar would put an additional tax on our own consumers of sugar, who are practically the whole people, and would give an advantage to the producers of cane sugar in the West India Islands. To exclude German woollens

would help the English manufacturers, and so on.

The more we examine the details of retaliation by tariff, the less we shall be enamoured of them. What have we to say about the policy on broader grounds? Germany has a moral right to exclude our products, or any of them, from her ports. Except as restrained by treaty, she is not bound to give any reason for excluding them. Every country has the right to regulate trade within her own limits. We exercise that right with the utmost freedom. We adopt prohibitory tariffs in order to give American producers a monopoly of the market. We have prohibited the importation of several kinds of foreign fruit—oranges for example. We have done this by means of a tariff. All right. Germany proposes to do the same thing by means of a health decree. There is not a pin to choose between the two methods. We may say that her grounds for excluding our fruit are false. So too are our grounds for excluding Italian oranges. We say that our laborers must be protected against the pauper labor of Italy, whereas the California orange-growers notoriously cultivate their fruit with Chinese labor, than which there is no cheaper labor known. (Exclusion by tariff, whether put upon the ground of protection to labor or of protection to health, is a mess of lies.) If it was not so in the beginning, it has come to be so now, and our lies are no better than German ones. Before we extract the mote from our brother's eye, we had best cast out the beam from our own eye.

We are not sorry, however, that this question has come up, since it may serve to open the eyes of our Dingleyites to the humors of the situation. We begin by putting prohibitory duties on various articles of Germany's industry. She retaliates by excluding our pork and our apples. We say, "Don't do that unless you exclude French and Austrian and Russian pork and apples. We have no objection to the policy of exclusion, provided you treat all nations alike." Germany may reply either that she does treat all alike, in that she excludes wormy pork and buggy apples from all countries, or that she has reasons of her own (commercial treaties, for example) for admitting the French, Austrian, and Russian products, and excluding ours. If she is determined to retaliate on us for the Dingley tariff, she will not lack reasons for doing so, and they will be reasons that we cannot easily controvert. We may have a moral conviction that the bugginess of our apples is not the real reason why they are excluded, but the trouble is that we have to prove that fact before the very tribunal that has pronounced the decree of exclusion. We must convince the judge who has already decided the case against us.

It is said that we have a treaty with

Prussia which contains the "most-favored-nation clause." The world has outgrown such treaties. It has supplanted them with maximum and minimum tariffs, and with treaties of reciprocity. There is any number of ways to get around the most-favored-nation clause, but all that Prussia need do in the present case is to find a bug in a consignment of American apples, and not find any among French, Austrian, or Russian apples. The task is not a difficult one, but the attempt to prove that the insect was not there—

"Hic labor, hoc opus est."

The real bug is the Dingley tariff.

UNION FOR HONEST MEN AND HONEST MONEY.

The vote of Senator Murphy in favor of free silver, as represented by the Teller resolution, has had an electrifying effect upon the members of both political parties in this State. It has, in the first place, aroused the National or sound-money section of the Democratic party to renewed life and activity, convincing its members that a return to harmonious relations with the regular organization of the party which supported Bryan in 1896, is impossible. It has, in the second place, given new life and hope to the Platt Republicans, inducing in them a belief that, by raising again the issue of Bryanism, they can turn the attention of the people away from the canal scandal and all other shortcomings of the Platt-Black administration, and save themselves from destruction by rallying to their support all believers in sound money. This view was put forth exultingly by the Platt leader in the debate on the canal inquiry in the Assembly at Albany on Thursday, when he declared that he and his associates were no longer afraid of the canal issue, since the vote of Senator Murphy had raised a greater issue upon which the fall campaign would be conducted.

There is little doubt that the money question will be the leading issue in the next State contest, but there is a good deal of doubt whether Platt will be able to convince the voters of the State that, in order to save the country from the peril of Bryanism, it will be necessary to put him in possession of the State government more completely than ever for two years more. It is doubtful if he will be able to convince the members of his own party who are in organized revolt against him that, in view of the peril, it will be necessary for them to surrender to his bossism once more. The chances are, in fact, very strong in favor of a continued division in the Republican party, in spite of the money issue. As for the Democratic party, Senator Murphy's vote seems to widen the breach which was showing signs of closing before he took that action. It is impossible for the National Democrats

to sustain that vote, or to sustain the regular wing of their party in case it shall uphold the Senator in his course and advocate his reelection. There is no doubt that the regular wing, which is in control of the Democratic organization in the State, is as strong for free silver as it was when it committed the party to Bryan in 1896. There is little or no likelihood that its leaders will permit the adoption of a party platform this year which will either repudiate or modify materially the silver platform of 1896. They may attempt to ignore the issue, as they did in the municipal campaign of last year, but they will not allow a gold platform to be adopted. A divided Democratic party seems, therefore, to be as well assured as a divided Republican party is.

With four distinct party organizations or factions in the field, a great opportunity is presented for the honest men in both the great parties to come together for the double purpose of ridding the State of Bryanism and bossism at a single stroke. Why should not honest Republicans and honest Democrats unite for this most beneficent work? The people of the State would hail such a union with joy. They are as weary of bossism as they are of Bryanism. They would rejoice at an opportunity to crush all bosses at once, to rid the State not merely of Croker and Murphy, but of Platt and Black and Payn. It would be a desirable thing to "down Bryanism" and get an honest-money Senator in place of Murphy, but it would be only half a victory if the new Senator were a Platt man and the price of his election were the return of Black or some other Platt dummy to the Governor's chair, together with another personally owned Platt Legislature. Why should that price be paid? Everybody knows that a great number of voters in both parties are sick of bosses, and would welcome an opportunity to vote against them and in favor of free men in the executive and legislative offices of the State. There is also, outside the parties, a great body of independent voters, ranging from 100,000 to 200,000, who would join eagerly in the same crusade. In fact, there is no State in the Union so ripe for a movement of this kind as New York is to-day. There has been, furthermore, no more opportune moment for such a departure than is presented this year. The people perceive, as they have never perceived before, that the bosses of opposing parties play into one another's hands whenever it is necessary to do so in order to save their corrupt system of government from destruction. The various offices to be filled cover all the issues which a union of honest men would raise. The election of a United States Senator forces the money issue, and the election of a Governor and Legislature forces the issue of bossism.

The anti-Platt Republicans and the

National Democrats are really separated only by party names. They have precisely the same views and convictions, both on the national and the State questions which will be involved in the election. If, under "harmony" pressure, each faction of them shall consent to return to old party affiliations, what will be accomplished? Absolutely nothing. Either Platt or Murphy and Croker will triumph. If, however, they refuse all offers of conciliation, and unite on the simple issues of honest money and honest men, they will stand an excellent chance of commanding such popular support as will carry them to success, thus not only warding off the peril of Bryanism, but redeeming the State from the accursed blight of bossism. The effect of such a triumph upon the rest of the country would be most beneficent, doing more than any other conceivable thing to lay forever the spectre of Bryanism.

THE CHARTER BLUNDER.

Our new city charter has been in operation only one full month, but that brief time has been sufficient to give us an accurate idea of how it is going to work. The first demonstration that it has made is that the new form of government is an enormously expensive one. So many new offices have been created, so many large salaries have been authorized, such large forces of subordinates are required to carry the borough and other systems into effect, that the Mayor has felt compelled, in order to keep the budget within anything like reasonable bounds, to declare that many of the charter's provisions will be nullified by refusal of the appropriations which are necessary for their execution. It is said, for example, that the demand for engineers, to fill the places in the subordinate borough bureaus, is so large as to more than exhaust the supply which the city affords. In nearly or quite every instance, the cost of running a consolidated department in the new city is several thousands of dollars greater than was the combined cost of running the several departments of the old cities and towns which now constitute it. This is due mainly to the multiplication of places. Each borough has its President, with a salary of \$5,000 in Manhattan, Bronx, and Brooklyn, and of \$3,000 in Richmond and Queens. One of these officials has found that he has so little to do that he thinks of resigning. He charges the responsibility for his lack of occupation upon the Mayor, who refuses to allow sufficient appropriations to put the full machinery of the boroughs in motion; but this is not the real cause. The trouble lies in the charter, which has created a useless office for no other apparent reason than to give five men handsome salaries.

Then there is the Municipal Assem-

bly, with its two houses and eighty-nine members, and a salary list of \$118,000. So little business has been found for this body to transact that its sessions are given over to the granting of permits for parades, to silly resolutions about matters not within its jurisdiction, and to formal requests upon the Legislature to interfere with the local affairs of the city. While created professedly to give us a "larger measure of home rule," this cumbersome local legislature is occupied chiefly in showing that it has no home-rule powers worth possessing. It will shortly be called upon to pass the budget which is finally agreed upon by the Board of Estimate and Apportionment, and the extent of its powers in this direction will then be revealed. It will have power, by a majority vote of all its eighty-nine members, to reduce any item, except such as have their amounts fixed by law, and such as are in payment of State taxes, and of interest and principal of the city debt, but it can neither increase an item nor insert a new one. In case action reducing an item is vetoed by the Mayor, a five-sixths vote will be necessary to override the veto. There is a field for "strikes" in these provisions, for a combination might be made among the thrifty members of the Assembly to reduce an item as a means for bringing the head of a department to terms. This would be of doubtful outcome, however, for it would be cheaper to satisfy the claims of the necessary sixth and one other than those of the striking majority, or five-sixths. It really does not look as if there was much of value for either the taxpayers or the legislators in these provisions.

Illuminating as these local developments are as to the nature of the charter, those which are made at Albany are even more so. Something like 75 or 100 bills have been introduced in the State Legislature, either in direct amendment of the charter or authorizing some kind of interference with our local affairs. It is very evident from this unparalleled flood that the State legislators do not regard the charter as a "larger measure of home rule." They are more than ever of the opinion that the seat of municipal government is at Albany, and that instead of reforming the old order of things, the new charter has merely aggravated it by increasing the opportunity for meddling and muddling. Appeal is still made to Albany to know whether or not we can give away coal to the poor, or can display the Irish flag from the top of the city hall, or can spend our money in building bridges over the North and East Rivers, or can have honest and capable city magistrates instead of corrupt and ignorant police justices, or, in fact, whether there is anything that belongs exclusively to ourselves and concerns our individual interests.

What we are learning from the opera-

tion of the new charter is simply what was inevitable as the consequences of the policy pursued by the Charter Commission. The members of that body shut their eyes to the teachings of experience in municipal government the world over for the past half-century, and took the position that the mere act of consolidation was so to transform human nature that what had failed utterly in the past would succeed here in the future. The teachings of experience all pointed to simplicity as the fundamental principle of municipal government. The members of the commission made complexity their fundamental principle. The teachings of experience demonstrated the utter uselessness and even positive harm of municipal legislation with two branches. The Commissioners gave us one of the largest bodies of that kind we or any other city ever had. The teachings of experience showed that there could be no real home rule in municipal affairs by means of a charter subject at all times to amendment by the State Legislature, and that the only method by which home rule could be secured was through general provisions embedded in the Constitution itself, safely removed for all time from legislative interference. The Commissioners gave us a charter to which the Legislature has already offered seventy-five or more amendments, any or all of which can be adopted provided a majority can be secured for them.

It is proposed by some well-meaning persons to have a great public celebration on the first anniversary of this charter's adoption, and a member of the Legislature has introduced a bill providing for a world's fair in commemoration of the same event. A far better use of the anniversary would be to start upon that day a movement to supplant the charter with a really enlightened scheme of municipal government, conceived and formulated in accordance with human experience. That would give us something to be thankful for; a condition of affairs which does not exist at present.

REPLYING TO CRITICISM.

Brunetière's account of the famous trial in which he, as editor of the *Revue des Deux Mondes*, was sued for refusing an outraged playwright his legal "right of response" to criticism, is not without touches of that humor which is one of the signs of his mental sanity. Most amusing is his version of the terrific address of the opposing counsel, Maître Gondinet. "Who are you, to pretend to deny us the right to speak?" This after the man had roared away for three hours! "By what right do you condemn us to silence?" The windows were rattling at that moment with his bellowing. "Is this France? Is this the end of the nineteenth century? Was it our grand-

fathers who razed the Bastille?" We all know these Gondinets.

It is, however, the state of the French press law which Brunetière most concerns himself about, and which he thinks unsatisfactory, however luckily he escaped under the ingenious rulings of the court. But one cannot read such discussions of the right to reply to a critic without wondering why an author or an artist should so greatly value the right and so valiantly contend for it, legal or not. There are, to be sure, some temperaments hard to restrain. They burn to confute hostile criticism, or at least to flay the hostile critic. Artistic sensitiveness of a certain order seems necessarily to carry this writhing under criticism along with it. Tennyson had it, as we now know, in an extreme degree. It was all very well for him to profess the belief that,

"Surely, after all,
The noblest answer unto such
Is perfect stillness when they brawl,"

but he was not a perfect example of perfect stillness. At times he rivalled Maître Gondinet. Even Thackeray had an immense capacity for suffering under criticism, and tried, on one occasion at least, to out-roar the Thunderer.

Then there are, of course, the complacent creatures who love to display their hurts in public, and to insist on being written down asses in the largest capitals. Of these are they who write indignantly to the editor: "You say that my book is silly and that I am a foolish fellow. I should like to see you prove that. Now, if you are man enough to print this letter, your readers will be enabled to judge between us," etc. And the weary editor does print it, as the short and easy way of proving that all he had said about the writer was true; while the writer—why, the proud man puffs out his chest and makes his cane ring more smartly on the flagging as he tells his friends how he has taught one impudent editor a lesson!

But apart from these unrestrainables, it does not appear why writers and other public performers subject to public criticism should care so much about the right or privilege of rejoinder. The critic himself is only another public performer. He is as dutifully trying to earn his daily bread as, say, the singer who hysterically accuses him of trying to deprive her of hers. He is just as truly entitled to fall back on the defence that he "must live" as the author who offers that excuse for selling poor work to a gullible public. In fact, a little imagination applied to the critic's case would make him out a deserving object of sympathy if not of charity. Think of his difficulties—the despairing hunt for a new adjective, the pathetic hope that his one quotation from Aristotle will bear another application; think of his having to go regularly to the theatre and take a hopeful view of the drama, of his being

expected to read a dozen popular novels and then write a sprightly review of them! Surely his very "victims," as they think themselves, would have tears for his sad lot if they but knew it in all its bitterness, and would set about founding Homes for Convalescent Critics and Retreats for Incurable Reviewers.

Seriously, there is something to be said for criticism of the kind that ought not to be, that cannot be successfully, replied to. There should be authorities in criticism of such weight, of such honesty, of such a sense of responsibility that, when they have spoken, it should be as if Rome had spoken and the cause were for ever decided. Brunetière says truly that all modern literatures, unless it be that of France, suffer from the absence of criticism of this high, impartial, and conclusive sort. Of course, such criticism must be something more than the record of personal likes and dislikes. It cannot get on with mere phrases—"unmatched virility," "unequalled pathos," "a delicate sense of style." We must have the examples along with the definitions, as Sainte-Beuve insisted. Show us the virility, make us feel the pathos, exhibit the style. When this is done, when criticism becomes by its skill and candor worthy to rank among the expert professions, the desire to reply to it, to set up rival opinions against it, disappears. Authoritative criticism can have no rival.

But are not the critics divided among themselves? Is it not possible to answer one critic with another? Brunetière admits this possibility, and says that the setting up of critic against critic is the only real response an author can make, is the only thing which makes criticism tremble for a moment for the certainty of its own decisions. But this, of course, relates, not to the ideal state, but to the present hurly-burly of criticism, and even there has its plausibility only through indiscriminate lumping of critics together. They must be weighed, not counted. Will a writer say, Dowden and Traill and Watts-Dunton are against me, but Smith and Brown and Jones and Robinson are on my side, and I therefore have a clear majority of one? Practically that thing is done. Majorities are the big battalions in politics, but in art and letters we have to believe with Aristotle (here is *our* one quotation from him) that the final word is with "the judicious" (we stand ready to give the Greek on demand). A poet cannot check off the review of the *Eatonsville Gazette* against that of the *Athenaeum*. Even in these days of every man his own critic there are certain critical authorities who have not defiled their garments, and who are not replied to because to their mature judgment no reply is possible.

SUDERMANN'S "JOHN THE BAPTIST."

CAMBRIDGE, MASS., February 3, 1898.

The cable has informed us that Sudermann's "Johannes," on its first production, on January 16, in the Deutsches Theater of Berlin, in spite of the elaborate stage setting, and in spite of the superb acting of Josef Kainz and Agnes Sorma, was at least a partial failure. If this be true, one cannot help thinking that the failure was due chiefly to the fact that the audience, through the attempted prohibition of the performance by the police, had been led to expect something like a Biblical extravaganza, and was naturally loath to be put off with a religious drama of deep poetic feeling. The lover of literature, and the lover of German literature in particular, will judge this play differently; he will carry away from its reading a sense of profound gratitude to Sudermann for having once more (and this time more emphatically than ever) stepped forward as a leader in the upward idealistic movement which, in various ways, had made itself felt for some time past until last year it broke forth with an overpowering wealth of poetry in Hauptmann's "The Sunken Bell."

Sudermann's John the Baptist is indeed a counterpart to Hauptmann's Henry, the bell-founder. The fate of both is genuinely tragic. The mediæval mystic succumbs in striving for an artistic ideal too grand and too shadowy for human imagination. The Jewish prophet succumbs in striving for a moral ideal too visionary and too austere for human happiness. Both lose faith in themselves and in their mission, and both rise through their very failure to the height of true humanity. Nothing is more impressive in Sudermann's drama than the way in which this disenchantment of the prophet with himself, this gradual awakening to the sense of his fundamental error, and the final bursting forth of the true light from doubt and despair, are brought before us.

In the beginning we see the preacher in the wilderness. He has gathered about himself the laden and the lowly. With burning words he speaks to them of the woe of the time, of the misery of the people trodden into the dust both by the foreign conqueror and by its own rulers, tormented by its traditional obedience to a heartless, inexorable law. And he holds out to them the vision of the deliverer and avenger that is to come: the Messiah, clad in splendor, like the King of the heavenly host, the cherubim around him on armored steeds and with flaming swords, ready to crush and to slaughter. Yet, irresistible and intoxicating as his harangues are, an occasional look, an occasional word betrays even here that his faith is not born of a free and joyous surrender to the divine, but of a dark, brooding fanaticism, and we feel instinctively that it will not stand the test of self-scrutiny.

Next he appears in the streets of Jerusalem, inciting the populace to revolt against Herod and his lustful house, especially against the scandalous marriage into which the tetrarch has just entered with Herodias, the divorced wife of his own brother, and which he wishes to have sanctioned by the synagogue. But here again it is the blind fanatic rather than the inspired leader whom we hear in John's language. Having led the infuriated mob to the King's palace, he is at a loss what to do, he feels lonely in the midst of the surging crowd, he longs for his rocks in the wilderness; and when the

Pharisees take this opportunity to embarrass him by mocking questions about the new Law the advent of which he has been holding out to his hearers, he has no answer. Just then there is heard out of the midst of the populace the voice of a Galilean pilgrim: "Higher than Law and Sacrifice is Love!" It is the message of him whose coming John has been preaching without divining his true call. This word strikes deep into his soul. For the first time he doubts his own mission, for the first time there looms up before him the dim vision of something more exalted than his own dream of the Messiah.

Again he rises to his full power as a hero of asceticism in his interview with Herodias and her wanton daughter Salome. Salome has been fascinated by the weird, fantastic appearance of this man with the lion's mane and the far-away look in his eyes; she wishes to flirt with him, to tame him, to possess him. When he enters the palace, she receives him with a shower of roses and the voluptuous songs of her maidens. But he remains unmoved. "Gird thy loins," he says to her, "and turn away from me in sackcloth and ashes. For I have been sent as a wrath over thee and as a curse to destroy thee." And he does not seem to notice that this very curse affects the infatuated girl like a magic love potion. Herodias, too, wishes to win him—she wishes to make him a tool of her political designs, to stifle through him the popular opposition to the clerical sanction of her marriage; and she attempts to bribe him by offering him the charms of her daughter. But again his only answer is: "Adulteress!" And yet even this victory over sensual temptation leaves a sting in his soul; for again he hears that mysterious word, Love, and he must remain silent when Herodias calls out to him: "What right have you to judge the guilty, you who flee from human life into the loneliness of the desert? What do you know of those who live and die for love's sake?"

And now he comes to see that he does not understand even those nearest to him. The wife of his favorite disciple comes to him and beseeches him to give back to her the heart of her husband; for since he has joined the band of the Baptist's followers he has forsaken his home and forgotten his kindred. And John never knew anything of this man's inner life, he knew nothing of the love that he is accused of having stifled! Who, then, is he to teach others—he who is constantly confronted with his own limitations, who must confess to himself that he is without a guiding principle of his own conduct! Where is there an outlook for him? Where is the path toward his salvation? Is it this Love that is thrust upon him from all sides? No, no; it cannot be. Love is littleness, is weakness, is selfishness, is sin! No, the only salvation lies in the Messiah, in him who is to come in heavenly splendor, surrounded by the rainbow, the King of Kings, the great fulfiller and judge! Thus he tries to assure himself, thus he strains every nerve to maintain his tottering belief in his mission, to keep awake the hope of his poor downtrodden people. And from this very people, from the mouth of an old wretched beggar-woman, he now hears for the first time the full, the cruel truth: "We do not want your Messiah! We do not want your King! Kings come only to kings; they have nothing in common with

us, the poor. Go away; let us alone, you false prophet!"

Immediately after this scene the climax is reached. Ever since the Baptist for the first time heard that mysterious message of Love, he has been endeavoring to discover whence it came. In a vague manner he has associated it with the noble youth whom years ago he baptized in the Jordan, and from whom he has in some way hoped for the fulfillment of his Messianic dreams. Now he learns from some Galilean fishermen that this Jesus of Nazareth has indeed brought a new gospel—not the gospel of a super-human Messiah, but of human brotherhood and kindness, of the love of one's enemies, the very gospel of which John, through the bitter disenchantment, has gradually become the worthiest prophet. Just after this meeting with the Galileans he is drawn into the surging throng of the populace, who have streamed together to make a forcible attack upon Herod and his wife as they, in solemn procession, repair to the temple. Torn with conflicting feelings as he is, unable to collect his thoughts, he is pushed along to the steps of the temple. A stone is forced into his hand: he is to execute the judgment of the people against the vicious King himself. Mechanically he lifts the stone; he calls out to Herod: "In the name of him who—"; but the stone glides from his hand, and he stammers—"of him who bade me love you!"

The rest of the drama brings little new of inner experience. Once more John rises to the full grandeur of the Old Testament prophet. Imprisoned, and led before the love-infatuated Salome, he once more defies her raging passion. He dies with words of peace and hope upon his lips. Immediately after his execution there is heard from the street the hosannah of the jubilant masses greeting the entry of Jesus into Jerusalem.

It may be that here and there in this drama there is an overdose of staginess; staginess is undoubtedly the danger of Sudermann's talent. It may be that the realistic touches are here and there a little forced, and seem like effects borrowed from the religious paintings of Münchacay. It may be that the talk of the Roman soldiery smacks a little too much of the jargon of the Prussian officers of the guard. And there can be no doubt that the figure of Salome, this self-conscious, calculating Berlin coquette, falls far behind that ravishing creation of Heine's fancy after which she has been modelled:

"In den Händen trägt sie immer
Jene Schlüssel mit dem Haupte
Des Johannes, und sie küsst es,
Ja sie küsst das Haupt mit Inbrunst.

"War vielleicht ein Biischen böse
Auf den Liebeten, liess ihn köpfen
Aber als sie auf der Schlüssel
Das geliebte Haupt erblickte,

"Weinte sie und ward verrückt,
Und sie starb in Liebeswahnsinn.
(Liebeswahnsinn! Pleonasmus!
Liebe ist ja schon ein Wahnsinn!)"

But what does all this mean beside the fact that in the Baptist himself Sudermann has created a character worthy of Schiller's genius; a character which arouses in us emotions such as our forefathers must have felt when they saw the first performance of a "Jungfrau von Orleans" or a "Wilhelm Tell"; a character which, we may confidently hope, will be a source of inspiration and delight to our children and our children's children.

KUNO FRANCKE.

THE PAINTINGS AT CHANTILLY.—III.

PARIS, January 27, 1898.

Greuze may be said to have introduced in the French school of the eighteenth century the bourgeois form of art—the representation of every-day life. He is a realist, but his realism preserves a touch of poetry; he likes to choose his models (especially his female models) from the most refined beauties he can find. It is evident that his mind was pervaded by his literary theories. His domestic dramas are an illustration of life such as it was understood by the philosophical school; the "Paternal Malediction," the "Punished Son," the "Village Bride" made his reputation. The galleries of Chantilly show us a head of a girl which is a charming portrait, and a study which was used for the "Village Bride." Tradition will have it that it is the head of Georgette, a daughter of Greuze's porter. "If Greuze," says M. Gruyer, "found this charming child in his lodge, he was quite right to take her as a model." Greuze painted this Georgette at the period, for which he had an evident preference, when her sex is no longer quite a child, and not yet quite a girl; his heads, of which there is a profusion (many are copies which were made when Greuze became the fashion and the rage), always have this character. Their naïveté is suggestive, their innocence is a veil. Greuze knew, however, how to go a step further, and in the picture at Chantilly which goes under the name of "Tender Desire," we see a woman who seems to have nothing more to desire. In Smith's catalogue of the works of Greuze this picture is marked as "Young Woman, with a languishing expression, looking up." Georgette's brother, a robust and healthy boy, figures at Chantilly near his sister. It is an admirable portrait, more vigorous than most of the pictures by Greuze; it bears the impression of life.

I have spoken already of the portrait of Marie Antoinette, as Dauphiness, made by Drouais; it is one of the ornaments of the great gallery of Chantilly. A portrait of Madame de Pompadour, representing her powdered and rouged, with white lace thrown over her head, working at embroidery, has been attributed to Drouais; Madame de Pompadour is no longer very young; she is about forty years old.

Fragonard (born in 1732, died in 1806) painted for the Princes of Condé a series of forty-two small oval portraits of the Princes and Princesses of Bourbon. It is difficult to recognize his very characteristic manner in this series, which is of no great value. More value, in an historic sense, is attachable to a portrait of the Prince of Condé, the commander of Condé's army, which is found at Chantilly. This full-size portrait represents the Prince at the age of sixty-five, when he was in England; he wears the costume of general of the army of Condé. It was painted by a certain Madame de Tott, and engraved by Bartolozzi in 1802. Who Madame de Tott was, it is impossible to say. Madame Vigée-Lebrun is well known; she lived as long as eighty-seven years, and died in Paris in 1842. She left a most interesting body of works; the collection of her portraits is of immense interest. Chantilly has a portrait of Maria Theresa of Austria, which cannot have been made from life, and consequently is of secondary value; a portrait of Queen Caroline of Naples, already old; a portrait of Marie Louise Jo-

séphine, Queen of Etruria (who died at Lucca in 1824), the best of the three.

Danloux (born in 1745, died in 1809) lived ten years in England, where he established himself at the beginning of the French Revolution. He imbibed somewhat of the rare faculties of Gainsborough, Reynolds, and Lawrence; he made portraits in England of Admiral Duncan, Lord Adam Gordon; he made a portrait of the Count d'Artois, in the costume of colonel-general of the Swiss—a good picture, which is now at Chantilly—as well as an excellent portrait of Louis Henri Joseph de Bourbon, the last Prince of Condé, in the costume of the army of Condé. This last portrait was given by the Prince to a Mr. Crawford, who had received him in England, and it was bought by the Duke d'Aumale from one of the descendants of Mr. Crawford.

The Vernets form a dynasty of painters, the most illustrious of whom was Horace Vernet, well known to all the visitors at the château of Versailles. Carle Vernet (born in 1758, died in 1836) is represented at Chantilly by a very interesting hunting picture; the two personages in hunting costume and on horseback are the Duke d'Orléans, the father of Louis Philippe, and Louis Philippe himself, who was called the Duke de Chartres in the lifetime of his father. Many people on horseback are seen in the background, in the landscape. The two princes have evidently sat for their portrait. The Duke d'Orléans has the same features, the same complexion, as in the magnificent portrait by Sir Joshua Reynolds at Windsor. (There is at Chantilly a reduction of this last portrait made by Reynolds himself.) This hunting picture, too, has its history; it was given to the city of Pesh by a Prince Esterhazy, who probably had received it as a present from the Duke d'Orléans. It entered the galleries of Chantilly by virtue of an exchange which had the approbation of the Hungarian Chamber.

Prudhon (born in 1758, died in 1823) is a sort of connecting link between the French school of the eighteenth century and the classic school of David; he combined a certain classic purity with all the grace of the eighteenth century. Prudhon is very personal, and it is impossible not to recognize him at once. He is very pure and Greek in his "Psyche aspiring to Heaven," a nude but chaste figure, which is full of poetry. The same qualities are found, in a minor degree, in two small pictures, "Homage to Beauty" and "The Sleep of Psyche." The Duke d'Aumale was fortunate enough to find a great number of Prudhon's original drawings; they are all framed, and form a most valuable exhibition by themselves.

Among the jewels of Chantilly we must place in the forefront the portrait of Bonaparte as First Consul, by Gérard (born in 1770, died in 1837). Many engravings have been made of this magnificent portrait, which shows Bonaparte at his best age, and gives the completest idea of the power of this extraordinary genius. Gérard, who was an excellent portrait painter, cannot be admired in his great classic compositions, such as the "Three Ages," which are seen at Chantilly. Titian treated the same subject, but with a difference. Gérard's composition was, however, the great success of the Salon in 1808. We do not view it with the same eyes as the contemporaries of Madame de Staël.

Gros (born in 1771, died in 1835) is famous for his picture of Napoleon among the men

stricken with the plague at Jaffa. This picture is now in the museum of the Louvre; Chantilly possesses a reduction of it, or rather the first study made by Gros for the great picture. It is interesting as such.

A great place is occupied by the pictures of Ingres (born in 1780, died in 1867), who was long considered the greatest master of the modern French school. We find an admirable portrait of himself, at the age of twenty-four, when he was a pensioner of the French School at Rome, full of vigor and quite alive. Another portrait, made at Rome, of a French lady called Madame Devaucay, is comparable for its qualities with the best portraits of the great masters, from the quattrocentisti to Holbein (such, at least, is the opinion of M. Gruyer, who is an enthusiastic admirer of Ingres). The picture, which goes under the name of "Stratonice," and which has been made popular by engraving, may be said to have been the starting-point of the neo-Greek school, which has in our day its best adept in Alma-Tadema. It was made for the Duke d'Orléans, in 1834. A "Venus Anadyomene," with cupids at her feet, on the waves; a small "Francesca da Rimini," with Paolo Malatesta at her feet, are also to be mentioned.

Horace Vernet, the favorite painter of Louis Philippe, made the name of Vernet even more illustrious. We see from his hand at Chantilly a portrait of the Duke d'Orléans (Louis Philippe), at the age of forty-five, in the painter's first manner; "Arab Chiefs in Council," in his second and final manner—a charming picture (the Arab chiefs are holding their council in a beautiful landscape, painted from nature); King Louis Philippe, on horseback, attended by all his sons on horseback, and coming out of the court of the château of Versailles. The King is in the uniform of a lieutenant-general, the Duke d'Orléans of a division general as is also the Duke de Nemours; the Prince de Joinville in the uniform of a captain of the navy, the Duke d'Aumale of a colonel of infantry, the Duke de Montpensier of a captain of artillery. Of all these, only one remains at this hour, the Prince de Joinville.

Ary Scheffer was one of the favorite painters of the house of Orléans; he had become personally intimate with most of its members, having given drawing lessons to them. He was much liked by Queen Marie Amélie, and made several portraits of her; one of them, taken when she was already a widow, is seen at Chantilly. We notice also a fine portrait of Prince Talleyrand by Scheffer, which was left to the Duke d'Aumale by his friend Lord Henry Holland. In this portrait Scheffer revealed some of the qualities of the Dutch masters, being himself a Dutchman. He is also represented by a fine portrait of the Duke d'Orléans, the eldest son of Louis Philippe, at the age of twenty, in the costume of a colonel of hussars.

Paul Delaroche made for the Duke d'Orléans, who had become Prince Royal, a picture representing the assassination of the Duke de Guise at Blois. The Duke ordered this picture at the same time as the "Stratonice" of Ingres. Both are now at Chantilly. The "Assassination" is probably the best painting by Delaroche; it has become very popular through a fine engraving. When we have cited the "Two Foscari" of Delacroix, we have nearly exhausted what belongs to the generation of painters of the period of 1830. M. Gruyer will complete his magnifi-

cent work by a fourth volume. We cannot finish this account without saying that the Duke d'Aumale was the happy possessor of several Decamps; but Decamps belongs already to a period posterior to that of Ingres, Delaroche, and Delacroix.

Correspondence.

THE FOLLY OF IT.

TO THE EDITOR OF THE NATION:

SIR: It is impossible for me to read the *Nation* without either agreeing with it or disagreeing with it very positively. On this occasion I most heartily agree with it. You never put a thing better than when you recently said that the annexation of Hawaii involved our maintaining two fleets, one to defend the islands and the other to defend our own coast when deserted by our present fleet for the protection of the islands. Living on the Pacific Coast myself, I may be able to offer you the reflections of sensible men here on this subject.

The truth is, all this talk about the military necessity of our having these islands is nonsense. We don't need them at all. Let us reason a little. If we require them, it must be for purposes either offensive or defensive. Now, offensive arguments nobody will tolerate. Well, then, we may need them for defence, or rather (for this is practically the only excuse) we ought to have them ourselves in order that others may not use them against us. Against us how? As a coaling and supply-station? Grant that. Then how many home ports of ours can they menace? Does nobody in the East know that on the whole Pacific Coast of this country there are only three vulnerable points? Nature has not opened this coast with harbors and rivers as she has the other. There neither are nor can be here that number of opulent maritime cities which, on the Atlantic Coast, from Maine to Louisiana, may tempt the avarice or the revenge of a foreign enemy. From Southern California to Cape Flattery there are only the harbors of San Diego, San Francisco, and Puget Sound. Now, if we cannot defend these three ports by fortifications and by our present squadrons without going two thousand miles and more into the Pacific to get an expensive outpost—to get an outpost that itself must be defended by ships, to get an outpost so far from our own coast that an enemy in possession of it, to use it for supplies and repairs, would have to operate by intermittent war, rather than continuous attack—then in all reason we had better give up our policy of minding our own business, and adopt one of laying about us on all sides and mauling mankind. It would be just as cheap in the long run to do one as the other. Let us, then, go on. Let us take Hawaii, squander millions on Hawaii, build a navy for Hawaii, and then fortify the Aleutians to protect the approaches to Hawaii. Throw away your Mercator's projection; look at the globe. The Aleutians are not so distant from Hawaii. Let us, accordingly, fortify the Aleutians and build there a dry-dock, too, for a reserve station for our squadron of Hawaii.

The degree of ignorance on this subject is something astonishing. That ignorance is found even in the official departments, where we pay men to know better. Let me give you an instance. Last summer, when some

madman or schemer spread a rumor that the Japanese were fools enough to think of wasting on Hawaii ammunition and ships which they manifestly needed against powerful neighbors at home, the battle-ship *Oregon* was lying near Seattle in the waters of Puget Sound. Forthwith the Navy Department ordered her to San Francisco. Why? Not because that city or any other American city was in the remotest danger—that, nobody claimed. It was for offensive purposes, admittedly, that she was sent there. She must be in readiness to depart at once for Hawaii. San Francisco is eight hundred miles south of Puget Sound, and Hawaii ever so much further south than that, so, of course, the *Oregon* would be so much nearer the islands. Would she? Every officer, even the tars, aboard her must have grinned at the conclusion. Though the islands are very far south of San Francisco, they are, by reason of the spherical shape of the earth, almost as near to Seattle. The difference is not above two hundred miles. Thus the ship was sent eight hundred miles to gain two hundred. But this is not all. She was to sail from San Francisco harbor. Now this involved two things—her being able to get into that harbor and her being able to get out of it. In quiet seas either is easy. In rough weather the deep keel of this ponderous machine has not margin enough at the Golden Gate for absolute safety, so at such times she has always to remain a prisoner. A fine scheme of offence this. But, worse still, the only dock on this coast large enough to hold her was the very one she had left behind on Puget Sound. Moreover, if a change of plan should require her dispatch to Japan itself, then San Francisco would be several hundred miles further away.

The only Power in whose hands islands so distant from our coast could ever be a danger to us, is England. But what would England want with them? That country has here, on Vancouver Island, within a stone's throw of our Puget Sound Coast, a complete naval station, a dry-dock, fortifications, abundance of coal, besides telegraphic and railway connection. The last country that will ever want the Hawaiian Islands for naval purposes is England. They are too far from Asia, they are too far from America, and she already has her ample stations on each of those continents.

FREDERICK BAUSMAN.

SEATTLE, WASH., January 31, 1898.

PORCHER'S MARCUS AURELIUS ANTONINUS.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of January 20 is "An Inquiry," by Mr. Thomas M. Johnson, relative to the 'Meditations of Marcus Aurelius Antoninus,' the text of which was issued, and edited, by C. L. Porcher, London, 1863. I am pleased to give a little information here which, although brief, represents a year's time and much searching and correspondence.

"C. L. Porcher" was one of the pseudonyms of an erratic genius whose true name was Capel Loft (the younger). A full account of his life and writings will be found in Macmillan's 'Dictionary of National Biography' (vol. xxiv., pp. 71-2), from which I extract briefly. He was born February 19, 1806, in Suffolk, England; was a Fellow of King's College, Cambridge, 1829, and took

his M.A. in 1832. He studied law, but did not practise, preferring literature and a roving life. He had high honors at college, and his several works received great praise, but his political theories were considered wild and his criticisms unsound. "Loft was in America during the civil war, and, while living in the wilds of Minnesota," prepared the text of the 'Meditations.' This explains the allusion to Minnesota in the note referred to by Mr. Johnson. Besides the pseudonym of "C. L. Porcher," Loft also used others, as "Stoic," "Kingsman," "C. Lawford," "R. E. Storer" ("Restorer"), etc.

Mr. Johnson's copy might be termed the first English edition, being printed in London; but the true first edition ever issued was printed in New York, 1861, by J. F. Trow, of Directory fame. The book *never was published*, as shown by the copy in the Astor Library, which is a presentation copy from Loft, bearing several inscriptions in his writing, among them, "Not published." The title has "Porcher" lined out, followed by "—Stoic." Capel Loft died in Milmead, Va., October 1, 1873.

I think Mr. Johnson is certainly in error in ascribing anti-slavery opinions to Loft, for the legend on the title of the 1863 edition, viz.: "N. Eboraci, U. S., 1863. A. Liberatoris Relp. I.," is also on the title of the first edition, with date 1861; so he could not have had in mind, as his epoch-maker, the emancipation proclamation of January 1, 1863. It seems to me a more plausible theory that he was of strong Southern sympathies, if not actually pro-slavery, as shown by his living (and dying) South, and by his using the name "Porcher," an essentially Southern family; and that by "Year of Liberty I." he referred originally to 1861, to what he hoped would be the first year of the Southern republic.

I was much puzzled at my first sight of this work, and attempted to trace it through the name "Porcher." The genealogies and cyclopædias indicated only the Southern family, the most famous member of which was Dr. Francis Peyre Porcher of Charleston, S. C. Correspondence with the family did not aid me, but seemed to show that the author was not of their line. Finally, I was put on the right track by Prof. Gerald Henry Rendall, of University College, Liverpool, who is preparing a new translation of the famous 'Meditations.' My belief is that Loft, while living South, became attached to some member of the Porcher family, and hence adopted the name, prefixing it with his own full initials, "C. L." If not this, then "Porcher" is some faint play upon the word "Loft."

The book is rare in any form, but exists in three or four states; first, the 1861 issue, which has an "Addenda," the whole being printed on a pinkish paper; next, the author had an "Ensauper Addenda," printed by Parker, of Oxford, on a yellowish paper, and bound in with some copies of the 1861 issue; finally, he reissued the work in 1863, in England, as described. The British Museum (see their Catalogue of Printed Books, London, 1881, Aur-Azz, page 5), has eight copies of this work, more or less perfect, and filled with emendations by Loft, sheets of his manuscript, letters, bills, etc.—in fact, the entire private collection of this extraordinary man. The two copies I have are among the treasures of my collection of nearly 300 editions of the 'Meditations.' The fact that the "Porcher" edition is the only one of the

text printed in the United States, lends interest and is my apology for this letter.

WALTER LEE BROWN.

EVANSTON, ILL., January 31, 1898.

A FALSE REPORT.

TO THE EDITOR OF THE NATION:

SIR: Some time in December I noticed, either in the *Nation* or in some equally prominent place, a short paragraph copied from a French paper, warning travellers that the Hermitage at St. Petersburg was undergoing extensive repairs, and that the pictures of the gallery would be closed to visitors for at least a year. I immediately gave up the idea of visiting Russia in the Christmas holidays, for St. Petersburg without the Hermitage would be like the play with *Hamlet* in the asylum. But I later decided to be sure, and received the following letter from M. Somof, who has charge of the picture gallery. The letter may be of interest to some of your readers who might be deterred by the notice I refer to from visiting St. Petersburg.

ERMITAGE IMPÉRIAL.

ST.-PÉTERSBOURG, le 20-8 décembre, 1897.

MONSIEUR: En réponse à votre lettre du 16 décembre, j'ai l'honneur de vous informer que vos informations ne sont pas exactes, et que le Musée de l'Ermitage Impérial est ouvert et restera ouvert pour tout le monde malgré la translation des tableaux russes de la collection de l'Ermitage au nouveau Musée National, dont je m'occupe en ce moment.

Agréez, monsieur, l'assurance de ma considération très distinguée.

A. SOMOF,

Conservateur en chef de la galerie de l'Ermitage.

Instead of all the Hermitage being closed to the public, it is only two rooms containing Russian pictures that are not to be seen. As one can see the very large Trétiakoff collection of Russian paintings in Moscow, there is no reason why any one should postpone a visit to Russia on account of the current notices of closure.

I may perhaps warn travellers that all collections, both in St. Petersburg and in Moscow, are closed from December 23 to January 6 (old style), inclusive, with the exception of one day. So visitors who wish to see both the Hermitage and the Russian Christmas should plan to visit the gallery before the holidays begin, or after they are over.—Yours truly,

WILLIAM FENWICK HARRIS.

BERLIN, January 12, 1898.

A FIELD FOR CLASSICAL SCHOLARSHIP.

TO THE EDITOR OF THE NATION:

SIR: Allow me to call the attention of competent persons to a field in classical studies at present largely unoccupied. While so much good work has been done, and is being done, particularly in Germany, in determining the correct text of ancient authors, there exists of many writers no complete modern edition containing notes explanatory of obscurities and difficulties in that text. There are no annotated editions of the complete works of Seneca, Suetonius, Pliny the Naturalist, and others, which are not at present entirely out of print. Such old editions as the Delphin and Lemaire, besides being antiquated, can now be obtained, if at all, only with considerable trouble and no little expense. There are few, even among professed classical scholars, who would not be assist-

ed by the collected researches of ages upon these writers. Who, for instance, can pretend to fully understand Pliny the Naturalist without some such help? For the general reader of the classics, of whom there are not a few, such aids are imperative.

Very respectfully, C. R. BLACK, Ph.D.

BALTIMORE, February 6, 1898.

Notes.

'Facts about Bookworms, their History in Literature and Work in Libraries,' is the title of a work, both literary and scientific (microscope in hand), by the Rev. J. F. O'Connor, S. J., former librarian of Georgetown College, in the press of Francis P. Harper. The edition will be limited to 750 copies.

D. Appleton & Co. will shortly publish 'The Broom of the War God,' by H. N. Brailsford, a volunteer in the Foreign Legion in the late war between Greece and Turkey; 'Eastern Journeys: Some Notes of Travel in Russia, in the Caucasus, and to Jerusalem,' by the late Charles A. Dana; 'Bimetallism,' by Major Leonard Darwin; 'Astronomy,' by Agnes M. Clerke, A. Fowler, and J. Ellard Gore; 'Points in Minor Tactics,' by Capt. Charles A. Smylie; and 'A Voyage of Consolation,' by Mrs. E. C. Cotes.

With Dr. George Adam Smith's volume on the 'Minor Prophets,' A. C. Armstrong & Son will complete the forty-nine volumes of the "Expositor's Bible." They announce also an 'Introduction to the Study of Sociology,' by J. H. Stuckenberg, D.D.

Charles Scribner's Sons will publish 'Emerson, and Other Essays,' by John Jay Chapman.

Frederick A. Stokes Co. will have ready in the spring 'Northward,' by Lieut. R. E. Peary, a narrative of his Greenland explorations in 1886 and 1891-'97, with nearly 900 illustrations; and 'Andrée's Balloon Expedition,' by MM. Lachambre and Machuron, his balloon-builders.

'Marching with Gomez,' by Grover Flint, with an introduction by the author's father-in-law, John Fiske, is promised by Lamson, Wolfe & Co.

Doubleday & McClure Co. have nearly ready 'The Science of Political Economy,' Henry George's posthumous work. They have also undertaken, in connection with this writer's family, a memorial edition of his works limited to 1,000 copies, and printed at the De Vinne Press. New photographic portraits, and a biography by Henry George the younger, will enhance the value of this edition.

The Peter Paul Book Co., Buffalo, announce the publication at an early date of 'Daydreams of a Doctor,' by Dr. C. Barlow of Robinson, Illinois.

About the middle of the month the second volume of the 'Review of Historical Publications' relating to Canada, edited by Prof. George M. Wrong and Mr. H. H. Langton, librarian, of the University of Toronto, will be published in that city by William Briggs. Only 500 copies will be for sale.

The forthcoming Poe-Patterson correspondence, with introduction by Eugene Field and facsimile of one of Poe's letters, is, we are informed, not new material, having been published in the Chicago weekly *America* of April 11, 1889.

We have received from Messrs. Scribner

two volumes in each of the uniform series of reprints of James Whitcomb Riley's and Richard Harding Davis's works: Riley's 'Afterwhiles' and 'Sketches in Prose,' and Davis's 'Cinderella, and Other Stories' and 'Gallegher, and Other Stories.' The "Homestead Edition" of the Western writer is the more elegant of the two, but not too much so for even the dialect verse of 'Afterwhiles,' in which the combination of elevated and of serio-comic poetry recalls the author of the 'Biglow Papers.'

No one will grudge, either, a new and handsome dress to Mr. Frank Dempster Sherman's 'Little-Folk Lyrics' (Houghton, Mifflin & Co.), among the best of their kind. The illustrations which frame a certain number of the songs are by Maude and Genevieve Cowles, and are much above the average in fancy and in draughtsmanship.

The appearance of a Life of Christina Rossetti and the Rossetti exhibition in London make it natural for Roberts Bros. to bring out a popular edition of T. Hall Caine's 'Recollections of Dante Gabriel Rossetti,' now some fifteen years old. Meanwhile, Mr. Caine has become a considerable literary personage, and it should be remembered that there is not a little of himself in this book about a friend.

It speaks well for his denomination that Dr. McConnell's 'History of the American Episcopal Church' has reached a seventh edition (Thomas Whittaker). Its independence and candor have not proved an obstacle to its reception, and it is now extended from the close of the civil war to date. The work has a good index.

'Afloat on the Ohio' is the title of a well-made, readable book by R. G. Thwaites (Chicago: Way & Williams), giving an account of a voyage in a skiff down the river from Redstone to Cairo, a distance of about 1,000 miles. Excepting the visit in Louisville, where Mr. Thwaites's party were the guests of Col. R. T. Durrett, the eminent Kentucky historian and President of the Filson Club, the outing was uneventful; but the little incidents of the trip are pleasantly told, the various places of interest are duly dwelt upon in succession, and the monotony of the narrative is evaded by frequent historical reminiscences. Such is particularly the case along the upper reaches of the river, where a good many places one now hears little and cares less about were once important points. The book is thus well balanced and ballasted, and the cargo it brings is no inconsiderable one. The most important matters it contains are the two Appendixes, one giving an historical outline of Ohio Valley settlement, and the other a selected list of journals of previous travellers down the river, forming quite a bibliography of the subject. The voyage having been undertaken, we are informed, to gather "local color" for work in Western history, the present volume is no doubt to be regarded as opening the way to a more serious undertaking.

Mr. W. M. Griswold of Cambridge, Mass., with that untiring diligence which characterizes the veteran index-maker, has now issued 'The Novels of 1897,' a two-column authors' list filling twelve pages, with references to notices and date of notice in six literary journals; and a complementary classified subject-list, with the references carefully repeated. Africa, Asia, England, Kentucky and Tennessee, Eccentric, Fanciful, Humorous, Ideas (with nine subdivisions), Occupations, Juvenile, are some of the head-

ings. Besides the references to criticisms, the judgment is often summarized, as "clever," "loathsome," "forced," "impossible," "praised," etc. There is no excuse for going astray here. Libraries and their frequenters must "come to this."

A distinctly good piece of work in its kind is the dissertation, by Pauline G. Wiggin, entitled 'An Inquiry into the Authorship of the Middleton-Rowley Plays,' which, as we are informed by the title-page, was "prepared under the direction" of Prof. George P. Baker of Harvard, and which appears as No. 9 of the Radcliffe College Monographs (Boston: Olin & Co.). In method this essay bears some resemblance to the valuable study of the joint work of Beaumont and Fletcher by Mr. G. C. Macaulay; but Miss Wiggin's work seems to us superior in closeness of reasoning, carefulness of argument, and general intelligence and soundness of literary criticism. It certainly is to be commended for its cautious use of the somewhat overworked and deceptive "metrical test." Miss Wiggin comes to the conclusion that Rowley "wrote the first scene and the underplot of 'A Fair Quarrel,' the first part of 'A World Tost at Tennis,' the second act of 'The Spanish Gypsy,' and the first and last scenes, as well as the underplot, of 'The Changeling.'" But while thus agreeing in the main with the opinions of critics like Fleay, Bullen, and Swinburne, she yet vindicates for Rowley, in an interesting concluding chapter, a higher place and a more important part in this literary partnership than previous critics have thought fit to assign him.

All the articles contained in the sixth volume of "Papers of the American School of Classical Studies" have been published in the *American Journal of Archaeology*, some of them years ago. In the course of this period, the *Journal* changed editors, place of publication, and the firms which electrotyped the articles. The articles have been reprinted from the old plates, and consequently the volume exhibits a variety of typography and spelling. The committee on publications announces that this volume is to conclude the series of Papers of the School, and that future papers will be published in independent form by the American Institute of Archaeology. A special volume will be devoted to the papers relating to the excavations at the Heraeum of Argos. The School has nothing to be ashamed of in these papers, for they speak in thankworthy wise of progress made by the School, in the matter both of the activity and of the scholarship of its members. But the wisdom of republishing them may be doubted. The money thus expended might have been used to greater advantage, for instance, in excavations. Then, since the papers are of interest only to the select few who already possess them in the *American Journal of Archaeology*, it seems a pity to force writers on archaeological matters to multiply references. Again, the papers are not of such epoch-making importance as to create an imperative demand for their republication. The only reason for the existence of the volume is that it may serve as an advertisement of the School. But it will probably fail to attain that end, since it will reach none but those who are already deeply interested in the School, and are more or less conversant with what concerns its welfare.

Mayor Quincy is to be praised for having newly founded an "official gazette of the

executive departments of the city of Boston," called the *City Record*. Its aim is to supply first the departments themselves, and afterwards the public at a moderate subscription price, or per single copy. Mayor Quincy courts criticism and publicity, and wishes writers on municipal matters in the press to be well informed. Such a gazette is published by the city of Vienna, as the present editor shows in No. 1. The *City Record* can be recommended to the attention of reformers in all our large cities.

Significant articles in the *Architectural Record* for January are "The Problem of the Leaning Tower of Pisa," by William H. Goodyear, and "The New Library of Congress," by Russell Sturgis, the latter quite the most detailed and well illustrated professional description we have seen. Mr. Goodyear attacks a theme of perennial interest, and brings the leaning tower into his particular realm of structural curvature. The tower is, in his view, a *tour de force*, in which the bend reverts towards the perpendicular; and he supports his opinion with numerous examples (one the neighboring leaning Baptistery, whose deliberate cant he demonstrates by measurement of the base courses), including bulging or impending façades. His photographic illustrations are very convincing.

Of the three articles on Socialism by leading representatives of that faith, in *Cosmopolis* for January, the one by H. M. Hyndman is the most logical and unimaginative. M. Jaurès is diffuse in his language and, as might be expected, most radical in his views. Liebknecht treats of Socialism as an outgrowth of the conditions of human society in the past, and fails in his effort to avoid fanciful representations of the future. Each of the articles shows distinctly the mark of the writer's nationality, but the firm belief in an early triumph of the cause is a characteristic common to all three. The same number of the magazine contains the first of a series of letters on modern Rome by D. P. Fischer, favorably known by his 'Betrachtungen eines in Deutschland reisenden Deutschen.'

The *Scottish Geographical Magazine* for January opens with an account, by Lieut.-Col. Wells, of an exploring expedition in northern Persia, in which the neglected condition of a naturally rich country is emphasized. This is followed by the papers read at the Toronto meeting of the British Association by F. H. Newell on the hydrography of the United States, and by Prof. W. M. Davis on geography as a university subject. Mr. G. F. Scott Elliot treats instructively of the factors which determine the possibility of the successful cultivation of economic plants in the tropics.

Two recent lion-hunting expeditions in British Somaliland are described in the January *Geographical Journal*, though much more attention is given to an account of the country and its inhabitants than to sport. The ruins of a Galla city of unknown antiquity was found in the centre of the waterless Haud desert, containing fragments of glass, pottery, Oriental china, iron, silver, and bronze rings. It is noteworthy that "the country not only pays for its government, but there is always a small surplus," and "it is one of the few remaining places where, in a healthy and bracing climate, our young men may learn to face their lion and obtain that coolness of judgment only to be acquired in the chase of big game."

Among the other contents of this number is an interesting address on the field of geography, by Sir C. Markham, and a review of geographical research in the United States by M. Baker.

The principal articles in *Petermann's Mitteilungen*, number twelve, are on the specific gravity of the water of the Northern Pacific in connection with the temperature and the currents, by A. Lindenkohl, and the conclusion of R. Oberhummer's narrative of his recent journey in Asia Minor. There is also the usual classified index of the geographical literature for the year 1897, from which it appears that the number of works important enough to be noticed is 736, or 66 less than in 1896, and 134 less than in 1895. There are 191 works on Europe, 21 on the United States. A supplemental number (123) is concerned with the determination of the geographical position of places without the aid of astronomical instruments, as set forth by Dr. Paul Harzer.

A correspondent of the *London Times*, in describing a journey from Massowah to Kassala, gives an unexpectedly favorable account of the Italian province of Eritrea. The port, "undoubtedly the pleasantest place on the Red Sea," has broad quays, handsome barracks, hospitals, and other public buildings, together with numerous large warehouses belonging to Italian, Greek, Arab, and Indian merchants. A railroad has been built seventeen miles into the interior, and from its terminus there is an excellent cart-road nearly to the western frontier. The military stations and settlements consist of substantial stone or brick houses, with tiled roofs, and canteens where the traveller found comfortable lodging and a good meal. Beyond the barren coast-plains is a fertile country in which were large fields of barley and great numbers of well-favored cattle, camels, and goats. Of Kassala, once a prosperous city of 40,000 inhabitants, the dervishes have left "only ruined walls and deserted jungle-overgrown streets, which are still strewn with the bones of the massacred citizens and garrison." Singularly, the only building of consequence remaining whole is a cotton factory erected at the time of the Egyptian occupation. A new town of straw huts and a few brick warehouses has sprung up around the fort. The surrounding plain is exceedingly fertile and shows abundant signs, in irrigating dams miles in length and countless wells, of former careful cultivation. Once secured from dervish raids, it will doubtless again produce large crops of cotton, sugar, tobacco, coffee, and dhurra.

The January Quarterly Statement of the Palestine Exploration Fund contains a suggestive paper, by Dr. C. Schick, on the position of the "nameless city," or Ramah, the home of the prophet Samuel. Contrary to the opinion of most authorities, who have placed it upon one of the heights a few miles to the north of Jerusalem, he believes that a hill between Bethlehem and Hebron corresponds better to the obscure indications of the Bible narrative. Among the other contents are an article by Prof. Clermont-Ganneau on the taking of Jerusalem by the Persians, A. D. 614, and notes upon recently found inscriptions.

In the Consular Reports for January it is said that an average of about 2,000 men are employed on the Panama Canal, which is practically "finished from Colon to Bujeo, fourteen miles," "the least expensive part

of the canal." The return of more than 500 laborers to the Congo was not preparatory to an abandonment of the work; the fact is, that they were found to be unsuitable. Progress in China is indicated by an account of the establishment of an electric-light plant in the capital of Hunan, "the most exclusive and hostile province in China, where, a few years since, the people refused to allow telegraph poles to be erected, and where the missionaries have always met with ill treatment."

—A correspondent writes:

"It seems strange—as I must conclude from your remark on page 74—that Jan ten Brink's masterly sketches of Dutch Indian life have remained unknown in this country. It would be hard to find in the whole range of modern literature anything to compare in vividness of portraiture with his 'Oost-Indische Dames en Heeren'—a few *praktische Menschen* with millions of oppressed natives behind them and the rich tropical nature as a background; a young man or a governess from the mother country stranded on Java's shores and pitted against purse-proud coffee barons and sugar lords who pretend to despise them, yet are willing to marry their daughters and sons to them as if conscious of their own inferiority. But the true champion of the natives was Edward Dekker (pseudonym, Multatuli), whose novel 'Max Havelaar' was translated into English a long time ago."

—The editor of the Jesuit Relations (Cleveland: Burrows Brothers Co.) shows a wish of overtaking that part of his scheme which secures to subscribers their stated instalments, by issuing volumes xi. and xii. at the same time. This practically completes the quota due for the first thirteen months, and offers a favorable contrast to the remissness often shown by the publishers of long series; e. g., Mr. Grosart and his Shaksperian reprints. There is a fitness in the simultaneous issue of these parts, arising from the fact that together they make up one distinct portion of the annual report for 1837. In volume xi. two short and somewhat perfunctory letters of Brébeuf to Vitelleschi, the general of the order, are followed by the beginning of Le Jeune's budget for the year. The connection between the eastern and western centres of the mission field is becoming closer and closer; the route no longer leads through a *terra incognita*; and the establishment of a Huron Seminary at Quebec shows that the savages are beginning to give some pledge of their conversion. One passes rapidly over the compliments paid to Montmagny, Champlain's successor, the thanks returned for aid and prayers of friends at home, and all the little flourishes which may be considered as modest advertisements. Neither is there much in the doings of the French colonists to detain one, apart from a great celebration of St. Joseph's Day, when a quantity of fireworks were sent off in honor of the "Father, Patron, and Protector of New France." Turning to the savages, we find that the sorcerers keep a strong hold upon Le Jeune's interest, although he has written a good deal about them before. Of far greater moment, in view of Jesuit methods and success in teaching, is the account given of the way in which the little Montagnais and Algonquins are taken in hand. In the chapel, boys are placed on one side and girls on the other. French children are interspersed with the young savages, that the latter may learn proper behavior from them. Small presents are added, and it is found that the barbarians, if caught in time,

are not above being captured by the novelty of their employments. The girls are "sans comparaison plus faciles de retenir que les petits garçons."

—Volume xii. continues this same subject of education into a higher grade. At the instance of the Provincial, Le Jeune had founded a seminary, and Brébeuf was instructed to find raw material among the Hurons. A dozen fine lads were selected and prepared to send down the river in charge of Father Antoine Daniel. Unfortunately, at the moment of parting, the strain upon affection was too great, and eleven of them deserted, leaving only a devotee, Satouta, who professed a willingness to follow the black gown even if it led him to France. However, when the fur fleet reached Three Rivers, the Hurons were so convinced of the advantages offered that half-a-dozen children were forthcoming, and in the end the missionaries found in their charge all they could feed. Moreover, they had to furnish complete outfits of new clothes, as the parents expected to take back with them the garments which had been worn by their sons on the way down. Calamities followed. One boy became homesick and insisted on returning; another, after engaging in a boxing bout with one of the French, died, rather from over-eating, it is explained, than from any blows he received. Worse still, Satouta, a model of humility and patience, was seized with a slow fever. "On le fait purger et seigner, on apporte toute sorte de diligence pour luy sauer la vie; mais nostre Seigneur leur voulant avoir, on lui conféra le Saint Baptême, qui lui donna bien tost l'entree dedans le ciel." Poor boy, the least they could do after such treatment was to assail him! In a word, the mortality was such that Le Jeune's only consolation was the docility of the remainder. What pleased him most was their own desire to clear some land, sow it, and build a hut for themselves, after the fashion they had learned in their own country. The most exciting incident of the year was the appearance on August 6 of an Iroquois band before Three Rivers. They were after the Hurons, and on learning that Montmagny had sent to Quebec for reinforcements, they retired; but for the moment we may well believe Le Jeune's protestation: "Vous pouvez bien penser que nous faisons bon guet."

—One of the most satisfactory of recent books is Mr. Thomas Hutchinson's reprint of Wordsworth's 'Poems in Two Volumes' (London: David Nutt). The reprint follows the original edition of 1807 page for page, and line for line, and appears to be as near perfection, in both accuracy and good looks, as can be expected of finite printers and proof-readers. The editing is simply admirable. Mr. Hutchinson, probably the best Wordsworthian alive, has contributed an elaborate introduction, which is both learned and readable, a brief essay on Wordsworth's sonnets, especially from the technical point of view, and a valuable body of notes. In the introduction and notes, Mr. Hutchinson lays particular stress on Wordsworth's constant alterations in his verses, and discusses, with keen discrimination, the significance of these changes, as well as their felicity. The reaction in the poet's style from the excessive and studied simplicity in which he sought to exemplify the canons of his famous "Preface," to conventionality and occasional grandilo-

quence, is well brought out in Mr. Hutchinson's remarks. He also traces, in an illuminating way, the gradual and by no means uniform success of the poet in restoring his lines, thus tampered with, to strength and vigor. One proposition the editor maintains with triumphant cogency: however distasteful adverse criticism was to Wordsworth, he gave careful heed to it, and showed the same disposition to profit by its strictures which afterwards distinguished Tennyson. We do not see, however, that this demonstration entirely overthrows the truth of Hazlitt's well-known remark, which Mr. Hutchinson, with an intemperance of phrase which is almost the only fault we have observed in his work, calls "an idle and outrageous slander." It is one thing to profit by minute and even carping criticism, another thing to accept it with equanimity. In closing, we may point out two matters of detail—the misprint *Schiffer* for *Schipper* at p. xxxvii, which is amusingly confirmatory of Mr. Hutchinson's declaration that he owes nothing to the 'Grundriss der Englischen Metrik'; and the hazardous conjecture about *Binnoric* (L. 174-5).

—One of the members of the late Royal Commission on the Depression of Agriculture, Mr. Francis Allston Channing, has been moved to publish his views of the evidence taken before the commission, which differ from those of the majority of its members, under the title 'The Truth about Agricultural Depression' (Longmans, Green & Co.). Speaking broadly, we may say that the increase in British manufactures and the growth of population created a demand for food, half a century ago, which resulted in high rents. The development of transportation after a time made available very extensive new sources of food, which therefore became cheaper in England, and for the last twenty years rents have fallen. The process has been a painful one. Theoretically, it should have been painful only to landlords, the tenant securing the ordinary profit and rendering the surplus as rent. Practically, while the process has been grievous for landlords, it has been perhaps still more so for tenants. Owing partly to their stupidity, partly to that of their landlords, Mr. Channing contends that reductions in rent have been made too late and have not gone far enough. In his view, the farming lands of England are rack-rented just as they used to be in Ireland, and land courts should be established for the purpose of securing the value of his improvements to the outgoing tenant. The impression made upon us by a cursory examination of the testimony cited by Mr. Channing is that the relations of landlord and tenant will adjust themselves without legislative interference; but he has made an interesting argument, and his facts throw much light on the causes which have made English farmers at once so progressive and so backward.

—Prof. Jules Nicole of the University of Geneva has had the good luck lately to detect in a fragmentary papyrus about 100 lines of one of Menander's plays, the "Georgos," or Farmer. He has edited and interpreted this fragment in a pamphlet entitled 'Le Laboureur de Ménandre' (Geneva: Georg & Cie.). The papyrus professes to come from Abydos—a profession which means very little—and the handwriting dates from about the second century A. D. There

is no doubt at all that the lines belong to the play above named, because, by a singular accident, they exhibit two passages already known and quoted by Stobæus and Zonaras. Meagre as these fragments are, and tantalizing as are the lacunæ, M. Nicole congratulates himself on offering a larger specimen, by sixty lines, than any we possess of the hundred plays or more written by that elegant fop and man of pleasure, who died at Shakspeare's age and was the precursor in wit and genius of Molière. Several of the plays of Terence, of course, give us some idea, under a Latin veil, of what these qualities were; but from this fragment we can even catch some slight whiff of his dramatic flavor and his vivacity, better than from the many isolated maxims and epigrams that have been handed down to us. Just at a critical point in the dialogue, the text offers an unlucky gap of a few lines which must contain the *nodus* of the plot; but, in spite of this, M. Nicole has been able to name the chief characters, and to work out a plausible reconstruction of the plot, by the help of one of the so-called "Rustic Letters" of Aelian.

—It is, as usual, a love intrigue. The farmer's son, aided by his mother, and favored by his father's illness and absence in the country, substitutes the girl of his choice for the bride *Chresippus* had designed for him. The way for a reconciliation is paved by the filial care which *Oleantus* had bestowed on his purlind father, after an accident he had sustained in cultivating his vineyard. The line which describes the farmer's mishap had already been divined by Kock with more daring than exactness from a passage in one of Aelian's letters. Apropos of this conjecture, M. Nicole calls attention to the fact that we cannot depend on rhetoricians like Alciphron and Aristænetus for the *ipsissima verba* of the authors from whom they served up their literary ragouts. He detects also an interesting divergence between the papyrus and the Florilegium in the wording of the following characteristic passage. The slave *Dæcus*, who belongs to the under plot, exclaims ironically as he appears laden with flowers and plants from his master's "pious" farm, to serve for the wedding, "You can't find a more pious and righteous piece of land. It bears all the plants which the gods love—myrtle, laurel, and all these flowers here [a left-handed compliment], and it gives you back exactly what you plant in it—not a grain more"—an idea which became proverbial, and which Menander himself borrowed from the 'Cyropædia.' It is clear from the discussion that he varied this expression, perhaps in a second edition, and that the papyrus offers the earlier form of Menander's borrowed thought.

THE ART OF WILLIAM MORRIS.

The Art of William Morris: A Record. By Aymer Vallance. With reproductions from Designs and Fabrics printed in the colours of the originals; examples of the Type and Ornaments used at the Kelmscott Press, and many other illustrations; also, a classified Bibliography by Temple Scott. London: Printed at the Chiswick Press and published by George Bell & Sons; New York: Scribners.

This is a folio with pages eleven by fifteen inches, printed throughout in a very

beautiful full-face letter, not wholly unlike the "Golden" type designed by William Morris for the publications of the Kelmscott Press and first used in 'The Golden Legend,' issued in 1892. The printed page, with its broad margin unbroken by running-title or other invading line of type, and the page number put at the foot of the page and close to the solid matter, has a singularly rich and decorative look. The cover is of white and blue linen, of an aspect not unfamiliar to those who have handled the publications of the Kelmscott Press in their covers of white and blue paper. The title-page is printed solid and without display or supposed picturesque arrangement, but is much diversified by the use of red and black ink. The illustrations are numerous and important. There is a photogravure portrait of William Morris, mounted by the corners and accompanied by a facsimile of his signature, thus serving as a frontispiece. There are six full-page reproductions in black and white of decorative windows designed by Burne-Jones, Rossetti, and Morris himself, executed by the firm of Morris & Company; and also two or three black-and-white reproductions of cartoons. A great number of woodcuts are in the text, from drawings by H. P. Clifford, R. J. Williams, C. M. Gere, and E. H. New. There are, also, in chapter viii., ten illustrations produced by printing directly from the blocks made for books issued by the Kelmscott Press. These are title-pages, as for Morris's 'Poems by the Way,' 'Godefrey of Boloyne,' and others, two pages of the great 'Chaucer,' chosen for their elaborate borders, their title-pages and initials and press-marks. At the close of the book are forty full-page prints in color, reproducing wall-papers, silks, carpets, tapestries, and tiles, nearly always the designs of Morris himself. The whole book, except the colored plates, is printed on handmade paper, thick, and resembling nothing so much as Whatman drawing-paper of the good old kind. Every sheet is of the full size of the book, so as to have a natural deckle edge.

We insist upon the splendor and richness of aspect of this volume because Morris himself had so strong a feeling for the beauty of the printed book; he desired so strenuously the making of books beautiful to see and pleasant to hold, and worked so energetically to bring that result about. The volume before us has its illustrations where they are required, and of set purpose has no illustrations at all in a chapter that needs none, and a crowd of them where the text requires their presence. The irritating system of adorning a book for the popular eye by scattering its illustrations through it, and leaving the reader to undertake a chase for the one the text requires him to consult, is a thing that neither Morris nor the biographer of his art, Mr. Vallance, would endure for a moment.

Continuing, however, this discussion of the decorative character of the book, the question arises at once as to the merit of the designs. The woodcuts, which have been already named as being from drawings by Mr. Clifford and Mr. Williams, are in the spirit of that work which Morris most admired; that is to say, they are conceived in the spirit of fifteenth-century wood-engraving. Mr. Clifford's sense of landscape is very refined; there is something remarkably delicate in his tree-drawing. Mr. Williams seems to have enjoyed himself most

in the drawings of the attics of Kelmscott Manor, on page 118; but it is noticeable that most of the architectural drawings have been intrusted to him. Another artist, Mr. E. H. New, has furnished the drawing on page 114, showing Kelmscott Manor from the meadow at the back, and C. M. Gere drew that picture of the front of Kelmscott Manor which was used as a frontispiece to 'News from Nowhere,' and which is reprinted here on page 111. It is difficult to explain the extreme dissatisfaction which one feels with these cuts, so well intended to be artistic in their signification and so unsuccessful in effect. They are not lovely to look at; they do not explain what they are intended to set forth; their only excellence (and we admit the importance of this) is in their fitting the printed page well and combining perfectly with the letter-press. Let full credit be given them for that virtue, for they have no other deserving much comment, and in this they are in a sense expressive of all the display of William Morris's art made by this splendid book, and, moreover, of all of his art which comes in the way of persons who, without being in his immediate circle of admirers, yet watch for the finer developments of modern English design. It is all so full of energy, enthusiasm, and high thoughts; and it is all so unsatisfactory! Is there one page in all the long array of Kelmscott books—is there a single page which satisfies the eye of the book-lover as does one page of even an inferior Book of Hours? Is there one border which is really well designed for its place? Is there one initial letter which the skilled designer could not improve? Is there a woodcut anywhere which can bear comparison for artistic merit with the Italian broad-lined wood-engravings published just before and soon after the year 1500? Unquestionably the books are attractive to persons who have to handle the ordinary modern book, even in its less offensive forms; but, considering their very high cost and the elaborate thought and care which went to their preparation, is there one which is not a great disappointment? Can there be found anything which is less worthy its immense cost than the great 'Chaucer' of 1896—that magnificent book in which it is deliberately undertaken to set forth in a worthy form a perfectly well edited edition of the great poet's works? That splendid volume, printed entirely in the larger of Morris's two mediæval fonts of type, "the Chaucer type," with many woodcuts from drawings by Burne-Jones and with elaborate initials and borders designed by Morris himself, was intended, as it seems, to be the culminating volume, and to show well what the Kelmscott Press could do. Yet, even to those who felt less than perfect satisfaction with the smaller books issued by the Kelmscott Press, it must have been a shock to find that the large folio was in no way better or more beautiful than the books which are of small octavo size, though really quartos. The great 'Chaucer' was in every way less satisfactory than they, apparently because there was more room in which to show the essentially inartistic character of the guiding intelligence. Good design is a thing apart; artistic ability is a thing apart. Each of them is as different as possible from the ambition to produce artistic work, the love of it and the desire to make it more abundant and accessible.

The reader must understand that the respect which the thoughtful man must feel

for Morris's devotion, his single-mindedness, and his prodigious energy is in no way diminished by the limited admiration which should be given to his designs. There was nothing in his surroundings, either considered as an Englishman or as a man of the nineteenth century, to make him a master of decorative design. There were no traditions existing in which he could grow up; he was compelled to create them for himself by deliberate transference of himself in spirit to another age. It is not safe to assert that a very able designer—a man who was, as such a designer must be, an artist—would have been unable thus to transfer himself into a previous epoch and to devote his life to the reconstitution of a bygone time; but it is probable that a natural designer would have acted along the lines of least resistance, and would have used less of his precious vital energy in discovering how men thought and designed in the fifteenth century. Granted, as it must be granted, that the spirit of decorative art had gone out of the world, and that Morris was impatient to revive it, it is the act of the theorist, and not of the artist, to set himself to an intellectual reconstitution of the art of another time. The artist takes, rather, the artistic thought of his own time, and modifies it insensibly. If such an artist feels strongly the desire for decoration, as decoration was understood in the fifteenth century, he tries to bend in that direction the modern ways of drawing and of composition in color and in form. He fails, of course, in much that he undertakes; but so does Morris fail. The only question is how far the striving and the failure of each contribute to the hoped-for recurrence of the time in which decorative design may be easy and natural once more. For this we cannot but think that the production of the best art is the best thing; and assuredly a life of such devotion and such tireless energy as that of Morris, spent upon the production of noble designs without much thought about the difficulties which surround the designer in the nineteenth century, would have produced a greater body of good art than that which Morris has left.

The marvel is, indeed, that anybody who loves early books should care much for the Kelmscott books. When one opens a simple volume of prose, like the very first issue of the Kelmscott Press, 'The Story of the Glittering Plain,' and looks at two open pages without any initial or border whatever, he finds what is certainly a comely piece of printing; and the rough, unpressed paper and broad and well-proportioned margin are delightful. This, however, is of the very simplest. Nothing but a little good taste and the calling of the printer's attention under the guidance of such good taste is needed for so much success as that. The initial, too, when one turns over a page and finds the beginning of a chapter, is attractive enough; too large sometimes, and perhaps, as a matter of taste, out of keeping, in that the letter is white on a black ground, so contradicting the black-and-white scheme of the letter-press, though this is characteristic of many of the old books. Here, still, is a page comely enough, though not so pleasing as the unadorned one. There is one border, that surrounding the initial page, which also contains the title, and it is not ill designed. The scroll work, indeed, is too rounded and flowing; it is not

in the severer taste of the early Renaissance; it takes its curls and rolls rather from Roman than from mediæval art; it is unnecessarily complex, and might be much more decorative with one-third the number of lines. After all, 'The Glittering Plain' is a beautiful little book, and when that one book was put into the hands of the amateur, he had cause to rejoice. Since that time many books of the same size have been issued, some larger, and a few much larger and more splendid, and these diminish definitely in their artistic value as they grow more stately, while, at the same time, it appears that the one artistic thought which the designer had ready for use in the composition of borders was used up in the first border and in the first volume, and has not sufficed for further development of the theme.

The difficulty with Morris's design may well have been that he had almost no power over the human figure. His drawings of the human figure are extremely inadequate. No doubt they are generally decorative in their intention, but it takes a man of profound knowledge to create a conventionalized design founded upon anything so subtle as the human figure. Morris's figures as we find them in the double plate at page 100, which reproduces a cartoon for wall decoration, do not stand upon their feet. Their drapery does not clothe bodies. Their heads are not well attached, and their arms and hands are not well posed. Those who have bought the figure-painted tiles of Morris & Co., which, in former times, were obtainable in New York and in London, know well what is meant by the complete failure to represent the nude figure in outline drawing for decorative purposes. It is very odd to find Morris's opinions on Japanese and Chinese art summed up as they are on page 78 in this, that those artists of the Far East produce nothing but pretty toys because they have no architecture behind them. When this opinion was formed, nothing was known in Europe of Chinese painting nor of Japanese painting, which reflects the splendid earlier work of the older and larger country. But still, a little insight might have shown the critic that the power of making pretty toys did not prove the non-existence of architectonics in their greater designs. If the same criticism is transferred to Morris himself, and it be alleged that he could draw nothing thoroughly well, and that he could design nothing thoroughly well because he did not understand the human figure rightly, the criticism would run this chance only of being unjust—namely, that there exists somewhere figure drawing of his which is not inadequate.

Returning now to Mr. Vallance's book, it must be stated that, although it professes to deal with Morris's art and not with his life or literary works (unless, indeed, his poems are considered as a part of his 'art'), the whole account of his life and his many labors is well arranged in eight chapters, followed by a very full bibliography. Chapter i. is entitled 'The Beginning of Days'; chapter ii., 'Oxford to London.' Chapter v. is devoted to the business enterprise, and contains an interesting account of the firm of Morris, Marshall, Faulkner & Co. in 1861, and the transference of the firm's business to Morris & Co. at a later time. Chapter vii. is devoted to societies, and here one would expect to find a good deal about Morris's socialistic labors, but

they are treated slightly and by allusion alone. Chapter viii. is, as we have said, devoted to book illustration and the Kelmscott Press. The book is very interesting reading and will not take any one long to read, in view of the fact that there are only 166 pages of large print, and that even these pages are invaded by many woodcuts.

Morris's life, his poetry, and his socialistic labors are treated much more fully in another book by the same author. The preface to the 'Art of William Morris' is dated February, 1897, and the preface to the fuller but less pretentious volume is dated in August of the same year. The volume which we are reviewing is expressly devoted to the arts of decorative design as practised by William Morris and as taught by him to his employees and disciples.

MRS. BROWNING'S LETTERS.

The Letters of Elizabeth Barrett Browning, edited, with biographical additions, by Frederick G. Kenyon. With portraits. In two volumes. The Macmillan Company. 1897.

The editor of these volumes is, presumably, a son of Mr. John Kenyon, a distant cousin of Mrs. Browning, to whom many of her best letters were written, who was ever her most loyal friend, and who, at his death, made her and her husband a gift of £10,000. The editorial work is done admirably. The "biographical additions" do something more than connect the letters and give the circumstances out of which they rose. There are critical suggestions here and there which show that, if Mr. Kenyon had chosen to write a critical biography of Mrs. Browning, he might easily have done so. No one since Mrs. Browning's death has done her such a good service as the editor of these letters. They make a very different impression from her long since published letters to R. H. Horne, which were nothing if not narrowly intellectual and pedantic. Mr. Kenyon says: "It is essentially her character, not her genius, that is presented to the reader in these letters." But it is her intellectual character equally with her moral, and this, if not essential to her genius, is to that allied. It is her character as a poet; it shows her relation to her work, and proves it to have been very different from that commonly imagined—different and much more creditable. She wrote in 1844, "If I fall before the public—that is, before the people (for an ephemeral popularity does not appear to me worth trying for)—it will not be because I have shrunk from the amount of labor where labor could do anything. I have worked at poetry; it has not been with me reverie, but art." There is abundant evidence of the truth of this declaration in dozens of these letters, in which we have her judgment returning on her work. Much that has been set down as carelessness was evidently deliberate, though it may have been mistaken. She had correspondents of rare intelligence and culture, and they dealt honestly with her. She was always grateful for their criticism, and sometimes adopted it. When she did not, she reasoned quietly and effectively in self-defence. The total impression is of a woman much less romantic, much less exclusively emotional than she has been imagined heretofore. Her letters are predominantly intellectual and habitually quiet and restrained.

Their revelation of her moral character

is extremely satisfactory. Mr. Kenyon has noted the entire absence of bitterness or personal ill-feeling of any kind, and has forestalled the suspicion that this absence is due, in the letters, as printed, to editorial exclusion, assuring us that such is not the case. It must be confessed that she hit back with some asperity at those who were severe on her defence of Louis Napoleon. But one of the surprises of her letters is the forensic skill with which she argued that defence. Where she had most reason to be bitter she was wonderfully sweet and kind. This was in the particular of her father's treatment of her marriage. She tells the story, and reviews the situation in one of her longest letters in the book, a letter remarkable for its simple common sense. Returning to England five years after her marriage, both she and her husband wrote to her father begging him to see her and kiss her child. In the meantime he had answered none of her letters, and he now returned them all unopened, some of them bordered with black that must have suggested to him that her husband or her child was dead. He treated another daughter and a son in the same brutal fashion, and the most charitable explanation of his conduct is that his sense of ownership in his children went to the verge of monomania. Mr. Kenyon has avoided an excessive intimacy in this as in other aspects of Mrs. Browning's life. He has been commendably considerate in his abridgment of "the mother's rapture" over her only child, but has given us enough to assure us that her satisfaction in her motherhood was very great. He has been more prodigal with her various emotions on account of her dog Flush. But as the pet did more than anything else to excite her defective sense of humor, the excess is readily forgiven. At another point where we seem to have deliberate reticence, Mr. Kenyon assures us that he has concealed nothing. We refer to her interest in spiritualism, which has often been represented as marring the perfection of the mutual love of the two poets. Those who delight in all such representations will find nothing for their comfort here. If there was ever any alienation it does not cast the slightest shadow on her letters, and she wrote so frankly that it would certainly have done so if there had been anything of the kind.

The date of Mrs. Browning's birth, which has been much disputed, is definitely fixed as March 6, 1806. In her sixteenth year she "nearly died" from an injury to her spine, caused by over-exertion in tightening her pony's girth. Five years before, she had written her first epic, "The Battle of Marathon," which was privately printed by her father, who was very proud of her precocity. He also printed her "Essay on Mind," a didactic poem, written when she was seventeen. Her translation of "Prometheus Bound" was actually published in 1833, but anonymously. In 1845 the translation was carefully revised, but some literary resurrectionist has recently unearthed and republished the translation of 1833, of which she was soon heartily ashamed. The true beginning of her literary career was in 1836, when she published, in *Colburn's New Monthly*, "The Romaunt of Margret." In 1838 she published her first acknowledged volume, "The Seraphim, and Other Poems," which profited by a decided lull in poetical production at that time, and was received by

some of the critics "with more than civility, with genuine cordiality." But the ambitious initial poem met with little favor in comparison with the minor poems. This experience was repeated when she published a collection of her poems in two volumes in 1844. Whereas she relied mainly on "The Drama of Exile" to float the venture, it went nigh to sinking it. The circumstances of its appearance were very different from those attending the volume of 1838. Tennyson had published his two significant volumes only two years before, and Browning the 'Bells and Pomegranates' series. Not only did she bear the competition well, but her reputation from this time grew apace, so that when, at Wordsworth's death in 1850, the *Athenæum* named her for the laureateship, there was no one to denounce the nomination as pretentious or absurd. That no one thought of naming Robert Browning indicates that she was then much the more famous poet of the two, and she remained so for the next dozen years. Indeed, in the early sixties Browning was getting so little encouragement to write poetry that he turned to modelling in clay, and found such pleasure in it that he began to fancy that his occupation as a poet was gone for ever.

It is therefore the more strange that, for the majority of readers, the principal interest of these volumes will consist in the light they throw on Robert Browning's character and career. There is not so much as could be wished about the genesis and exodus of his various poems; but there is enough in a general way to elicit profound gratitude. Nothing touches him here which does not beautify him in a large and noble way. The early forties were for Miss Barrett years of sickness and utter social isolation, and of these things there is much painful reflection in her letters. But gradually these assured her a spiritual companionship that compensated her in part for the loss of every social pleasure. To the number of her correspondents she added Robert Browning in 1845, when she writes, in January, "I had a letter from Browning the poet last night, which threw me into ecstasies—Browning, the author of 'Paracelsus' and King of the Mystics." "The rest is silence," some one having torn off the remainder of the letter. Her comments on him before this are full of interest. In 1843 she declares herself very sensitive to the thousand and one stripes the critics have laid upon him. Yet, from time to time, she made her own criticism upon his methods, writing in 1845, after her acquaintance with him had begun and was rapidly advancing, "He cuts his language into bits, and one has to join them together, as young children do their dissected maps, in order to make any meaning at all, and to study hard before one can do it." In May they met for the first time, and acquaintance soon flowered into friendship and ripened into love. Strangely enough, Mr. Barrett interposed no objection to attentions which could have but one natural sequel. The two were clandestinely married September 12, 1846, in Marylebone Church—not in St. Pancras, as Mrs. Sutherland Orr wrote in her *Life of Browning*; and on September 19

"Those lovers fled away into the storm."

Into the sunshine rather, of both Italy and their perfect mutual love, "the most perfect example of wedded love in the history of literature—perfect in its inner life and in its poetical expression." Such is Mr. Ken-

yon's estimate, and in these pages there is much to confirm it and nothing of an opposing character. Browning's letter telling the manner of her death, June 19, 1861, is as beautiful as any poem that he ever wrote. Leaving Florence shortly after her death, he could never muster courage to go back.

If the interest of these volumes reaches its climax in the first, where Mrs. Browning invites her father's curse, all the succeeding parts abound in glimpses of persons, judgments of men and books, political ardors, and personal relations, that maintain an average interest much higher than that of the early letters. Catholic in her friendships, Mrs. Browning was not less so in her admiration of other poets. Hardly could two persons have been more different than she and Harriet Martineau, whom she describes as "the most manlike woman in the three kingdoms," and yet their friendship was superior to all perturbations. For Tennyson she had the most loyal affection, though she wrote of him before "In Memoriam" as "not yet a Christian," and that monody could not have satisfied her altogether. As for herself, she was between two fires—on the one hand, the orthodox complaining of her heresies; on the other, the editors begging her to observe a stricter parsimony in her allusions to religious matters. Quite the most charming incident in the book is that of Tennyson's reading "Maud" from end to end in the Brownings' London lodgings, and stopping every now and then with "There's a wonderful touch!" "How beautiful that is!" Mrs. Browning had correspondents who invited her most personal as well as her most intellectual and æsthetic expression, so that we are enabled as never before to conceive of her character in its entirety; and there is nothing in the conception which does not enhance our sympathy with her aspirations as a poet and our admiration for her conduct of her life in every personal way.

Korea and her Neighbors. By Isabella Bird Bishop. Fleming H. Revell Co.

The courage of Mrs. Bishop is of a very high order. It may not be true, as the gossips say, that she never hesitated to go even where it was not safe to take a husband, in order to gain information, yet the nerve and grit she has shown in exploring Yezo, Interior Persia and Turkestan, China and Manchuria, and now the rarely visited portions of Korea, are those which we associate with men rather than with women. Armed with a photographic camera and tripod—largely useful at night as a rat-proof clothes and shoe "horse"—and plenty of oiled paper (more potent than the powder of Dalmatia), she has seen often and thoroughly the Korean house, and knows the country with more practical thoroughness than any alien except the French Catholic missionaries and a few hardy male travellers. In 1894 she was turned back from her explorations by the Chino-Japanese war, but she returned and succeeded in visiting the three seaports open to foreigners, in ascending the Han River, and in making several overland excursions. These were from Seoul to Won-San and southwestwardly to Yong-Chon, northward to near the fortieth parallel, and westwardly through the Ta-Tong valley. She also travelled in northern and western China and in Primorsk, or the maritime province of Siberia. She thus saw the

neighbors of Korea, besides many of the white-coated and hunger-driven natives who have emigrated, there being probably at least twenty thousand Koreans in the Tsar's domain, and possibly as many in the China province of Shing-King.

No other book on Korea is so satisfying in its presentation of the facts of nature and man in Korea as they are to-day. This is not a work of history, but of travel and observation; yet, in its discussions of the forces and environment which have made the native what he is, it is thorough and illuminating. Mrs. Bishop confirms what the best observers have been unanimous in declaring, that in few countries on earth are the natural conditions better for the development of humanity, while in none that claims to be civilized is the government worse. Four-fifths of the people are preyed upon by the official class. It is no benefit to a man to accumulate property or even to be industrious. On the contrary, life appears to be much more worth living when one is poor, and sows no more seed, gathers no more grain, gold, or ginseng than is absolutely necessary. Whatever wealth there may be has to exist, like that of the Jews in mediæval Europe, disguised under a protective mask of outward poverty, for any saving up of resources means a visit from the *yang-ban*, or privileged classes, with forced loans which are never recovered in interest or principal. Mrs. Bishop's first impressions of the Koreans were that they were the mere dregs of a race; but when she saw the prosperity and cheerfulness of those under Russian rule, she changed her opinions. In the end she became highly interested in them as a hopeful people.

The new order of things, foreign pressure, the stimulus of commerce, the entrance of the railway and posts are gradually breaking up the old world of Korean society and politics, which has been already powerfully modified for the better. The filth and squalor of the average Korean houses and streets are almost past belief when we consider that these peninsulars have had writings and etiquette for a millennium and a half, and a superb alphabet of native invention for at least five hundred years. Nevertheless, out of these houses come fine looking men in snow-white or glossy garments of many tints, for the native woman lives as a slave to wash and starch for her husband. As laundry maids the Korean women lead the world.

Hitherto, money in the national Treasury has been like cleanliness in the poor people's houses, conspicuous by its absence. Now, however, the customs service at the treaty ports has given the national finances a backbone, and along with pecuniary improvements have come reforms in the virtue which is next to godliness. Under the chief Commissioner of Customs, J. McLeavy Brown, LL.D., Korea not only discharged her debts last year, but was able to pay a million dollars of the indemnity which she owed Japan for the murder of her citizens in one of the numerous revolutions in 1836. Under his energetic ministrations, backed by the Governor of Seoul, Ye Cha Yun, formerly of the Korean Legation in Washington, the royal city has been changed from the similitude of a pigsty; the original width of the broad streets, laid out in 1392, has been won back from rubbish heaps, booths, and encroaching houses, and Seoul actually bids fair to become almost as clean as a Japanese

city. Under American contractors, a railway is now in advanced course of construction from Chemulpo to Seoul. The beasts of burden—gentle bulls, vicious ponies, and good-natured men and women—that have hitherto done the work of transportation, will soon give way to steam transit. The junks, that seem to be in many a case "a fortuitous concourse of planks," are giving way to ships and steamers on Western models.

Mrs. Bishop, as all readers of her books know, has a fascinating style; she tells of her travels both in Korea and among the Russians with all the arts of rhetoric and the merit of wonderful directness. No book yet printed gives so clear a picture of Russian enterprise at Vladivostok and along the new railway, which brings in a thousand excellent families every year. Her chapter descriptive of the Phyong-Yang (Ping-Yang) battlefield of 1894 is wonderfully vivid, and so also are her word-pictures of the effects of the hair-cropping edict in 1895, and of the murder of the Queen by the brutal Japanese adventurers, who were actually encouraged to their abominable work by the Mikado's envoy, a rough soldier intrusted with the delicate and difficult business of diplomacy. This man illustrated the worst phases of Japanese ring politics. Yet his behavior was only a symptom and outcrop of that "Satsumalism" from which Japan has so long suffered. It was this man's folly that hopelessly discredited Japan in the peninsula, heaped fuel upon the hereditary hatred of the Koreans towards the Japanese, and gave Russia her long-coveted opportunity. Mrs. Bishop's final chapters show the Seoul of 1897, with its hopeful features and the entrance of the Russian military instructors.

Not the least interesting of her paragraphs treat of the work of the American and other missionaries, and of the religions of Korea, which are: dæmonism among the people, discredited and shadowy Buddhism in the mountain monasteries, and Confucianism, of a peculiar phase, among the educated few. In the appendix she shows that Korea is not only a very promising field for the Gospel, but also a steadily enlarging market, the total foreign trade of \$2,978,410 in 1896 having increased to \$11,266,024 in 1896. Pictures, maps, index, and all that is necessary to equip the book for the student as well as general reader, make this an unusually interesting and valuable work.

Artists and Engravers of British and American Book-Plates: A Book of Reference for Book-Plate and Print Collectors. By Henry W. Fincham. Dodd, Mead & Co. 1897. 4to, pp. 135.

It is a sign of the times that we do our fooling so seriously and gregariously. The number of persons having money to spend, time to waste, and energy to spare without intellect to direct it, is simply immense. Suddenly some one leader arises with an idea, or the simulacrum of one, and forthwith a new fad is launched and a new cult founded. The disciples are many, and, in due succession, clubs, societies, and journals are established.

The above-cited book is the result of the book-plate fad. It is the product of enthusiasm and toil, and must have cost the publishers a pretty penny. Yet it is nothing but a catalogue of the men who engraved book-plates, of their various jobs, and the

names of their patrons. Page after page is a reiteration of items like this:

"Lionel Walter Rothschild, C. W. Sherborn, Monogram, 1886."

The description column changes from "monogram" to "pictorial," or "armorial," but the facsimiles are the only definite descriptions.

This particular fad of collecting has no solid foundation. With rare exceptions, book-plates are the poorest forms of the engraver's skill, the pot-bollers of the struggling artist. As works of art they are generally beneath criticism, and the only form of the plates which possesses any value is the armorial one, which is sometimes of service to the genealogist. The pictorial or imaginative forms—at least those executed more than a score of years ago—are as worthless as the cuts which were supposed to ornament the books of the last century. Of course the book-plate of a distinguished man has the same interest which attaches to any other personal relic of him, especially if it be found in a book from his library. But who can care for a poorly designed cut, engraved by a wretched artist, and commemorating some utterly obscure individual?

It is true that of recent years some improvement in the art is apparent. We note, however, that the English designers seem to have divided into two schools. In one, strong effects are sought by the profuse use of a black background, from which conventional foliage or scrollwork stands out in relief. The other school affects a white ground with designs traced in outline, and dependent, therefore, upon good drawing to be endurable. But beyond the technical skill shown, there is little to praise. None of the quaint ingenuity shown in the old books of Emblems or Devices has been recovered. Most of the patrons seem to desire to present their own effigies in uncouth postures, surrounded by volumes which are arranged like bricks in impossible libraries.

But this is a new science, and we have an Ex-Libris Society, and an *Ex-Libris Journal*, and a "greatest collector," and now a prodigious Catalogue. What more is needed to prove that the present age is one that appreciates art, ingenuity, and industry?

English Sanitary Institutions. By Sir John Simon, K.C.B., etc., etc. Second edition. London: Smith, Elder & Co. 1897. 8vo.

Except for the addition of two important appendices, the second edition of this work is, as stated in the preface, "in substance almost textually a reprint" of the first, which appeared in 1890; but to the student of sanitary institutions, in this country as well as elsewhere, the value of the book is even greater now than when it first appeared. It is a work addressed to the laity as well as to the medical profession, for, as the author says, "such art of medicine as it purports to discuss is an art which the laity is now under legal obligation to exercise; and every educated layman is well aware that, in proportion as medicine has become a science, it has ceased to be the mystery of a caste." The importance of the study of sanitary institutions is not likely to be fully apprehended by the layman who, when he thinks of sanitation, generally thinks only of the drainage of his house or the city in which he lives. It is unfortunate that in English the meaning of the word "sanity" has become limit-

ed to health of mind only, for it might well be used in a broader sense to define the general well-being of the individual or of a race; and, with such an extension of meaning, the non-professional reader would recognize the broad import of this book better than by its present title.

Perhaps few people during the Jubilee of the Queen of England last summer were led to reflect that its brilliancy had its main source in the present healthy condition of Great Britain, and to Sir John Simon more than any other living person this glory was due. That London is now one of the healthiest cities in the world, in spite of its enormous population, is largely the result of his work while medical officer of her Majesty's privy council; and although the reforms effected during the thirty years for which he held this office were carried out by the hard work of many able assistants, yet his was the mind which mainly conceived and guided the course of the sanitary improvements which have wrought incalculable benefit to the crowded population of the British isles. Had he remained in office during the last twenty years, in all probability England would have been spared the terrible ravages of epidemics of typhoid fever from which it has but lately suffered, and in respect to sanitary institutions would have been, still more than it is, the example for other countries to follow.

Such improvements as he brought about are often of slow growth, and the originators of them are quickly forgotten, except by the few by whom the memory of the most serviceable helpers of mankind is cherished, as guide and stimulus through life. The author himself, in speaking of the splendid work done by some of his predecessors, says, "Let the noble compensation be noted that often the thoroughness of a reformer's victory is that which most makes silence of the reformer's fame. For how can men be adequately thankful for redemptions when they have no present easy standard, no contrast between yesterday and to-day, by which to measure the greatness of them?" It is pleasant, however, to note that the first Buchanan medal, the funds for which are derived from a bequest by the late Dr. Buchanan, an eminent pupil of Sir John Simon, was but a few weeks since awarded by the Royal Society to Sir John himself, who, as *Nature* states, "may fairly be termed the founder of modern sanitary science."

It is impossible to do justice to Sir John Simon's book in a brief review; it should be read by all interested in improving the external conditions of their own life and that of the general community. The book is divided into four parts: (1) the history of sanitation from the earliest ages down through the Roman Empire to mediæval times; (2) "Post-mediæval England," i. e., legislation under the Tudors, Elizabeth, and the Stuarts; (3) "New Moments," which brings the reader down to the reign of Queen Victoria; and (4) legislation during her reign up to 1890. To the general reader the first three sections will appeal most strongly, for the last is more technical, and of greater interest to the Englishman than to the foreigner. The chapter entitled "The Growth of Humanity in British Politics," dealing with the eighteenth century, is an important contribution to history. Its closing words are well worth quoting. Sir John Simon believes that

"the period in its entirety deserves to

be counted among the greatest in English history. In the cultivation which it gave to a sense of moral responsibility in national affairs; in the splendid instances which it showed of the applicability of common ethical arguments to politics; in the appeals which it made to the consciences of rulers and nations against courses of selfish wrong; in the feeling which it propagated that nations, like persons, if they would not be ashamed of themselves, must obey at home and abroad the common rules of equal justice; not least in the mutual understanding which it promoted between the social instincts and the political philosophy of mankind, it represented such strides of civil culture as no former age of our country had seen—strides of a far truer civilization than any which widened empire, or enhanced luxuries of life, can pretend to show," etc.

This growth of right sentiment made it easier to bring about reforms during the present century, and, great as these have been, there is still much more to do.

The last two chapters deal with the "Politics of Poverty" and contain general broad deductions as to the best means of introducing further improvement and reforms. Coming from the highest authority on these matters, they deserve the serious consideration of all who have to deal with sanitary institutions, not only in England, but in other parts of the world.

The work is that at once of a universally recognized leader in his own profession, and of a man whose large humanity, generous character, and experienced wisdom are apparent throughout his pages, no less than his broad culture, his great store of varied knowledge, and his unusual powers of clear and persuasive expression. He is a master of the English tongue, and the volume may be safely commended to the general reader as of interest alike in its subject and in the mode in which the subject is presented. It is the noble crowning work of a long life spent in the service of mankind.

Founders of Geology. By Sir Archibald Geikie, F.R.S., etc. Macmillan. 1897. Pp. vi, 297.

In this work Sir Archibald Geikie gives the substance of a course of six lectures delivered at Johns Hopkins University in 1896, his excellent purpose being to draw the attention of American students of geology to the achievements of the half-forgotten founders of the science. This limited end is well attained by what the author presents. In a swift and effective way he sets before the reader the character and labors of a dozen or more of the most notable men in this branch of learning, who, in the present and preceding century, have given it its modern shape, while the accomplishments of a score of other less important contributors are lightly but effectively sketched. The work is more than a fresh and attractive presentation of the general facts of geological discovery, such as is given in Lyell's 'Principles' and other histories of the science; it brings into deserved prominence the labors of certain masters whose worth has long been overlooked, and it treats with a just, though drastic, criticism the claims of others who have by chance attained unmerited celebrity.

The most important contribution which Sir Archibald has made to our knowledge of the history which he treats, concerns the life and work of Jean Étienne Guettard (1715-1786), too long unnoted by English geologists. This master was clearly the pioneer in the science and art of interpreting geo-

logic processes by the aspect of the rocks. After the manner of many another able yet half-educated solitary worker, the clumsiness of his statements and their excessive volume served to hide his admirable results from his contemporaries, as well as from his successors, so that his penetration was without much profit to learning. His life is another instance of the fact that greatness of understanding is not of itself a measure of efficiency in a man.

Singularly in contrast with Guettard, who, despite his great ability, failed to impress himself on his age, who, indeed, despite his many volumes, never found a fair chance to be heard, is the history of Werner of Freiberg. Werner's story is, on some accounts, the most curious chapter in the history of learning. He came to his chair of mineralogy, in the mining school of Freiberg, with but a closet preparation and with knowledge limited to what could be gained from the aspect of the mineral species which were then known. His opportunity for acquiring information concerning the face of the earth was insignificant. His travels hardly extended beyond Saxony, and, even in that small kingdom, were of trifling extent. He knew, it may be said, however, the underground revealed by the mines of the Erzgebirge passing well. On this trifling foundation, by the aid of a vigorous but unguided constructive imagination and an extraordinary eloquence, he managed to build a mass of irrational though curiously coherent hypotheses concerning the history of the earth, which attracted universal attention, and served for a generation to stay the progress of sound geological knowledge. Sir Archibald gives some critical inquiry to the remarkable history of Werner and his work. He properly attaches importance to the fact that Werner was the teacher in a technical school where no large criticism could develop itself, and where the tendency of the intellectual life was towards immediate ends.

While much of the amazing success of Wernerism is to be accounted for by the earnestness of the man, which for all its worth barely saved him from being a charlatan, and by the eloquence with which it found expression, the problem of his success remains essentially unsolved. Nearly every part of Werner's theories was set directly against obvious and well-known facts; against the experience of many of the host who came to attend his teaching; and yet they long prevailed. It will not do to attribute, as some have done, the acceptance of the Wernerian hypothesis to certain peculiarities of the Teutonic mind, for he was as successful with French and Swiss, with Scotch and Irish students as with those of his own land.

The 'Founders of Geology' includes only the men who are related to the modern development. Nothing is said of the labors of the ancients, the Greeks, the Arabs, and the Italians of the Renaissance, to whom we, indeed, owe the very foundation of the science. There is much need of a treatise which shall embody the whole history of this branch of learning. It may be hoped that Sir Archibald Geikie, who has so well shown his capacity for the historic view, may take up this subject in its larger aspect.

A History of Christianity in the Apostolic Age. By Arthur Cushman McGiffert,

Ph.D., D.D., Washburn Professor of Church History in the Union Theological Seminary. [International Theological Library.] Scribners. 1897. 8vo, pp. 681.

The subject of this bulky volume has probably never been treated before with equal freedom and freshness by any Christian scholar, unless that title is accorded to Renan; and yet, after reading it, we are obliged to wonder if a good history of the Apostolic age will ever be written by any scholar who has distinctly the theological bias. An anti-theological bias would be equally fatal to the undertaking. The desirable thing is that some scholar of ability, well proved in secular history, who can dig as patiently as Mommsen and write as well as Green, should take up the beginnings of Christianity in the same temper and spirit he has shown in other fields. Dr. McGiffert's theological bias is not particularly strong. On the contrary, for a man in his position, he is free and fair to a degree that must be exceedingly distasteful to those who have been long engaged in hunting down the heresies of Dr. Briggs. It is evident that Dr. Briggs does not monopolize all the aberrations from the traditional standpoint by which the teaching in the Union Theological Seminary has been characterized of late. There are many here as positive as his, while, nevertheless, the whole presentation hovers in a kind of haze engendered by the mingling of the author's critical temper with his desire to save as much as possible of the theological contents of the events which he describes.

He is much better furnished as a critic than as a historian, and he has written mainly a literary history of the early church, a criticism on the early documents. These stand out much more sharply than the persons who were engaged in the great enterprise of giving a new religion to mankind. The studies of the different books of the New Testament, and the conclusions reached, will be of special interest to those who have followed the course of recent discussion concerning the critical opinions of Prof. Harnack. These have been hailed in certain quarters as a virtual abandonment of the results of modern criticism as touching the New Testament. What is true of them is that, in certain particulars, they recede from some of the extreme positions of F. C. Baur and his earlier disciples; but, striking an average, they are still less conservative than the critical opinions of Renan, which laid on him, we need not say, no obligation to accept the traditional theological constructions. Dr. McGiffert informs us that his book was already in press when Prof. Harnack's volume touching the same series of questions as his own appeared, but he is happy to say that he finds himself "in general agreement with Harnack in most of the matters which he touches."

The most notable of these is the chronology of Paul's life and writings. The writings, taking them altogether, are pushed back some ten years from the dates heretofore assigned to them by German, French, and English scholars. Believers in Sienkiewicz's 'Quo Vadis?' will be distressed to find Paul dying in 58 A. D., six years before the Neronian persecution, and Peter visiting Rome for the first time after Paul's death. Neither of Peter's epistles is considered genuine, while four are excluded from the traditional list of Paul's. The Book of Acts is accepted as "based in the main on trustworthy

sources," only to be set aside in most of its details. The authorship of the Fourth Gospel is left in extreme doubt, the balance tending plainly to a denial of John's hand in it. Where Harnack thinks that the Apocalypse was certainly by the same author (the Presbyter John), Dr. McGiffert is equally confident that it was not. This is one of many points on which these doctors disagree; and when we consider with these Dr. McGiffert's disagreements with other critics and his own hesitations and misgivings at almost every turn, we shall find that the one impression dominating all others that he leaves upon our minds is, that to know anything with certainty of the Apostolic age is nearly, if not quite, impossible.

The Horse of America, in his Derivation, History, and Development; tracing his ancestry by the aid of much newly discovered data through all the ages from the first dawnings of history to the present day, etc., etc. With maps and illustrations. By John H. Wallace. New York. 1897.

It is, perhaps, too much to say that, had there been no Wallace, there would have been no trotting-horse literature in America, but it is certain that this literature owes to him the greater part of such flavor and piquancy as it has. He was the first to make any successful attempt at the registration of trotters and to establish and enforce rules that gave it value; and to him will some day be accorded the distinction of having, more than any other man, laid the foundations for the correct and systematic breeding of the American trotting-horse, and established a family now as well recognized as that of the thoroughbred.

Mr. Wallace's book is largely in the nature of an autobiography, with interesting histories of the many wars he has waged with magnates of the horse-breeding industry, and the many triumphs he has won against error, misrepresentation, dishonesty, and about every kind of villany known to mankind. He is a Boythorn in his views of everything and everybody opposed to him, and confides to the little world of his readers the unexampled and unparalleled baseness of those who do not think as he does; but there is also evidence that, like Dickens's violent hero, the old gentleman is capable of a rapid transformation from ire to gentleness.

As introductory to the history of the horse of America, Mr. Wallace devotes his first seven chapters to the origin and distribution of horses, to the Arabian, and to the English race-horse. The inoffensive Arabsteed seems particularly odious to Mr. Wallace, who proves to his own satisfaction that the horse is an original native of Armenia, and was very rare in Arabia, and explodes the beautiful fiction about the famous mares of Mohammed by insisting that the prophet always rode a camel or walked, and that there is nothing in his life or history to indicate that he ever owned a horse or ever mounted one, except on a single occasion. This is followed by various assertions and statements all tending to belittle the supposed virtues of the Arab horse and to cast ridicule and discredit on those, including notably Mr. Wilfred S. Blunt and Mr. A. Keene Richards, who have imported these horses to England and America. Mr. Wallace says of them: "Whatever their blood, whether genuine or counterfeit Arabian, they have all

been failures and all alike good for nothing." The Eastern horses which were brought to England mostly in the eighteenth century, and are there recognized as the most worthy ancestors of the thoroughbreds of the present day, are thought by Mr. Wallace to have been inferior to the native English horses, with which, he says, Britain was fully supplied at the time of the Roman invasion. The Godolphin Arabian, however, is recognized as having had a beneficent influence on the English horse, though Mr. Wallace stoutly denies that anything whatever was known of his breeding, and says that his picture, while "it does not tell us what he was, tells us in the most clear and unmistakable language what he was not. There is no feature or element in his make-up that does not say he was neither an Arabian nor a Barb."

The pedigrees of many of the English race-horses are attacked, perhaps as an introduction to the very disheartening statements as to the American horses we have all been wont to consider of pure lineage. Imported Messenger's maternity is put in grave doubt, and the fact of no other imported thoroughbred stallion having succeeded as a progenitor of trotters in this country is brought forward as confirmatory of the charge of plebeian ancestry on her side. The two great horses Boston and American Eclipse are also stated to be incorrectly called thoroughbreds, and many other general beliefs as to horse lineage are quite as rudely shattered in the chapter on "Investigation of Disputed Pedigrees." The most notable of the living animals on whose breeding doubt is cast are the famous mares Maud S. and Sunol. As to the former, Mr. Wallace first asserts that the thoroughbred cross claimed through Nancy Pope, the dam of Pilot, Jr., was furnished by the "pedigree-maker" of Mr. Alexander; and also that the claims that Boston was the sire of Sally Russell, the granddam of Maud S., are baseless and were made with intent to deceive. As to the hardly less distinguished Sunol, reputed to have had a thoroughbred granddam, viz., Waxy, by Lexington, taken to California as a two-year-old in 1864, Mr. Wallace states: "There is not a scintilla of evidence that any two-year-old daughter of Lexington was taken to California in that year"; and it follows, of course, that this pedigree, along with most others with the thoroughbred cross "investigated" by Mr. Wallace, are, as he calls them, "frauds."

It might seem to some that his success in discrediting the thoroughbred crosses in about all the trotting-horses of merit he has noticed has been rather remarkable. The commonly accepted theories are, that the thoroughbred race-horse of the present day is descended from pure Eastern ancestors, and that it is the influence of this hard and condensed element in the American trotting-horse that gives him the endurance and stamina for which he is distinguished. It does not follow that in breeding trotters it is desirable to make the first cross a thoroughbred one, as the inherited tendency to the running gait is apt to overcome the trotting inheritance on the other side. The desideratum is to approximate the form and quality of the thoroughbred with the constant, instinctive tendency to the trotting gait. Mr. Wallace denies, first, that the thoroughbred horse is descended from pure Eastern ancestors, and, second, that he is of any use in breeding trotters. He says, and we think

truly, that if you are going to breed trotters, you don't want to use runners in doing it. But he also says (p. 496) that the trot and pace are simply two forms of one and the same gait. This is quite as unjustifiable a statement as that running and trotting are two forms of the same gait. All these movements involve the use of the legs, but so do kicking and plunging, backing and going sidewise. To attempt to prove it by showing that many horses have both paced and trotted is equally absurd. Many trotters can be trained to pace, and almost any pacer to trot, but every pacer and every trotter can be easily made to run, and all three of these gaits involve radically different movements of the legs.

The chapters on "How the Trotting-Horse is Bred" are interesting and instructive, as the author has a vast store of knowledge and experience on this subject, which, impersonal as it is, yet offers him various opportunities to make lively raids on the camps of his personal enemies. In 1871 Mr. Wallace issued the first volume of the 'Trotting Register,' which has since been succeeded by many others. The credit of the work in classifying, investigating, and publishing the vast number of pedigrees contained in these volumes, and bringing the breeding of trotters to a systematic and recognized basis, is due more to Mr. Wallace than to all others besides; and although he sold out the publication after a number of years, his name will be identified with the American trotting-horse so long as that noble animal exists.

Victorian Literature: Sixty Years of Books and Bookmen. By Clement K. Shorter. Dodd, Mead & Co. 1897. Pp. 231.

This is a Jubilee volume and is meant to be taken as such, and not as a history of literature, either for libraries or for schools. "So far as it has any worth at all," the author writes, "it is meant to be bibliographical and not critical." And he would have done better to follow out the idea which evidently at one time occurred to him, and cast the little book into the form of a dictionary of authors and books rather than into narrative form as we have it; for it must be said that the author does not excel in writing either history or criticism. But then, of course, there are the exigencies of a Jubilee year.

In style and in many other features the book resembles the summary of the same subject on a similar occasion written by the late Prof. Henry Morley and published in the Tauchnitz series. Both works are written in the same paragraphing style, and display the same good-natured and comfortable spirit of critical compliment and tolerance, combined with a certain lack of felicity in the use of critical adjectives. Both, too, are innocent of any really philosophical summaries or generalizations. And yet, of course, there is the danger of generalizing on what is still under our eyes, and the warning example of more ambitious works such as Prof. Saintsbury's latest. All the more reason, one must reply, for keeping to the dictionary form or to the guarded and impersonal criticism of the literary primer. Mr. Shorter, however, has partly atoned for the error of form by appending a full and excellent index.

The Poets, the Novelists, the Historians, and the Critics are the four classes into

which the author divides the writers of the period. The chapters on the prose-writers (especially the last two) are generally better than that on the poets. American authors are not included, but in his introductory pages, by way of sop, Mr. Shorter testifies to the "enormous influence" of American writers like Longfellow, Hawthorne, Irving, Emerson, Lowell, and others upon the England of Victoria. As a sort of running list recalling the achievements of the reign in literature, many mature readers will doubtless find this little volume readable, and for younger readers lacking a better primer or short history of the subject, it may be found useful as a text or reference book.

Without further comment, and as a taste of his quality, a few of the author's off-hand critical pronouncements upon writers and books of the era may be subjoined:

P. 10: "Tennyson never wrote with greater force or with more perfect dramatic and lyric art [than in 'Maud']."

P. 16: "[Swinburne] has written tragedies of wider purpose than those of Tennyson, of equal insight with those of Browning."

P. 17: "His [Swinburne's] appreciation of Charles Lamb endears him to English readers, and his eulogies of Victor Hugo command the respect of Frenchmen."

P. 41: "The great epoch of English fiction began with Goldsmith and Richardson, and ended with Sir Walter Scott."

P. 47: "Her [Emily Brontë's] best verse is perhaps the greatest ever written by a woman."

P. 60: "[Stevenson's] 'Beau Austin,' although not accepted by the public, is probably the greatest contribution to the drama of the era. As a critic of life and of books Stevenson has also an honorable place. I know of no better treatment of the one than 'Virginibus Puerisque,' or of the other than 'Some Aspects of Robert Burns.'"

P. 120: "[Carlyle] profoundly revered Goethe, who, after all, was the only one of his contemporaries who could take rank anywhere near him." (Carlyle has sixteen pages out of 193; Ruskin comes next with eight.)

P. 129: "Still another arrangement would have been to divide the subject, as De Quincey suggested, into the literature of power and the literature of imagination [sic]."

P. 141: "In the seventies his [Mill's] philosophy dominated Oxford. It is of no account to-day. . . . For adequate philosophical guidance . . . we must turn to Herbert Spencer."

P. 146: "In universality of knowledge he [Spencer] rivals Aristotle and Bacon at a time when the sphere of learning is immensely larger than in their epochs. . . . To him, with Mill, belongs the glory of restoring to Great Britain the old supremacy in philosophy given to her by Bacon."

P. 172: "[F. W. H. Myers's] biography of Wordsworth is a daintily fanciful memoir."

P. 193: "[The great Victorian writers] have given us a literature without a parallel in history."

Cambridge: Described and Illustrated. Being a short History of the Town and University. By T. D. Atkinson. With an Introduction by J. W. Clark, M.A., Registrar of the University. Macmillan.

The standard works on the history of Cambridge have hitherto been both ponderous and expensive. This is true of Cooper's municipal 'Annals,' of Mullinger's 'University of Cambridge,' and of Willis and Clark's 'Architectural History.' There was room for a book which should set forth the more important of the facts in a moderate compass, and this Mr. Atkinson has now produced. He makes but little claim to original research; for the town history he has relied on Cooper; for the University and colleges, as he tells us, he has followed Willis and Clark very closely, in places

verbally. It is, perhaps, in consideration of the permission which Mr. Clark has given for this use of his writings that his name appears as joint author on the back of the book; though we would remark in passing that this practice among publishers of making the back of the book suggest something a little different from the title-page is one that is growing, and already proving a nuisance to the bibliographer. Mr. Atkinson seems to have performed his task with intelligence. From the absence of a degree after his name, we gather that he is a "townsman" pure and simple; and, if so, the coöperation of "town and gown" which is here presented is itself significant. Both in Oxford and in Cambridge the old feeling between town and gown is rapidly passing away, with the growth of the historic sense among the citizens and the growth of the sense of municipal duty among the dons.

Mr. Clark tells us in his introduction that their first idea was to write a mere guide-book, but that on second thoughts "it seemed better to deal with so interesting a subject in a less dry and formal manner," though the book "might still do duty as a guide." So it may, in spite of its more than 500 pages. The Cambridge colleges are near together, and we can readily imagine an ardent student taking the book with him, or, more probably, her, one afternoon after another, to this or that college court. But while such devotion would be proper enough for one who is spending a term in Cambridge, the passing traveller would be better advised to begin with Mr. Clark's own 'Historical and Descriptive Notes,' with Toussaint's and Brunet Debaines's charming pictures. For, after all, Mr. Atkinson's pages are somewhat stodgy; and the array of facts is rarely lit up by a generalization. The attractiveness of the volume lies, we must confess, largely in the pictures with which it is embellished. Besides a lot of block-plans, and of seventeenth-century views "after Loggan," there are five and twenty of the exquisite engravings by Le Keux which first appeared in the 'Memorials of Cambridge.' They are visions of beauty, with Cambridge looking its best, at sunrise or sunset or after a shower. If members of the governing boards of American universities who have had money to spend on buildings in recent years can look on these pictures without a sense of lost opportunities, we shall despair of the educative influence of art.

NEW BOOKS

English and Scottish Popular Ballads.

Edited by Prof. F. J. CHILD. Part X., completing the work. With a Portrait of Prof. Child and a Biographical Sketch by Prof. G. L. KITTRIDGE of Harvard University. \$5.00 net.

English and Scottish Popular Ballads.

With a Portrait of Prof. Child and a Biographical Sketch by Prof. G. L. KITTRIDGE. Complete in five imperial quarto volumes. \$50.00 net.

These volumes represent one of the great achievements in literature, the rich result of many years' labor and an unmatched equipment of learning and patience.

Birds of Village and Field.

A Bird Book for Beginners. By FLORENCE A. MERRIAM, author of "Birds Through an Opera-Glass," "A Birding On a Bronco," etc. Very fully illustrated, 12mo. \$2.00.

A book of peculiar value to beginners in bird study. The birds are described plainly, and pictures of many are given. There are family color-keys, and a field color-key to all of the 154 birds described, with miniature heads of the species.

The King of the Town.

A Novel. By ELLEN MACKUBIN. 16mo, cloth, \$1.00; paper, 50 cents.

A fresh and stirring story of army and frontier life by one who is intimately acquainted with it, and who tells a story very well indeed.

An Elusive Lover.

A Novel. By VIRNA WOODS. 16mo, cloth, \$1.00; paper, 50 cents.

A capital story of California, such as Stevenson might have written. It has elements of uncommon interest, a fine assortment of mystery, a satisfactory clearing up, and sustained readability.

The Old Rome and the New,

AND OTHER STUDIES. By WILLIAM J. STILLMAN, author of "On the Track of Ulysses." Crown 8vo, \$2.00.

This is a volume of varied interest, historical, biographical, artistic, and literary.

Sold by all Booksellers. Sent, postpaid, by
HOUGHTON, MIFFLIN & CO., Boston,

NEW BOOKS.

The Story of Modern France

1789-1895. By ANDRÉ LEBON. Member of the Chamber of Deputies. No. 49 in the "Story of the Nations Series." Fully illustrated. Large 12mo, cloth, \$1.50; half leather, gilt top, \$1.75.

CONTENTS.—The French Revolution—The Constituent Assembly—The Legislative Assembly—The National Convention—The Consulate—The First Empire—The First Restoration—The Hundred Days—Letters, Arts, and Sciences from 1789 to 1815—The Second Restoration—Letters, Arts, and Sciences from 1815 to 1848—The Revolution of 1848—Second Empire—The National Defence—The Third Republic—Letters, Arts and Sciences from 1848 to 1895.

Thirty Years of American Finance.

A Short Financial History of the Government and People of the United States, 1865-96. By ALEXANDER DANA NOYES, author of the *New York Evening Post's* "Free Coinage Catechism" in the Campaign of 1896. 12mo, \$1.25.

The purpose of this book is to meet a demand very general among readers interested in American politics and finance of the present day; namely, the demand for a clear, concise, and complete review of the events in this country's financial history from 1865 to the present day. This book, which is a history and not an economic treatise, narrates the series of events which have governed the country's finances, public and private, during these thirty years.

The Bargain Theory of Wages.

A Critical Development from the Historic Theories, together with an Examination of Certain Wages Factors: The Mobility of Labor, Trade Unionism, and the Methods of Industrial Remuneration. By JOHN DAVIDSON, M.A., D.Phil. (Edin.), Professor of Political Economy in the University of New Brunswick. 12mo, \$1.50.

A Simple Grammar of English Now in Use.

By JOHN EARLE, A.M., LL.D., Professor of Anglo-Saxon, University of Oxford, author of "English Prose: Its Elements, History, and Usage." 12mo.

Lavengro.

The Scholar—The Gypsy—The Priest. By GEORGE BORROW, author of "The Bible in Spain," "The Gypsies of Spain," etc. Large 12mo, gilt top, \$1.00.

"A book which has a panoramic unity of its own, and of which scarcely a page is without its proper interest."—*Pitt's Magazine*.

The Caxtons.

A Family Picture. By LORD LYTTON. With 16 Illustrations by CHRIS. HAMMOND. No. 13 in the Illustrated English Library. Large 8vo, \$1.00.

Previously Issued in the Library: 1. The History of Henry Esmond. By Thackeray. 2. Hypatia. By Kingsley. 3. Jane Eyre. By Brontë. 4. Ivanhoe. By Scott. 5. The Last of the Barons. By Lytton. 6. Charles O'Malley. By Lever. 7. The Last Days of Pompeii. By Lytton. 8. Shirley. By Brontë. 9. Pendennis. By Thackeray. 10. Rob Roy. By Scott. 11. Vanity Fair. By Thackeray.

The Confession of Stephen Whapshare.

By EMMA BROOKE, author of "A Superfluous Woman," etc. No. 28 in the "Hudson Library." 16mo, paper, 50 cents; cloth, \$1.00.

"If we begin to read 'The Confession of Stephen Whapshare,' the chances are that we shall not lay down the book before the closing page. Miss Brooke has composed a clever, strong, and original tale. She will 'go far,' doubtless, for among other gifts she possesses a grave and cultured style."—*London Telegraph*.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 17, 1893.

The Week.

The advocates of Hawaiian annexation in the Senate are evidently at a loss what to do. When Congress met early in December last, they announced that the treaty would be rushed through without any trouble, and probably before the holiday recess. They have at last found out that it can never get the two-thirds vote that is required for the ratification of a treaty, and that they must resort to the joint-resolution method. This is a very disagreeable discovery to the annexationists, for various reasons. In the first place, the failure of the treaty involves a serious loss of prestige for the promoters of the scheme. Moreover, when a joint resolution is substituted for the treaty, it must take its chances along with other business in open session, and, as the weeks pass, it will grow easier for its opponents to push it over. Finally, and worst of all, discussion must then be public, and the weakness of the project can be exposed in the eyes of the nation.

President Dole is said to have gone home a sadder and a wiser man. He enjoys the peculiar distinction of being the first President of a republic known to history who travelled round the world trying to sell his own country to a foreign Power. This is the more comic because he was telling everybody all the time he was here, that his Government was much beloved by his people, and that they greatly desired its maintenance. But he resented deeply any proposal that they should be consulted about the transfer. In fact, he said it was insulting to him to doubt their willingness to be sold out. A more happy and contented lot there could not be; nevertheless, they felt that it was time they were disposed of. The only other case on record of the sale of a government by its chosen officers is that of the Irish union with England. But the Irish Parliament-men did not offer themselves for sale; they were asked whether they were in the market, and they said, bedad, they were. But they never made themselves ridiculous by telling how much their people loved them, and yet how anxious they were to be sold. It was a plain, above-board mercantile transaction. There is a story told of one of them, that, being reproached with a desire to sell his country, he "thanked God that he had a country to sell." The Hawaiian republic has begun the practice of selling admittedly happy people to foreigners. Although, therefore, President Dole was received in

Washington with Presidential honors, his position was really that of a drummer sent abroad to dispose of a choice assortment of missionary goods.

The probability of the passage by the House of the Senate bill for the restriction of immigration by an educational test grows smaller week by week. Western Representatives find growing opposition to the policy among their constituents, and those who come from close districts shrink from a vote on the question. Meanwhile the sentiment in favor of the measure in the East appears to be weakening, and its newspaper advocates are now urging its passage on the ground that it would not amount to very much anyway. The *Boston Journal*, for example, points out that "the educational test, if applied to every immigrant in 1897, would have kept out only 23.2 per cent. of all persons over sixteen years, and many of those would have been admitted in spite of their ignorance, by virtue of the provisions intended to prevent the separation of families." The discussion of the subject during the last few weeks has been noteworthy for the new argument presented by many advocates of the proposed policy—that a stringent restriction of immigration is essential to the success of the protective policy. This argument has been put very concisely by various newspapers in Pennsylvania. In the same vein the *Columbus (O.) Dispatch*, a Republican newspaper, declares that "the best practical test is the one that will keep out the greater number of undesirable immigrants," and adds: "In all this controversy over ways and means, the one great point to be kept in view is the protection that restriction will afford to the workingmen of this country, both native and naturalized."

The Senate committee on appropriations has "raised" the House committee, as regards the fortification bill, from \$4,500,000 to \$9,000,000. In other words, the appropriation has been doubled. We shall now have an opportunity to see which of the two houses can hold out longest. Usually the one which goes in for the largest sum prevails in the end, but the situation now is peculiar in that the Treasury is facing a deficit instead of a surplus. This circumstance may strengthen the nerves of the House even to the point of losing the whole bill. It is to be hoped that it may. We have gone without fortifications for a whole generation, and no harm has come of it, and none will come of it except by our own seeking. Therefore we can assuredly postpone our fort-building until we are able to pay for it. Let Mr.

Reed and Mr. Cannon insist that the public outgo shall not exceed the public income, and let Mr. Dingley look after his deficit by cutting down expenditures without pity or remorse. Let the Senate have the alternative of taking the \$4,500,000 offered by the House or nothing.

Secretary Gage made a very sound and instructive speech at the Lincoln Day exercises in Chicago. He went back to the beginning of the greenback, and showed how the statesmen of that day hesitated to pass the legal-tender act, how they dreaded its consequences, how they vowed that it was only a temporary affair, etc. In fact, they made all the protestations that their forefathers did when the latter went into the Continental-money experiment, and ended by doing the same thing, but with less excuse. The statesmen at Richmond were going through the same motions as those at Washington, and they fell into the same kind of pit, but a somewhat deeper one. Secretary Gage did not express any opinion of his own on the question whether the issue of legal-tender notes was necessary at that time, but he quoted the opinions of the leading men concerned in the passage of the bill. He paid a compliment to Senator Morrill of Vermont, then a member of the House, for his unflinching opposition to the bill. This compliment was fully deserved. Senator Collamer of Vermont might properly have been included in it, for he made the strongest argument that was made by anybody in either house against the bill. In fact, the State of Vermont showed more financial wisdom and a better grasp of the situation than any other in the Union. Next in order comes Fessenden of Maine, chairman of the Senate committee on finance, who saw as clearly as Collamer the evils of Government paper money, and who spoke and voted against the legal-tender clause. Mr. Fessenden hesitated to take the responsibility of defeating it, as he might have done if he had used his full powers to that end, and as Collamer or Morrill would have done if they had been in his place. It is the first step that costs. After the first bill was passed it was idle to resist the later ones. Secretary Gage made mention of Thaddeus Stevens, who was then chairman of the ways and means committee, of which Mr. Morrill was a member. The truth of history requires the statement that, in matters of finance, Stevens was the most dangerous crank in either branch of Congress. The bill never could have been reported from the committee, nor could it have passed the House, without his active support.

The Republican politicians have a

fresh grievance against Mr. Gage. The Secretary of the Treasury has just recommended to Congress a sweeping reorganization of the customs collection districts of the country, by which the number would be reduced from 156 to 66. His argument in support of the change is that the Government would save nearly \$150,000 a year in the payment of the force employed, and yet would secure a better service. In Connecticut Mr. Gage would consolidate the ports of New Haven and Bridgeport, and have only one Collector at \$2,500 in the former city, instead of two receiving more than twice that sum between them; consolidate Hartford, Stonington, and New London, with only one Collector, at Hartford, instead of three, and a salary for that one smaller than is now paid the Hartford Collector. We are not surprised to learn, through the Washington correspondent of the *Hartford Courant*, Senator Hawley's newspaper, that "the adoption of Secretary Gage's plan is generally regarded as improbable, on account of the strong disapproval of individual members of Congress, who would represent the opposition of customs collectors to the scheme."

The first town elections of the year in this State, which were held on Tuesday week, gave forth ominous warnings to Platt and his machine. In nearly all of them the Democrats showed gains, and in Tloga County, the town of Owego, in which Mr. Platt makes what Mr. Choate calls his "momentary residence" on election day for the purpose of voting, a Democratic Supervisor is said to have been chosen for the first time in several years. This untoward result will be likely to stimulate the anxiety of Messrs. Platt, Black, Payn, and Hackett for "harmony" in the party. The town elections in the spring have seldom failed to foreshadow accurately the outcome of the regular election in the fall. They sounded the doom of Hill in advance, and they gave audible warnings to Platt last year, which were unheeded, but which were followed by a Democratic plurality of 60,000 in the State in November. With this end of the State solidly delivered into the hands of Tammany, together with a stupendous mass of patronage, and with the other portions of the State turning in disgust away from the Republicans, because of Platt, Black, Payn, and company, the outlook for a Republican triumph next November is not bright.

It is announced that Senator Grady's bill, applying the Black starchless civil-service law to this city, is dead beyond hope of revival, and that Grady himself has abandoned all hope in regard to it. The cause of its early death is the implacable opposition of the Governor,

who, rather than have it pass, has issued a decree that there shall be no New York city charter amendments passed at this session. He is most unwilling that the Grady bill should reach him for action, and naturally so, for it would be very awkward for him to veto it, thus admitting that it was not so desirable a measure that the field of its operation should be extended. He is forced to confess, in fact, that it was passed for the purpose of breaking into the public service of the State in the interest of partisan politics. It was designed to capture places for Republican machine politicians, its author not having the sagacity to foresee that his party might be defeated in the election, and that thus the service would be thrown open to the Democrats for a "clean sweep."

The address of the chairman at the influential meeting of the "Birth" Celebration on Thursday seems to indicate that the object of the ceremony is not so much to rejoice over the event as to advertise the concern called "Greater New York." He complains that only a sixth of a column was devoted to American news in a copy of the *London Times* which he bought that day, and he thought a good "birth celebration would draw the attention of other countries to the commerce and importance of New York." The committee which Mayor Van Wyck has appointed to make preparations for the Celebration is a perfect example of that confusion of good and bad citizens in which Tammany delights. Bishop Potter, James C. Carter, Seth Low, Bishop Littlejohn, the Rev. Drs. Van Dyke, Abbott, Collyer, and other men of the highest character and best professional and business standing, are assigned to confer and work with Oakey Hall, Gilroy, Croker, Pat Gleason, Platt, and Lauterbach for the common glorification of the city. The supposition, of course, is that they are all leading citizens and equally the best representatives of the community, character really having nothing whatever to do with the question of eminence, and the supreme test being prominence, no matter how attained. Considering all that has happened here during the past few years, the universal understanding as to the methods by which Croker and Platt have attained and maintained their power, and the general belief that the two conspired last year to reverse the progress of civilization in the city by turning it over to the rule of barbarians, this proposal that men of real character shall unite with them in organizing a public jubilee to celebrate the city's degradation, is the crowning test to which our moral sense as a people has been subjected. If we submit to it, and join quietly and cheerfully in the celebration, there will be no lower depths of humiliation for us to reach. Mr. Croker has, very appropriately, put himself in the

foreground of the movement, and he should be made the central figure in the programme which is arranged, for the festivities will be in his honor.

In appointing Charles F. Roe Major-General in command of the State troops, Gov. Black not only has selected the candidate of our best military authorities, but has thereby ended that discouraging régime of inefficient and undignified adjutant-generals and of *opérahouffe* staff officers which has too long disgraced the State. Major Roe's refusal to work for the place or to accept any offers of "influence," and his declaration that he would not take command unless politics was wholly eliminated from the militia, have naturally attracted most favorable comment. Furthermore, the appointment of an officer who combines the experience of many years of professional soldiering with the tact and discretion absolutely essential to a successful volunteer officer, carries with it a distinct promise of future military reform and reorganization, and of this Gen. Roe is well aware. Unless all expectations fall, we should have in a few years the best-developed citizen soldiery in this country. This does not mean that Gen. Roe will work miracles, but simply that he will apply the merit system to the military service from the lowest private to the ranking brigadier-general. It is a curious thing that Gov. Black and the Albany politicians realize that when it comes to the service upon which the internal peace and safety of the State may at any moment depend, "politics" has no claims whatever, and that a rigid and well "starched" merit system is imperative. Yet no one will pretend that in national peace or emergency an honest and efficient civil service is one whit less necessary than a modern, well-organized and disciplined militia.

The definition of their policy by the Irish in the House of Commons—that is, stern hostility to the Liberals even, unless they give home rule its old place—promises to complicate matters a good deal during the coming session. The Liberal minority is already pretty small, but the desertion of the Irish would make it look pitiful. The Irish are not, however, gaining ground. There is less political discontent in Ireland than there has ever been, owing to the settlement of the land question, although there is still much distress in some districts. Then, also, the winds are blowing against parliaments everywhere. But nobody now expects any great gain or relief from a parliament, and especially, after Tammany, an Irish Parliament. Irishmen, since our last election, are held to have "taken the cake" as corruptionists and bossocrats, and you find increasing difficulty in persuading Englishmen that they would do any better in Dublin than

in New York. Everybody is now waiting to see what kind of thing Mr. Balfour's bill giving Ireland county councils and municipal reform will be. The great fight of the session will be over that. If the Irish members accept it cordially, the Liberals will be indeed "dished."

The reluctance of England to adopt countervailing duties against Continental sugar has a practical as well as a theoretical basis. The Continent seems to be exerting and taxing itself to the utmost to give the English consumer cheap sugar, and to give English manufacturers of jam and biscuits and pickles an almost complete control of the business. Of the entire Continental production of beet-sugar—3,000,000 tons—no less than 2,000,000 is exported under the export bounty system. Local taxes make the price of sugar high to the local consumer; and the net result is that England gets sugar at three cents a pound while the people who sell it to her have to pay nine or ten cents a pound for what they use themselves. No wonder the consumption in England is more than three times per capita what it is on the Continent. The Continent has the sugar industry, but England has the sugar. It is clear, also, how little can be done for the West Indian planters. Their entire product is only 300,000 tons, and the exportable surplus of 2,000,000 tons from the Continent threatens to overwhelm them, bounty or no bounty.

The latest attempt of the German Government to repress free discussion is seen in a plan to muzzle the lecturers, or *Privatdozenten*, in the universities. These, as is well known, are the ambitious and rising young men in the academic world who, by originality of investigation, or interest of theme, or attractiveness of manner, compete with the regular professors and win hearers. They are not paid by the state, though they are subject to the rules and discipline of the university, and the Government has very little control over them. Their freedom, both in choice of subject and in manner of presenting it, is of the very essence of their position. In them, in fact, the boasted *Lehrfreiheit* of Germany finds its chief illustration. But now a bill has been laid before the lower house of the Prussian Diet authorizing the Minister of Education to warn or reprimand *Privatdozenten* whose utterances he may disapprove, and, in the last resort, to cancel their licenses as lecturers. The pretence is that these young men, the hope of the universities of the future, are turning their lecture-rooms into nurseries of unsound political doctrine. Under the name of political economy or sociology or ethics or what not, they insinuate beliefs that are not consistent with "the Gospel of his Majesty's sacred person." So Sacred Ma-

jesty proposes to give them a touch of the mailed fist. But the university world is up in arms. Right under Majesty's sacred nose in Berlin, the professors of the university, including its most distinguished scholars, are signing a protest against the measure, as one calculated to impair their liberties and efficiency. What the issue will be remains to be seen; but one result is certain to be a hundred thousand more votes for the Social Democrats in the coming elections to the Reichstag.

Emperor William's latest prosecution of a subject for *Majestätsbeleidigung* was most unpopular in Germany. To imprison an artist for a comic political cartoon was stretching things. Perhaps Germans thought their country needed a humorist just now more than an Emperor of a certain type. At any rate, the arrest of Herr Trojan of *Kladderadatsch* for undermining the authority of the monarchy by exciting a little harmless laughter seems to have provoked more indignation than many cases less absurd have done. It has given one critic occasion to compile the sentences for *lèse-majesté* since William became Emperor, and they foot up the respectable total of more than 1,000 years' imprisonment, all told. This is 100 years to each year of the reign. One of William's predecessors, the father of Frederick the Great, used to cane his subjects, while crying out, "Confound you, I want you to love me!" In these more humane days imprisonment is the chosen means to awaken affection; but we doubt if it is any more effective than the franker methods of the old Prussian drill-master. Still, love is said to be a child of solitude and meditation; and there is no telling what emotions towards their Emperor may have been aroused in the bosoms of his traducers, when bound like Satan for a thousand years.

A good deal of alarm about the immediate future of France has, naturally enough, been excited by the furore developed in Paris by the Dreyfus affair and the Zola trial. But no one who has closely followed French history for the last hundred years can well avoid seeing that such crises are really just what the Parisian democracy needs and must have. It has never, since the Revolution, gone on for more than ten years without an "émeute"; it has never gone on more than twenty years without overturning the existing régime. No government, except this one, has proved capable of facing a second great "manifestation." Consequently the overturning of the Government had become by 1870 the principal French mode of expressing intense dissatisfaction with something or other—not necessarily with any special policy or measure, but simply general discontent, like that negro's

dog which howled "because he smelt su'thing, and couldn't locate it." What the Boulanger episode, and now the Dreyfus episode, apparently show, is that the necessity for revolution has passed by, and that the mob can have their periodical fun without overturning anything whatever. They shout, and "conspuent," and squeeze, and threaten, but they do not erect barricades or fire on the troops. Moreover, the republic has one power in reserve which none of the monarchies has had. It is not afraid to use the army in self-defence. It can shoot and kill without bringing the blame of bloodshed on any one in particular. The Bourbons and Napoleons all shrank from this. Napoleon III. never quite got over his volleys of the second of December, 1851, but in 1849 Cavaignac, and in 1871 Thiers, found no difficulty in killing as many people as might have been necessary. It is well known in Paris now that, though disorders and noise will be tolerated, insurrection will not be. Accordingly there is much shouting and pushing, but, as Hanna would say, "God reigns and the Republic still lives."

The announcement was made by the Russian Minister of Finance last month that the monetary reform of the empire had been completed by the resumption of specie payments and the adoption of the single gold standard, with a silver subsidiary coinage. This was accompanied by a statement of the note issues of the Imperial Bank, showing that the amount of gold on hand exceeds the total amount of notes by 236,000,000 rubles. The redeemability of the notes is, therefore, abundantly secured. The ruble, according to the plan announced by the ukase of last year, is equal to one-fifteenth of the gold imperial. "Thus the ruble," says the Minister, "formerly an undefined and variable quantity, has become a precise measure of value like the pound sterling and the monetary units of other countries with a normal circulation." While congratulating the Czar and the people on the achievement of monetary reform, which is considered the precursor of an unexampled prosperity, the Minister observes that its continued success depends not merely upon good measures of finance, but upon the entirety of the governmental policy. "Among these measures," he adds, "those which concern the foreign policy exercise the most considerable influence in the economic life of the country and its monetary circulation. In that respect the principal support of the economic and financial prosperity consists in the traditionally peaceful and just policy of its sovereigns." These are words that ought to be heeded by the wild Senators of the United States, who are seeking to rush this country into war for a Quixotic purpose which they cannot themselves define.

THE DE LOME LETTER.

Minister de Lome's plight is one that must be peculiarly humiliating to a man of his proud race and nature. An experienced diplomat, who had maintained himself in a position of extreme difficulty with great resource and skill; a Minister, moreover, who had prided himself almost arrogantly on his "correctness," and had scarcely concealed his scorn of the rough-and-ready diplomacy of Americans, has been brought low in one day by a letter-thief. The chances were a million to one that this particular letter would never see the light; but it was Señor de Lome's bad luck to have the one chance go against him, and to end his diplomatic career in deepest mortification.

His indiscretion was of the kind that appears enormous only because it was exposed. It was a blunder after the event. Comparison has been made of his letter with that of Sackville-West in 1888; but this is unfair. The British Minister was guilty of a shrieking indiscretion. He wrote a letter to a man whom he did not know, and it was a letter bearing upon a burning question of current American politics. He invited his own catastrophe, and it did not fail to overwhelm him. But Señor de Lome was writing to an intimate friend, a semi-official representative of his own Government. He was, doubtless, under instructions to keep in close touch with Señor Canalejas, and to give him all the information and advice in his power. It was, therefore, almost an official duty which he was performing; and that this letter would be stolen and broadsided through the land was as little to be reckoned upon in advance as that any of his official communications to Señor Gullon, the Spanish Minister of Foreign Affairs, would meet with a like fate. The letter was essentially private, and it was apparently safeguarded. It was such a letter as the Venetian Ambassadors used to write in the sixteenth century, for the use of historians in the nineteenth, and its proper destination would have been the archives of Simancas, thence to be extracted by some plodding writer two hundred years from now. But the daring rifier of Señor Canalejas's mail, and the newspaper facsimile, have expedited events at an alarming rate, and Minister de Lome has had to suffer the consequences of writing too much history in his own lifetime.

Of course his indiscretion, or misfortune, whatever one calls it, was just as fatal, once it was in the glare of publicity, as if he had deliberately gone to work to end his usefulness as Minister to this country. He himself promptly recognized this fact by instantly cabling his resignation, when his letter came back to stare him in the face. A Minister must be *persona grata* to the head of the government to which he is accred-

ed, and Señor de Lome obviously had ceased to be that to President McKinley. What he wrote of him and of his message was only what the Spanish press had freely said, only what newspapers in this country and members of Congress had openly uttered; but a Spanish Minister could not say it publicly and stay in Washington, and neither could he stay in Washington if he said it privately in a form which had been made public and which he could not deny.

The accuracy of the translation of Señor de Lome's letter has been questioned, as if an undue severity were given to some of its expressions about the President. But the published version appears to be sufficiently correct. Still, a good deal would depend on how one took the language. Señor de Lome wrote that the President was "populachero," which has been rendered "catering to the rabble." But it might be taken in a sense that a politician would regard as complimentary; applying to McKinley the phrase Carlyle used of Gladstone, the "People's William." To call a politician a "good mixer," a "smooth" man, one who keeps "close to the people" and is of the "get-there" kind, is about the same thing as calling him "populachero"; and most politicians would be rather flattered thereby. Still, Presidents might not like it. "Politico" scarcely means "low politician," but rather, we judge, an amateur politician, a dabbler in politics; and here, of course, the insult is more obvious. To charge Mr. McKinley with wishing to "leave a door open for himself, and to stand well with the Jingoes of his party," cannot be thought deeply insulting. It is rather a tribute to the President's astuteness and to his success in being all things to all men.

The De Lome incident has been very well taken by the country. American good nature, with its touch of cynicism, has stood the people in good stead. The laughing has been done as much at the expense of the few ferocious newspapers which at once called for war, as at that of the unfortunate Spanish Minister. About him the general sentiment is expressed by one overheard remark, "Well, I guess he knows now that if there is to be any abuse of the President we'll attend to that ourselves." American *lèse-majesté* for Americans! The President, on his part, has, up to the present writing, acted with dignity and propriety. But Congress is growing more and more restive about Cuba; State legislatures are resolving all over the country; the rainy season, which has been generally taken to be the limit of "the reasonable time" within which Mr. McKinley has already informed Spain that Cuba must be pacified, is only three months away. What Señor de Lome wrote in December is even more significant to-day: "Everything depends on military and political suc-

cess in Cuba. . . . We must do something great, or we lose." It cannot be said that there has been any such success, and the time for the Spanish authorities to do "something great" in Cuba is short. "Poor Spain!" wrote Señor de Lome in the phrase which one sees so often in Spanish newspapers, and hears from the lips of troubled Spaniards; and "Poor Spain!" is, after all, the best comment one can make on the spectacle of a nation of such a splendid past, fallen on such evil days.

OUR AFFAIRS IN CHINA.

In view of the critical conditions existing in China to-day, the recent appeal of the Chamber of Commerce to Congress in behalf of our trade with that empire may well excite the most serious and careful attention. That a crisis has arisen there which may cause the partial or entire dismemberment of China, with or without war, must be patent to the most careless observer of events.

By existing treaties between the various foreign countries and China, that empire lies open and free to all alike. Monopolies of every sort are forbidden, and any right, privilege, or immunity granted to the citizens or subjects of any one Power inures at once, by the granting act itself, to the citizens or subjects of every other. This wise provision has more than once been appealed to successfully to prevent special grants or favors to particular corporations and governments. In the situation which now exists in the Chinese Empire, it may be and should be emphatically appealed to again. China herself would recognize with deep gratitude such an appeal. Certainly it would require the exercise of the highest tact, discretion, patience, and firmness, to maintain our commercial rights against the opposition of European Powers. (But they may be maintained without the use or display of physical force. We may so use our rights and privileges in China as to hold our prestige, increase our political influence, and develop our large and growing commerce with that empire. The practical question arises, How are we fitted at this critical period to carry out this delicate and difficult task? When the whole future of our trade with that vast territory may be at stake, how are we prepared to defend it? What is the condition of our diplomatic and consular service there upon which we are to rely in such a crisis?

Since the inception of the present administration at Washington every consul in China, with perhaps one exception, has been removed. New appointments have been made, and each particular appointee, having received his commission, has betaken himself to his particular spot, there to enjoy his share of the party spoils. Only one of them, it is believed, has ever been in China be-

fore, or has had any considerable consular experience. Not one of them has any knowledge of the Chinese language, although by terms of treaty all business must be done in that tongue. Through the parsimony of Congress, only two or three of them are provided with competent interpreters. Unless they are a decided improvement upon our consuls sent to like posts in the past, some of them, at least, are unfamiliar with the amenities of social life and the intricacies of evening dress. And this counts for much more in China than is commonly supposed.

These are the kind of people sent, and these the circumstances under which they have been sent. Each one of our new representatives must come into direct and constant competition and contrast with the members of the trained consular services of England, Russia, Germany, and France, every one of whom has spent many years in the service, speaks Chinese, is familiar with and expert in the intrigue and by-paths of consular work, and has a staff of well-trained assistants. (To a very large extent, development of trade in the Orient depends upon the activity, intelligence, and experience of consuls, and it is worse than idle to expect our fair share in the growth of trade in China when we send such men as we do, under such conditions, to be pitted against the single or combined competition of the representatives of the European Powers.)

But it may be said that, in the special crisis which has now come upon our trade interests in the East, the delicate work required is not consular, but diplomatic. Let us then see how our legation at Peking is equipped for this great emergency. Minister Denby is about to be relieved. Originally a Mr. Bryan from Chicago was selected as his successor upon the remarkably appropriate grounds that he had served one term in the Legislature of his State, and that he was a man of most respectable family and of good education. As there were some serious duties to be performed which could not be intrusted to a boy or a greenhorn, it speedily became manifest that Mr. Bryan could not be confirmed by the Senate, although he blandly informed the President that he entertained no doubt of his capacity to fill that delicate and responsible mission.)

Even this plain statement strangely failed to convince any one. A rearrangement of the party spoils upon an equitable basis became necessary. Accordingly, Minister Conger has been recalled from Brazil and is to relieve Minister Denby at Peking. Of the new appointee it can only be said that he was formerly a Republican Congressman from Iowa, who had lost his seat and against whom nothing could be said. He had served for about two years under the Harrison administration as Minister to Brazil, and was reappointed to the same

post by President McKinley. No questions have arisen during either of his terms of service in South America to call for or show the possession of any diplomatic ability; and he goes to China quite unfettered by any knowledge of that interesting and extremely puzzling empire. The Secretary of the Legation at Peking, Mr. Charles Denby, jr., has resigned, whether voluntarily or not is unknown. He is an excellent Chinese scholar and possesses a good knowledge of the history of our affairs with that country. In his place a young man has recently been appointed of whom the public appears to know as much as he himself knows about China, which is nothing. The Second Secretary, so far as heard from, retains his post.

Hence it appears that, in this crisis in our commercial relations with that vast empire, a crisis so grave that such a body of men as our Chamber of Commerce has felt bound to call the attention of the Government to the urgent necessity for action, all of our consuls there, with one unimportant exception, are green hands, and that at the legation, where the most delicate and difficult part of the work must be done, the only person having knowledge of Chinese language and affairs is the interpreter or dragoman to the legation, whose status prevents him from having any serious influence. To such an untrained, uninformed body of men are our vast commercial interests intrusted at the moment when the continued existence of those interests may be in question. And all this because the "American idea" of a public office is not something to do, but something to get.

THE ALABAMA FRAUDS

The House of Representatives on Thursday, by a vote of 143 to 111, unseated Mr. T. S. Plowman, a Democratic member of that body from the State of Alabama, and awarded the place to Mr. William F. Aldrich, Populist and Republican. The vote was on party lines. The Populist-Democrats voted with the minority, and the Populist-Republicans (from North Carolina) with the majority. The case presents some features which place it above ordinary party contests of this character.

In the first place, the frauds in this election were proved by such overwhelming evidence that the supporters of the sitting member did not attempt to deny them, but merely insisted that, after deducting the fraudulent votes, there still remained a sufficient majority to elect Mr. Plowman. Thus, it was shown that in one county all the judges of election, clerks, and markers were either avowed Democrats or Democrats masquerading as Republicans, whereas the law of Alabama requires that the clerks and markers shall be equally divided between the two parties. This

neat arrangement was brought about by recognizing one Jordan Crocheron as chairman of the Republican executive committee of the county, whereas he was simply the tool of the Democrats, "a confessed liar, a mercenary creature, ready to sell himself to anybody at any time, and a proven perjurer," as he was described by Mr. Taylor of Ohio, who presented the report of the committee on elections. With such a creature to represent the opposing party and to name their clerks and markers, the door was wide open to any species of fraud in the ballot-boxes and in the count of votes. It was only a question how many votes were wanted in this county (Dallas) to overcome the remainder of the district. The means adopted were of the wholesale kind and very clumsy.

The State of Alabama has a registration law. The voters at the November election were registered in the month of May preceding. In Kings precinct 201 voters were registered, and exactly this number were returned as having voted six months later. This was a suspicious circumstance in itself, but when the poll-list and the registration list came to be examined, a greater wonder appeared. It was found that the first fifty-five voters on the poll-list had come to the polls promiscuously as regarded the registration list. Thus the first man to deposit his ballot was No. 5 on the registration list, the second was not registered at all, the third was No. 56, the fourth was No. 6, the fifth was No. 161, and so on—all as might be expected. But after the fifty-five had voted, the returns showed that all the rest of the 201 had voted in the same order in which they were registered. Thus, the fifty-sixth man who voted was No. 3 on the registration list, the fifty-seventh was No. 4, the fifty-eighth was No. 6, and so on to the end of the list. Only one conclusion could be drawn from this, namely, that fifty-five men and no more actually did vote, and that the remaining one hundred and forty-six were purely fictitious. Of course they were all counted for Plowman.

This was only one species of fraud disclosed and proved by evidence that could not be disputed and was not disputed. The votes of the negroes were turned, twisted, and miscounted in whatever way the Democrats pleased. In short, the election was a complete farce, and the probability is that it did not differ from the elections in other parts of that State, and in Tennessee, Mississippi, Louisiana, Georgia, and South Carolina as well. The election laws and machinery in all those States are contrived for the purpose of cheating. They were intended at first to cheat only the negroes. They are used now to cheat anybody who is not in harmony with the organization in power. The Populists say that they have been counted out in

two State elections in Alabama. There is every reason to believe that they have been. The facts revealed in the Plowman-Aldrich case show that if Kolb was not counted out in his contest for the governorship, it was not for any lack of means to accomplish that end. The facts show that the votes actually cast in an election in that State, or in any State similarly controlled, have no necessary relation to the returns. In other words, representative government has come to an end in that quarter of the Union. All the Representatives in Congress, all the Senators, all the Presidential electors are or may be the products of fraud and fiction. It follows also that the monetary standard of the United States may be changed and the country dragged into the mire of repudiation or the throes of revolution by a few fellows like Jordan Crocheron and those who hire him to do their dirty work.

That there is a body of decent people in the South who habitually vote the Democratic ticket, and who deplore the state of things here revealed, but are powerless to prevent it, we know full well. How are they to be assisted to bring about a better state of things? We can see only one way, and that is by an incessant exposure of the frauds and by immediately ousting from office every man elected as Plowman was. Mr. Taylor of Ohio said, when he presented the committee's report, that neither himself nor any member of the committee was moved by partisan feeling in taking the course they had adopted in this case. We can well believe this. The Republicans were not in need of Aldrich's vote in the House. Aldrich himself seems to be more of a Populist than a Republican. There is no reason other than the demands of naked justice why he should be preferred to Plowman, but these reasons are of such an imperative kind, they are fraught with such far-reaching consequences to the whole country, that no other action was to be thought of by men who are responsible in some measure for the permanence of our free institutions.

SUGGESTIONS.

We are informed that persons who enjoy the inestimable privilege of intimate intercourse with Mr. Croker, and chat freely with him on public questions, find him much concerned about certain phases of his government which are not satisfactory to him. His mind dwells constantly upon these shortcomings, with a view to the evolution of remedies. He has been much troubled, for example, by ambitious persons outside Tammany Hall who have sought in various ways to obtain his favor without becoming conspicuously identified with him. After much reflection he has hit upon a very effective method of treatment for this kind of annoyance. He waits until

friendly overtures have been made and cordial relations established, and then asks the suitor what his politics are. If the suitor replies that he is a Democrat, as he must or invite failure, Mr. Croker's next question is if he is a member of the Democratic Club. If he answers no, then the trap is sprung in Mr. Croker's declaration, leaving all question of choice out of the matter: "Ah, then I will put your name up." The name must go up and appear in the list of new applicants, "proposed by Richard Croker," and be published in the daily papers, or the suitor must refuse the offer and thus abandon all hope of favor. News of this ingenious procedure has had the effect of keeping many patriots, who were bringing themselves to take a charitable view of Mr. Croker's government, from obtruding themselves into his personal society.

But this is only a trifle, viewed as a worryment, when compared with what Mr. Croker suffers in regard to the conduct of the press. On the subject of newspaper insolence and license he is said to be most deeply stirred. During his residence in England he examined the London journals, and was much pleased with the way in which they habitually treat their public men, Gladstone, Salisbury, Balfour, Harcourt, and the rest. Compared with the way in which the American journals treat our leading men, Croker, Platt, Grady, Black, Payn, and the rest, he much prefers the English method. The English editors do not pry into a statesman's private affairs, do not ask of his wealth, "Where did he get it?" do not question his ability to read and write, or dispute his title to high and powerful office. Why should American journals be permitted to do these things? That is what Mr. Croker would like to know, and he is going to see if something cannot be done to put a check upon them. He and Mr. Platt thought at one time an anti-cartoon law would be a good thing to have, but they seem to have lost faith in it recently. Our opinion, we "put it forth for what it is worth," is that something far more drastic is needed, and for this precedents are not lacking.

Doubtless, in the course of conversation with Mike Daly, Tom Grady, Paddy Roche, Ike Fromme, and other leading minds of the Club, Mr. Croker has heard allusions to Napoleon I. and to his troubles with the boss government which he gave to France in the early part of the century. If he will look into Napoleon's official letters, he will see how a really capable boss disposed of annoyances of this sort. Napoleon was troubled not only with the press, but with the Pope and the bishops and the priests, and he made short work with all of them. When the *Gazette de France* said something which displeased him, he wrote to his Minister of Police: "Give orders to have the editor arrested and

put in prison. You will keep the editor in prison for a month, and you will appoint somebody else in his place." As an intimation of what might happen to other editors, he added: "Generally speaking, the newspapers are horribly badly managed." At another time the *Journal de l'Empire* as the offender: "That young man [the editor] is either an ill-disposed person or a fool; tell him so from me. If he does not change his ways, I shall change the editor." At another time: "Make known my displeasure to the editor of the *Journal des Débats*, who prints nothing but nonsense in his paper. Truly all our newspapers are very silly." But the French press was not the only one to be regulated. Prince Murat, the Lieutenant of Napoleon in Spain, was ordered: "Take the management of the *Gazette* into your own hands, by fair means or foul, and let it appear every day." Frequently the outline of articles was furnished, and sometimes orders were given like the following: "Have caricatures made—an Englishman, purse in hand, entreating the various Powers to take his money, etc." Again, like this: "Have a great fuss made over the persecutions of the Irish Catholics by the Anglican Church. Collect every incident so as to paint the persecutions in the most vivid colors."

Like methods were pursued with the Church dignitaries. The Pope was put in prison, with orders to leave him only his doctor, steward, florist, cook, and footman. All his letters were intercepted and his papers seized. Cardinals and bishops shared a like fate. The cause of offence was not conducting their religious offices in the manner ordered by the Emperor. "You will go," he said on one occasion, to the Minister of Police, "to the Cardinal's councillor, and you will speak to him in this sense: 'Either my letter is contrary to religion or it is not; and has any bishop the right to change the sense I have given it?' I am as much of a theologian as they are, and even more. I shall not go out of my province, but I will allow nobody else to go out of his." He even went so far as to compose prayers for the clergy to offer on the subject of his own achievements, putting forth, through the Minister of Public Worship, a circular to all the French bishops, in which it was directed that "a *Te Deum* be sung, and thanks offered to the God of Armies," and prayers added "to call down the Divine protection to our arms, and above all for the preservation of the sacred person of the Emperor, whom may God shield from every danger! His safety is as necessary to the welfare of Europe and of the Empire as to that of religion."

It is scarcely necessary to suggest to Mr. Croker that if he were able to exercise over press and pulpit in this city powers of this stringent order, his government would be immeasurably

strengthened and his personal enjoyment of life greatly increased. What a salutary effect it would have upon the newspapers if he could put their editors in jail whenever he pleased and suppress publication. They would be much more inclined than they are at present to treat him with proper respect as a great ruler, and much more likely to set forth views which he might outline for them. Then, too, think how happy it would make him to be able to order the arrest of Dr. Parkhurst and regulate his food and drink in prison! The clergy do not offend him often nowadays, but there are times when they do. Furthermore, if they were under Mr. Croker's regulation, they might be made to preach in favor of boss rule, and that would help to give it moral support. Mr. Croker's government is a strong one now, but it needs to be buttressed with Napoleonic methods in order to give him perfect happiness and become the crowning glory of free government in the first city of the American republic.

ARCHÆOLOGICAL FIELD-WORK IN ASIA MINOR.

AMHERST, MASS., February, 1898.

When the ignorant hordes of Turcoman shepherds left their original abode in Turkistan in quest of better homes in the West, they attacked and in time conquered the moribund Byzantine empire. Being zealous Mohammedans, their souls glowed with intense hatred of the Byzantine Greeks, the chief representatives of Christianity in the East. Their religious fanaticism was comprehensive; they hated all religions but Islam. The mere conquest of the Byzantine Empire and the annihilation of its civic government did not glut their appetite; they were bent upon destroying all traces of pre-existing civilizations. For centuries the demon of destruction held high carnival, though to this day the destruction and defacement of ancient monuments is still going on. Thanks to this religious hatred of everything not of Moslem origin, many monuments that belonged not only to the Christian period, but to the classical pagan civilization as well, have perished; monuments that had been spared by time and the fanaticism of the early Christians. Irreparable ruin was wrought, and many documents in stone of priceless value to the historian were annihilated by the shepherd invaders; but, in spite of their zeal, the undertaking proved to be too vast even for the destructive powers of the Turk, and therefore many precious monuments and inscriptions are still spared to tell their tale even at this late day, each adding its mite to the sum total of human knowledge, each helping to write some page in the history of the past. It is the business of the travelling archæologist to hunt up and conserve these remnants, whether they be monumental or epigraphical.

After the first fury of the storm of devastation had passed, the Turks, who were then pure nomads, and are still partial nomads, found it necessary to accommodate themselves to their enlarged circumstances. Accordingly, they abandoned their nomadic habits and became residents in fixed abodes

for at least the most inclement part of the year. Houses were imperatively necessary, but they had ruthlessly destroyed, not merely monumental buildings, but probably private houses as well; they did not possess architectural skill sufficient to erect buildings in any way comparable to those they had destroyed. However, their ambition did not soar high; a roof over their heads during the winter was all they craved; it mattered not that the walls of their houses were ill-built and shabby in the extreme. Their greatest care was displayed in the construction of their mosques, in building which they utilised ancient stones of every kind, for the reason that these stones were well hewn and easy to handle. The exteriors of Turkish buildings, therefore, often present a ridiculous jumble of stones taken from pagan and Christian buildings, as well as tombstones, altars, and even statues and bas-reliefs. To this use of the old and well-dressed material is due the fact that many stones bearing Greek and Latin inscriptions are found in the walls of buildings. It should be noted, however, that in inserting such stones in the walls of the mosque or other building, the barbarian builders paid no attention whatever to the inscription; chance or the convenience of the mason alone decided whether the inscribed face of the stone was to fall on the outside of the wall or be concealed in it. Even when the inscription did fall on the outside of the wall, it is rarely right end up, but in most cases either lies sidewise or else is upside down.

The Turks are very particular in the matter of their drinking-water; one may often overhear them comparing notes about the water of two given villages, in precisely the same way that Germans discuss the relative merits of this or that make of beer. Even the meanest village takes care to supply itself with an abundance of cool, fresh, pure, running water, which is intended not merely for household use, but also for the ablutions so necessary before prayer. Consequently the fountains take rank immediately after the mosques. Some attempt at architectural display, oftentimes crude enough, is always visible in the fountains, and this coveted beauty could best be attained by utilizing the fine old stones that belonged to the civilization of the hated infidels. The travelling archæologist, therefore, should examine carefully the mosque and the fountains of every village; and if the village be anywhere in the vicinity of an ancient town, he is almost sure to discover inscriptions in the walls of one or both of these structures.

The old cemeteries, which in many cases are situated in desert places far from a village, must always be examined with extreme care by the archæologist. Among the Moslems a grave is inviolate, at least in theory, and therefore it must have a stone at its head and foot to proclaim its sacred character for ever. It makes absolutely no difference what may have been the original character of the stones used on Turkish graves, provided only they be large and heavy, for in that case they will stand erect and mark the spot as a grave for ages after the mound over the grave has become completely levelled. Often it can be proved that stones have been transported long distances to serve as Turkish tombstones. Indeed, the Turkish cemeteries exhibit the oddest, most comical pot-pourri of all sorts of ancient marbles; in them one may expect to

find any conceivable kind of antique stone. Hittite stelæ, altars of pagan gods; round, cubical, and horned altars; huge columns and epistyle blocks from temples; Roman milestones with Latin inscriptions; double-columned window supports from Christian churches—all are made to stand as sentinels over the graves of faithful Moslems. Not only this, but ancient Greek tombstones, in all their endless variety—from the simple slab and the sculptured stele with temple pediment to Phrygian doors, cenotaphic sarcophagi, sarcophagus lids, and even sculptured sarcophagi themselves—are made to do duty a second time, thus forming an odd commentary on the mutability of civilizations and empires. As a rule, the inscriptions have not been erased from these stones, so that one may find on Turkish graves important decrees of cities, municipal laws, letters of kings to cities, legislative regulations and edicts of imperial Rome, the autobiography of wealthy or powerful citizens, the *cursus honorum* of Roman proconsuls and legates, and innumerable epitaphs of men dead a thousand years and more before the Turkish conquest.

The inscribed tombstones of the early Christian dead also were often utilized as tombstones by the Turks. Christian tombstones prior to Constantine may only be detected by the initiated, for the reason that, before Constantine, Christians had no legal status, so that their identity had to be concealed under the guise of guilds, crafts, and fraternities which might attain to a legal status, own, bequeath, and inherit property. But after Constantine the cross and the fish are boldly displayed in reliefs on Christian tombstones; indeed, the cross is not infrequently made so prominent that it is as high as the stone itself, so that the epitaph of the original owner of the tombstone had to be inscribed on either side of the vertical bar of the cross. Moslem pride demands defacement of this cross before the stone which bears it can be accorded the honor of standing over the grave of one of the faithful. The emblem of the fish, however, does not seem to have been so offensive, probably because the ignorant peasant did not understand its import. Of course the cross could not be tolerated for an instant; its removal, however, was not easy to effect; they might hack away at it with their primitive tools, but they lacked the skill and the patience so to polish the stone that no traces of the cross remained. In point of fact, their very effort to efface the cross only served in many cases to bring it into greater prominence. But, at any rate, the cross had been insulted, and that much was soothing to the religious intolerance and hate of the ignorant. Often, too, religious zeal has led to an attempt to efface an inoffensive but important pagan Greek inscription. But that meant much work, for the letters, besides being incised, usually cover a great part of the stone, and the patience of the fanatic was almost always exhausted before he had defaced the stone so effectually that the experienced epigraphist might not decipher it with more or less ease. He is only too thankful that the fanatic did not smash the stone or turn it into lime.

According, then, to what we have seen, the travelling archæologist should search for inscriptions in the mosques, the fountains, and the cemeteries. So much he can do without asking leave of any one. But, of

course, inscriptions are found in other places, and if they be in private houses, then much careful diplomacy is often necessary in order to persuade the ever-suspicious householder to give the *glamour* permission to enter the sacred precincts of his house and harem. I once worked for two days to gain access to an inscription of whose existence the house-owner had himself informed me. The stone was in a windowless cellar or chaff-room, and, of course, upside down. I copied it painfully by the help of a candle, but when I came to study it more carefully in my tent, I found that it located the city of Tymandus and was otherwise so important that an impression or squeeze of the stone was absolutely essential. Upon renewing negotiations for a second visit to the stone, the ladies of the family not only refused the permission, but wept and wailed bitterly at the very thought. The reason for these tears will appear presently. But, thanks to the persuasive power of *backsheesh*, judiciously placed by my chief servant, I finally succeeded in getting the coveted impression. On another occasion I spent much time laboring with a house-owner who stoutly denied the existence of an inscribed stone in his house, while his neighbors just as stoutly affirmed its existence. But an energetic *kavass* can usually touch the heart of the village priest by the help of a dollar, and many seemingly impossible things may be done when the priest acquiesces and urges thereto.

Now, this hesitancy is not due wholly, or even mainly, to disinclination to admit a foreigner and a *glamour* into the inner parts of the house, but to a prevalent superstition. A belief pervades all classes of Turks, both of high and low degree, either that the stones which bear inscriptions have money or other treasure safely concealed inside the stones themselves, or else that the inscriptions on the stones tell where money or treasure was hid by the people who fled from their homes when the all-conquering hordes of Turks were invading the country more than four hundred years ago. Their theory in regard to the business of the travelling archaeologist is that he is a lineal descendant of the former inhabitants of the country; that his family have preserved, throughout all these ages of their exile, traditions in regard to vast treasure stored away by them when they were compelled to abandon their ancestral homes; and lastly that the archaeologist has come to search the country, find the family inscriptions that tell exactly where the treasure is hidden, and then return to the home of his adoption laden with wealth. Accordingly, ignorant peasants are loath to tell of inscriptions in their own houses, because such stones are their own private property, and they cannot bring themselves to give away to a *Frank* a secret which, if only the key could be found, would assuredly bring in millions to the worthy Moslem family. Hence those tears and wails!

Nothing, neither argument, nor reason, nor ridicule, nothing whatever can shake their faith. Often, as I was busy about an inscription, a curious, silent, suspicious mob would gather round me, sullenly watching every stroke of my pen, that fateful pen that was even then fliching untold treasures from them. Presently the sullen silence would be broken, and excited questions would be showered upon me: Where is the

money? When do you intend to get it? How much is it? Will you not be generous enough to share with us? Truthfulness compelled me to deny the existence of hidden treasure, and to explain that my business was to gather up the scattered facts of history, so that by weaving together a multitude of such facts the historian might be able to give something like an accurate account of the country before it was conquered by the ancestors of the present inhabitants. But my breath was wasted, my labor lost; I was simply accounted a fraud and a liar, while my servants were applauded as men of truthfulness and wide-awake intelligence when they jokingly affirmed that buried treasure did exist thereabouts, and that by judicious use of the mattock and the spade the bystanders could find it. In point of fact, the natives have dug on their own account in innumerable places, and many ancient buildings have been brought to ruin for the reason that their foundations were undermined by these ignorant searchers after hidden treasure.

In this search for gold they are often guided by what they call a *Nishan*. The word means sight, that is, the sight of a rifle. The *Nishan* is of two kinds: one being the small, round, natural holes in rocks, such as are often seen in the limestone formation. The prevalent theory in regard to these holes is that they are so constructed as to point directly towards the spot where the coveted treasure lies hid. But unfortunately it indicates accurately only the direction of the line on which the treasure lies buried, but not the spot itself. It is universally believed that the inscriptions which the *Frank* so sedulously transfers to his notebook give the information necessary for identifying the exact spot. It is a source of regret and mortification to the peasants that they cannot read the inscriptions themselves, and so they envy and hate the interloping archaeologist, because, as they firmly believe, he does possess the knowledge necessary to unveil the secret and lay hold upon the coveted and much-needed treasure. There is a second kind of *Nishan*. The ancients sometimes made sun-dials on the walls of buildings, especially on walls that faced the market-place. Little grooves in the wall, to mark the time of day, radiated from the dial-nail. Of course some of these carefully chiselled grooves pointed down to the ground, and, according to the prevailing superstition, located exactly the spot where treasure lay buried. I well remember one such dial at Adada, and I saw the ruin of which it had been the innocent cause.

But another formidable danger threatens the existence of the stones that bear, it may be, priceless inscriptions, for many stones are smashed up every year in order to get the gold that is hidden within them. It would be interesting to discover the theory by which the natives account for the presence of gold within the stones, but that is a secret which the Oriental mind declines to divulge to the uninitiated. When the stone has been broken to pieces, the gold fails to show up, of course. Now, after a few such ridiculous failures, one might think that even the stolid Turks would lose faith in the superstition, but such is not the case; ill-success does not dampen their ardor nor shake their faith in the slightest degree. If you ask them why the gold did not appear, the unvarying answer is *Allah billir*,

God knows. This superstition is not confined to the Turks, but at one time was shared by the peasantry of Greece as well—an inheritance, it may be, from the Turks. We see, then, that priceless stones are perishing every year throughout Asia Minor by reason of this barbarous superstition, as well as in many other ways, some of which have been mentioned above. These stones should be saved; history and the science of the past demand that they be saved, and archaeology calls aloud upon great-hearted men of wealth to save them, either by rescuing them in person, or by gifts of money to enable specialists to go and save to science these *disjunct* members of mighty peoples of a mighty past.

Notwithstanding the sacred character of the cemetery, the Turks are ever ready to lend a helping hand in digging about stones that mark the graves of their ancestors. Frequently only a portion of an inscription is visible on a fallen and half-buried stone; in that case more or less digging must be done in order to bring the whole inscription to light. Or it might be that we merely suspected the existence of an inscription on the buried side of a large stone. Implements suitable for light digging were always carried, but for serious digging and for raising and turning heavy stones, the villagers were pressed into service. In return for a pittance they would come with mattocks and levers, and soon the inscription would be exposed to view. It frequently happened that, after I had transferred to my notebook and impression-case the inscription on an upturned cemetery-stone, the villagers would replace the stone in its old bed, but just as often they would leave it lying by the side of the unfilled hole.

It would be natural to suppose that, though eagerness to turn an honest penny might make them ready to disturb the abode of the dead, they would be chary enough about laying violent hands upon their own houses at the bidding of a stranger. But such is not the case. As soon as I had ascertained for a certainty that a given stone in the wall of a house was inscribed, my chief servant would begin negotiations with the house-owner, who for a ridiculously small sum was always willing to demolish enough of the wall of his house to enable me to read the inscription; I have made holes fully a yard square in the walls of houses. As may be imagined, the stones that are built into walls are found in all sorts of positions; if they were deeply buried bottom-side up in the foundations of a mosque or pretentious house, a deep hole would have to be dug in order to reach the beginning of the inscription; not infrequently I have had to lie with my head far down in such a hole in order to decipher the inscription. Such a position becomes very painful after a while; if the inscription be badly defaced and the sun be pouring down with all his fierceness, the man who essays the decipherment has need to steel his heart, for under such circumstances the temptation to do slovenly work is very great, and it is not lessened by the almost positive knowledge that all his zeal and devotion will be rewarded by an attack of malarial fever on the morrow.

J. R. S. STERRETT.

LONDON NEWSPAPERS OF 1776 AND
THE DECLARATION OF INDEPENDENCE.

LONDON, January, 1898.

Nowadays an English provincial newspaper, under the heading of "America Day by Day," gives its readers the news of what has happened in the United States the day before. Throughout the United Kingdom also the daily papers publish longer or shorter accounts of American news. How different were things a hundred and twenty years ago. Then, sailing packets or ordinary merchantmen arrived from New York or other ports with intelligence only of what had happened weeks before, and of the news of only one part of the country. Sometimes, by some vessels having quicker passages than others that had sailed sooner, later news arrived first, and the gaps were filled up afterwards.

Much had happened since "the embattled farmers" had "fired the shot heard round the world." The war between the United Colonies and Great Britain had been actively carried on for a considerable period. At the same time a paper warfare was kept up in the London newspapers upon the question of the rightfulness, or otherwise, of the resistance made by the Colonies. It was on the 9th of August, 1776, that the following letter, under the signature of "A Virginia Planter," pithily put the case for the United Colonies, in the *Gazetteer* and *New Daily Advertiser*:

To the Printer of the *Gazetteer*:

Without entering into any discussion of the hacknied controversy, whether America can or cannot be constitutionally bound by acts of the British Parliament, it is pretty evident that at no period of our Government since the Revolution have our public affairs been so badly conducted, particularly respecting that country. I will grant, for argument's sake merely, that America has throughout this whole contest been in the wrong; this being allowed, a question will instantly present itself, in what manner ought Administration to have proceeded; not, surely, by violent sanguinary measures; or if violent measures were become necessary, was it not equally cruel, unfeeling, and impolitic to involve the innocent in the same punishment with the guilty? This is the rock on which our blundering Governors have split. This is what has created a continental army, and given union to the several Members of Congress. This has taught the Provincials discipline, given them a paper currency, and inspired them with a spirit of freedom equal to any of the inhabitants of the ancient Republics. In short, Administration, by their various acts of indiscriminate and wanton oppression and provocation, have done more towards uniting all America against them in the penning of a few acts of Parliament and angry votes, in a few weeks, than all the factions, leaders, and demagogues from Halifax to St. Augustine could effect in half a century.

I lived in America for several years. I know the disposition of the people well, and am not yet quite two years from that country. When I left it, except a few speculative writers, and a few others, perhaps men of dark and ambitious views, I can affirm that there was not one man in a hundred who did not abhor the idea of American independency. I remember, in particular, the inhabitants of the Midland and Southern Colonies expressed the most unqualified detestation and disapprobation of any such design; and I recollect, too, that private explanations were desired and had on this point from some of the leading men in New England, before the other Colonies would consent to co-operate in any plan for forming a Common-Council for their united protection.

I am further well informed, that, so late as

autumn, 1776, most of the Colonies still preserved their allegiance; and that it was not till after the prohibitory bill had passed, and the burning of the towns on the sea coast, that the idea of independency was ever held out as a favorite or popular topic. If, therefore, America, trained to arms and aroused by the repeated injuries it has received, should prove successful in the course of the present campaign, or should be able to protract the war to another year, I will venture to foretell, without the gift of prophecy, that she will never again be brought back to acknowledge a state of dependency on this country; and that the whole force of Great Britain will not be able to compel her to it.

The leading article was not yet in vogue. A newspaper was mainly a composition of paragraphs of news, of letters to the editor, and of advertisements. In the same number of the *Gazetteer* in which the Virginia Planter's letter appeared, there is what is nowadays called a leader. In this the editor adopts the views of a correspondent who severely criticises the ministers of the day in their actions towards the American Colonies. Especially caustic are the denunciations of the Colonial Secretary of the day, Lord George Germain. The following extract will show that, even in England, the course taken by the British Government was, in some quarters, vehemently denounced:

"There appears indeed too much reason to fear that all future attempts to reconcile the breach will prove ineffectual; Ministry are determined, and Ministry (continues our correspondent) have hitherto been determined to persist in their violent resolutions: England or America must therefore fall; one or other of these countries are devoted victims of a prostituted act of the most abandoned and that ever cursed this or any other k—m. A Minister, who in the field disgraced the British troops on the plains of Minden; he, it is, ye Britons, who is rewarded for his cowardice with one of the most important offices in the State. Lord George Germain has now the bravery to load the American leaders in the Cabinet with every vile and opprobrious appellation, who in the field he would tremble to meet. We cannot, however, forbear to admire his Lordship's policy in holding a situation wherein he can exercise the thunder of his eloquence, without any dread of the consequence. He can bestow the epithet of rebel, and forget that himself is a cowardly runaway, whose heroism can extend no farther than blustering declamation. But a dissection of his Lordship's character as a soldier and a statesman will be too wide a field for us to enter into within this narrow compass; we will therefore quit the subject, and once more repeat our regret that such a man should direct our councils, who has proved himself divested of those delicate feelings which ought to characterize the man who is entrusted with the honour of a nation."

In a subsequent issue the Colonial Secretary is referred to as Lord George *Minden*.

The *Gazetteer* was not the only paper that was down upon Lord George. The *Morning Post* of the 10th of August said: "Lord George Germain has taken advantage of the late dispatches, to show that his plan of the war, to carry it on entirely from Canada, was right; and would have been attended with all those effects which he pointed out; he has mentioned this so often to the King, that his Majesty is tired of both him and his plan."

Things were really in such a parlous state that it does not seem to have surprised any one when the news arrived that the Colonies had declared their independence. On the 12th of August the papers each and all ap-

pearing on that day contained, in identical words, the following paragraph: "Advice is received, that the Congress resolved upon Independence the 4th of July, and, it is said, have declared war against Great Britain in form." A mail from America had reached London the day before which had been brought to Falmouth from New York, by the *Mercury* packet-boat. It seems reasonable to suppose that the short paragraph above quoted, that went the round of the papers, was a *communiqué* from the Government. Had there been an organized agency for collecting news, it could hardly have failed to post the press as to the contents of the Declaration itself.

On the 13th of August the *Gazetteer* published the following items:

"By a private letter received by the *Mercury* packet we are informed, when the Congress resolved upon independence, there were present several foreigners of different nations, amongst whom were some persons of distinction from the Courts of Versailles and Madrid.

"A correspondence, we are assured, has been carried on between the Delegates of the American Congress and our natural enemies, the French and Spaniards, and that it was in consequence of the latter promising to give the former every assistance in their power, that the Americans declared for independence.

"As soon as the Colonies declared themselves independent States, two foreign vessels, which were at Philadelphia, slipped their cables, and sailed with the intelligence to the above courts.

"By a private letter from Philadelphia we have advice, that the Congress had made a great naval promotion, viz., two Admirals, two Commodores, and several captains."

The *Morning Chronicle* and *London Advertiser* of August 14 said:

"Copies of the Declarations of War by the Provincials are now in Town, and are said to be couched in the strongest terms—that having now drawn the sword in defence of all that is dear to them, they are determined never to sheath it till a full compensation is made for the cruel oppressions they have sustained.

"It is said the American Provinces have not only declared themselves independent, but that they have sent memorials thereof, and of their proceedings, to most of the Courts in Europe."

In the same number of the *Morning Chronicle* is printed the Report, dated New London Harbour, April 9, 1776, made to Congress by Commodore Ezech. Hopkins, of the operations of his fleet. There is also this ominous paragraph, bearing upon the attitude of France:

"Express upon express, and those of a very interesting Nature, are hourly arriving from our Ambassador at Paris, and Mr. St. Paul is detained here to explain them. Lord Stormont is certainly trifled with by the French Court, and our Ministry, it is said, have not the spirit to demand a categorical answer to a requisition they have made, respecting certain armaments getting ready at the various seaports. The French are between hawk and buzzard, whether to sign and avow a treaty with the American Congress, before the event of the seizure of New York, or to declare them rebels to their parent state, the point to which Lord Stormont is instructed to fix them; but no definitive answer, it seems, is likely to be obtained."

The full text of the Declaration of Independence is first found in the *British Chronicle* for August 14-16. There it appears with the subscription, "signed by Order, and in behalf of the Congress, John Hancock, President. Attest, Charles Thomson, Secretary." A few days afterwards another paper

published it. On the 15th of August the *Morning Post* treated its readers to the following lively paragraph about the leading men of the newly born American nation:

"Arnold, the Commander-in-Chief of the rebels in Canada, once kept the Intelligence Office in the archway leading from St. Paul's churchyard to Doctors Commons, and having in an intrigue with a certain citizen's wife expended more than his finances would admit, was tempted to try his fortune on the highway. This step obliged him to decamp, and to take up his residence among the saints, a race of men among whom such conduct can hardly be held disgraceful, as they derive their origin principally from pickpockets and reprobated felons. Accordingly, as no better man could be found in this land of heroes, he was opposed to Carleton. Plunder being the object of the Congress in the expedition to Canada, they chose, with great propriety, a thief and a robber for the leader.—Hancock, the President of the Congress, is a ruined, and therefore a discontented, smuggler.—Adams, a pettifogger, was, for want of common honesty, refused a place under government.—Lee, because not appointed to a regiment out of his turn, joined these desperadoes. May we not justly apply to such wretches the words of Gamaliel on a similar occasion?—'Ye men of Israel, take heed to yourselves what ye intend to do as touching these men. For before these days rose up Theudas, boasting himself to be somebody, to whom a number of men, about four hundred, joined themselves; who was slain, and all, as many as obeyed him, were scattered and brought to nought. After this man rose up Judas of Galilee, in the days of the taxing, and drew away much people after him; he also perished, and all, even as many as obeyed him, were dispersed.' Have we not reason to believe that Washington and Putnam, the Judas and Theudas of America, will share the same fate? The hand of heaven must be against unnatural rebels, who, in hopes of repairing their own ruined fortunes, bring famine, nakedness, and the sword upon a devoted multitude."

Having regard to the racy nature of some of the paragraphs in the *Morning Post* of that era, one hardly expected to find the editor quoting Scripture for the edification of his readers. Of course Franklin did not go unnoticed. Of him the *Morning Chronicle* of the 16th of August had the following mention:

"A correspondent says that Dr. Franklin, when in England, got himself appointed Post Master of half America—his son Governor of New Jersey; and his friend Stamp Master of Pennsylvania. That being returned to Philadelphia, he obtained a seat in the Congress, whilst his son remained Governor of New Jersey, and stickler for the measures of Administration, whereby he is become so dangerous and detestable to the people, that they have taken him into custody, and sent him prisoner to Connecticut. By this manœuvre of Dr. Franklin, if the Americans prevail, then he is the patriot that saved them. If the Crown prevails, then his son, the Governor, is to be rewarded for his services, and for the persecution that he suffers. So that, let who will triumph, the Doctor and his family will be on the right side."

The writer little knew that Franklin lamented that his son's craving for being styled "His Excellency" had kept him on the Loyalist side.

Of Paine's pamphlet entitled 'Common Sense,' the *Morning Post* of the 19th of August says, attributing it to Franklin:

"No less than 46,000 of the pamphlet called *Common Sense* have been printed and dispersed in different parts of America, which has been attended with a greater effect than any other public performance of the kind that

ever appeared in any country, and gave the decisive spirit for independency."

"The Queen once found the Prince of Wales reading Dr. Franklin's pamphlet, *Common Sense*," she expressed her disapprobation, and asked him who put it into his hands. He answered *Nobody*. Where did you get it? *I don't know*. When did you see it first? *I can't tell*. Who has seen you reading it? *I know nothing at all of the matter*. It seems clearly from hence no easy task to get anything out of his Royal Highness that he does not wish to communicate."

At last we come upon some expression of editorial opinion upon the Declaration of Independence. It is in the following short paragraph in the *Morning Post* of Monday, the 19th of August:

"The Congress have acted with the utmost impolicy, in declaring the United Colonies free and independent States: for, after such an avowal of their Republican principles, every European Power must now abandon them to the punishment due to their Villainy and folly."

In the *Gazetteer* of the same day is a longer paragraph, inspired by a correspondent, in which it is declared that

"We have lost America for ever: hopes of a reconciliation are fled even from those who have plunged us into these distresses. The secret counsels of a few are the cause of all this mischief: and it becomes the public of all ranks to turn their eyes and attention to those few, and make them answerable for their conduct. . . . The people cry out to their Sovereign for the lives of their fellow subjects, lost in a fruitless, inglorious, contest. They cry out for justice against those by whose counsels half the British Empire is lost, the treasures of the nation wasted, its forces employed in wreaking the revenge of a few, the safety of the kingdom endangered, and the reputation both of Prince and people tarnished in the eyes of all Europe."

The *Morning Post* of the 20th of August published "A Reply to the Declaration of the Representatives of the Disunited States in America, in Congress Assembled," as supplied to the editor by a correspondent. In the same issue appears the following paragraph:

"The Congress, we are credibly informed, have erected an honorable military order, as a spur to the abilities of the Provincial officers; it is called the order of Independency; and it is to consist of the President, the Hon. John Hancock, Esq.; and twenty-four Knights Companions;—the three following are invested with it, viz., Gens. Washington, Putnam, and Wooster—they wear the silver star, with five points, on the left breast, and an apple-green ribbon across the right shoulder, with the figure of America sacrificing at the shrine of liberty."

On the 20th of August the *Gazetteer*, again inspired by a correspondent, had an article almost of the length of a leading article of our day. The following extract from it seems not altogether inapplicable to the present condition of affairs with regard to Cuba:

"The trade with America we have irrecoverably lost, and our good friends, the French and Spaniards, are at length in quiet possession of that inexhaustible mine of treasure. They now enjoy unmolested what they have a long time secretly endeavored to obtain."

"The American trade has too many allurements to escape the attention and pursuit of the French and Spanish Courts. They laugh at the idea of our Ministry, in expecting to withhold the intercourse of commerce upon a private dispute between a King and his subjects, as to the last degree absurd. But to carry on that farce, they will amuse us with

promises which they have no intention to keep, and feed our Ministry with vain expectations of neutrality."

The views of those who did not approve of the policy of the Government are completely summarized in a sarcastic paragraph in the *Morning Post* of the 21st of August. Therein it is reported that a subscription had just been set on foot by the Patriotic Party, "to purchase the remainder of the scaffolding in Westminster Hall, for the use of the Ministry. D. D."

Correspondence.

THE SPANISH MINISTER'S LETTER.

TO THE EDITOR OF THE NATION:

SIR:

WHAT WASHINGTON WOULD HAVE SAID.

(Coldly.) "I cannot allow the amicable relations of two countries to be impaired by anything which an officer of Spain may have said in his private official correspondence concerning my personal character. There is no reason for me to suppose that either his Catholic Majesty or his Ministers approved of the letter or will approve it, or that they will sanction its publication. I desire that the subject be not again referred to."

WHAT LINCOLN WOULD HAVE SAID.

"Well, I am sorry that this Mr. De Lome hadn't a better opinion of me. I reckon that he must have been reading the newspapers about that time. But, you know, it isn't the writing of a thing which constitutes a libel; it is the publishing it. Therefore, the question is, whether Mr. De Lome stole his own letter and gave it to somebody to give it to the newspapers." X.

WASHINGTON, February, 1898.

THE STRATEGY OF HAWAII.

TO THE EDITOR OF THE NATION:

SIR: Without entering for a moment into the merits of the Hawaiian question, will you permit me to say a word as to the strategic questions involved? They cannot be so summarily pushed aside as your Seattle correspondent, in the last issue of the *Nation*, thinks.

A naval defence of the Hawaiian Islands and of all our Pacific Coast is limited to one issue or objective—the enemy's fleet. Whenever this fleet and attacking force is met and fought, there the question of the defence of our Pacific possessions is met and settled. If the enemy's fleet is met and reduced to a non-effective condition—whether that be done in mid-ocean, off the coast of Alaska, or at the mouth of the Columbia River—then Alaska, Hawaii, and the coast of our Pacific States has been successfully defended.

A division of the enemy's attacking fleet for the purpose of threatening two places would be a military blunder and subject it to be beaten in detail. C. H. S.

30 KAY STREET, NEWPORT, R. I.,
February 11, 1898.

"STILLMAN'S ESSAYS."

TO THE EDITOR OF THE NATION:

SIR: Nobody can be more fully aware than I of the uselessness of kicking against the

pricks of criticism, or as a rule more indifferent to critical attacks in malice, or more attentive to just strictures; but the misrepresentation of my views in the review of 'The Old Rome and the New' in the *Nation* of January 13 makes it obligatory on me to protest.

I have never objected to artists drawing from or studying nature as much as they please, but to the habit of depending on the model, or the facts of nature, in their painting. I say, in an article which is a criticism of Ruskin's theory, and not the statement of my own:

"Ruskin's feeling as to art may have been as *fond* correct, but it was so disturbed and perverted by his theories and the settled conviction that art was simply the uncompromising rendering of Nature as she appears to the bodily vision, that he left out of all consideration the *subjective transformation of natural truth which is the basis of art*; or, if he reckoned it in, it was to persuade himself that it was due to a peculiarity of vision in the painter."

And again:

"Art does not lie in representing Nature, but in the manner of representing her, and may equally be employed in invented and conventionalized forms as in repeating hers."

In the two essays in which I state my own theories there occur the following passages:

"But science and nature cannot go wrong, . . . and as I am not without hope that Science may some day show us immortality, and that matter is not all, so I trust that we shall find even in the Actual the proof that the Ideal is something better and nobler than the Actual's accidental results, and that Art is no more bound to follow nature than Religion to serve Science." "Painting and sculpture are materialized by their subjection to the facts of nature. They draw their language, the prime elements of their creation, from a visible world, so full in its vocabulary that the artist cannot escape from the suggestion of its terms, if he would be understood. Color is, and in its highest expressions can only be, subjective, to be treated like music, orchestrally; but the element of form is necessarily dependent on Nature for the intelligibility of its terms and types, the artist having only the faculty of calling and refining her forms into what we recognize as the ideal; but the essential condition of all of the arts of design becoming true art is in their being expression, not imitation. . . . The idealist gets his materials from nature, but he recasts them in expression; the realist who is no artist repeats them as he gets them. This is the fundamental distinction in all design; the copyist is not an artist. It is this, and not the choice of subject, or the more or less decided tendency of a painter or a school, which constitutes the distinction between 'high,' or true, art and 'low,' or spurious, art; the test is not in fidelity to nature, but to one's own self. . . . Not that the distinction can be drawn sharply, so that we can in every case say that painters shall fall in one or the other category; but just in the proportion that an artist depends on his model or the actual material furnished by nature, so he is removed from pure art. The essential conditions of a true art education, are the cultivation, above all others, of the faculties of rapid observation and retention of the significant facts, and putting before the eye the essential truths of what was seen, memorizing the fitting panorama of nature and training the power of conception and the imagination by exercising and depending on them. . . . To work from knowledge of things, rather than from information of their superficial aspects, is the end to be kept in view: to get rid of the model as far as is possible is the first step to the right education; dependence on the model the obstacle to it."

The clear meaning of what I have said is, that the scientific study of nature is a stumbling-block to the artist, who is only interested in knowing how things look and in

conveying the impression they give, and that literal copying of nature is not art.

Yours truly, W. J. STILLMAN.
ROME, January 27, 1898.

[We are very sorry that Mr. Stillman should feel that he has been misrepresented, and gladly afford him this opportunity to explain his position. We expressly conceded that he probably did not hold the extreme views which might be logically deduced from some of his statements, and from the premise of his definition of art. —ED. NATION.]

PORCHER'S MARCUS AURELIUS ANTONINUS.

TO THE EDITOR OF THE NATION:

SIR: Mr. Walter Lee Brown's letter in the *Nation* of February 10 sheds abundant light on C. L. Porcher's editions of the 'Meditations of Marcus Aurelius Antoninus.' He has shown "C. L. Porcher" to be Capel Loft, and has given interesting details of his biography and work. He has, in fact, done more than he claims. For, when he spends a paragraph in suggestions about the sources of the name "Porcher," he overlooks the fact that he has already given the indisputable reason for it. He has stated that the copy in the Astor Library, inscribed and presented by Loft himself, has on the title "Porcher" lined out, followed by "Stoic." This plainly indicates that "Porcher" means "man of the Porch or Stoa." It is superfluous, then, to speculate about Loft's possible acquaintance with one of the Southern family of Porchers, who are of Huguenot descent.

As regards the Latin phrase marking the date, "A. Liberata Reip. I." appears to have been used first to denote 1861, and afterwards 1863. May not the Stoic scholar have regarded the American republic as practically freed from slavery by the secession of the bulk of the slaveholding States in 1861, or by the war then begun? Many Americans at that time so regarded the case. President Lincoln, however, then declared otherwise; but in 1863 he issued his Emancipation Proclamation, and Loft may have felt that he had now official sanction for his style of dating. His residence in the South after the war does not indicate pro-slavery feeling.

J. P. LAMBERTON.

PHILADELPHIA, February 12, 1898.

A VERSE VULGARISM.

TO THE EDITOR OF THE NATION:

SIR: The suppression of final *g* in the ending of English participles and verbal nouns is one of the commonest of vulgarisms. To call forms so abridged provincial would be absurd, since they are found not only in the low life, but also among the careless speakers of every locality in England and America. Paddies, Cockneys, Down - Easters, Bowery boys, Hoosiers, Crackers, and negroes—indeed, all natural economists in speech—drop with impunity the final *g* of weak syllables. This omission of the guttural has, in course of time, come to be regarded as sanctified to the uses of those who dwell in or make constant excursions into the slums of language. But it has a higher province. The purpose of this slight contribution is to indicate the frequency of the elision in verse, and to discuss

the part that it plays in the dialect of rimers.

Many writers of light or humorous verse from the time of Samuel Butler have clipped their *g*'s for the sake of their rimes. The *Hudibras* abounds in examples: I, i, 915-916, urging, virgin; I, ii, 199-200, discoursing, Orain; I, iii, 251-252, ragamuffin, huffing; II, ii, 497-498, curmudgin, grudging; II, iii, 33-34, pecking, reckon (a rime that would have delighted Field); III, ii, 451-453, reason, teasing; III, ii, 161-162, doing, ruin; III, ii, 245-246, ruins, outgoings; III, iii, 329-330, maiming, famine. John Gay employs the elision under strong provocation (*Epistle XII*, undoing, ruin). But the poets of our own century have been the chief offenders. Note the occurrence and recurrence of the license in one poem of the *Ingoldsby Legends*, the "Black Mousquetaire": admit in, befitting; divulging, indulge in; delight in, fighting; doing, ruin; urchin, birching; wink in, thinking. Then turn to Thackeray's examples: sudden, scudding (*The White Squall*); piping, snipe in (*Peg of Limcaddy*); drinking, sink in; priest in, feasting (*Legend of St. Sophia*). Charles Lamb preaches the elision into service in his *Farewell to Tobacco*; admiring, siren.

The vulgarity is perhaps in keeping with the tone of society verse or with the light ballad movement; but we should hardly expect to find it in serious poetry. In point of fact, the free lances who trample under the hind feet of the measures on which they are mounted all laws of word-stress, seem to regard the omission of the final *g* as the very least of irregularities. The greatest enemies of rigid verse and true rime among poets of established position—if we limit ourselves to the present century—have been, I think we shall all agree, Leigh Hunt, Byron, Mrs. Browning, and our own Whittier. In all these the elision is common; in the poetess it is rampant. Hunt rimes emerging and virgin (*Story of Rimini*), snapping and rap in (*Fest of Poets*), shining and wine in (*To J. H.*), and bobbing and Robin (*To J. H.*). It is dangerous, particularly in the case before us, to assert a negative, yet I feel safe in saying that there are no similar rimes in Keats, who, as a member of Hunt's "Cockney School," would naturally employ them; nor do I find them in Shelley. Byron has the excuse of his Bernesque tone for the occurrence of the false rime in *Beppo* and *Don Juan*. Indeed, he uses it generally in laughing mood: *Beppo*, VI, agreeing, glee in; XXXIX, charming, alarming, harm in; *Don Juan*, V, xvi, building, gilding, skilled in; V, cxviii, liking, striking, pike in; V, cxxx, imagine, waging, raging; V, ciii, according, sword in, wording; XI, xxxviii, Erin, wearing (with the last rime compare Campbell's *Boile of Erin*, I—Erin, repairing—where the Scotchman uses a rich Milesian brogue very applicable to the actions of his wanderer).

Yet in verse Byron is a martinet beside Mrs. Browning. Long since, Edgar Allan Poe raised his voice in protest against the multiplicity of inadmissible rimes in the *Drama of Boile*. "We would wish," he said (Stedman and Woodberry Ed. VI, 312), "that she had not thought it proper to couple Eden and succeeding, . . . taming and overcame him, coming and woman, . . . children and bewildering." Other such rimes are as numerous in her works as occurrences of wip and lip in the *Nibelungen Lied*: *Drama of Boile*, sleeping, ankle-deep in; praying, day in; *Lady*

Geraldine's Courtship, woman, gloaming; admiring, iron; *Cry of the Children*, IX, resounding, round him; XI, heaven, unbelieving; *Fourfold Aspect*, bounding, round him; *Hector in Garden*, XIII, ruin, renewing; *Lost Bower*, XXIX, linen, winning; XXXV, hushing, cushion; XXXVIII, waken, overtaking; *Wine of Cyprus*, III, deep in, leaping; XV, Nazlanzen, glancing; XVII, morning, shone in; *Cry of the Human*, II, human, coming; X, live in, giving; XIII, beholding, golden (compare *Mourning Mother*, II); *A Flower in a Letter*, XI, rewarding, garden; *The Dead Pan*, VI, flowing, slow in; XII, golden, infolding; XVI, driven, heaving; XXVII, Slon, dying; XXVIII, alone in, moaning; XXXIX, nothing, truth in; *A Child's Grave*, played in, fading; XXVIII, spring in, singing; XXXI, falling, all in. The frequency of such rimes invites the almost flippant inquiry, "Did Mrs. Browning drop her *g*'s in ordinary conversation?" This unhappy explanation must, however, be abandoned as soon as proposed. The very violence of her riming is—paradox though it seem—the best defence of her pronunciation; couplets like deserting and parting or driven and heaving certainly do not indicate that the poetess said "desarting" or "dreeven" (save the mark!), but simply that the connecting link between her lines is neither a regular assonance nor a rigid rime. Whether the same plea may be made for Whittier is doubtful; for not even the most ardent admirer of the Quaker poet's spontaneous melody can deny that, in his rough-hewn political poems at least, disregard of technique, inaccurate word-use, and faulty construction, and lastly many clumsy verses and rimes, point to a lack of training in the schools. The examples selected are naturally from his polemics: a-darting, Martin (*A Letter*, Cambridge Ed. Works, p. 299); trimming, women (*id.*); lurking, jerkin (*Lines on a Portrait*, 310); brimming, women (*The Shoemakers*, p. 358).

So much for the humorists and verse-libertines. But the vulgarity is not limited to the rimes of these writers: Dryden allows it at the end of his "resounding line," when he couples certain and parting (a Yankeeism noted by Lowell, *Introd.* 2d Ser. *Biglow Papers*). Such a master of verse as Coleridge condescends to use it (*A Day Dream*, remounting, fountain, humming, woman). Such an artist as Rossetti tolerates it, as in *A Last Confession*, laughing, half in. Sir Walter Scott, in his poem on Helvellyn, rimes the name of the peak with yelling; but the rimer, as well as the lover of scenery, would have to go far to find a match to this mountain (compare Mortimer Collins, *The Ivory Gate*, Stedman's Victorian Anthology, 316, Helvellyn, swelling). In his use of the license, Wordsworth has applied, in an unexpected way, his theory that poetic diction should not differ from the ordinary speech of men. In the weakest stanza that he ever wrote (*Ellen Irwin*, Globe Ed., 152) travelling is coupled with javelin; in the *Seven Sisters*, Globe, 208, Erin with steering (the poet, handle he ever so carefully the rudder of his verse, can hardly hope to escape shipwreck on that coast); and elsewhere in his works we meet together waggon and dragging (*Waggoner*, III, Globe, p. 230), inviting and delight in (*Triad*, Globe, 661), pursuing and ruin (*Furness Abbey*, Globe, 735), coming and omen (*Ode on the Imagination*, Globe, 550). But the *locus classicus* of the vulgarity—and we

are almost beginning to doubt its vulgarity—is in the work that stands, as Emerson justly declares, "at the high-water mark of nineteenth-century poetry," the *Ode on the Intimations of Immortality* (Globe, 359):

"Oh evil day! if I were swollen
While Earth herself is adorning
This sweet May-morning,
And the children are cutting
In a thousand valleys far and wide
Fresh flowers."

This is the greatest triumph of the silent *g*.

I think enough has been said to show that the territory of the guttural elision must be extended to embrace many slopes of Parnassus. Length of days and ability to count will, however, enable any one to multiply indefinitely my scanty list of examples.

F. T., JR.

UNIVERSITY OF VERMONT,
BURLINGTON, February 7, 1898.

[The suppressed *g* partly avenges itself in this country by attaching itself in speech to final syllables in *n*, as "certing," "certingly," for certain, certainly. —ED. NATION.]

THE PROPER REVISION OF THE PRESS.

TO THE EDITOR OF THE NATION:

SIR: I venture to call your more special attention to a peculiar defect which I have found in many books published in this country, in the hope that you may bring your powerful influence to bear for the correction of the evil. I refer to a class of errors of the press, or rather errors of revision, which is hard to define, but very annoying to the intelligent reader and a serious discredit to American scholarship. I do not mean mistakes in the spelling of common English words, such as should be corrected by the ordinary proof-reader. From these the books of our best publishers are now quite reasonably free. Printers' proof-readers seem to be as efficient and accurate as they could be expected to be for the small wages they receive. But many American books contain errors of a higher order, which the ordinary proof-reader cannot be expected to detect, and does not detect, but which yet seriously diminish the pleasure of the intelligent reader. It would seem that our publishers, even some of the greatest, do not employ competent revisers of the press, but trust wholly to the printer's proof-reader. Now, accurate and comprehensive scholarship is no doubt scarcer and more expensive in America than in Europe. Still, it is becoming more abundant and cheaper every year, and I feel quite sure the time has come when our publishers can afford to have all their important books read by competent revisers. In no other way can they get rid of a class of errors which are misleading to young readers and annoying to more experienced ones, as well as damaging to the reputation of American scholarship.

Some of the mistakes referred to may perhaps seem trifling, and are doubtless often overlooked by careless readers. Sometimes a word is displaced by another of similar appearance—as laws for lands, divided for derived, national for natural, Edwin Burke for Edmund Burke, yield for wield, impart for import, arisen for risen—all of which are found in an excellent book on French politics issued by one of our best publishers. Shown for shone and affect for effect are good specimens of this variety.

Sometimes it is the misplacing of words which makes confusion. In a recent book on Greek history Solon is said to have been "endeavoring to make evil out of good," quite contrary to the received view of his character. Probably the words "good" and "evil" have been transposed. Sometimes it is the omission of a word which does the mischief. I could give several sentences where the word "not" has been omitted. In a recent reprint of a valuable historical work the word "which" has been omitted from one passage, "but" from another, and "than" from a third.

Sometimes it is not easy to say what is the matter with a sentence which is evidently crippled in some way. In a recent work of high rank on the history of the Middle Ages, there are several sentences which, whether from the omission or transposition of words, seem quite devoid of meaning. I puzzled over one of these sentences for half an hour, and at last decided that if "every" were substituted for "the only," the meaning would be restored. But, after all, perhaps the author would not agree with me.

Sometimes, no doubt, errors are chargeable to the author or translator himself, or, rather, to the pernicious practice of requiring the final revision of proofs to be done by the author. He is just the one who ought not to do this, because he cannot possibly know the exact limits of his own knowledge. A competent reviser is quite likely to detect errors in fact as well as in word which have escaped the author's notice, and will always have expert assistants at his command for important books. Translators, especially, need constant supervision. One of our great publishing-houses has a book, translated from the Italian, in which there is a curious error illustrating this point, as well as the general subject. The reader of this book finds himself suddenly stumbling over the name Evemero. Obviously the translator found it in the text and did not recognize it or know what to do with it, and so transferred it bodily to his English translation. The proof-reader, of course, did not recognize it either, and let it stand. Probably many young readers have puzzled over it and looked for it in their dictionaries in vain. But the experienced reviser would know that Evemero is merely the Italian form of the name Euhemerus, and that the allusion is to the Euhemeristic theory of the origin of the gods.

Many other examples of like errors might be looked up in the books of even our best publishers, especially of the last and most important class mentioned, those in which the author himself needs some one to stand between him and the printer. They have not learned that business ability and scholarship are quite different things, seldom co-existing in the same person, and that both are necessary to the proper management of a great publishing-house. They often lose money on worthless books whose worthlessness they might have found out easily beforehand, and they often issue important books in a way which is no credit to them, because they do not understand what competent revision is, or will not pay the cost of it.

Hoping that you will agree with me on this subject, and will give the publishers some *ex-cathedra* advice about it, I remain,

Yours fraternally,

RUSTICUS.

CAMPBELL, CAL., January 5, 1898.

DREYFUS AND THE JESUITS.

TO THE EDITOR OF THE NATION:

SIR: Allow me to say that your note on p. 41 ("The rioting in Paris indicates only two things," etc.) is not correct. Parisians at large don't believe that Dreyfus was a spy; they don't believe, either, that the present row is kicked up by the Jews. In fact, Parisians at large don't riot, and don't recommend that somebody should be spat upon. They are attentive, anxious, and they wait.

The rioters and the "spitters" are nothing but the pupils and the servants of the Jesuits. These worthies have a far greater influence on French politics than the "haute finance." About fifteen years ago they contrived to get under their control a good part of our War Office, from which unbelievers, Protestants and Jews, have been slowly but surely removed. They know that the impending rehabilitation of an innocent man, who was condemned because he was a Jew and for no other reason, is a big stone menacing their supremacy, so they are fighting desperately, and spending lots of money to make people believe (1) that Dreyfus really betrayed; (2) that his partisans are either Jews or writers hired by Jews. As that wicked nonsense cannot last, the money of the Jesuits will be spent in vain. Perhaps when France recovers from her present nightmare, and things are investigated in a calm spirit, we shall hear very curious facts about the good Fathers and their loathsome protégé, M. Édouard Drumont.

Truly yours, SALOMON REINACH.

CHATEAU DE SAINT GERMAIN EN-LAYE,
February 2, 1898.

Notes.

A new series of scientific books, edited by Prof. Cattell of Columbia University, in cooperation with Frank Evers Beddard in England, will soon be begun by Messrs. Putnam. 'The Stars,' by Prof. Newcomb; 'The Earth as a Planet,' by Prof. Young; 'Earth Structure,' by Prof. James Geikie; 'Volcanoes,' by Prof. Bonney; 'The History of Science,' by Charles S. Peirce; 'Age, Growth, Sex, and Death,' by Prof. Charles S. Minot, are some of the titles already announced. The same house will shortly have ready an American edition of 'Le Soutien de Famille,' Daudet's last work, under the title of 'The Wage-Earner.'

Henry Holt & Co. promise early publication of a 'Primer of the Bible,' by W. H. Bennett, a compact manual for those who wish to study the Bible in the light of contemporary criticism. They are the American publishers of 'Turgeneff and his French Circle,' which we mentioned last week in Mr. Fisher Unwin's London list.

'The Essentials of Argument,' by E. J. MacEwan, M.A., is soon to appear with the imprint of D. C. Heath & Co., Boston.

'In King's Houses or the Adventures of Robin Sandys,' by Mrs. Julia C. R. Dorr, is announced by L. C. Page & Co., Boston.

If all the first-fruits of Greater New York were equal in quality to the 'First Report of a Book-Collector,' which Dodd, Mead & Co. announce for issue on February 18, there would be cause for rejoicing. Mr. William Harris Arnold, who relates his brief but successful experience in collecting, has chosen to seek a printer at the Marion Press, of whose productions and high stan-

dard our readers know something, but which now first can display the imprint "Jamaica, Queensborough, New York." Mr. Hopkins's Long Island establishment has, in other words, been annexed to Mr. Croker's domain. Mr. Arnold's gossip is light, practical, and entertaining, and is attended by a scientific description of the principal "book worms" of the destructive class. What, besides the hand-made paper, the fine execution of the letter-press, and the elegant vellum binding, most distinguishes the book, however, is the rich variety of facsimiles of leaves, title-pages, MS., and so forth, chiefly drawn from Mr. Arnold's accumulation, pertinently bound in with the text, as well as some original leaves to show their successful mending, the cleansing of foxing, the ravages of worms, etc., along with fragments of booksellers' and auctioneers' catalogues, a portrait of Mr. Quaritch, etc. These alone would delight any owner of one of the eighty-five copies to which Mr. Arnold's pretty conception is limited.

We have noticed in instalments the progress of the admirable 'Encyclopedia of Sport,' edited by the Earl of Suffolk and Berkshire, Hedley Peck, and F. G. Aflalo (Putnams). The first volume (A-Leo) makes a truly noble appearance, with its clear text, its numerous full-page plates, and abundant process cuts from nature and from drawings. The binding is a simple green cloth.

An index must be judged a sufficient excuse for a new edition of any book worth issuing at all. This has been provided for the late George Hooper's popular and readable 'Campaign of Sedan—The Downfall of the Second Empire, August-September, 1870' (London: George Bell & Sons; New York: Macmillan), originally published in 1887. Some errors have been corrected, too, and the author's style would have borne a little overhauling; but there has been no general revision. Military maps of Woerth, Spicheren, Colombey-Nouilly, Vionville-Mars-la-Tour, Gravelotte, Sedan, and the war-field as a whole, are grouped at the end, and will be found convenient.

The third bound volume of the *Monthly Bulletin* of the Providence Public Library is a monument to Mr. Foster's rare industry and intelligence in catering for his readers. The richly annotated Reference Lists are continued, with a timeliness witnessed by the titles Crete and Modern Greece, William Bradford and Plymouth Colony, Cabot Bibliography, Hawaiian Islands, Alaska, and British India and England's Interest in Asia. Along with these are lists for Wordsworth, Tennyson, and Scott, really interesting from the pithy judgments of critics and editors appended to the titles; and in the case of Scott an appendix arranges the Waverley Novels chronologically, and gives very full details about the composition of each. There are also Special Catalogues on a variety of subjects, a survey of the books of the year in history, and an index of the periodicals taken by twenty libraries and reading-rooms in Providence. A triple index unlocks these treasures.

From the Reynolds Library, Rochester, N. Y., we have its new 'Reference Catalogue,' which has, of course, a value for other institutions. It is "a classified list of all the books in the Reference department, together with books in the Circulating department which are believed to be useful for consultation." The five classes thus composed are: Bibliography, Encyclopedias, General Treas-

tises, Periodicals and Reviews, Society Transactions and Publications, Public Documents. An author-index and a subject-index complete the scheme. It should be remarked that the typography of this volume is elegant, and yet each title has been set by the linotype machine, in order that an enlarged edition may hereafter be possible at a moderate cost. The authors' names are set in small capitals, and italics are freely used. The full-face captions of divisions and subdivisions have of course been set by hand. Altogether, one would never suspect machine work.

A second, revised edition of a 'List of Books recommended for a High-School Classical Library,' prepared by a committee of the Michigan Schoolmasters' Club, has just been issued by Macmillan. It is a thin pamphlet of thirty-odd pages, selling at ten cents.

The volume of the complete works of Victor Hugo, which has recently come from Hetzel, Paris, is entitled 'En Voyage: France et Belgique.' It is pleasant reading, of a reminiscent character, for it recalls strongly the once famous letters on the Rhine, with their wealth of descriptions of everything mediæval, whether castle, abbey, cathedral, or private house. The Middle Ages were evidently the one preoccupation of Hugo at that period of his life. Though he had had a classical education, and had always a respect for the greatest works of classicism, still it was the picturesque and mysterious Middle Ages that claimed his admiration and awoke his enthusiasm. And this enthusiasm bore other and better fruit than the ballads and drawings which came into fashion as a consequence; it helped largely to draw attention to the beauty and value of the Gothic monuments in which France is so rich, and aided the movement to secure them against further degradation and destruction. In the present volume many instances of this form of Hugo's influence are to be noticed.

We hear less and less nowadays of the Symbolists and the Decadents—not that they have wholly vanished from the field of letters, but that many of them can no longer excite the enthusiasm they once awoke in tender hearts and not over-strong brains. Verlaine himself is not enjoying quite such a reputation as was manufactured for him, and it may well be that he in turn will pass out of sight like many another better and purer poet. He will leave some lines to be quoted in anthologies, as one quotes Villon, but it is possible that this will prove the limit of his fame. And of the other less notorious writers who at one time attracted so much attention, what shall remain? Of Maeterlinck? Of Moréas? Of Mallarmé? They have striven after and occasionally attained new and quaint combinations of verse or words or letters, but they have not renovated poetry and they have not displaced the ancient idols. They have often been absurd, usually unintelligible. They have been violently criticised and as vehemently adored and praised. It is pleasant, therefore, to come upon a review of their efforts and of the task fulfilled by them in a work written by one of themselves, who nevertheless does not go into constant ecstasies concerning himself and them. E. Vigilié-Lecocq's 'La Poésie Contemporaine' (Paris: Société du *Mercure de France*) is a book well worth reading, inasmuch as it sets out in serious fashion to explain what the school

has sought to do and how it set about doing it. It tells much that is interesting and useful to know, and modifies in some essential respects judgments formerly delivered on the points raised.

During the past summer the semi-defunct alumni associations of the various departments of the University of Michigan united and formed a vigorous general society. To membership are eligible the graduates of any department of the University, as also non-graduates who have been absent from the University for some years. The association has a paid secretary, who devotes his time to the interests of the association and of the University. The *Michigan Alumnus*, hitherto a private magazine, has just become the property of the association, and is sent free to all who pay the annual membership fee of one dollar. These various steps are the culmination of the earnest efforts of alumni who have long observed and regretted the weakness that has come from division, and much good is expected to result from the new organization.

All who are interested in classical studies will read with intense interest the first number of the new series of the *American Journal of Archaeology*. It consists in the main of the first annual report of the managing committee of the American School of Classical Studies in Rome. Professor Hale's story of the year's promising doings culminates in the discovery at the Vatican of an overlooked Catullus MS. which appears to take equal rank with those of Oxford and Paris, and which the Vatican will now publish. Professor Frothingham tells of his survey of Norba, and tracing of ancient roads connecting the city with others of the Volscian League—a work which foreshadows important revelations hereafter when the Italian Government undertakes the excavations which it denies to foreigners—and of the casts made from Trajan's arch at Beneventum, which are a most desirable addition to collections of Roman sculpture. A page of the Catullus, a full view of and a charming group from the arch, with plans and elevations of the Villa Cheremeteff, the new home of the School, to which all must wish a long and prosperous life, adorn the number.

The principal contents of the *Annales de Géographie* for January are the conclusion of the account of the climate of Eastern Siberia as compared with that of North America in the same latitudes, descriptions of the physical features of southern Provence and the great desert of Australia, and an historical and statistical account of the European agricultural colonization of Algeria. The time of settlement of every important village, in each of the departments, and the number of the original colonists and the present number is given. From this it appears that in 1896 there were nearly 200,000 white farmers, a decrease of about 8,000 within the past eight years. The accompanying map shows the area under cultivation, which, relatively to the arable land, is very small.

An interesting case of coöperation in a public cause is just now being witnessed at Munich, where sixty artists of reputation have agreed to furnish, by the 7th of October next, portraits of distinguished men and women—actors and actresses, composers and musical directors, etc.—who have been connected with the Royal Court and National Theatre since its opening on October 7, 1778.

A score of academy professors, among them Lenbach, Defregger, Habermann, Gabriel Max, Uhde, Franz Stuck, Gruetzner, head the list of contributors. The portraits are to be hung in the foyer and other accessible places in the theatre.

With something less than his usual promptness, but with his customary skill, Mr. F. Gutekunst, Philadelphia, produces an imperial panel photograph of the late Henry George (a native of that city), which will be acceptable to a large circle of this writer's admirers.

—We are accustomed to look, in President Eliot's annual reports, for ingenious and suggestive statistics. His latest is no exception in this particular, and we single out his revelations concerning "the increasing number of students admitted to the University for short periods of residence, like one year or two years, who nevertheless obtain some degree from the University, and not infrequently a highly honorable degree like that of Master of Arts." He shows that in the College proper the work of the men admitted to junior and senior standing in the past decade "has been decidedly higher than that of the Harvard undergraduates in the year 1896-'97 as a whole, or that of the senior class of 1897." He shows, further, for the Graduate School, that the rating of the short-residence men who enter it from other colleges, is likewise much higher than the average rating of undergraduates, though it falls below that of Harvard College graduates who pass directly to the Graduate School. The Divinity School tells a similar tale, and President Eliot concludes, justly and wisely, that "there is reason to regard [these short-residence students] with high favor, and make them welcome in every possible way." We will add that a contrary showing would not have diminished one iota the reasonableness of such welcome.

—The implied motive of President Eliot's inquiry is the notion entertained by "some persons" that the significance of the Harvard degrees is impaired by their being won by outsiders in so brief a connection. He does not hint that academic chauvinism lies at the base of such a notion, but we apprehend that it does. This chauvinism is manifest, as we write, in the jealousy of the College towards the University, respecting participation in the election of Overseers by all branches of the University. In consequence of a strong appeal for such an extension of the suffrage, the Board of Overseers, by a narrow majority, approached the Massachusetts Legislature for a change in the law of its constituency. This action aroused so intense a feeling of opposition that at a special meeting last week the Board suspended its action till the collegiate alumni could be more thoroughly canvassed. A temporary check to the movement is to be anticipated, on grounds which, except as purely sentimental, pass our comprehension. Not to invite accessions to the student force of the University in all its branches from all quarters; not to foster the fashion of seeking a polishing-off at Harvard; not to fix the affiliation of short-residence and professional-school men to Harvard "in every possible way," in order that their children may tend to follow in the same path and their benefactions to seek the more honored alma mater—this seems to us deplorable narrowness and shortsightedness. The fears expressed seem almost incredible when we consider that the votes actually cast and

counted for Overseers are cast only in person on Commencement day, so that the constituency will hardly be perceptibly changed.

—In volume v. of the Harvard "Studies and Notes in Philology and Literature" Prof. Kittredge lays before us the full evidence in support of his identification of Sir Thomas Malory, which he first made public on March 15, 1894, at a meeting held at Columbia College in honor of Friedrich Diez, and shortly after printed in a brief article on Malory in volume v. of 'Johnson's Universal Cyclopædia.' Prof. Kittredge identifies the author of the 'Morte Darthur' with Sir Thomas Malory, knight of Newbold Revell (or Fanny Newbold), who was M. P. for Warwickshire in 1445. This Sir Thomas answers all the conditions, and although Prof. Kittredge's lists would make it appear that the woods of England have from time immemorial swarmed with Malorys, no other appears whose claims can compete with those of this one. We will refer our readers to the article itself for all technical details, and will content ourselves with saying that the life of our author does not need to be reconstructed from scattered scraps of information. It has long been accessible in Dugdale's 'Antiquities of Warwickshire,' first published in 1656. His ancestors were lords of Draughton in Northamptonshire in the 13th century, and his father, John Malory, was Sheriff of Leicestershire and Warwickshire, Escheator, and Knight of the Shire of Warwick in the Parliament of 1413. There can be no doubt that Sir Thomas received a gentleman's education according to the ideas of the fifteenth century, of which the ability to read and write French as well as to speak it was an essential. When a young man, he served in France under Richard Beauchamp, Earl of Warwick, that chivalrous knight whom Emperor Sigismund christened "The Father of Courtesy." In 1445 we find Sir Thomas a knight and sitting in Parliament for his county. Some years later he was conspicuous on the Lancastrian side in the War of the Roses. He died March 14, 1470, advanced in years, and, when Dugdale wrote, lay "buried under a marble in the Chappell of St. Francis at the Gray Friars, near New Gate in the Suburbs of London." He left a widow, Elizabeth Malory, and a grandson Nicholas, who died without male heirs. Satisfactory as are Prof. Kittredge's arguments, one would like to know how he explains the fact that Dugdale, who knew so much of the life of Sir Thomas, appears to know nothing of his authorship of the 'Morte Darthur.'

—The usual Christmas gift to the members of the Goethe Gesellschaft has, for 1897, taken the shape of another album of drawings and portraits from the collections of the Goethe Museum in Weimar. This is the twelfth volume of the *Schriften*. Of these albums Dr. Carl Ruland is *ex officio* editor and furnishes the interesting introduction. When the tenth volume, likewise an album, was published, it was the well-defined intention of the committee to follow it up with similar revelations from the museum treasures. The present volume marks another step towards the accomplishment of this design. Examples of Goethe's own attempts in art and portraits of the noted men who were members of his circle, or whose paths intersected it, make up twenty-five plates. The first sheet of this collection has a peculiar

charm. The damaged state of the original has heretofore rendered reproduction impossible. Now we have a sketch by the poet's own hand of the romantic vicarage at Sesenheim. Riemer saw this drawing in 1814, and has recorded that upon the reverse side stood some words in Frederike's own handwriting. The sheet had been mounted on stout paper and the writing hidden, but now, after the lapse of more than a century and a quarter, there has been brought to view and here reproduced what is probably the only specimen of Frederike's handwriting from those happy autumn days of 1770. It is a girlish scrawl: "Monsieur—Monsieur Goethe à Strasbourg."

—Goethe had long intended to publish an edition of his 'Italian Journey,' illustrated by himself. He made a beginning by sending a kind of illustrated journal of the travels to Frau von Stein. Like most good intentions of this sort, it was very indifferently carried out. In this album, twelve of the sketches made in pursuance of his laudable purpose are reproduced. It has always seemed to us an act almost of unfriendliness to the memory of the great poet to lay much emphasis upon the artistic merit of these performances; they are for the most part only interesting and often delightful mementoes of genius in its moments of recreation. But out of this dozen examples there are at least three that show genuine inspiration and a promise of ultimate mastery. The "Blick auf St. Peter" retains the "petty German manner" in the treatment of the foliage in the foreground, but to the whole the artist has succeeded in giving a poetic and atmospheric beauty which marks a great advance over the fussiness of the Thüringen sketches contained in volume x. Finest of all the specimens of Goethe's work that we know is the water-color sketch, here reproduced as number xi., of the beautiful sweep of a Sicilian bay. All traces of his German manner have here vanished, and we have a delicate rendering of a summer scene upon a shining southern shore. It almost justifies Goethe in the delusion, which he long and fondly cherished, that he was, "after all, an artist." The third sketch of those which are especially striking is slighter, but, aside from the weird moonlit charm of the scene, it has a pathetic personal interest. In February, 1788, Goethe wrote to Fritz von Stein: "One evening not long ago when sad thoughts haunted me, I made a drawing of my own grave at the Pyramid of Cestius." By a remarkable coincidence it was almost upon this very spot that forty-two years later Goethe's only son was buried. The twelve sheets of portraits which complete this attractive album include a fine reproduction of the best portrait that we possess of the aged Goethe. It is from Schwerdgeburth's original sketch for the well-known engraving of the poet's head. This reproduction is incomparably better than that which appeared in the *Goethe Jahrbuch* for 1882. Goethe is known to have sat for it on January 24, 1832, two months before his death. Thus, as it is the best, it is also the last portrait taken from life of the German Jupiter, and it proves his title to that lofty epithet. There is also a portrait of Jerusalem of "Werther" fame, the familiar face of Wieland, portraits of Riemer, Eckermann, and the Chancellor von Müller, and a good counterfeit of the young Mendelssohn, who, introduced to Goethe as the favorite pupil of Zelter, soon won the poet's

heart by his own sunny artist nature. This twelfth volume of the *Schriften* maintains the high standard set by its predecessors.

—We know of no more satisfactory commentary on Rousseau than Prof. Harold Höfding's 'Rousseau und seine Philosophie' (Stuttgart: Frommann), forming volume iv. of Frommann's "Klassiker der Philosophie." The treatise is popular in so far as it is clear and concise; for the same reason it will prove useful as an introduction to a more exhaustive study of the philosopher. The author, though evidently abreast of the literature of his subject, does not allow himself to become entangled in any of the controversies in which other writers have been engaged in recent years. Inconsistencies of Rousseau are explained, but no attempt is made to explain them away; in this respect the chapter (iv.) on the principal ideas of Rousseau and the type of his thought is excellent. The new philosophical problem arising from his opposition to the Encyclopædists, the new ethical ideas resulting from his thought, his discovery of the mysticism of Nature, the standard given by him of false and true civilization, the turning-point in educational thought marked by his idea of negative education—these are shown to be real achievements of Rousseau. It is admitted, on the other hand, that the logical value of his pedagogy is injured by conflicting demands, and its historical importance lessened by the limitations set to the education of girls and of the poor; and the difference between the results of his religious feeling and the results of his reasoning is not denied. Rousseau was, more than most men are, a martyr to the contradiction in his own nature and between his ideal and the existing order of things. What reconciles one with him personally, in spite of his wretchedness, is his longing for the pure and the great, his sincere enthusiasm, his capacity for sympathy, admiration, and reverence.

HARRISON'S WILLIAM THE SILENT.

William the Silent. By Frederic Harrison. Macmillan. 1897.

Of certain parliamentary orators Macaulay writes, that "on a perilous crisis they would have been found far inferior in all the qualities of rulers to men such as Oliver Cromwell, who talked nonsense, and William the Silent, who did not talk at all." The sentence affords a measure both of Macaulay's strength and of his weakness. He recognized the extraordinary capacity of leaders such as William and Cromwell, who were no parliamentarians; but he failed to see that the Protector's tangled and ungrammatical sentences are full of force and are never wanting in sense, and assumed that a hero known for the charm of his conversation and the noble urbanity of his manner was a man who never spoke a word. If a trained historian who was specially interested in the annals of the House of Orange was misled by the strangely inappropriate epithet which in William's case has become a surname, how can we suppose that the ordinary English public know anything worth knowing about William the Silent?

To most of our readers we may be sure that Mr. Harrison's succinct and charming biography will be a revelation. They will learn, and learn for the first time, what was the true character and what was the actual work of the noblest among the statesmen of

the sixteenth century. It would, indeed, be ungrateful to forget the labors of Motley; but the Carlylese dialect, which is almost unbearable in its inventor, has been found by many students intolerable in an imitator, and Motley's virtuous partisanship, no less than his rhetoric, concealed his real historical power. Mr. Harrison, on the other hand, has drawn just such a sketch of William and his career as was needed by earnest students on both sides of the Atlantic. The biography is short, and we certainly at times could have wished that Mr. Harrison had been able to treat his subject in fuller detail; but the brevity and compression of his book add to its impressiveness; not a word is wasted on rhetorical artifices; every fact is told simply and plainly, and, what is even more remarkable, with strict impartiality. Hence, readers are given the results of a long contest and of perplexed negotiations, instead of being overpowered and confused with all the petty facts which are important only in so far as they lead to great and permanent consequences. The tale meanwhile is so tragic, so thrilling, and so inspiring that, when once properly told, as Mr. Harrison tells it, it carries the reader along; and the story of the contest with Spain is in this instance almost identical with the narrative of William's life. It is the identity between an heroic life and a great cause that makes the career of William a tremendous historical drama. It were easy, as it would be instructive, to dwell in more detail on the merits and charm of Mr. Harrison's workmanship, but the best way to show appreciation of his 'Life of William' is to use the facts which he has placed before us, with a view to making known his hero's character and the nature of the achievement which turned William's failure (for in one sense his efforts failed) into the most lasting of the triumphs achieved by human energy and foresight.

In estimating either William's character or his work, two essential facts should be constantly before one's mind. He was by birth one of the greatest of nobles; or, rather, he was a sovereign prince whose ample wealth supported a rank almost of royalty. He was also a trained statesman of the sixteenth century. Both these circumstances mean more than a modern reader at first realizes. A great noble was, in the sixteenth century, of necessity a leader of men; a statesman of the sixteenth century was one who not only had to guide a nation in the sense in which England or France might nowadays be led by a popular Minister, but was forced actually and in very truth to determine the course which his country should take, with the knowledge that any error on his part might be the destruction of his nation. A statesman of the sixteenth century was, further, of necessity driven to practise all the arts of the boldest and most unscrupulous statescraft.

"The diplomatic history of Europe," writes Mr. Harrison, "during the life of William the Silent, was an almost unparalleled maze of unscrupulous intrigue and shifting combinations, wherein the claims of religion, honor, mercy, and truth were regarded by all statesmen as mere phrases, so far as foreign countries were concerned, and wherein subtle and patriotic men strove *per fas et nefas* to safeguard their own country and augment its strength. Machiavelli's 'Prince' was in its most brilliant vogue."

And the dangers among which statesmen moved were doubled by the fury of religious passions scarcely known to Ma-

chiavelli. Under these circumstances, niceness in the choice of means was an impossibility. In this matter Elizabeth, William, Philip, Alva himself, stand pretty much on a level. We must judge such leaders, not by their nice sense of honor, but by their aims and by their tendency to recognize, however faintly, the claims of humanity. The King of Spain and his General were not persons devoid of principle; they were fanatics for what they deemed the cause of religion. Their names deserve execration because the cause for which they fought was in reality the establishment of the kingdom of darkness, and because they exceeded the cruelty of a cruel age, and did not even dream that the impulses of common humanity must temper the logic of religious intolerance. Elizabeth and William, on the other hand, were no models of high-toned statesmanship. A moralist who would justify all their words and acts becomes a casuist who uselessly perverts the truth of history, and corrupts without convincing the conscience of his hearers. Yet Elizabeth, and in a far greater measure William, command our admiration. They laid the foundations of the kingdom of light; they were each faithful, if to nothing else, yet to their own country; and they each rose above the worst inhumanities of their time.

Grant, for the sake of argument, that Elizabeth was guilty of every cruelty or perfidy which the malignity of contemporary Papists could lay to her charge, and it still remains true that the government of England was, in her day, a government of honesty and humanity, if we compare it with the perfidy and atrocity of Alva's reign of terror, which was sanctioned and stimulated by Philip in the calmness of his closet. Take the most unfavorable view which is possible of William's career, and two facts still assure us of his greatness. In an age of intolerance, he anticipated by more than a century the practice no less than the theory of religious freedom. In an age of cruelty, he hated bloodshed and so loathed torture—a practice condemned neither by the morality nor by the law of his time—that, when apparently at the point of death, he forbade the torture of his murderer. The terrible torments of Balthazar are a monument to the humanity of William. The fanatic had slain the one man who, had he survived Balthazar's stroke by an hour, would have saved the assassin from agonies which can be hardly read without horror.

It is natural to link William with Elizabeth, yet the character of the Prince has qualities which raise it far above the character of the Queen. It may well be doubted whether, in clearness of aim, he has ever found a superior. There is no one fact more clearly brought out than the perfect clearness with which, from the beginning to the end of his career, he perceived the object which he wished to attain. The freedom of the whole of the Netherlands—a very different thing, be it noted, from independence—the withdrawal of every Spanish soldier as the one guarantee for liberty, the establishment of practical toleration for Catholics and Protestants alike, so long as they respected public order—these were the objects which William pursued from the moment when he became the repository of the secret the concealment whereof in the depth of his own heart conferred upon him the surname of the Silent, till the day when his death, or rather his martyrdom, laid the

foundation of Holland's freedom. In the pursuit of his end he was unwavering; as to the means of obtaining it he was the most flexible of opportunists. Constitutional opposition to Philip's despotism, resistance to Philip's ministers, appeals to popular passion, armed suppression of lawlessness, attempts to arouse the dormant public spirit of Europe, open rebellion against Philip, intrigues with France, intrigues with England, alliances with Lutherans, alliances with Colligny and the French Protestants, endeavors to win the support of the very basest of the Valois—every shift or device which policy or statecraft could suggest—came ready to William's hand so only that he could employ the arts of diplomacy to obtain the high ends of his enlightened patriotism.

His life was a series of failures, yet he was never daunted by calamity. The death of his friends, the slaughter of his adherents, the defeat of his armies, the ill-success of one combination after another, never shook this unconquerable man. His enemies knew, as he must have known himself, that in an age of warfare he was not a great general; he was no match in the field for Alva; he was markedly the inferior in generalship to Alexander of Parma; he was no born soldier like his brother Louis; he did not know, as did Cromwell, how to throw aside on the battle-field the caution of statesmanship. While his eyes were fixed on the great ideas of the future, he had none of the intuitive sagacity by which the Protector saw instinctively what was attainable at a given moment and what were the means for its immediate attainment. William imagined greater achievements than were possible, and in one or two cases at least did not see with great rapidity where his real strength lay. By a sort of miracle the Beggars of the Sea came to his aid, yet it took some time before he perceived that the sea power might be used to save Holland. At the very moment of his death he had hardly grasped the idea that, to create the United Provinces, it was necessary to surrender the hope of freeing from the yoke of Spain a country which is now known as Belgium. Yet his very defects as a general, or even as a practical politician, are his glory. They reveal the superhuman tenacity with which he achieved his ends almost in despite of fate.

And his energy rested upon his devoutness. It is true that, a Lutheran by family, he was brought up a Catholic and died a Calvinist; it is true that he exhibited a tolerance utterly unknown to his generation, and that he held light, perhaps too light, theological differences which divided the world. It must also be acknowledged that his divorce from Anne, which, if it be carefully considered, deserves no moral condemnation, and his marriage with Charlotte, which is less easy on grounds of statesmanship or patriotism to defend, betray the self-will of a mediæval noble. But, for all this, he was, though no theologian, a man of serious religion. We suspect that on this point Mr. Harrison has hardly done justice to the true character of his hero, though Calvinism, combined with tolerance for other creeds, was the least phase of William's religious development. His adoption of this creed was more than an act of policy. In William's time no form of belief except Calvinism was strong enough to support a reformer in his contest with the powers of evil. It is natural and right to suppose that William found in the stern belief which has

been called by the name of Calvin, the rest and strength necessary for the carrying out of the task laid upon him.

His character was exactly suited for his work, and none of the statesmen of modern Europe have ever conferred greater benefits upon mankind than did William. When he began his life's battle with Spain, everything was against him. The wealth and power of Philip were as great as his fanaticism and his cruelty. Spain menaced, for a time at least, the spiritual and political liberty of the world. Rebellion had never yet been successful, and, to Protestants no less than to Catholics, the sin of rebellion was like unto the sin of heresy. The forces which William had at his disposal were, compared with those of Spain, simply contemptible. In the nineteenth century we have rightly admired the astuteness with which Cavour enabled the feebleness of disunited Italy to triumph over the strength of the Austrian monarchy; but even after the defeat of Novara the resources, physical and moral, which were at the disposal of Victor Emmanuel, far exceeded any resources of which William could dispose when he defied the Spanish tyrant. Cavour, too, knew that the humanity of the age would prevent Austria from using the force of arms to its very utmost, and that the interest of rival potentates would at worst guarantee the independence of Piedmont. William knew that religion itself would stimulate the cruelty of Philip, and that failure meant, not in a metaphor but in plain truth, the destruction of his country, and the death and it might be torture of himself and his followers. When he perished, the most sagacious of his contemporaries would have predicted that his cause would die with him. Yet his task was done. The struggle with the Dutch provinces had sapped the strength of Spain. The defeat of the Armada was, indeed, the public sign that the power of the Spaniard was broken, but it was the contest with Holland which had so weakened Philip that the great naval defeat told the world that Spain could never realize the scheme of the universal empire. Part of William's aims had to be surrendered: the dream that the Catholic and the Protestant provinces might be united under the rule of justice and toleration was never to be fulfilled. But Protestant Holland more than fulfilled the hopes of William, and the provinces which remained subject to the sceptre of Spain came to enjoy at any rate a bearable form of government. What is more than this, every step in European progress has been a step along the path marked out by William the Silent. The bitterest religious feuds of to-day have nothing in them of the brutal cruelty which gave a peculiar horror to the religious contests of the seventeenth century. The system which has pacified Europe is in its essence the system of William.

The career of the Stadtholder recalls, both by way of contrast and of likeness, the career of the Protector. Both were the heroes of Protestantism; both went so far as they did—to apply an expression attributed to Cromwell—because they did not know where they were going; both combined religious fervor with unscrupulous statecraft; both were the men of their age, and yet anticipated the ideas of modern times and carried into practice broad conceptions of toleration unknown to their contemporaries; both waged a fearful fight against desperate odds and came out victorious. Yet the points of

contrast are as noteworthy as and more essential than the points of similarity. Every step in Cromwell's career, if each step be looked at alone, was crowned with success. He never made a single definite blunder, but his life of triumph ended in failure; he neither founded an English commonwealth, nor created an English Protestant monarchy, nor established a system of toleration. To the Whig nobles, not to the Puritan General, is due the salvation of English freedom and the development of English power. The life of the Stadtholder was a series of failures. As a general he gained not a single great victory; as a statesman he failed utterly in achieving that union of all the revolted provinces which was the aim of his policy. His death looked like the last act of a tragedy. William himself died, we may fear, with the belief that he had lived and suffered in vain. But in truth a career of failures was rewarded by posthumous success. Spain was ruined, Holland was saved, the union of the seven Provinces grew and flourished beyond William's utmost dreams till, for a time, it rose to be an Empire. The blood of the martyr turned out to be the seed of the State. The name of the Stadtholder became the glory of Holland. "The effigy of William in marble," writes Mr. Harrison, "lies surrounded by a canopy beneath which are the four emblematical figures of Freedom, Justice, Prudence, and Religion, with the mottoes, *Je maintiendrai piété et justice—Savies tranquillus in undis*. And in this case neither emblems nor mottoes are conventional untruths." If Cromwell's lifelong successes end in permanent failure, William's life of failure is the very foundation of complete and permanent victory.

TEN NOVELS.

- What Maisie Knew.* By Henry James. Chicago: Herbert S. Stone & Co.
- His Grace of Ormonde.* By Mrs. F. H. Burnett. Charles Scribner's Sons.
- The Young Mountaineers.* By Charles Egbert Craddock. Houghton, Mifflin & Co.
- The King of the Broncos.* By Charles F. Lummis. Charles Scribner's Sons.
- The Enchanted Burro.* By Charles F. Lummis. Chicago: Way & Williams.
- Outlines in Local Color.* By Brander Matthews. Harper & Brothers.
- The Story of an Untold Love.* By Paul Leicester Ford. Houghton, Mifflin & Co.
- The Days of Jeanne d'Arc.* By M. H. Catherwood. The Century Co.
- The Water of the Wondrous Isles.* By William Morris. Longmans, Green & Co.
- Master Skylark: A Story of Shakspeare's Time.* By John Bennett. The Century Co.

Mr. James's 'What Maisie Knew,' if told directly, might be entitled 'What Maisie Didn't Know,' and would be no more fit for publication than is the evidence given before divorce courts sitting in camera. The device of unfolding a tale, not only without a moral, but without morals, through analysis of impressions made on the mind and character of a child, thrusts the burden of impropriety on the mind of the reader. For, however wide awake a child may be, it is blind as a bat to the cause of certain effects, such as a constant change and exchange of presumptive and ostensible fathers and mothers, coming

about without a death in the family. The gross facts of the relations between the men and women who assume the parental attitude towards Maisie have no sort of attraction for Mr. James, and he rigorously confines himself to Maisie's point of view, her observations of and reflections upon the rather monstrous persons for whom, at a very tender age, she perceives herself to be "a centre of hatred and messenger of insult." Whether it is natural or probable for a child to have accepted and used such circumstances in the way that Maisie did, no one can say with any positiveness. To maintain any respect for humanity, her case must be considered as unique, with nothing in the records of the race to select for comparison. The fact that she never excites an emotion of compassion or pity, may be taken as an indication that she is neither natural nor probable. As we follow her interpretations of marriage and divorce, and of connections demanding one or the other or both, we get to feel that she is an arbitrary, artificial construction, and that the author, fascinated by an experiment, did not realize that he was being beaten.

The method is experimental, and, considering its very great difficulties, cannot be called a failure. The passive Maisie is the centre of action, the bone of contention, and the innocent, confidential agent through whom alone her abandoned guardians reveal themselves to each other and to the public. So far as the guardians are concerned, the revelation is complete, and it is their vivid presentation in this indirect fashion that justifies the experiment. In phrase and comparison, Mr. James is even unusually brilliant, but falls too often into alarming passages, through whose clauses and parentheses few are gifted enough to find a way. It is a sad moment for a writer when he mistakes obscure diction for subtle thought, and Mr. James is confronted with this moment more than once in 'What Maisie Knew.'

Attempts to rehabilitate real, living "Ladies of Quality" are made every day, sometimes with very gratifying success, but perhaps not often flowering into magnificent vindication like unto Mrs. Burnett's new rendering of her 'Lady of Quality' in a second volume, entitled 'His Grace of Ormonde,' with a coronet and heraldic beasts on the cover. Mrs. Burnett is in the curious position of a lawyer who, having grossly slandered a most respectable lady, prosecutes himself in open court. She succeeds in making Lady Clorinda Wildairs appear considerably less disreputable than in the first version of her unholy career, effecting this improvement by a very full and enthusiastic statement of the views and sentiments about the Lady entertained by his irreproachable Grace of Ormonde. Of the characterization of his Grace it may be said that Ouida, in the proud flush and insolence of youth, never constructed anything so immaculate and splendid, and that we may now see what a child she was in the apparently copious use of the glorifying adjective. Least any one should hesitate to accept the absolute wisdom and justice of his Grace's reflections and conclusions, Mrs. Burnett takes care to relieve Clorinda of personal responsibility for suspicious episodes. She declares, with every appearance of exact knowledge, that the blood of historic chiefs of the Wildairs house "woke in Clorinda's veins

at her birth." These chiefs were "devils who fought shrieking with ferocious laughter in the face of certain horrible death; devils whose spirit no torture of rack or flame could conquer; beings who could endure in silence horrors almost supernatural, who could bear more, suffer more, defy more than any other human thing." If Mrs. Burnett had thought of appending this information in the form of a note to 'A Lady of Quality,' there would have been no need of giving us a literal example of a twice-told tale. With a clear understanding of the condition of Clorinda's blood, few are so virtuous as to blame her for what she did rather than praise her for what she resisted.

Excepting two or three great cities, there is no locality on the face of the earth in which the material for good fiction is inexhaustible. Almost every voluminous writer of local tales has proved the limitations of his chosen village or county or region, which, however extensive and remarkable for natural beauty or grandeur, has little variety of human interest. Generally, long before the "last picture is painted," "the tubes are twisted and dry." Miss Murfree, in the volume of short stories entitled 'The Young Mountaineers,' wrings nothing new from the Tennessee mountains, in the way either of adventure or character. The scene which was set a good many years ago and elicited spontaneous applause, now receives only that perfunctory attention which we bestow upon an old friend whom we privately regard as something of a bore. As the heroes of the tales are all young, Miss Murfree has probably particularly addressed herself to the public which has not reached the dull age of reminiscence and comparison. If it were not for that public coming fresh every year to sit gaping at the feet of the story-teller, he would doubtless be forced to realize with pain that it is quite useless for him to keep on trying to palm off old lamps for new.

In his stories of New Mexico and South America, Mr. Lummis exploits comparatively fresh fields. But with all the attraction of novel scene and character, two volumes coming pretty close one upon another show the limitations of the local story. Not that there is repetition, but only similarity of atmosphere, incident, motive which indicates that the circle is nearly rounded. All the description is good, very clear, and significant, and the narrative is spirited, arriving at dramatic moments in a simple, straightforward way, quite without literary artifice. The cow-boy (often called by other, Spanish, names) is a prominent figure, and though he is satisfactorily prompt with his pistol, alert, enduring, and frequently humorous, his speech is not garnished with strange oaths. Superficially, therefore, he seems an unnatural, perhaps effeminate cow-boy; but, closely examined, it is seen that his force and efficiency are in no way diminished by temperance in blasphemy. The half-Indian, half-Spanish boys (*cholos*) are charming, so sturdy, sober, and faithful. They have none of the signs of made-up boys, and the author must know many of them well. He also, probably, knows (but we hope will never tell us) that they are the very boys who grew up to be conspicuous failures of youthful promise; otherwise, it is difficult to account for the wicked old men abounding in Mexican mountains and deserts. It is more fitting to believe

that these nice boys emigrate or even die in their youth, and that the bad men were the sort of boys that Mr. Lummis does not care to speak about.

Mr. Brander Matthews's 'Outlines in Local Color' are of course sketches of New York, a locality which offers infinite variety for the student of humanity. Externally, it is no slander to say that New York is not one of the most interesting of the world's great cities. Its streets and buildings are obtrusively there for the needs and uses of the New Yorkers, with scant concessions to artistic taste or superfluous yearning for impressions. Mr. Matthews makes the most of the tall houses and cable-cars and elevated roads, and that is perhaps a little too much in the way of setting for slight and casual incidents. Yet it is possible that with less detail, less insistence in noting names of streets that are only numbers, in recalling commonplace sights and awful sounds, he could not convey his own feeling of intimacy with the city and delight in that intimacy. He is the only writer about New York who appears really to love it and who is steadfastly loyal.

Mr. Paul Ford's 'Story of an Untold Love' introduces the genuine stone-blind lover of fiction that is now somewhat old-fashioned. To Donald the lover, Maizie the beloved is compact of perfection. The tale of Donald's sorrows and sacrifices and despair must not be read twice or examined critically, because suggestions and suspicions obtrude themselves, and horrid doubts that Maizie was, after all, as other girls are, mortal. Nothing short of an angel could be worth such travail and torment, and it is a tribute to Mr. Ford's power for expressing the passion of pure love that, for the time taken to read the tale, no point of view except the lover's is tolerable.

In her preface to 'The Days of Jeanne d'Arc' Mrs. Catherwood tells us that more than two thousand books have already been written about the famous Maid. Without pretence of familiarity with this extensive literature, and judging chiefly by comparison with some specimens of the recent Jeanne d'Arc revival, we feel that none of the two thousand can be better worth reading than Mrs. Catherwood's. She approaches her subject with unquestioning belief in *La Pucelle's* special inspiration. There is no doubt, and hence no argument or irony and no bitterness even against the English triumphant in malignity. The drawing of the Maid is admirably candid, simple, and sincere. Between her and other kind, affectionate little peasant girls there is no difference of nature; the difference, as Mrs. Catherwood paints it, is wholly supernatural, and to reject that influence is to reject the whole as an incredible fairy tale. The confusing incidents of the Maid's campaign are set forth in orderly fashion, and the detail of her life at home, at court, and in battle has been carefully gathered, sifted, and woven into convincing narrative. Mrs. Catherwood says that she has given months of study and travel to the preparation of her book. She deserves the warmest congratulations on the result.

The best reason for the writing of 'The Water of the Wondrous Isles' is the reason that William Morris believed to be the true inspiration for any sort of work—the love of doing it. A perception of his delight in irresponsible exercise of the imagination goes far to make the reader share it, and

abandon himself to the wonder-tales with quite unthinking joy. Two or three times Morris, prodded, perhaps, by the Christian conscience of an ancestor, made pretence of rational basis for his tales, gave them a faint excuse of history or respectable legend, of moral intent or social experiment. This last one is unblushingly irrational, and has not so much as a fragment of allegory concealed in its numerous well-printed pages. It has rather more coherence and directness than many of its predecessors, but that appears to be an accident. He would not willingly separate himself from his enchanting maiden, Birdalone. In the narrative of Birdalone's marvellous adventures with witch-women, wood-wives, magic-sending-boats, knights good and evil, beautiful and ugly, the only sense appealed to is the sense for beauty—beauty of woods and fields and water, of the human body, and the good, loving human heart. How much the force and fascination of the appeal is due to its shining garments, its manner and wording, every lover of Morris knows without being told, and no telling can enlighten those who were not born to know.

The adventures of Nick Attwood, a not-too-good little boy of Stratford town, make a very pretty tale, attractive for both children and their elders. Nick was stolen away by one of the Lord Admiral's players, who heard him singing in the fields, and knew how much money such a voice would be worth in London. So Nick became Master Skylark, of the Company of St. Paul's boys, and charmed the town and sang before the Queen. But ever his heart yearned for his mother, and even for his hard-hearted father, from whom he had been running away when captured by Master Gaston Carew. By the kind intervention of Master Will Shakspeare and Ben Jonson, Nick gets home and gladly forgets both fame and sorrow. Besides writing a good story, the author draws the times and manners very well, and uses great people with discretion.

The Story of Language. By Charles Woodward Hutson. Chicago: A. C. McClurg & Co. 1897.

Language is a subject of everlasting interest, and scholars who are willing to turn from their special philological investigations, and give the general public a trustworthy account of the present status of their science, will always find a hearty welcome. The pity is that scholars all too often leave the writing of such books to charlatans. If the public then gets untrue and unworthy conceptions of the principles and methods of philological science, the philologist has no one to blame but himself.

There has just appeared a new and handsome volume with the above title, which is intended to meet the wants of the lay reader interested in general linguistic subjects. The specialist needs to read but a chapter to know what the book is; but those for whom it is primarily intended may profit by a word of warning. The writer, or rather compiler, has gone to a library of very limited treasure, and out of such volumes on the subject as he there chanced to find has "made a book." The first two-thirds of the volume deals with language in general, and with the non-Aryan tongues, and is copied from Max Müller and various books of travel. Most of the rest of the volume deals with English, and is almost wholly a rewording of that old eyesore of the scholar,

Melkielejohn's 'The English Language.' A sample of this process of book-making will suffice to give an idea of the whole, and at the same time will furnish an illustration of what can be done in the way of swapping synonyms in English.

MELKIEJOHN.

The guttural has been softened . . . into a sibilant. Thus *rigg*, *egg*, and *brigg* became *ridge*, *edge*, and *bridge*.

The guttural has become a labial—*f*—as in *cough*, *enough*, *laugh*, *draught*, &c.

The guttural has become an additional syllable, and is represented by a vowel sound. Thus *sorg* and *mearh* have become *sorrow* and *marrow*.

In some words it has disappeared both to eye and ear. Thus *nakèd* has become *made*.

How is it, then, that we have in so many words the strongest gutturals in the language—*g* and *h*—not only separately . . . but combined? The story is an odd one. Our Old English or Saxon scribes wrote—not *light*, *might*, and *night*, but *liht*, *mihht*, and *niht*. When, however, they found that the Norman-French gentlemen would not sound the *h*, and say—as is still said in Scotland—*licht*, &c., they redoubled the guttural, strengthened the *h* with a hard *g*, and again presented the dose to the Norman. But, if the Norman could not sound the *h* alone, still less could he sound the double guttural; and he very coolly let both alone—ignored both.

Of course, Melkielejohn's farcical account of *gh* is devoid of all truth, as might be expected of the work of a professor of pedagogy who undertakes to write philology out of his imagination rather than go to the trouble of consulting authorities; but it is at least expressed with some wit and spirit, by the side of which Hutson's dilution is very tame.

When the book gets to the other side of the Atlantic, we may look for long parallel quotations like the above, but probably headed respectively "The English Book" and "The American Book," and we shall again have pointed out to us the dependence of American scholarship on that of Great Britain. The discredit brought upon us by such books will end only when publishers find that scholars do not content themselves with laughing at them, but regard it as worth their while immediately and fearlessly to expose them.

Goethe's "Die Aufregungen": Politisches Drama in fünf Akten. Ergänzende Bearbeitung von Felix von Stenglin. Berlin: Alexander Duncker; New York: Lemcke & Buechner.

The greatest political event of Goethe's

HUTSON.

The guttural took a softened form and sound. *Rigg* became *ridge*; *egg*, *edge*; *brigg*, *bridge*. In these the guttural became a sibilant.

In others it became to the ear a labial sound, while still written with a guttural form. Such are *cough*, *enough*, *trough*, *laugh*, *draught*.

In some the guttural was transformed into a vowel sound, constituting an additional syllable. Thus *sorg* became *sorrow*; and *mearh* *marrow*.

In others it disappeared wholly. Thus *makèd* became *made*.

One amusing trace of the struggle between Norman organs and English speech is found in words like *light*, *might*, *night*, which were written in inflected English *liht*, *mihht*, *niht*. These were sounded as in Scotland with a light guttural or burr—written now for the Scottish dialect with a *ch* as in *licht*. As the Norman would not sound the guttural, however light, the words were written then with the strong guttural they still bear around with them as a dress, to induce the careless conqueror to attempt something like a guttural. But still the Normans refused to sound either *h* or *gh*.

lifetime was the French Revolution. It disquieted him; it interrupted the calm process of his self-development. He strove to divert his mind; he studied Chinese, optics, the metamorphosis of plants, but his thoughts were, in spite of himself, irresistibly drawn to the significance of what was happening around him. He has treated themes suggested by the Revolution, directly and indirectly, in many forms; autobiographically, in the 'Campagne in Frankreich' of 1792, for in that campaign he took part, conscious of being present at the birth of a new era in the world's history; lyrically, in many a well-known song (even in the Venetian epigrams there are revolutionary echoes); epically, in 'Hermann und Dorothea'; novelistically, in the 'Unterhaltungen Deutscher Ausgewanderten'; and dramatically, in the four plays, "Die Natürliche Tochter," "Der Gross-Cophta," "Der Bürgergeneral," and "Die Aufgeregten." The last-named play, which gives a nearer view of Goethe's own political creed than any of the others, was written in 1793, but left unfinished. Regret has frequently been expressed that the missing third and fifth acts had not been supplied, and the whole drama made a part of the regular classic repertory of the German stage. The first step has now been taken, and, in accordance with the brief but explicit directions of Goethe himself, the Freiherr von Stenglin has with much ability and self-subordination completed the work.

Friedrich Vischer has called this play and "Der Bürgergeneral" "odorless plants that grew in the sour peat-bog of the spirit that then prevailed." Odorless and perhaps a little artificial they are, but on the whole this judgment is too harsh. In the other works of Goethe relating to this subject, the Revolution was either a mere stage-setting, as in 'Hermann und Dorothea,' or else some strikingly dramatic incident connected with the Revolution was made the centre of the action, as in "Der Gross-Cophta," which deals with the affair of the diamond necklace. In "Die Aufgeregten," however, it is the actual strife of classes that has been presented, of the misled and bombastic scoundrels, enthusiastic for a freedom and equality which they would be incapable of maintaining, and of the liberal and clear-sighted aristocracy, willing to be just, but refusing to be forced. Goethe was a liberal in politics; for more than half a century he was in intimate association with an enlightened ruling prince, and he had never shared the mad ideals of the youthful Schiller, whose political incendiarism in the "Robbers" had made him a citizen of the French Republic. In this play the author makes the Countess his mouthpiece. All that he ever wrote of the third act was the beginning of a conversation between the Countess and the Hofrath, in the course of which it was doubtless his intention to develop fully his views concerning the obligations of the ruling classes towards those dependent upon them. Speaking to Eckermann in 1824, Goethe quoted from this fragment of the third act. He said:

"I wrote it at the time of the French Revolution, and it may be regarded in some sort as my political creed at that time. I had made the Countess the representative of the nobility, and in the words which I put into her mouth I showed how the nobility ought to think. The Countess has just returned from Paris, where she has been a witness of the revolutionary proceedings, and from these she has drawn no bad lesson for herself. She has convinced herself that the people

may indeed be suppressed, but not oppressed, and that the revolutionary uprisings of the lower classes are due to the unjust actions of the great."

She announces her determination to avoid all injustice herself, and for the future to denounce every act that has a show of unfairness, even if she should be decried as a democrat. "I thought," continued Goethe, "that this attitude of mind was entirely respectable. It was at that time my own opinion, and it still is. But in reward therefore I have been called all manner of names which I do not care to repeat." And, indeed, Goethe has been the object of much unjust vilification on the score of his politics and patriotism. His conservatism offended the hotheads, and his sane liberalism was rarely understood.

The completed play of "Die Aufgeregten" is a welcome but not necessary addition to a library of Goetheana. Goethe's own directions are so clear that there has never been any doubt concerning the development and outcome of the drama. The present work, therefore, must find its reward on the stage and at the hands of an audience. That this was the intention is evident from the preface and from the reservation of stage rights. And now comes the news that in January at the Royal Theatre of Berlin the drama was produced with gratifying success. The general public, which had half forgotten the existence of the fragment, was delighted by the force and humor of the "new" play by Goethe. The task of following the author's intentions was in this case comparatively easy; not like that of completing Schiller's "Demetrius," which has lured so many poets to failure. Freiherr von Stenglin has done only what was absolutely necessary to give to Goethe's conception its rounded dramatic expression. He has even refrained from elaborating the conversation in the third act so brilliantly begun by the original author, and this was wise, for it could not have been essential to the plot development and would have been of interest only as the direct exposition of Goethe's own views. The danger of coming into contrast with the sonorous periods of Goethe's prose has been avoided by restricting the dialogue to short sentences. The book should find a welcome among all lovers of Goethe. Its value would have been increased by printing the brief concepts for the missing acts from Goethe's own pen.

The New Puritanism: Papers by Lyman Abbott, Amory H. Bradford, Charles H. Berry, George H. Gordon, Washington Gladden, Wm. J. Tucker, during the Semi-Centennial Celebration of Plymouth Church, Brooklyn, N. Y., 1847-1897. With an Introduction by Rossiter W. Raymond. Ford, Howard & Hulbert. 1898.

Besides the articles and addresses enumerated on the title-page, this interesting volume has a "Publisher's Preface" which adds little to its value, and is disfigured by the most popular of misquotations, "fresh fields and pastures new," which has been set right a thousand times, apparently with no effect. The celebration by Plymouth Church of the fiftieth anniversary of its organization and Mr. Beecher's coming to Brooklyn, as here reported, was happily conceived and carried out with dignity and sobriety. There was no undue glorying and no exaggeration of Mr. Beecher's influence, although the indi-

cation of its character was not entirely satisfactory. Dr. Abbott's sermon on May 16, immediately following Mr. Raymond's genial introduction, is called "The New Puritanism." The newness is much in evidence, but the Puritanism less so. With the loss of the Puritan theology and the Puritan temper, there does not seem much Puritanism left. Dr. Abbott handles the old Puritanism roughly, identifying it mainly with the doctrine of election. As for the new Puritanism, he identifies that mainly with the slight aberrations of Lyman Beecher and Albert Barnes and their kind from the doctrine to which they were born, and there is no clear expression of the fact that Dr. Abbott and his kind have departed from them much further than they did from Calvin and Edwards. Dr. Abbott is inclined, like others of his school, to damn those who have said his good things before him. He is filled with wonder that he "should ever have been thought to be Unitarian in his tendency"; but his three characteristics of the new Puritanism are as good a statement of Unitarian doctrine as could be made.

Dr. Bradford, discussing "Puritan Principles and the Modern World," finds the old Puritanism essentially as good as Dr. Abbott finds it bad. But he uses the term without much discrimination. Beecher, he assures us, was "a Puritan of the Puritans." He had not their theology. Had he their temper? He was nothing if not a humorist. The Puritan temper was utterly devoid of humor. But Dr. Bradford has some good things about "the defeat of the people" in our political affairs. Dr. Berry's subject was: "Beecher's Influence upon Religious Thought in England." He represents it as more theological than we can think it was, except as much of the new theology has been an attempt to express Beecher's emotional piety in intellectual terms, with conspicuous failure, such as he himself experienced in the same attempt. It is strange that in his list of recent personal religious forces in England Dr. Berry finds no place for Martineau, who has been a preacher to the preachers and a teacher of the teachers in an eminent degree.

Dr. Gordon begins with the assertion that "Calvinism, as an adequate interpretation of the ways of God with men, or even as a working philosophy of life, is for ever gone." He thinks we must have another elaborate theological system, and he sketches it in outline. Some of his phrases are so scholastic and so vague that they convey no definite idea to our minds. He, too, is careful not to defile himself with the pitch of unorthodox liberality. He tells us that his doctrine "does not necessarily imply universal salvation," but "it is true that it looks that way." "If God shall succeed" (the italics are his), "universal salvation will be the final result." This may not be so deep as a well nor so wide as a church door, but 'tis enough for the pastor of the most typical of the New England Congregational churches. Dr. Washington Gladden's subject, "The Social Problems of the Future," brings our social and political institutions to the test of human brotherhood, and finds them wanting; but some of his specifics would, we imagine, aggravate the disease. Dr. Tucker, President of Dartmouth College, makes a bold push for the free intellect in the church, and for the subordination of the church to social needs. In conclusion, Dr. Abbott urges on his people the

application of the foregoing principles and doctrines to their habitual life.

If the book, as a whole, leaves much to be desired in the way of real and definite thought, it is, for better or for worse, significant of a disintegration of the traditional theology which is spreading far and wide.

Lectures on the Principles of Local Government. By George Laurence Gomme, Statistical Officer of the London County Council. Westminster: Archibald Constable & Co.

The London School of Economics is doing good work, and not least in leading to the publication of some useful courses of lectures. But among these we are unable to include Mr. Gomme's lectures on Local Government. Mr. Gomme has made in the past some suggestive, if not solid, contributions to the archaeology of municipal institutions, and as a collector of out-of-the-way facts his industry and enthusiasm are not to be condemned. But to formulate with any success "the principles" of local government, under modern circumstances, in a country like England, calls for a keenness of insight into the actual social situation, a power of generalization, a knowledge of contemporary English and foreign literature, and, finally, a power of exposition, such as Mr. Gomme certainly does not possess. As

one reads his book, one begins to doubt whether he has ever stopped to think what he means by a "principle." He refers to Austin with a knowing air; but on pp. 24-27 he uses the term "sanction" some ten times in a way that might make Austin turn in his grave, and which is quite indefensible. His style is cumbersome and frequently incorrect. The meaning of such phrases as these, "An area formed accidentally by the legislative movements of water supply" (p. 13), "a standard which should be used as a conforming test" (p. 142), can be readily guessed; but continual guessing is tiring. One or two general ideas are indeed discernible, especially this, that when new governmental powers are to be conferred on any local authority, it would be better to attach them to the old historical units, the county, the borough, and the parish, than to create brand-new institutions. That this would be wise to-day we may well allow. But it does not occur to the author, in the midst of his distress at the different policy pursued by the English Parliament during the last couple of centuries, to ask whether that policy may not have had some justification in the facts of rural life as they were then. Mr. Gomme's implied argument, that certain things are desirable because something that looks like them is to be found among our medieval ancestors, is one we had hoped had gone out of fashion.

BOOKS OF THE WEEK.

HENRY HOLT & CO.,

29 W. 23D ST., NEW YORK,
PUBLISH TO-DAY:

Tourgueneff and His French Circle.

Edited by R. HALPERIN KAMENKY. Translated by ERNEST S. ARNOLD. 12mo, \$2.50.
Letters written by Tourgueneff to Mme. Viardot, George Sand, St.-Beuve, Gautier, Flaubert, Taine, Renan, Zola, Maupassant, and others, beginning with his first literary appearances and only ending with his death.

Law and Politics in the Middle Ages.

By EDWARD JENES, Lecturer at Balliol College, Oxford. 8vo, \$2.75, net.
A volume that worthily supplements Maine's Ancient Law.

A Primer of the Bible.

By PROF. W. H. BARNETT of Hackney College, London. 12mo, \$1. net.
A compact and helpful manual for the study of the Bible in the light of contemporary criticism.

THEY HAVE RECENTLY PUBLISHED Pancoast's Introduction to American Literature.

With 18 portraits, chronological tables, and "study lists" for collateral reading. 16mo, \$1. net.

Prof. J. M. Hart of Cornell:—"The several chapters are well proportioned, and the tone of the entire work is one of kindly and enlightened sympathy. The book must become an admirable manual for school of a higher grade, as well as for the general reader."

A Book of Verses for Children.

Compiled by EDWARD V. LUCAS. With covers and title-page in colors. 12mo, \$2.00.
This book will please older readers, too.
"We know of no other anthology for children so complete and well arranged."—The Critic.
"An extremely pretty volume. His selection is marked by an extraordinary diversity, and on the whole the diversity is admirable. His understanding has been so excellently realized, in so unimpeachable a spirit and with such unerring discernment and taste, we would be brief in exercising our sad prerogative of hinting a doubt in one or two matters."—Literature.

The Pamphlet Library.

Under the general editorship of ARTHUR WAUGH. 12mo.
POLITICAL PAMPHLETS. By Burke, Steele, Saxby, Halifax, Arbuthnot, Swift, Bolingbroke, and "Junius." Ed. by A. F. POLLARD. 1 vol. \$1.75.
LITERARY PAMPHLETS, chiefly relating to poetry. By Sidney, Daniel, Swift, Milton, Pope, Addison, Byron, Wordsworth, Bowles, etc. Edited by ELBERT HARRIS. 2 vols. \$2.00.

The Building of the British Empire.

1558-1895. The Story of England's Growth from Elizabeth to Victoria. By ALFRED THOMAS STORRY, author of "The Life of John Lubbock," etc. In 2 vols. Nos 50 and 51 in the "Story of the Nations Series." With over 100 Portraits and Illustrations from contemporary prints. Large 12mo, cloth, each \$1.50; half leather, gilt top, each \$1.75.

The Story of Modern France.

1789-1895. By ANDRÉ LEBON. Member of the Chamber of Deputies. No. 49 in the "Story of the Nations Series." Fully illustrated. Large 12mo, cloth, \$1.50; half leather, gilt top, \$1.75.

G. P. PUTNAM'S SONS, NEW YORK & LONDON.

NOW READY.

New Novel by Stanley J. Weyman.

SHREWSBURY

By STANLEY J. WEYMAN,

Author of "A Gentleman of France," "Under the Red Robe," etc., etc.

With 24 Illustrations by Claude A. Shepperson. Crown 8vo, cloth, ornamental, \$1.50.

NEW YORK, THURSDAY, FEBRUARY 24, 1898.

The Week.

The admirable conduct of the Government officials at Washington renders the course of the sensational press in this city the more shameful by contrast. Nothing so disgraceful as the behavior of two of these newspapers in the past week has ever been known in the history of American journalism. Gross misrepresentation of the facts, deliberate invention of tales calculated to excite the public, and wanton recklessness in the construction of headlines which outdid even these inventions, have combined to make the issues of the most widely circulated newspapers firebrands scattered broadcast throughout the community. It speaks well for the good sense of the masses that so little effect has been produced by all this stuff. It is evident that a large proportion of the public refuses to take the sensational newspapers seriously, and reads them only from motives of curiosity. At the same time there is abundant evidence that thousands of people are affected by such announcements in print as "War Sure," and that this sort of recklessness disturbs the public mind unnecessarily. It is a crying shame that men should work such mischief simply in order to sell more papers; and the first impulse of every right-minded person is to wish that journalism of this sort might be suppressed by the hand of the law.

We are in receipt of many letters asking whether nothing can be done to this end. Frankly, we do not see that anything can be done. The trouble lies in the condition of our society. Suppose we had a law declaring such articles criminal libel, it would have to be executed through jury trials. These trials would last for months, and would rival the Dreyfus trial in blatherskite and absurdity, and act as a tremendous advertisement for the wretched sheets which caused them. Of course such libels as they have been publishing on the Spanish Government and people ought to be criminal offences, but we have long ceased to regard printed stuff as criminal unless it is obscene. The people who buy such papers are really *participes criminis*. In the well-governed and highly civilized communities of the future, they will be arrested at the news-stands and locked up; but we are far from that. The reason why such journals lie is that it pays to lie; or, in other words, this is the very reason for which they are silly and scandalous and indecent. They supply a want of a de-

moralized public. Moreover, such journals are almost always in favor of war, because war affords unusual opportunities for lying and sensation. That war involves much suffering and loss does not matter. Their business is not to promote public happiness or morality, but "to sell the paper." And it must be admitted, they find in the Jingo spirit a great deal of encouragement for their wretched business. Dr. Huntington of Grace Church, in his sermon on Sunday, struck a deadly blow at this spirit. After depicting the results of the explosion which is filling the land with horror and mourning, the fearful loss of life, the sufferings of the wounded, and so on, he turned on our sorrow, and said, had we done intentionally this very thing to a Spanish ship in time of war, and caused just this loss of life, just this agony of the wounded, the land would be filled with rejoicing. Such is the contradictory nature of man!

The sympathy manifested by the public authorities and citizens of Havana at the funeral of the dead sailors of the *Maine* ought to soften some asperities on this side of the Gulf Stream. The Cuban junta and press will perhaps try to make it appear that this sympathy was perfunctory and not genuine. Such a theory is not compatible with Capt. Sigsbee's dispatch. A whole population never joins in a perfunctory act. Capt. Sigsbee says that the funeral was attended not merely by those in official life, but by a vast concourse of people. These people did not merely stand on the street while the funeral procession passed, but escorted it to the cemetery where the remains of our brave men were buried in ground presented to us as a gift. This was a touching act of kindness. It was all that the people of Havana could do. It was all that we could do under similar circumstances for the dead sailors of the most friendly nation on earth.

One member of the House naval committee admits that it might be well to have a war if only for the purpose of finding out definitely how a modern war-ship will behave in battle. Much was hoped from the naval conflict of the Chinese and Japanese, but the battle of the Yalu, though a most satisfactory "hell of death and destruction," left an unpleasant number of uncertainties in our best naval minds. Will an iron-clad pierced by a torpedo sink in two minutes or in ten? Is the store of high explosives on board more dangerous to the crew than to the enemy? These and many other doubts can be resolved only by an actual war, and, as this Congress-

man says, we shall soon be driven to a war if only to relieve naval constructors from their harrowing uncertainties. It would be a great boon to foreign navies, too. They are far from clear what will happen to a battle-ship in action. If we go to war in order to show them, they will add to their telegrams of condolence at the sinking of our ships with all on board expressions of heartfelt gratitude for having demonstrated just how the thing was done.

The Hawaiian scheme of annexation was sure from the first to be opposed by nearly all the Democrats in the Senate. It is now openly fought by such prominent Republican Senators as Mr. Morrill of Vermont and Mr. Gear of Iowa. These Senators are sustained by the chief organs of their party in their respective States, while all through the North the drift of opinion in the Republican press sets more and more strongly against the project week by week. As public sentiment thus pronounces against annexation, those Republican Senators who had no strong convictions either way at first, naturally incline to oppose a measure which must seriously injure the party if it shall be carried through. The *Times* made the gratifying announcement on Monday, upon the authority of a Senator who opposes annexation, that not less than forty Senators can be depended upon to vote against the treaty; which leaves but fifty favoring the treaty in a full Senate—ten less than the constitutional two-thirds required for its ratification. The treaty is therefore dead, and the *Times* also hears that the annexationists will not press the Morgan scheme to annex the islands by bill or resolution, as they foresee defeat there also. There will doubtless be more or less spluttering yet, but all the indications sustain the view that annexation is already practically defeated.

The exhibition of Tammany official manners which the Mayor gave us when the Captain of the *Viscaya* called at the city hall on Monday may serve the useful purpose of bringing more clearly to our minds the true nature of the Charter Birth anniversary which we are asked to celebrate. Official manners of this extraordinary kind were surely never seen before in the Chief Executive of a great city, and they came in here with our new charter. At least they are an improvement upon those which the Mayor gave us during the first few weeks of his term, and there is reason for thankfulness, possibly, in the fact that he was content to receive Capt. Eulate in boorish silence. He might

have abused and bullied him for his impudence in calling, as if he were a mere reformer or Mugwump. The chairman's idea that a Birth Celebration will boom our city by compelling the newspapers of foreign countries to devote more of their space to our affairs, is likely to be realized if the Mayor continues to receive foreign visitors in this striking style. Special correspondents will be sent here presently from all parts of the world to study us as a curiosity of modern civilization, and in time it may be as perilous for an obnoxious foreign visitor to enter the city hall as it was for Stanley to penetrate Africa.

It came out very clearly at Thursday's meeting of the committee which has been invited by the Mayor to organize a Charter Birth Celebration, that nobody outside Tammany circles cares to take part in it. Mr. Croker was not merely the central figure at the meeting, surrounded by his favorites, but actually directed its proceedings from the front bench, much as he directs those of regular Tammany gatherings. All the leading professional and business representatives of the city, who had been invited to attend, failed to appear, and only two of the many ex-Mayors, both Tammany men, were present. One of those, Mr. Gilroy, moved to make Mayor Van Wyck honorary President of the celebration, and this was carried. The chairman, Mr. Washington, repeated his very striking observations in regard to the amount of space which foreign newspapers would be compelled to give to the affair, and the meeting adjourned amid much genuine Tammany enthusiasm. Nothing was said, of course, about the leading personages who are to perform the proposed "literary exercises" which are to constitute the chief feature of the celebration, but we venture to suggest to Mr. Croker that the orator of the day be the Hon. Thomas F. Grady. We are confident that this will meet Mr. Croker's approval, for only a short time ago Mr. Scannell said of the relations of the two: "The Senator is highly prized by Mr. Croker for his learning, ability, eloquence, and familiarity with practical politics. The Senator could undoubtedly have any position he wanted in the city government, but his services at Albany are regarded by Mr. Croker as too valuable to be lost for this time. Great head the Senator has got, ain't he? Ain't he an interesting talker! You can't mention any subject that the Senator ain't up on, and can't talk about by the hour, while you can't help listening."

The figures of the Immigration Bureau for the last six months of 1897 are calculated to strengthen the growing opposition in the House to the Senate bill for the restriction of immigration by the establishment of an educational test. Such

a test has been urged chiefly as a means of protection against the hordes of illiterates that come from Italy, Russia, Hungary, Poland, and other nations where the masses are very ignorant. But during the last half of 1897 there came from Italy only 20,616 persons of all ages, from Russia 12,323, from Hungary 5,885, and from Poland 1,737, while a considerable proportion of these would not be affected by the reading test because too young for its application, or excepted from its operation by other provisions of the bill. This seems too small a number of people to worry over, especially as the immigration from each of these four countries except Poland was smaller during the last half of 1897 than in the same period of 1896. Indeed, "McKinley prosperity" is not yet reflected in the tide of immigration, the total number of arrivals for the six months of 1897 being but 92,492, against 100,349 in the corresponding months of 1896.

The official statement of this country's foreign trade in January marks a continuance of all the noteworthy phenomena which have distinguished our commerce during the last two seasons. Exports of merchandise from the United States last month were again larger than in any corresponding period in our history, and exceeded by \$14,537,567 the January shipments of last year. On the other hand, the month's import of merchandise was the smallest for January in at least a dozen years, and less by ten to twenty-five million dollars than the imports of the same month in years such as 1892 and 1893. This is in line with the tendency of this class of exports during the last five years, as is shown in the comparative table herewith subjoined:

Calendar year	Export of manufactures
1897	\$379,616,896
1896	253,681,541
1895	301,153,663
1894	177,796,069
1893	177,347,876
1892	152,397,302

It may be added that the proportion of manufactured exports to the total export trade was in 1892 only 16½ per cent., whereas in 1897, with all the increase in the cereal shipments, it had risen to 25½ per cent. Numerous inferences, more or less conflicting, have been drawn from this extraordinary expansion. Dingley and his fellow-philosophers are fond of arguing that if such a movement can continue with a new and high protective-tariff law in force, then surely there can be no ground for objecting to protective tariffs because of their ill effects on foreign trade. But we suspect that people who wish to grasp the true significance of the export trade in manufactures, in its relation to protective tariffs, will hardly stop at this triumphant flash of argument.

When Milford W. Howard of Alabama

came to Congress, he did not know that his bank deposit in Washington could be attached to satisfy his debts. The courts of the District of Columbia have, however, decided that this process may be employed against him as a non-resident, and that as a member of Congress he is not privileged from suit while in attendance upon its sessions. Nearly twenty years ago the Supreme Court of the District of Columbia held, in an action against Representative Durrant of Texas, that members of Congress are at all times liable to service of process, just as other individuals are, though during the sessions, and while going to and from them, they are privileged from arrest in any civil action. The Court of Appeals of the District of Columbia, referring to this carefully considered decision, maintains that it is sound in principle, and that it is in accord with the weight of judicial opinion even in England. It admits that the tribunals of the various States have not been uniform in their decisions as respects the privileges of the members of the Legislature, but contends that in considering the privileges of members of Congress, only the Constitution of the United States can be looked to. That instrument declares that these officers shall be privileged from arrest during their attendance at the session and in going to and returning from the same, in all cases except treason, felony, and breach of the peace. This abridges even the exemption from arrest, the intent of the framers being, as Jefferson says, that "the laws shall bind equally on all, and especially that those who make them shall not exempt themselves from their operation." In England these privileges were strained to such intolerable lengths that the courts were compelled to interfere, and finally the Parliament, early in the reign of George III., obviated the necessity of this interference by enacting a statute expressly abolishing the exemption of its members from the service of civil process unaccompanied by arrest. Unfortunately, in this country some judges were misled by the text in the earliest editions of Blackstone, and their erroneous decisions have been blindly followed in other cases.

There is some quite natural irritation at Albany over Gov. Black's open assumption of the right to exercise a controlling influence over legislation. He not only serves notice upon the Legislature concerning special measures which he wishes to have passed, but also declares in advance his determination not to approve others which he dislikes, provided they are passed. Members of the Legislature denounce this as an assumption of legislative powers which is unwarranted in the executive, and it is difficult to dispute that contention. The Governor began this practice last year when he forced the passage of his

starchless civil-service law. He has enlarged upon it this year by calling conferences of the members to hear his views on a primary bill and other measures, in order that they may know what his wishes are and obey them. Members who have not objected when Platt did this, do object when the Governor does it, possibly on the ground that two bosses are more than they ought to be called upon to endure. The remedy is in their own hands. They have only to refuse to obey, and the system will break down. The difficulty with that course is that their "local bills" are at the Governor's mercy, and will break down also if he is defied.

Town elections were held in five more counties in this State last week, and showed the same tendency as the similar ones in sixteen counties the week before. The Democrats gained six Supervisors, as against a gain of only two for the Republicans, and in the twenty-one counties which have now held town elections, the total Democratic gain is thirty-nine, while the Republicans have gained but three. It is impossible to explain so striking a change on any other theory than dissatisfaction with the Republican party as it is represented by the Platt machine. That such dissatisfaction should find general expression in the rural districts of the State is highly significant, because it is those districts upon which the Republican boss always relies for support when there is a revolt against his rule in the cities.

The local election in Philadelphia last week illustrated the ease with which the machines of the two parties can combine their forces to defeat independent movements. Two magistrates were to be chosen, but the voter could cast only one vote for that office. The Municipal League placed a candidate in the field, and made so active a canvass that the professional politicians on both sides feared his success. The Republican managers were as much opposed to such a result as the Democratic, and resolved to prevent it by insuring the election of the candidate of the other machine. Some hundreds of Republicans in each ward, therefore, evidently by concerted action, cast their votes, not for the Republican candidate, who was sure to succeed in any case, but for the Democratic nominee. The Republican managers evidently supposed that they had arranged for enough such votes to do the business, but they figured a little too closely, and the independent nominee slipped in by a small plurality. For Tax Receiver the League candidate ran much further ahead of the Democratic, but he was overwhelmingly defeated by the Republican nominee. The only encouragement to be drawn from the results is suggested by the *Ledger*, which points

out that the Democratic organization in Philadelphia for several years has been utterly useless as a restraint upon the dominant party, and considers it "a matter of congratulation that in the place of this discredited organization there has arisen a real minority party, which, though not yet strong enough to cope with the office-holders and place-men, is, nevertheless, the nucleus of a minority party that in better days may be summoned by the people to take charge of the city government."

Late news from Nicaragua brings discouraging accounts of the progress of the survey for the canal. A letter in the *Tribune*, dated San Carlos, January 23, says that Mr. Brown's party began work on the 7th and found great difficulty in establishing a base-line. After cutting a pathway through wood and swamp for a mile it was found impossible to set up a transit. "The men sank to their armpits in the mire without getting solid ground under their feet." Eventually a base-line was established, but there was no open country to work in. "Every inch of the line had to be cut." Just as they were ready to begin work from the base-line a difficulty of a totally different kind was met, Mr. Brown being recalled to the United States as a witness in the court-martial of Capt. Carter at Savannah. The remainder of the surveying party are going ahead as well as they can, but they have found that the appropriation for the work is much too small. Capt. Ludlow, who made the previous report—the one that Senator Morgan so flouted in the debate a year or more ago—had said that at least \$350,000 would be needed to make a proper survey. Congress appropriated only \$150,000. But, according to the *Tribune's* letter, the work will cost \$500,000, judging from the scale of expense already incurred. There is a humorous side to the survey, according to this writer, growing out of the prepossessions of different members of the party touching the amount of rainfall in Nicaragua, which is a matter of prime importance. Although only a very little progress has been made, enough has been done to show that the passage of the Morgan bill in the last Congress would have involved the Government in an untold expense, without any certainty of ever getting the canal built at any cost.

While Brother Henry is striving desperately to beg or borrow coal enough to get his ships to Kiao-Chau, the German newspapers are poking sly fun at him and Consecrated William. Of course, they cannot do it openly; there are jails as well as judges in Berlin. But they have taken to studying the Chinese classics with prodigious zeal. What can be more natural or praiseworthy? If the Germans are going to colonize China,

it is absolutely necessary for them to know the ideas of the Chinese people. So the German editors have been going deep into Confucius, and they solemnly bring out for the edification of their readers such solid chunks of wisdom from the philosopher as these:

"A man of weight blushes in fear at the thought that the echo of his words may be louder than the fame of his deeds.

"The wise man is overcome with shame at the loud and extravagant clamor of words, at vain and boastful behavior, and at exaggerated demands for slavish obedience.

"Noisy pageants, pomp which has only a fleeting influence upon the senses, and scenic effects, have never contributed much to the happiness of nations."

Of course, nobody mentions the word Kiel, or says anything about the brag-gart speeches there or the ostentatious departure for China; it is all a simple-minded citation of Confucius. But one can imagine the chuckling.

What Zola's trial is bringing out most distinctly is that there is something concealed, and something which the military authorities wish to keep concealed, for some unrevealed reason. The plea that you must rely, as to this reason, on the honor of the military authorities, would probably be triumphant but for the fact that a man's liberty and career are involved. If it were a good reason in this case, it would be a good defence for secret trials, in all cases in which the judge's character stood high. Zola's position is that no judges, military or civil, stand high enough to try a man in secret, or to keep secret their reasons for condemning him; and the more he can keep this proposition before the public, the more ground he gains. But he is fighting against one of the most deeply rooted principles of French jurisprudence—the principle that an accused man is probably guilty. The old ante-Revolutionary parlements were led by this into dreadful atrocities, and it more than aught else brought them under Voltaire's lash in the last century. The Revolution brought about great changes in the judicial machinery, but it brought little in the character of criminal prosecution, beyond abolishing torture and breaking on the wheel. It left the popular mind still under the hideous theory that when a man falls into the hands of justice, the public has no further concern with him, and that whatever the judges do with him is probably right. In fact, the French penal system has undergone no real reform since 1789. It is only within a month or two that the complete seclusion and secret preliminary examination of accused persons before the "juges d'instruction" were abolished. So that Zola is really fighting for more than Dreyfus. He is fighting, whether he is conscious of it or not, for every man's right to public trial. After this we doubt if any man, "militaire" or "pékin," will ever lose his civil rights through secret inquiry.

A TEST OF NATIONAL CHARACTER.

The bearing of a man in the presence of a startling and crushing calamity yields a searching test of his character, and the same is true of a nation. If reason prevails over hysteric alarms, if dignity and coolness and fortitude in disaster keep down unmanly cries and panic fear, the mental and moral stuff is shown to be sound, and the purpose firm and resolute will shine out the nobler for the trial. Such a trying of our national temper has come to us in the mysterious and appalling loss of the *Maine* in Havana harbor. All the antecedent circumstances were of a sort to make one dread a wild outburst of blind rage in Washington and throughout the country; but happily the event has disappointed both those who dreaded and those who desired and labored for such an outbreak.

To Capt. Sigsbee's calm dispatch are we indebted more than to any other one thing for the general disposition to wait and hear before striking. His situation was excruciatingly painful, but he kept his head. He was telegraphing not only under the first keen sense of disaster, not only conscious that he stood responsible for the loss of his ship and his crew until inquiry should relieve him of all suspicion of negligence, but fully aware that one word, one hint, from him would set this country aflame. The self-possession and the good judgment of his dispatch were, under these circumstances, simply admirable. With the voice of reason heard so audibly from him, it was easier for it to make itself heard in Washington and throughout the land. We owe this cool-headed officer much. He deserves well of his country, and is entitled to adopt the motto, *Sævis tranquillus in undis*.

And we must say that the cabinet and (as a body) Congress have borne themselves well. They have acted only as they should have done; but we have heard too much harum-scarum talk from our public men, and seen them too often fall into a frenzy, in connection with foreign complications, not to be duly grateful when they conduct themselves with the dignity of rational beings. The thing is the more gratifying because we have had six or eight years of constant Jingo excitement to make our national temper irritable and suspicious. We have had dark plots and designs of foreign nations held up before us as bogies. National good faith, the sincerity of a desire for peace, the sanctity of treaties, the strength of diplomatic methods and moral forces—all have been scouted as the delusions of lethargic and luxury-loving citizens or the inventions of malicious enemies. We have had prayers offered in Congress that we might be "quick to resent insults." A hectoring, jealous, fault-finding, touchy, and quarrelsome spirit has been steadily preached to us,

by many powerful organs of public opinion, as the true grandeur of a nation; and it would not have been strange if such a dramatic occurrence as the destruction of the *Maine* had been chosen as the occasion for great fuming and posturing and crying to high heaven at Washington.

But we are glad and proud to say that reason asserted herself. The danger was that something rash would be done in the first confused moments. When once we began to think quietly about the affair, the rest was easy. It was at once evident that the chances were enormously in favor of the theory that the blowing up of the *Maine* was due to accident. But suppose it were shown that she was destroyed by foul play, by treachery from within or by secret attack from without—what would that prove? That we should instantly declare war against Spain? By no means. It is simply inconceivable that the Spanish authorities in Cuba, high or low, could have countenanced any plot to destroy the *Maine*. Make them out as wicked as you please, they are not lunatics; and official connivance in torpedoing the *Maine*, or in firing a mine under her, would have been an act of madness far more fatal to Spain than it could possibly be to this country. The only possible conclusion, if it should appear that the *Maine* was blown up from the outside, would be that the work was done by some irresponsible miscreant for whose actions no country, no officer, could be held accountable. The perception of this truth no doubt restrained the authorities at Washington from taking any rash step or even forming any hasty conclusion.

We think a slightly sobering effect on the professional Jingoism may be observed. Senator Morgan, it is true, was hot for having two battle-ships ordered at once by joint resolution to take the place of the *Maine*. We must show the world, he said (using a fine image to convey his idea that the country is best thought of as a devil-fish), that when one of our tentacles is cut off, two new ones immediately grow in its place. Later, Senator Mason of Illinois made a degrading spectacle of himself, by insinuating that an investigation undertaken by the naval authorities would not be a fair and truthful one—that it would conceal facts in order to shield somebody, presumably the Spanish Government or some Spaniard, from punishment for the awful crime of blowing up an American ship in time of peace. But on the whole this tragedy of the navy in time of peace has made Congressmen pause and think what might happen in war. A foreign war, especially a naval war, has been pictured as such a jaunty, holiday affair for national picnic-makers, that this stroke of the grim reality, this sudden eruption of the volcano, which, in Senator Hale's phrase, a modern war-ship is, has distinctly appeased

the Jingo appetite for gleefully fighting all creation.

The first effect, then, of this shocking calamity upon the nation has been salutary. It has discovered in us a reserve of sanity, of calmness, of poise and weight, which is worth more than all our navy. If we are able to display these qualities throughout, the world will think better of us, and our own self-respect will be heightened; and, despite the Jingoism, it is better to have foreign nations admire us than dread us, better to be conscious of strength of character than of strength of muscle.

WONDERFUL LAWMAKING.

Senator Ellsworth has had some difficulty in inducing anybody to take a serious view of his bill "to prohibit and punish the publication and dissemination of licentious, indecent, and degrading papers," but he found one man who was able to do so at a hearing last week upon the measure, and the result is likely to prejudice him against further treatment of that sort. Mr. Ellsworth, as chairman of the Senate judiciary committee, presided at the hearing, impressively sustained by Senator Lexow as chief member of it. Nobody appeared in defence of the measure, and the chief argument against it was made by ex-Congressman Franklin Bartlett of this city. Mr. Bartlett took up the bill seriously, as a measure which had been conceived in intelligence and designed to constitute real law, though this is a view of it which few persons who have ever given thought to the subject have found themselves able to take. Indeed, we doubt very much if Mr. Ellsworth was able to take it after Mr. Bartlett had concluded.

Mr. Bartlett grouped his objections under three heads, first, that the legislation proposed is unnecessary; second, that it violates every principle of natural justice; and third, that it is unconstitutional and void, and hence beyond the power of the Legislature to enact into binding law. Every one of these objections he sustained with such an overwhelming array of fact and argument that even Ellsworth was unable to defend his bill except by saying that its intention was different from what its text implied. Mr. Bartlett showed, in reference to the first objection, that there were at present in the penal code ample provisions against obscene literature and libel. One would imagine, he said, from reading the bill, "that we had no libel law on our statute-books, no law against obscene literature." Ellsworth evidently imagined as much, for on no other theory can the composition of his bill be explained. Mr. Bartlett said he had been asked not to oppose the bill because it was designed especially to apply to prurient publications; and then he proceeded to show, its

author that these publications were already forbidden by the penal code. He made it very plain that if this was the object of the bill, there was no excuse for its existence.

He then went on to prove that it was aimed at the natural liberty of the citizen by imposing upon the business of publishing a newspaper such obligations and penalties as would amount to prohibition in case the courts were to sustain them. In the first place, "the main crime is to have anything whatsoever to do with the printing or publishing of a newspaper—not that it is corrupt, degraded, depraved, or indecent, but that by some construction in the minds of some jury somewhere in one of the sixty counties of the State it can be held to have a tendency to corrupt the morals of some one person, or to degrade that person, or to injure him." Upon conviction of this crime, the offender can be punished by a fine of not more than \$1,000, or imprisonment for not more than a year, or both fine and imprisonment. For a second offence, he may be imprisoned for five years, and his paper suppressed for all time, the use of the name even for a new paper being made a crime. But this was not enough to satisfy Ellsworth. Said Mr. Bartlett:

"That was not sufficiently drastic. That doesn't strike the press of the State enough, so the second section goes on to create an absolutely new crime, unheard of in the annals of any State or in the records of any Legislature. And that is what? It makes it a misdemeanor to fail to publish the name of any one connected with the newspaper. It applies to every paper sold or circulated throughout the State of New York. The first provision declares that every paper circulated in this State shall contain a printed statement setting forth the names of every owner, proprietor, publisher, and editor of such paper; and if it fails to do this, every person connected with the paper is guilty of a misdemeanor."

These are only sample provisions of the bill. There are others equally ridiculous. Mr. Bartlett went to the trouble of quoting the opinions of the founders of the republic, Madison and Hamilton, and others on the right of freedom of the citizen and the press, but it was a sheer waste of time. If Ellsworth never heard of them before, it is quite useless to call his attention to them now.

Mr. Bartlett's argument that the bill is clearly unconstitutional was as unanswerable as that which he made on the other two points. There is not the slightest chance that, if made a law, the bill would be sustained by the courts. Neither is there the slightest chance that a jury could be empanelled that would bring in a verdict under it if it were to be put in force. It is a wild absurdity from beginning to end. What its author had in mind when he was drafting it we cannot imagine. Possibly he thought he was pleasing Mr. Platt and Mr. Croker, both of whom are seriously troubled by the license of the press and its treatment of great men. Ellsworth tried to make some response to Mr. Bartlett's arguments, but his observations reveal-

ed, as his bill does, dense ignorance of the whole field of libel law and the purpose of such law. The gifted Lexow sought to help him out, but with indifferent success. When Mr. Bartlett said that the bill erred in attempting to establish a general crime instead of a specific one, and declared that "you cannot punish people for general badness," Lexow asked, "Why is it not right to punish a man who carries on the business of corrupting morals?" Mr. Bartlett's reply quieted the great man permanently: "I would do so, but you must try him for a specific offence."

The chief value of this incident is the revelation which it makes of the quality of mind which the Platt system of government brings to the front in the Legislature. Ellsworth and Lexow are the legal luminaries of the Senate, the first members of its judiciary committee. Their libel bill is a fair sample of the kind of law they would give us if they had their unimpeded way. They draft new measures without any regard for, apparently without any knowledge of, existing statute or fundamental law, and propose to "jam" them through on the simple, elementary principle that "the old man wants them." If we had not a constitution and courts, existence in the State would soon become intolerable, for we should have no law or government save what the boss gave us.

THE CITIZENS' UNION.

The "committee on permanent organization" of the Citizens' Union has made its report. It recommends, in brief, a central committee, a district association, and a central committee for the boroughs, composed of delegates from each borough. Membership in the district associations is to be obtained by signing a declaration approving of the principles of the Citizens' Union, and expressing an intention to act with it in city affairs, but reserving freedom of action in national and State politics.

The report states that the committee had to choose between imitation of the Democratic and Republican machines, or a campaign of political education simply, through such an organization as it recommends:

"The supporters of this view pointed out that it would be the height of unwisdom for the Citizens' Union to devise a complete scheme of political organization, for purposes of show or of symmetry, that was in advance of local sentiment or that local sentiment could not support; that neighborhood sentiment in favor of the principles and policies of the Union must first be stimulated and allowed to develop naturally, in its own way, about the personalities of its own voluntarily chosen and trusted leaders; that in the immediate future the opportunities for political action are very few and relatively unimportant, while the opportunities for a campaign of education are constant and obvious; that, therefore, a simple form of organization is all that is required at the moment, one that will preserve the continuity and maintain the prestige of the campaign organization of 1897, and that will also inspire and guide the de-

velopment of neighborhood sentiment in all parts of the city, and provide for the more formal organization of the supporters of the Union for campaigning purposes as soon as local sentiment will fully warrant and support such further organization."

The wisdom of this must be apparent to every one who has any familiarity with the history of politics in this city. The voters have to be taught a good many things before there is any use in enrolling them. They have to be taught in the first place that the city has interests of its own, separate from, and in many cases to the residents, higher than, those of the State or nation, and that these interests cannot be properly cared for without a mental discrimination on the part of the voters. The general diffusion of this view is going to be the hardest part of the reform work, because it is the view against which the machines of both parties have most sedulously contended. Their principal effort at every election has been to make the city appear a mere counter in the federal game, and its tickets merely auxiliaries to the Presidential contest. They had been so successful in this that they had almost until last year produced among the people of the city a sort of incapacity to conceive of the city as a body corporate, or to understand the relation of its government to the primary conveniences of life. Tens of thousands went to the polls every year, indifferent to the effect of their vote on health, education, and police, or local taxation, as long as it promised to put a tariff or an anti-tariff man in the Presidential chair. To break up this habit of mind is far more important than the creation of a good nominating machine, because, until it is broken up, it makes little difference how we nominate.

We are glad to see that the committee did not make enrolment a leading feature in their plan. This passion for "enrolment" is one of the relics of the old party organization, the least adapted to any new order. It was undoubtedly intended in its origin to put on record in black and white the names of the persons whose fidelity to the party entitled them to an office or favors, when the party got into power. At all events, this is what it has become in the hands of the Boys of both parties. Originally it may have been designed as a list of the genuine and honest party men. It has for more than a generation ceased to be anything of the kind. Not one-tenth of those who support either party in this city ever "enroll." How many of those who supported Mr. Low, for instance, wanted to take part in nominations? Not 2 per cent. What they wanted was good candidates to vote for, to be supplied by some honest body, like the central committee. Supply such a body, and you need not drag the citizen from his fireside to put his name down anywhere or to attend meetings. By no endeavor will it be possible to get meetings, whether district associations,

good-government clubs, or others, in a great city, attended by the bulk of the voters continuously for any lengthened period. They will read your papers, and give you their adhesion, but they will not leave their homes to listen to the harangues of the somewhat dull persons who are apt to be the principal speakers at such places. Therefore, we believe the committee of the Union is wise in confining its organization to two good committees, and as many district associations as naturally come into existence, but we wish we could see why a man should "enroll" or sign "declarations" in order to join the association. The declaration will not bind him to vote the committee's ticket, and if this ticket is ever to win, not one in twenty of those who vote for it will ever have gone to a meeting or signed any pledge.

All our reform organizations shudder a little over the idea of "raising a standard to which the wise and honest can repair," to use Washington's phrase, and trusting simply to goodness to bring the good men to its support. They must have a ponderous machine, needing a whole army of "workers" to keep it going, before they can make nominations, and the machine is so troublesome that little by little the working drops into the hands of a few, who attend to it for want of any honest calling. The Low movement is a striking illustration of the readiness of the community for something new in the mode of selecting candidates. It indicated clearly the line on which any organization which is to be successful in New York must travel. The object it must aim at is the selection of candidates so plainly good that people will vote for them without putting down their names anywhere, or interrupting their daily occupations. Reformers must remember that government was never meant to be an absorbing occupation. It is a human convenience, like clothes or tools. We have made it very much what travelling by stage was said to be in parts of the South before the war. You paid high for a seat and then started on the journey on foot, carrying a fence-rail to prise the coach out of the mud when it got stuck.

THE ANGLO-FRENCH IMBROGLIO.

It is not easy to understand the proceedings of the French in Africa. There are two opinions about them current in England. One is that the French Ministry desires to keep a foreign question going, without bringing on a crisis, in order, if possible, to divert public attention from internal troubles, in reliance on two things—Lord Salisbury's timidity and the Queen's reluctance to have her closing years troubled by a great war. The other is that the French really wish to fight the most unpopular Power in Europe, and the one with which

complications would be least likely to bring them into collision with the only Power they really dread—that is, Germany. Germany would probably witness an Anglo-French conflict with pleasure, and could be relied on now, as she could not have been even ten years ago, to keep her hands off.

There are evidently two currents of opinion, too, in the British cabinet. Lord Salisbury, as always, shrinks from war; but the Chancellor of the Exchequer is evidently full of fight, and so is Mr. Chamberlain, within whose jurisdiction the French trouble clearly comes. Chamberlain has during the past twenty years produced a great many projects which have come to nothing. He probably never was so popular as during the short period when there seemed some likelihood of trouble with Paul Krüger and with Germany. At one time it seemed likely he would be able to parade Paul in triumph, fairly tamed and subjugated, through London streets; but Paul was too shrewd for him, and would not come, and produced those dreadful telegrams. The subsequent African inquiry did not turn out well either. Nothing was proved against Mr. Chamberlain, but nothing was proved for him, and his certificate of character for Rhodes did not give satisfaction to moralists. The scheme of subsidies to the West India sugar men, also, does not please British taxpayers. They may have to submit to it, but no one will win popularity by it. As a specimen of the way to "improve neglected estates," it does not seem worthy of as clever a man as Mr. Chamberlain.

Under these circumstances the Colonial Secretary would, of course, be glad of anything which would again make the Colonial Office the centre of excitement and intelligence, as in the old Krüger days, and Sir Michael Hicks-Beach, as a Gloucester squire of the olden time, probably inherits a strong disinclination to "stand any nonsense" from Frenchmen. The French have not been lucky in their colonial wars. This fight for colonies was begun in India more than a century ago, and was continued as a fight for America, and in both cases with unfortunate results. The fight for Africa would probably end in the same way. Upon the merits of the African dispute it is not easy to pass, so uncertain are boundaries in a wilderness, and so vague a thing is a "sphere of influence." Each Power is probably ready to take and keep whatever the other is willing to yield, but in any resort to force, the French would probably be promptly cut off from all succor by the British maritime superiority, if anything can be confidently asserted about the future of naval warfare.

Nobody seems able to foresee how the next naval war will go. If we rely on ingenuity of construction and thickness

of armor, we are told that a single shot may dislocate the elaborate machinery of the costliest ship-of-war and make her comparatively helpless in the hands of the best of sailors. If we rely on seamanship, we are told that the result of a naval fight does not depend any longer on seamanship, but on manœuvring, and that all sailors can do is to watch and wait until engineers bring them into a good position to get a shot at the enemy. So there may be said to be as yet no authorities on naval warfare. The past furnishes no lessons about it. What seems most likely to the unprofessional eye, is that there will be a great deal of "going to the bottom," and that the Power which has most ships is most likely to be the victor at sea. But the old Napoleonic scheme of throwing a large force on the English shores might to-day be revived by a Power in command of a large land force, with chances in its favor such as Napoleon never had. At the same time it must be remembered that warlike and fond of war as the French are, not since Rocroi have the French arms enjoyed any considerable success, except under an Italian of genius. Under Louis XIV., even, they were treated to a great deal of what the late Gen. Kearney called "beautiful fighting," yet his wars left France unsuccessful and impoverished. His successor was, as a military man, unfortunate, except at Fontenoy; and after the Revolution, wherever Napoleon was absent from the scene, even his veterans began to give ground.

In any event, war would probably be the end of the republic, if victorious. What would happen if it were beaten, the boldest prophet might well shrink from predicting. The foundations of no permanent régime have yet been laid in France. The revolutionary spirit has been compelled to confine its expression to shouting and "manifesting," and all prospect of a constitutional monarchy may be said to have finally disappeared. But the republic of the future, a republic in which the government will be loved and respected, as well as put up with, can hardly be said to have been founded as yet.

THE MAKING OF THE OXFORD DICTIONARY.

LONDON, February, 1898.

One of the most interesting excursions taken by the American Librarians who attended the International Conference held in London in July last, was, unquestionably, that made to the city of Oxford. There, roaming among the antique colleges and their delightful surroundings, those pilgrims from the New World could get an idea of the oldness of Old England such as no other town in England could afford. One of the entertainments given to the visitors was a reception by Mr. Byron Nicholson, the Librarian of the Bodleian. At this gathering an observer would have noticed a number of the visitors grouped around a man of

mature and vigorous appearance, with a long head and a massive forehead, whose eyes sparkled with intellectual light, as he held forth to his listeners upon a subject that evidently interested them greatly. This striking personality was Dr. James A. H. Murray, editor of the Oxford Dictionary. When the knot of listeners dispersed, they were promised by Dr. Murray that he would show them, on the day following, the Scriptorium, where the work of making the Dictionary is being carried on. Accordingly, about fifty librarians put in an appearance at the Scriptorium next day, instead of only fifteen, as Dr. and Mrs. Murray had expected. They had the pleasure of seeing, in his home life, the man who is the architect of a vast literary pile that will last as long as the English language has a literature of its own. At the same time they found in Mrs. Murray—a granddaughter of Ruthven, one of the pioneers of geology—not only a winsome hostess, but also an example of the helpful wife of a British savant.

The late Archbishop Trench of Dublin was an eminent philologist. His instructive little volume upon "The Study of Words" would of itself have given him a reputation. When Dr. Trench was as yet Dean of Westminster, he read two papers to the Philological Society "On Some Deficiencies in our English Dictionaries." The Dean said it was the business of the dictionary maker to "collect and arrange all the words of a language." He pointed out that obsolete words were omitted from dictionaries, while there was no history given of existing words. As there was no institution in Great Britain analogous to the Academy in France, Dr. Trench urged upon the Philological Society that it should take the steps necessary to supply such deficiencies. His own idea was, that the best way of doing that would be by publishing a supplement to existing dictionaries. The Society adopted the suggestion, and it was decided that a supplement should be compiled. To carry this in effect an "unregistered words committee" was appointed, consisting of Dean Trench, Herbert Coleridge, Dr. Furnivall, Hensleigh Wedgwood, and Professor Malden. The two latter were responsible for etymology. The three former took the literary and historical side. Their commission was to "form a collection of words hitherto unregistered in the dictionaries of Johnson and Richardson." Seventy-six persons undertook to read various books, in furtherance of the objects of the committee. Among the best known of these were Dowden, Lightfoot, Lubbock, Lushington, Lord Lyttelton, Perowne, and Rossetti. During the first seven years about 1,500 words were read.

Within about twelve months' time, some of the members of the committee, having regard to the accumulation of materials, asked: "Why not collect for a new dictionary?" The question was discussed by the Society. Dr. Trench adhered to his original proposal for a supplement, but the Society decided to remodel the scheme, and a new dictionary was determined upon. Herbert Coleridge was in 1888 elected as editor. Slips were issued, books were bought and distributed among "readers," for the proposed work, and twenty-six sub-editors were appointed, one for each letter of the alphabet. Readings went on for years. Then, the finds made by readers under the letters A, B, and C were sent in to Herbert Coleridge, who was most enthusiastic in the

business. This ardent scholar actually met his death through his zeal for the cause. A memorial of him is preserved at the Scriptorium. It is a small stand of pigeon-holes, the size of which proves how greatly Coleridge, like others, underestimated the grandeur of the scheme proposed. The stand is capable of holding only about one-twentieth part of the slips that will be used in the compilation of the Oxford Dictionary.

Dr. Furnivall now became sole editor of the proposed Dictionary. In furtherance of the work in hand, he promoted the establishment of the Early English Text Society. Materials went on accumulating. Years passed, and readers asked, "When is the Dictionary to be begun?" Within the Society itself the proposal was made to hand over the collections to the British Museum, but the suggestion was not adopted. Then publishers were approached and invited to undertake the publication of the new dictionary as a commercial enterprise. To the late Mr. Murray it was especially proposed that he should publish a *concise* dictionary. But although big publishers set great store upon the publication of a dictionary by their firms, the vastness of the projected dictionary caused one and all to decline the undertaking. In 1876 Dr. Murray, who had joined the Philological Society in 1867, and had become an active member of that body, was consulted by the late Mr. Macmillan, the well-known publisher, with a view to his becoming joint editor, with the late Mr. Richard Grant White, of an 'International English Dictionary.' The idea had originated with the Messrs. Harper of New York, who proposed to Mr. Macmillan that he should adventure with them in the undertaking. Messrs. Harper's proposals limited the size to that of Webster. When Mr. Macmillan told Dr. Murray of this limitation, the latter said: "Within the compass of Webster you cannot do better than Webster has done." On Messrs. Harper being informed of Dr. Murray's opinion, they expressed their readiness to undertake the publication of a dictionary twice the size of that of Dr. Webster, but no further would they venture. Dr. Furnivall was then called into consultation by Mr. Macmillan. Specimens were set up of the manner in which the new dictionary should be compiled, on Dr. Murray's lines. These showed that the whole work would bulk out to four times the size of Webster's. Dr. Jack, a learned gentleman, a relative of the Macmillan family, then proposed the reduction of Dr. Murray's scheme to the extent of one-fourth, so that the new dictionary should not exceed three times the size of Webster's. In this arrangement Dr. Murray concurred, but Messrs. Harper were not prepared to go so far, and the negotiations came to an end.

The conservation of energy is well illustrated by the proceedings that led up to the undertaking of the Oxford Dictionary. The specimens which had been prepared for the Macmillan-Harper project were submitted to the members of the Philological Society, and met with high appreciation. The interest so awakened led to an enthusiastic determination that every effort should be made to promote the production of the desired dictionary. Two publishers, in turn, were approached, but these, as others before, shied at so vast a risk. Dr. Furnivall, whose name must always be held in high honor on account of his great share in promoting

the undertaking of the *magnum opus*, now determined to approach "the studious universities." Himself a Cambridge man, he first applied to the Syndics of the Pitt Press. That body duly considered the proposal, expressed high approval of the grand scheme, but could only avow their regret that want of means disabled them from engaging in it. To Oxford Dr. Furnivall then turned. His application was carefully considered by the Delegates of the Clarendon Press—a body which then numbered among its members such lights of learning as the late Mark Pattison and Dr. Stubbs, the present Bishop of Oxford. Dr. Murray had then, in 1879, become President of the Philological Society. In connection with the deliberations of the Delegates of the Clarendon Press he made three visits to Oxford. In the end the Delegates decided to undertake the publication of the New English Dictionary on Historical Principles, provided that Dr. Murray would himself agree to edit it. When this decision was communicated to Dr. Murray, he held the position of second master of Mill Hill School, the Wesleyan Eton. He asked for a fortnight within which to give his answer. At the end of that time he accepted the honorable and laborious office of editor of the Oxford Dictionary, with the concurrence of the authorities of Mill Hill School. By arrangement with them, Dr. Murray was at first relieved of one-third, and later on of one-half, of each day's duty; he, on his part, surrendering a proportionate part of his tutorial salary.

When, in 1879, the Oxford Dictionary was cradled at Dr. Murray's house, he was living just outside the grounds of Mill Hill School. His residence, called Sunnyside, stood on the top of Hammer's Hill, just over against the Three Hammers Public House. Thither were brought, from Dr. Furnivall's house, the accumulations of twenty years of toil on the part of the various "readers" for the Dictionary. The bulk of this mass of literary stuff was so great that its dead weight was more than two tons. Mrs. Murray gave up her drawing-room for its accommodation. Later on an iron building was put up in the garden of Sunnyside, and was called by Dr. Murray the Scriptorium. In this laboratory the serious work of making the Dictionary was really begun. There were about 3,000,000 slips to be sorted into pigeon-holes under the respective letters of the alphabet, and to be distributed under their relative words. This was done by assistants paid by the Clarendon Press. The 3,000,000 quotations not being sufficient, Dr. Murray called for 1,000,000 more. About 800 persons in the United Kingdom and about 500 in the United States became readers for the Dictionary. Directions were printed for the guidance of these voluntary workers. The two most important rules were:

"Make a quotation for every word that strikes you as rare, obsolete, old-fashioned, new, peculiar, or used in a peculiar way."

"Take special note of passages which show or imply that a word is either new and tentative, or needing explanation as obsolete or archaic, and which thus help to fix the date of its introduction or disuse."

In America as in Great Britain there were some backslidings among those who had volunteered to be readers. Not so with two Americans residing in England, who are thus referred to by Dr. Murray at the close of the preface to his third volume: "But above all, we have to record the in-

estimable collaboration of Dr. Fitzedward Hall, whose voluntary labors have completed the literary and documentary history of numberless words, senses, and idioms, and whose contributions are to be found on every page; also the unflagging services of Dr. W. C. Minor, which have week by week supplied additional quotations for the words actually preparing for press."

In 1885 Dr. Murray removed from Mill Hill to Oxford. The building used by him as the first Scriptorium was presented to Mill Hill School, to the grounds of which it was transferred. It is now used by the boys of the school as a reading-room. The new Scriptorium was built in the garden of Sunnyside, the house in Banbury Road, Oxford, which has for the last twelve years been the sunshiny home of the Murray family. In that period the total number of slips has increased from 4,000,000 to 5,000,000. Dr. Murray estimates that another million of quotations will be needed for the completion of the work.

After each part of the Dictionary has been printed, the slips used in making it are put together, and sent off to the Delegates of the Clarendon Press, to remain in their possession for twelve years, when they will be handed over to the Philological Society, whose property they will become. Moreover, that society may not use those materials for the making of another dictionary until a number of years have passed after the completion of the Oxford Dictionary. Even then any dictionary that may be published by the Philological Society must be not less than four times the size of that which is now becoming one of the chief literary glories of the university by the Isis. The copyright of the Oxford Dictionary belongs, of course, to the Delegates of the Clarendon Press, who are themselves the representatives of the University in matters of printing and publishing.

Of recent years Dr. Murray has enjoyed the benefit of the assistance of Mr. Henry Bradley, a born philologist, whose genius was first disclosed in his article in the *London Academy* reviewing a portion of the Dictionary that had been published. The letter H is now going through the press, and Dr. Murray hopes to have it out in October. It will then have been one year and ten months in hand. The letter I will take about a year and six months. J and K will take about four months each. The editor hopes to finish K by the 31st of December, 1900. Should he accomplish this, he will have compiled more than half the Dictionary. The remainder may, if too many treacherous slips do not turn up, be worked off by 1910.

Dr. Murray was born in 1837, at Denholm, near Hawick, in the border county of Roxburgh. On his father's side he claims descent from Sir Andrew Murray, the friend and companion of Scotland's hero, Sir William Wallace. On his mother's side Dr. Murray descends from the border family of the Scotts of Boonraw, cadets of the Scotts of Harden. Educated at Cavers, Minto, Hawick, and Edinburgh, he adopted the profession of a teacher in 1855, as assistant master at Hawick Grammar School, becoming headmaster of Hawick Academy in 1858. From 1870 to 1885 he was chief assistant master at Mill Hill School, as well as examiner in the English language at the University of London from 1874 to 1878. While at Hawick he was one of the founders of

the local Archaeological Society, of which he was the first Secretary, an office he filled for several years. He was happily married, in 1867, to Ada Agnes, eldest daughter of George Ruthven of Kendal, Westmorland. Since 1870 Dr. Murray has been a member of the Council of the Philological Society. He was President of the Society from 1878 to 1880 and again from 1882 to 1884.

Edinburgh had already conferred her high distinction upon Dr. Murray before he became editor of the Dictionary. Durham alone, of British universities, has recognized the value of the philological labors of the lexicographer as being those of a man of science rather than of a "harmless drudge," as Dr. Johnson defined a maker of dictionaries, according to the notion entertained by the vulgar. Neither Harvard nor any American university has yet entered the name of James Augustus Henry Murray on its beadroll. Oxford and Cambridge are in a similar position. On the other hand, some learned bodies on the continent of Europe have done honor to the editor of the Dictionary. It is to the credit of the American Philosophical Society of Philadelphia that that body, so far back as 1881, enrolled Dr. Murray as one of its foreign members.

D. D.

MAZZINI'S EARLY LETTERS, 1834-1840.

FLORENCE, February, 1898.

We have some very interesting letters of Mazzini's, hitherto unpublished, which cast fresh light on his life in Switzerland during the years that intervened between 1834 and 1837, i. e., after the failure of the expedition to Savoy up to his arrival in London. The first series, published by Prof. Carlo Cagnacchi, and entitled 'Joseph Mazzini and the Ruffini Brothers,' are in fact letters of the two exiles, Agostino and Giovanni Ruffini, to their mother, to whom also those of Mazzini are addressed. Unjustly but not unnaturally, the brothers regarded Mazzini as the cause of Jacopo's suicide and of their own exile. Now, in the first place, Jacopo possessed far more worldly wisdom than Mazzini; in the second, he was warned and might have escaped had he not refused to do so while yet there was time. We learn, too, that the eldest of the family had also committed suicide without any apparently adequate cause. Jacopo killed himself on finding that one of his dearest friends had betrayed him, fearing that he might himself become a traitor. Mazzini, though blameless, was haunted by a life-long sorrow for the martyrs of Young Italy, and considered it his duty to act towards the two exiles as a father. He had promised their mother to watch over them, and did so faithfully; but the slight difference in their ages, the immense difference in their characters, rendered his task a difficult one. Great, however, is their admiration of his genius, and for the first time we are assured of what we always suspected, viz., that, after the failure of the Savoy expedition, when his followers were dispersed and the hopes of the entire party dispelled, when all save himself despaired of attaining independence, to say nothing of unity, Mazzini returned to his old idea of using literature and the press as a means of national redemption.

The second collection of letters issued today by L. Ordone de Rosales is entitled 'Mazzini and Some of his Fellow-Exiles to Gaspare Rosales,' Rosales being a wealthy

Lombard patriot who barely escaped arrest by the Austrians. They sequestered as much as they could of his property, while he spent most of his remaining fortune in succoring the exiles, and even supplying the sinews of war for fresh expeditions doomed to failure. Rosales was faithful to this system until 1859-60, when he accepted the monarchy of the plébiacite and his correspondence with Mazzini ceased; but, in his autobiography, the latter speaks of him with gratitude and admiration. Both collections should be read together, as the letters to Rosales often explain points merely hinted at in those addressed to "Signora Elena," the mother of the Ruffini. The brothers always speak of Mazzini as "Antonietta, the cousin," etc.; we will keep to his well-known name of Pippo. On the 5th of August, 1834, from Berne, Giovanni (later the well-known author of 'Lorenzo Benoni' and 'Doctor Antonio') writes:

"At last I have read Pippo's drama; it is beautiful from beginning to end, and has several incomparable scenes." "August 13. Pippo is in a high fever of composition; he dreams of nothing, does nothing, but his drama." "August 19. Don't worry about Pippo; he is neither cast down by the unflourishing state of his affairs, nor by any thought of his future. His are artistic preoccupations which make him happy instead of miserable, and carry him up to an ideal sphere thousands of leagues away from this low world; he is always good and pure (*santo*), but his moods are utterly changed. He sees nothing, hears nothing, takes interest in nothing but in the creations of his own imagination. His is a true artistic egotism. He is now in ecstasy, having succeeded in getting a sum of money for the publication of his first work."

On the 26th of August, 1835, Agostino, who became professor of Italian in Edinburgh in 1840, writes: "Pippo starts to-day for Vienna, there to publish his 'Alessandro Medici.' Yesterday we sat up till midnight in the dark, singing the pieces of music that we liked best." "October 3. Pippo has returned; the printing of his drama goes on slowly, but he must succeed!" Alas, the drama was never published. Still, on the 17th of December: "Pippo has written a second drama entitled 'Anna,' full of interesting scenes and in a charming style. There are no allusions to politics, nothing that can bring it into disgrace with the censor. It is not historical; purely imaginative." Of neither of these dramas has any trace been found. We have the 'Foi et Avenir,' written in French in 1834, and Saffi, after endless research, recovered more than twenty articles written by Mazzini for the *Jeune Suisse*; perhaps he destroyed or lost the dramas when he returned to his conspiracies, his expeditions.

In his letters to Rosales during 1834-5 Mazzini speaks of translating Lamennais's 'Paroles d'un Croyant' with a preface

"which will not be a tirade against tyranny, but rather a free philosophical discussion concerning the progress of the popular humanitarian symbol. I shall omit the so-dreaded name of Young Italy to please the Lombards, but retain the motto, Liberty, Equality, Humanity. Would Ruggia [a Lugano publisher] undertake it? See James [Giacomo Ciani, a wealthy generous exiled patriot]. If we could earn 100 lire [£20] it would be a godsend, at the end of our tether."

Then he speaks of the necessity of founding the Young Switzerland, and if this succeeded for a brief period, then the Young Europe, which is to save Switzerland from annihilation "and make of her an independent republic with the addition of Savoy;

Savoy, Switzerland, the Tyrol to form a confederation of the Alps." These letters are signed Strozzi. Meanwhile he continues the publication of the *Young Italy* journal, and speaks of his own article on Italian unity, of a religious article by Gioberti, another giving an account of the Savoy expedition; but he has not the wherewithal to pay the printer, and is much exercised how to smuggle the papers into Italy. Usiglio, one of the few who remained faithful to Mazzini, writes to Rosales in the same year: "Your affection is necessary to him. The other day he said to me, 'If his affection were to fail me, I should doubt all men, doubt Italy; I might even believe that some day my own mother's love would fail me.'" On October 1, 1834, Mazzini sends Rosales extracts from a letter of Lamennais's:

"Ce que vous avez fait, portera ses fruits. Vous avez organisé la lutte de l'esprit contre la matière, de la liberté contre la tyrannie; on ne saurait douter à qui la victoire restera. La cause que vous soutenez a pour auxiliaire le berceau et la tombe—la tombe qui dévore le passé, le berceau qui contient les germes de l'avenir. Prenez courage, monsieur; les mères enfantent pour vous," etc.

Rosales is disheartened; Mazzini reproaches him:

"These ideas of ours, you say, are mere dreams, but they are sublime dreams and will become realities in the future. Are you worn out with three years of delusions? Did not you, I, all of us, know when we accepted our mission that three centuries of delusions, of servitude, of inertia lay behind us? What is changed? Not the sanctity of our principles. What has success or failure to do with our faith? How can misfortune change our duty to our country? Come what will, let glory or infamy surround my grave, I care not. My voice, weak through tears, will be heard, will thrill through my brothers. And I know that the future dwells in my voice. Whether I shall see that future, matters not. Brother mine, be comforted, let your isolation itself comfort you. The finest type of man is he who from the midst of ruins foretells a brighter future."

All through 1835 this indomitable courage keeps him up. He receives the works of Giordano Bruno, of S. Simon, of Lessing, which he intends translating from German, "not trusting to French translations." He collects all Foscolo's works, and commences the "Dramatic Library," the first number of which, according to Agostino Ruffini, is to contain articles on "The Literature of the XIXth Century," on "Literary Materialism in France," on "Byron and Goethe," on "The German Dramatists: (1) Werner." This for the literary part. Then the social condition of woman is to be considered; music—"Robert le Diable," "I Puritani," "Othertton."

They hoped to publish their review in Genoa, but the veto of the Piedmontese minister frustrated all their hopes. Mazzini, nothing daunted, proposes to found a review of European Literature, and submits to Rosales his first essay. Some of the articles did appear in a *Rivista Repubblicana*, and I have just found in Vielleux's unique library a rare copy of the volume entitled "L'Italiano," published ostensibly in Paris, in which appear Mazzini's articles on Music, and others signed "M. J." Concerning these attempts, Mazzini writes in the third volume of his published works: "If this series had succeeded, it was to have been followed up by a work on Epopees, a work on the various religions of the world. Of the proposed dramas, Werner's '24th of February' was chosen. Agostino Ruffini translated it admirably [Mazzini him-

self wrote the essay on fatality]. But the experiment failed." "Byron and Goethe," one of Mazzini's finest literary productions, was printed "somewhere" in France. Of this a mangled translation appeared in the 'Literary Writings of a Living Italian,' was reproduced in the *Morning Chronicle* in 1839, and can now be read in perfect English, corrected by Mazzini himself, in the "Camelot Series," with an introduction by William Clarke. It is strange that neither Mazzini nor Saffi included this fine essay in the eighteen volumes of the Italian edition of his works.

The year 1836 was the bitterest of all the bitter years of Mazzini's life. Reduced to poverty, abandoned by those he loved best, the "tempest of doubt" assailed him as he tells us in his brief autobiographical notes (vol. III.). Out of this tempest he came as one purified by fire, never again to hope for personal happiness, yet never again to doubt the sanctity of his mission, nor flag in its fulfilment because of the obstacles, the misery, the dangers that beset his path. The letters give a vivid glimpse of his early life in England, but we have space only for a few extracts from his to Signora Elena, whose sons continued for some time to live with him in London, but who were growing more and more intolerant of his persistence in his ideas, and anxious (naturally) to hew out each his own path. Some misunderstanding had suspended the correspondence; on the 9th of April, 1837, two months after their arrival in London, Mazzini writes:

"In your letter to my mother you say, 'Tell Pippo to love my sons always, because I know that his affection is necessary to their very existence, nor have they proved themselves unworthy.' So you have forgiven me and restored your friendship to me? You believe me to be unhappy but worthy of your esteem and affection? As to your request, listen to what I say, to what I swear by all that we both hold most sacred, the memory of our dead martyr [Jacopo]. I love your sons as I loved them when we were near one another [at Genoa before the catastrophe]. I shall love them as long as I live, whether they return my affection or no, because I am incapable of ceasing to love. Whenever (I speak of recent times) I have feared that they were changed towards me, I have wept, shed real tears even in their presence, and now I weep for no other cause. But all change, save you and me. In one thing your sons change not—that is, in their love for you. That love is holy, is immutable. Might I only come second to that love! But, whatever befalls, I love no other as I love them."

All these letters to Signora Ruffini, whom to the last Mazzini loved as his second mother, are worthy of translation, as they give us the real Mazzini. But the whole man will be revealed to us only when his letters to his own mother are published. These she herself gave to Signora Emille Hawkes Venturi, who passed them on to Saffi for publication. Saffi died in 1890, just as he was commencing it; the letters were passed on to the committee, one of whose most active members died in the same year. The surviving members promise to issue the long-looked-for volume from year to year, but it is still a hope deferred. J. W. M.

Correspondence.

TRUMPERY SUITS.

TO THE EDITOR OF THE NATION:

SIR: Your recent comments on the Eng-

lish libel law and the proposed amendments requiring the plaintiff, whenever he is reasonably suspected of being a bankrupt, to furnish in advance security for costs, suggests the pushing of the same principle a little further. There seems no good reason why defendants in other actions in tort should not be offered the same protection.

In Illinois no security of costs is required except in case the plaintiff is a non-resident of the State. But even in that case the "costs" consist only of the fees of witnesses, the sheriff, the clerk of the court, etc., which constitute but a small part of the expenses of litigation. The practical result is, that an irresponsible person is at liberty to bring a "trumpery suit" and subject the defendant to a heavy outlay in necessary preparation for the trial, and then, when the suit has been thrown out of court, the defendant is left without any means of adequate reimbursement. This burden, for example, is particularly onerous when the defendant in a damage suit for personal injuries happens to be a charitable corporation which has no fund available for expensive litigation.

In a recent case in point, such a suit, without any foundation in justice, was instituted against a hospital, and, after a delay of some years, during which the defendant had been obliged to appear by its attorneys several times in court, to take the depositions of distant witnesses, to collate other evidence, and to incur considerable expense, the suit was called for trial and was promptly "dismissed for want of prosecution." Surely, justice to worthy plaintiffs does not require that every eleemosynary institution should be at the mercy of any bankrupt that can beg, borrow, or steal \$13 or \$15 for initial costs, and of any one of the ignoble army of lawyers that are ever ready to jump at the prospect of a "contingent fee," no matter how unmeritorious the cause.—Yours very truly,

S. R. T.

CHICAGO, February 18, 1898.

A VERSE VULGARISM.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "F. T., Jr.," writing under the heading "A Verse Vulgarism" in the *Nation* for February 17, says, though with some hesitation, that he believes Keats to be free from rimes in -ng: -n.

Permit me to call his attention to one case at least, in the Sonnet "Written . . . at the end of Chaucer's Tale of the Flower and the Life." The closing couplet contains the rime sobbings, robins.—Very truly,

M. P. H.

FEBRUARY 17, 1898.

Notes.

"The Vitality of Christian Dogmas, and their Power of Evolution," from the French of Dr. A. Sabatier by Mrs. L. Christen, will shortly be issued by Macmillan Co. They announce also 'My Life in Two Hemispheres,' by Sir Charles Gavan Duffy, in two volumes; 'A Handbook of Nature Study,' by D. Lange, of the Central High School, St. Paul; and Zola's 'Paris,' translated by Alfred Visetelly.

The Continental Publishing Co., No. 25 Park Place, is about to publish in an edi-

tion of 1,250 numbered copies a 'Holland Society Art Edition of Vondel's *Lucifer*,' the poem to which Milton is credited with some rather indeterminate obligations. The work will be profusely illustrated by an able Dutch artist, John Aarts. The translation is by Leonard C. Van Noppen, an American, into blank verse, except for the lyrical portions.

A new novel, 'Young Blood,' by E. W. Hornung, will soon be published by Charles Scribner's Sons.

A new edition, revised to date, of 'Chambers's Biographical Dictionary,' Snyder's 'Comic History of Greece,' and Dr. Horace Howard Furness's Variorum edition of "A Winter's Tale" are on the eve of publication by J. B. Lippincott Co.

'From Tonkin to India,' a narrative of travel and adventure by Prince Henry of Orleans, will soon appear with the imprint of Dodd, Mead & Co.

During the coming month, William Paul Gerhard, C. E., No. 36 Union Square, will publish for himself a volume on 'Sanitary Engineering.'

Herbert S. Stone & Co., Chicago, have nearly ready Whigham's 'How to Play Golf,' 'Priscilla's Love Story,' by Harriet Prescott Spofford, and 'The Londoners,' by Robert Hichens.

Ginn & Co. are about to bring out 'The New Century Speaker,' selected and adapted by Prof. Henry Allyn Frink of Amherst College.

Richard C. Badger & Co. have in press 'Rational Home Gymnastics,' by Hartvig Nissen, and 'Poems,' by Philip Becker Goets.

"The Library of Literary History" is the newest undertaking of T. Fisher Unwin, London. The first volume will be 'The Literary History of India,' by R. W. Frazer, LL. B.

What may be designated as a breast-pocket edition of Kipling's "Recessional" has been neatly printed by M. F. Mansfield, No. 22 East Sixteenth Street, with a conventional Victorian Jubilee embellishment by Blanche McManus.

An altogether tasteful and well-printed edition of George Borrow's 'Lavengro' comes to us from G. P. Putnam's Sons (London. George Newnes). Without undue compression, this gypsy and open-air classic is contained in one duodecimo volume of 532 pages, and offered at a very moderate price. It forms part of a series called "The New Library."

'The Story of Marie Antoinette,' by Anna L. Bicknell (Century Co.), is a charmingly illustrated holiday book, consisting of a number of papers from the *Century*. The pictures are more noticeable than the story, many of them being from well-known portraits, especially those of Mme. Vigée-Lebrun. The author has a clear style, and her narrative of the life of the unfortunate Queen has many biographical merits. The story is one which the process of popularization does not injure. No matter how it is told, nor for what sort of an audience, it remains one of the great tragedies of history; the domestic side of it, on which, perhaps, the most stress is laid in the present instance, is, of course, the most painful. One of the chapters is devoted to the affair of the diamond necklace, and a reproduction of this ornament, one-third the original size, is given.

The volume contributed by Dr. Hinsdale

to the "Great Educators" series, 'Horace Mann, and the Common-School Revival in the United States' (Scribners), deals with a subject of deep interest to every American, for the questions agitated and the controversies engaged in by the New England reformer are even now not all settled. But, aside from the practical importance of the work and permanent influence of Horace Mann, his uncommon moral and mental traits, the pathetic incidents of his private life, and the dramatic events of his public career, leading up to the tragic catastrophe at Antioch College, are fascinating in the extreme. Prof. Hinsdale has succeeded admirably in giving in comprehensive, compact and, withal, very readable form, all the essentials of the life and main work of the great educator. The general reader, we feel inclined to suggest, might start at once with chapter III., leaving for subsequent reading the first two chapters and the last, dealing respectively with common-school affairs before and after Horace Mann. This plan, while spoiling the chronology, will heighten the interest.

Dr. L. L. Forman's 'Index Antiocheus, Lycurgus, Dinarchus,' published by the Clarendon Press (New York: H. Frowde), belongs to that self-denying class of work which combines a maximum of plodding labor with a minimum of attractiveness to the ordinary public. Dr. Johnson's Dictionary was comparatively light and fascinating reading. Yet the columns of references speak to the understanding of the expert, and are packed with curious information as to matters of style and usage. The uses and arrangement of the articles and pronouns, of the prepositions, and of particles like *de*, *in*, *ex*, and *per*, are skillfully and elaborately registered and classified. In the matter of idiom and phrases, the work does not attempt those very interesting and complete summaries which make Dr. Van Cleef's 'Index Antiphonteus' so valuable and instructive; but this is not a thing to complain of, inasmuch as the scope of Dr. Forman's work is adequately carried out, and the small band of scholars to which it addresses itself are indebted to the liberality of the Delegates of the Clarendon Press for its publication.

The eleventh volume in the new series of Transactions of the Royal Historical Society, which has just been issued (Longmans), is hardly as substantial as we should like to see. The most valuable among its contents are the paper of Mr. Corbett on Elizabethan Village Surveys, which breaks new ground in economic history; Mr. Figgis's careful exposition of the political theories of the early Jesuits, in which some modern enlightened notions are shown to have strange antecedents; and the official narrative of the pursuit of English refugees in Germany by the agents of Queen Mary, annotated by Mr. Leadman. The other contents are mostly of the nature of exhortations—by Mr. Frederick Harrison toward a new historical bibliography; by Prof. York Powell toward the establishment of courses in paleography and the appointment of "certificated archivists." Mr. Lord's paper on Goree has already been published in a journal of wide circulation, and its inclusion looks as if the editor had been hard up for copy. All students of English history thankfully recognize the enormous improvement in the Transactions of late years. Now that the Royal Historical Society has incorporated with itself the Camden So-

cieté, which has done so much for the history of the seventeenth century, we shall expect even better things; more original material, more bits of fresh investigation, and fewer literary essays.

In view of the disordered condition of Cuba, Mr. Robert Combs's scientific work in that island during 1895-96 is certainly noteworthy. The results of Mr. Combs's researches are embodied in a paper entitled, "Plants collected in the district of Cienfuegos, province of Santa Clara," published in the current volume of the Transactions of the Academy of Science of St. Louis. A comparison of the flora of Cuba with that of Florida shows a difference greater than that existing between the floras of Florida and Canada. On the other hand, it is almost identical with the floras of Central and South America. The determinations of these plants were made by Dr. I. Urban of Berlin and Mr. J. M. Greenman of Cambridge.

The publication of G. O. Sars's 'Fauna Norvegica' has been rendered possible by a Government grant. This work is a continuation, under a more comprehensive title, of the 'Fauna Littoralis Norvegica,' by the late Michael Sars and others, of which three volumes appeared. The new volume contains descriptions of the Norwegian species at present known belonging to the sub-orders Phyllocarida and Phyllopoda. It is printed in parallel columns of Norwegian and English, and is illustrated by twenty lithographic plates.

'Nærronaskaller' is the title of a work by Justus Barth published by the Royal University of Christiania. The author describes one hundred and sixty-one crania found in the ancient towns of Oslo and Tønsberg, and now deposited in the Anatomical Museum of the University. They are thought to be at least five hundred years old, and are typical of the ancient inhabitants of the southeast part of Norway, being markedly dolichocephalic. Ten plates accompany this work.

The Boston Public Library has begun, in its February Bulletin, a Bibliography of Boston, to consist of a list of the publications relating to the city in the library and "to a certain extent, also," in the neighboring libraries. In this first instalment are the official documents of the town, arranged in chronological order under different headings, as by-laws, town meetings, watch, etc. It is noteworthy that the first of the few documents relating to schools bears the late date 1789. The earliest printed document which we have noticed is a letter "To Sr. Edmond Andros Knight," printed in 1689, and now in the library of the Massachusetts Historical Society.

A special bulletin just issued by the State Library of Massachusetts has an interest far wider than the boundaries of that commonwealth. It is a classified Bibliography of Works on Taxation, and has been compiled by Ellen M. Sawyer, Mr. Tillinghast's principal assistant. It takes no account of works on the tariff and internal-revenue. Articles in periodicals, as well as books and pamphlets, are recorded.

In the last (January) number of Wiedemann's *Annalen*, Röntgen's entire work as discoverer and promoter of the X-ray analysis is given in his own words. His first contribution of December, 1895, its continuation in March, 1896, and his recent work as summarized in his paper of March, 1897, are here reprinted in full. It is interesting to see

how little, beyond details of construction and application, has been brought out by the thousands who have repeated and sought to extend his work, since the publication of the original papers.

The *Zeitschrift für den Physikalischen und Chemischen Unterricht* celebrates the completion of its tenth year and volume by a very strong January number, opening the eleventh volume. The responsible editor, Dr. Poske, strongly reaffirms his old contention of the humanistic character of all rightly directed physical instruction, and warns teachers against overmuch theory and hypothesis in teaching children. Dr. Mach, one of the associate editors, and a very able and luminous writer, emphasizes the same points in some interesting notes upon the "Historic Development of Optics." Van't Hoff has an important paper on Stereochemistry, and the number is otherwise full of good matter. This publication can be most heartily commended to teachers of the physical sciences in secondary schools. Julius Springer of Berlin publishes it.

We read in recent issues of the *Egyptian Gazette* (January 22-25) that the building of the new museum at Kasr el-Nil has been suspended for three months, in view of some question about the remuneration of the engineer in charge; that Mr. John Roes of Alexandria has asked for the Government's license to excavate a site in the desert about two days' journey to the southwest of Cairo, he bearing all the expenses, and dividing with the Government any treasure that may be found; and that Sir Benjamin Baker is on his way to Upper Egypt to ascertain if the waterfall at the cataracts is available for industrial purposes.

—The State Historical Society of Wisconsin will not let this jubilee year of that State pass away without a harvest of historical research. Finding that most of the seventy counties propose to have local celebrations preparatory to the chief one in the capital, it has already published and scattered abroad in each of them four semi-centennial circulars. In these papers the formation of as many local societies as possible is urged, and suggestions are given for making them as efficient as possible. Many lines of observation are mentioned with the hope of awakening a pervasive interest in all departments of history. Thus, the study of foreign groups in Wisconsin, as German, Swiss, Scandinavian, and others, already begun in the published Collections of the State Society, will be extended. Material to serve for future historians will be gleaned and garnered from many quarters and corners hitherto unknown or only slightly exploited. Much must come from pioneers, some of the first of whom are still able to tell their own stories. Even better than any present memories are the diaries which many kept from their first settlement, and which, while a household treasure to their children, have been hidden from the public. Account books, advertisements, and unprinted anniversary sermons are worth resurrecting. Letters written by first-comers to one another or to friends at Eastern homes, which were brought West again when those friends followed on the emigrant trail, are numerous and invaluable.

—The circulars point out how much may be ascertained by scrutiny of local official records, as of courts, schools, and churches. They also show how much remains to be

done in supplementing past searches relating to Indian mounds and cornfields, tools of stone and copper, etc. Relics of the French régime—a mine long explored—are set forth as still to be unearthed. As a motive to accuracy and veracity, investigators are reminded that errors must be inevitably exposed, and that though "he that is first in his own cause seemeth just, his neighbor will come and search him." With a view to their guidance, a select bibliography is given of books, booklets, and monographs which are best suited to assist their labors, and help is asked for rendering this catalogue more complete. It is hoped that the gleanings of each county presented at its local celebration in May will be bound up in a sheaf by a county historian, and brought with similar sheaves from all other counties to Madison at the general celebration in June. They will then be the Kohinoor of the Historical Society's fire-proof building already half finished, and the septuagint of brief chronicles when printed will form a memorial volume more many-aided than any State has yet produced.

—In a letter to a friend, the Duke of Wellington once remarked, with gentle resignation, that the fate that had made him Vice-Chancellor of the University of Oxford had placed him "in other situations much exposed to authors." Surely if there is any portion of a famous man's work from which he might hope to avert the attentions of the over-sealous admirer, it is that which he does in the character of a busy magazine editor. Charles Dickens, dashing off in his gay, trenchant, rather slipshod manner, the ephemeral notes on all subjects "from poetry to the dry rot" that were called for during his long editorship of *Household Words* and *All the Year Round*, was perfectly willing to let them remain anonymous and at rest in the back numbers of those magazines. Not so Mr. F. G. Kitton. By means of "careful research among the manuscripts at South Kensington Museum and elsewhere," he has triumphantly identified and brought to light some fifty of these occasional contributions, and now publishes them under the unhappily suggestive title, 'Old Lampe for New Ones' (New Amsterdam Book Co.). It is a queer farrago of letters to the newspapers, book reviews, editorial notes, and articles in self-defence. In a letter to Macready, Dickens indicates the manner in which he composed these spirited compositions: "I hope you have seen my tussle with the *Edinburgh*. I saw the chance last Friday week, as I was going to read the 'Carol' in St. Martin's Hall, instantly turned to then and there, and wrote half the article, flew out of bed early next morning, and finished it by noon. Went down to Gallery of Illustration (we acted that night), did the day's business, corrected the proofs in Polar costume in dressing-room, broke up two numbers of *Household Words* to get it out directly, played in 'Frozen Deep' and 'Uncle John,' presided at supper"—and so on. The first essay, which gives the title to the collection, is a very foolish attack on the Pre-Raphaelite Brotherhood, written in 1850. Among the signed contributions is a letter to the *Daily News* denying the report that the novelist would stand for Finsbury, and another to the committee of the Metropolitan Drapers' Association regretting his inability to be present at their meeting. One's passion for Dickens must amount to mania if one does not find this sort

of thing unspeakably tedious. A note of non-acceptance may in some hands come near to literature, but Charles Dickens had not the peculiar fascination of style that can gild these trifles. The lively description of a Chinese junk that was anchored in the London docks has already been printed, in part, in Forster's 'Life.' The paper advocating the "Guild of Literature and Art" is of especial interest at the present time, when a private bill is before Parliament the object of which is to wind up the "Guild" and transfer the existing stock to the Royal Literary Fund and the Artists' General Benevolent Institution. But the papers, taken as a whole, will be read by the curious rather for the light they throw on passing politics and social evils than for any literary merit.

—According to reports published by Dr. Paul von Salvisberg, editor of *Hochschul-Nachrichten* and Secretary of the Volks-Hochschul-Verein in Munich, the success of the university-extension movement in German cities and in the Austrian capital is very encouraging. In Vienna, where the efforts of individuals and associations have been substantially aided by the Government, more than 8,000 persons have registered for the various courses. In the German States, with the exception of Hamburg, no subvention has been asked for or granted. The Humboldt Academy of Berlin in 1896-97 provided for 177 courses of lectures (*Vortragssycken*), which were attended by more than 5,100 hearers; during the quarter beginning in October last, 79 courses were given, and a branch association has begun its work in Potsdam. In Munich, according to Prof. Dr. Lujo Brentano's 'Erster Jahresbericht des Volks-Hochschul-Vereins' (Munich, 1897), although the association did not open its courses till February, 1897, 1,440 persons were registered as hearers during the first quarter, about one-third being laborers and mechanics and about one-fourth women. The readiness and unselfishness with which many of the leading instructors in the University and the Technische Hochschule took charge of the courses deserves recognition, the more so as the Bavarian Ministry refused the use of the lecture-rooms and laboratories of those institutions, leaving it for the city authorities to furnish the required assembly halls. Good beginnings in the same direction have also been made at Königsberg, Hamburg, Frankfurt, Mannheim, Jena, and Nürnberg. In Frankfurt, where the lectures are given under the auspices of the Chamber of Commerce, as well as in Munich and Mannheim, young business men and employees of banking and commercial establishments furnish a large contingent of the audiences in courses of especial interest to themselves.

—Japan's "Grand Old Man," with name of bright omen, is Fukusawa (Happy Valley). He is editor, author, educator, observer of the winds of public opinion, and the "intellectual father of one-half of the young men who now [1891] fill the middle and lower [and in 1898, not a few of the higher] posts in the government of Japan." He has declined all tenders of office and still rules the minds of millions. He edits the *Jiji Shimpō*, one of the ablest daily newspapers in Tokio, and is president of a school which is the one worthy rival of the Imperial University. A new edition of his voluminous writings of astonishingly large circulation has just been issued in Tokio, in

the preface of which he tells the story of his unique success. In 1859, having learned Dutch and a little English by means of Dutch, he settled in Yedo. His first work was a small dictionary which gave in Japanese *kana* the English pronunciation of Chinese names. In 1861 he accompanied the embassy proposed by Townsend Harris, and spent twelve months in seeing America and Europe. Determining that the progress of which he was spectator should be seen in Japan before many years had passed, he wrote on his return the famous 'Seyo Jijo' (Foreign Matters), of which over 250,000 copies have been sold. We have met scores of Japanese who dated their conversion from "well-frogs" to citizens of the world from their reading of this book. It opened millions of eyes. Fukuzawa had no practical knowledge of fire-arms, but noticed that in the civil war between the Yedo Government and the Choshu clansmen, the latter won through their superiority in using American rifles. Finding a Dutch monograph on the subject, he translated it. One of his readers was Murata Shosho, later Colonel, and inventor of the renowned Murata rifle, whose attention was first drawn to the subject by this tyro's brochure. His next work, a 'Guide to Travellers in the West,' enabled thousands of the hermit-islanders to see Christendom. Having cultivated and mastered a clear, simple, and flexible vernacular style, he composed works on physics, military tactics, parliamentary debate, and the geography of the world. A popular encyclopedia, something like Chambers's 'Information for the People,' in seventeen small volumes, reached a circulation of 3,400,000 copies. It was furiously attacked, and the author's life put in danger, because he ridiculed *kara-kiri*, and denounced suicide as cowardly and worthless. On the day of the battle of Uyeno, instead of rushing to the bloody fray, he gathered some companions and studied Wayland's 'Moral Science.' Other books followed on ethics, foolish customs (such as blackening the teeth), the change of calendar, bookkeeping, debating and public speaking, foreign civilization, political economy and the rights of the people. A true creator of public opinion, a destroyer of things useless, and a builder of noble institutions, Fukuzawa's career is that of a nation's teacher. His fortune, made wholly by the pen, has been invested largely in improving and enlarging the University which he controls.

NEWELL'S KING ARTHUR.

King Arthur and the Table Round; Tales, chiefly after the Old French of Crestien of Troyes, with an Account of Arthurian Romance and Notes. By William Wells Newell. 2 vols. Boston: Houghton, Mifflin & Co. 1897.

It has long been matter for regret that the poems of Chrétien de Troyes should be the exclusive property of scholars—inaccessible to readers at large and, indeed, scarcely known by name to one in a thousand of them. Ever since Sir Thomas Malory's 'Morte Darthur' was in 1816 and 1817 brought within the reach of all in three modern editions, the press has teemed with 'Tales of King Arthur,' in prose and verse, for old and young. We have even had a play on the subject, a serious (not to say dull) attempt at a tragedy in due form, with a ludicrously sentimental distortion of the ca-

tastrophe and a "Rule Britannia" moral attached to the sword Excalibur. In all this, Sir Thomas Malory has been, to all intents and purposes, the sole guide, so that he has come to be regarded in England and America as the canonical authority on the Round Table and its knights. Tennyson's delightful 'Idylls of the King' did much to perpetuate this misapprehension; for, though Tennyson had occasional recourse to Lady Guest's agreeable translation of the so-called 'Mabinogion,' and in this way made everybody familiar with the substance of one of Chrétien's poems, yet his chief source was still Malory. And this was unfortunate for the 'Idylls.' Malory's compilation could afford no better materials than those which the worthy knight found in the French texts which he followed—late and debased versions, most of them. All the ennobling touches which the laureate gave the old romances cannot quite compensate for one defilement which, following Malory, he has attached to it—one fear, forever. We mean, of course, the dishonoring of Gawain, the flower of chivalry. It was an evil hour when Tennyson selected from the 'Morte Darthur' the tale of Pelleas and Ettarre, the latest offshoot of an immemorial literary conspiracy against the good fame of Sir Gawain, and invested it with the charm of his eloquence and poetry.

Scholars, to be sure, have repeatedly asserted the untrustworthiness of Malory's book and the haphazard character of his sources. But habit, the haunting charm of Sir Thomas's style, and the supreme felicity of certain favorite passages, have, we fancy, led most readers to regard such protests, when they have chanced to hear them, as amusing evidence of an antiquary's preference for the mustier of two manuscripts. Under these circumstances, we cannot think of any works that more imperatively demanded translation than precisely these poems of Chrétien de Troyes, of which Mr. Newell has given us so charming a version. For Chrétien has not merely the historical importance attaching to those who give definite literary form to an important body of poetic material, or a definite turn to a powerful literary movement: regarded simply by himself, he merits, in all soberness, the title of a great poet, and, if that be perversely or provincially denied him, he must still take rank as one of the best narrators and purest stylists "whereof this world holds record."

Five of Chrétien's poems have come down to us. Three of these, the "Erec," the "Chevalier au Lion," and "Perceval li Gallois," Mr. Newell translates with substantial completeness. In the "Erec" he has omitted only the episode known as the "Jole de la Cour," and this is summarized in the notes. In the "Chevalier au Lion" he has given the first part of the story in a condensed form, which, however, is so well proportioned that the reader who does not know the original will miss nothing. In the "Perceval," the work of Chrétien's continuators is disregarded, but the poet's own account of Perceval is given in its entirety, along with one adventure of Gawain. From the "Cligés" the story of Alexander and Soredamor is selected for translation. The "Chevalier de la Charete" is, with excellent judgment, omitted entirely, except for a brief summary in the Notes. To these versions of Chrétien are appended translated selections from the French prose ro-

mances of 'Merlin,' 'Lancelot,' and the 'Queste du Saint-Graal,' and the whole closes with the stories of the Maid of Escalot and the Death of King Arthur, adapted from the Middle-English 'Morte Darthur' published by Dr. Furnivall in 1864. These supplementary extracts illustrate different phases of the Arthurian legend in the course of its development. They also serve to round out the story and to bring it to a fitting conclusion. In selecting them from the huge mass of accessible material, Mr. Newell has given evidence at once of his wide reading and his discriminating taste.

In "Erec and Enide" we have a tale already familiar in Tennyson's 'Enid.' Its initial interest for most people will doubtless come from a purpose of comparing it with their recollections of the "Idyll"; but this adventitious attraction will surely be forgotten after the first two or three pages, and the reader will go on for pure delight. If, at the end, he reverts to his comparison with Tennyson, he will doubtless agree with Mr. Newell that the advantage is not altogether with the modern poet. In one respect the poem of Chrétien is certainly superior to the Idyll, and that is in the motive of the whole. Geraint, it will be remembered, suspects his wife's truth; it is

"the pang
That makes a man in the sweet face of her
Whom he loves most, lonely and miserable."

which sends him out on his new course of knight-errantry. Between Geraint and Enid there is a complete misunderstanding, and the action of the knight is not free from an illogical pettishness. In Chrétien, on the contrary, there is no misunderstanding and no suspicion. Erec, on learning that he has incurred the unknighly reproach of uxoriousness, rides out in angry pride to clear his name. Not only is the "scheme of the French poet" in this regard "more delicate and human," as Mr. Newell remarks, but it is far less conventional and more artistic. Tennyson's error is due to an ambiguity in the unknown writer who turned Chrétien's poem into Welsh prose, for in this instance the laureate's source was Lady Guest's 'Mabinogion.'

The episode of "Alexander and Soredamor," selected from the "Cligés," is not only a beautiful story in itself: it is a typical example of Chrétien's art. If it were remarkable for nothing but its exquisite literary finish, it would still deserve a place in Mr. Newell's book; but it is not less distinguished as a picture of the psychological refinements of courtly love in the twelfth century. Chrétien's analytical method is admirably reproduced by Mr. Newell. The "Cligés," we may remark in passing, formed no original part of "the matter of Britain"; its Arthurian relations are due entirely to Chrétien. On this point there is no controversy. If now the "Cligés" be compared with those works of the same author which are commonly thought to be referable to Celtic sources, the essential difference will be found striking, and, in our opinion, significant. We could wish that Mr. Newell had gone into this matter in his Introduction, to which we shall revert in a moment.

In "The Knight of the Lion" we have an admirable specimen of what one means by a "romance of the Round Table." The story is, as Mr. Newell suggests, in some ways a counterpart and complement to that of "Erec and Enide," but he pushes the comparison too far—so far, even, as to leave the impres-

sion that he believes the design to have been primarily ethical. What we particularly miss in his discussion is a definition of the real nature of the implacable Lady of the Fountain. Had he turned his efforts in this direction, Mr. Newell, with his minute and extensive knowledge of folk-lore, could have found no difficulty in the problem. The Lady is, of course, a *fée*, whose fate it is to marry whoever can overcome the (eldritch) Knight who guards the well in the forest. But her husband can retain her favor only on terms of obedience and fidelity. Just as actual unfaithfulness to a fairy wife or fairy mistress always brings disaster and sometimes death, so, in this softened and rationalized form of the tale, the forgetfulness of Iwain and his failure to keep his day come near costing him the love of his lady. Her implacability is originally an essential trait of her fairy nature, though Chrétien himself may not have understood it in this way or have been aware that she was a *fée* at all, any more than Shakspeare fully understood the mythological antecedents of the Scandinavian Norns whom he found in Holinshed's account of Macbeth.

Of all the stories in Mr. Newell's volumes the "Perceval" will probably command the readiest attention, from its relations with Wolfram's "Parsival" and with the whole subject of the Holy Grail. Mr. Newell has translated all that part of Chrétien's work that has to do with Perceval, and he has included the first of Gawain's adventures—the tale of the "Damsel with the Narrow Sleeves." This last episode is inexpressibly charming. There is nothing with which it may be so aptly compared as the story of Nausicaa in the 'Odyssey.' As for Perceval himself, such of our readers as know him only from Wolfram von Eschenbach or from Wagner will no doubt be surprised at the insignificant rôle which the Grail plays in his adventures as recounted by Chrétien. Yet, with whatever expectation they take up the story, the feeling with which they lay it down will hardly be one of disappointment. There is no religious symbolism in it, to be sure—no trace of the sublime mysticism which later gathered about the sacred chalice and the holy lance—but the air is pure and the sun shines, and one is relieved for a space to escape from dim religious light and the heavy odor of incense.

For Mr. Newell's translations we have nothing but praise. Feeling that the limpid fluency of Chrétien's language would scarcely endure rendition into English verse, he has turned the French poet's short couplets into prose. It was a hazardous experiment, but it has succeeded to admiration. When condensation was necessary, he has condensed the original, and at times, as we have seen, he has reproduced an episode in outline merely; but in all these processes he has carried so sure and even a hand that the result is consistent, symmetrical, and in a high degree felicitous. That a translation should reproduce all the charm of the original is, of course, not to be expected, but we are satisfied that only those who know Chrétien well will miss anything except metre, and that those who know him best will be the first to acknowledge the merit of Mr. Newell's rendering. It is a great service to letters to have introduced Chrétien to English readers at all; it is a very great service to have introduced him in so worthy a form.

To his first volume Mr. Newell has pre-

fixed an essay on "Arthurian Romance" which challenges careful examination. The propositions therein developed are in several respects strongly opposed to prevalent theories. "The views enunciated are," in Mr. Newell's own words, "given as individual opinions, which to the writer appear probable and reasonable." Even a brief summary of these views would require more space than is at present at our disposal, and to state our objections to them would carry us quite beyond the limits of a review. We must be content with remarking that Mr. Newell seems to us too incredulous with regard to Celtic sources, and that, in our opinion, he ascribes too much to the creative literary activity of Chrétien in the matter of plot. Our dissent in these particulars, however, in no way decreases our regard for the book as a whole or the warmth with which we welcome its appearance. That part of the Introduction which deals with literary criticism contains many just and acute observations.

We cannot close without giving a word to the mechanical execution of these volumes, which is of the highest order. The printing, in particular, is hardly susceptible of improvement: the letter is clear and handsome, and the arrangement of the pages shows the acme of typographical good taste.

AUDUBON.

Audubon and his Journals. By Maria R. Audubon. With zoölogical and other notes by Elliott Coues. Two vols., large 8vo, plates. Charles Scribner's Sons. 1897.

In setting out to write the life of America's greatest field naturalist and prepare his voluminous journals and other manuscripts for the press, Miss Audubon undertook a very large task. She states in her brief introduction: "I have tried only to put Audubon *the man* before my readers, and in his own words so far as possible, that they may know what he was, not what others *thought* he was." This being her avowed purpose, she has reduced the account of his life to a minimum, and has not allowed herself to dilate or eulogize, no matter how strong the temptation. Thus the biography proper covers only seventy-two pages out of more than a thousand, and even here, so far as practicable, Audubon is made to tell his own story. The same plucky determination and tireless patience that characterized the labors of her illustrious grandfather are conspicuous features of Miss Audubon's search for the original letters, journals, and other papers utilized in the preparation of the volumes under consideration. The circumstances attending the recovery of some of these long-lost documents are little short of the miraculous, and would make a chapter as full of interest as any in the book. Miss Audubon has done her work well. She has produced a book which is a credit to herself, her sex, and the honored name she bears; she has made an important contribution to the historical and zoölogical literature of America, and has erected to the memory of Audubon a useful and enduring monument.

In preparing the work for the press Miss Audubon was fortunate in securing the assistance of Dr. Elliott Coues, the well-known ornithologist and writer, who has added numerous footnotes, under his initials, explaining or amplifying statements in the text. Most of these are zoölogical, geographical,

or biographical. In the case of the Missouri River journals these footnotes are of special value, for Dr. Coues, both from his personal experiences in the West and from his labors in bringing out the recent three-volume edition of the Lewis and Clark expedition, was peculiarly well fitted for the task, and the book has profited largely at his hands.

Audubon was born in Louisiana some time between 1772 and 1783—the exact date is unknown—and died in New York in January, 1851. His boyhood was spent in France, after which his father, then a retired Admiral in the French navy, sent him to an estate he owned on Perkiomen Creek, in eastern Pennsylvania. On an adjacent estate lived William Bakewell, an Englishman, whose daughter, Lucy, Audubon married in April, 1808. As a young man Audubon was gay and fond of dress, but the sober business of earning a living for his growing family changed all this, and in later years he spoke of his early vanity as "an absurd spectacle." While still in France he had learned to paint birds, and on coming to America he continued painting them at intervals, as a pastime and in a desultory sort of way, until the habit grew to be the ruling passion of his life. But he was not merely a great painter; he had the instincts and tastes of a naturalist. The purely technical details of the science were distasteful to him, and in this part of his work he secured the assistance of others. At the same time, few specialists are better acquainted with the characters of their species than was Audubon. His physical strength and powers of endurance were phenomenal. He habitually rose before daylight and worked continuously until night; and then, apparently, attended to his correspondence and wrote up his copious notes and journals. Four hours is said to have been his allowance for sleep; and when painting birds and mammals in England, he mentions the surprise expressed at his habit of working fourteen hours a day without fatigue. He combined the grace, culture, and pleasing manners of the French with the candor, patience, and earnestness of purpose of the American, and there was something about his personality which appears to have been irresistibly charming. His friend Dr. Bachman of Charleston tells us that people considered it a privilege to give to him what no one else could buy.

Considering the times in which he lived and the facilities for getting about, Audubon was a famous traveller. He visited Texas, Florida, and Canada, conducted special expeditions to the rugged shores of Labrador and the then distant Yellowstone, and crossed the ocean a number of times; and in the eastern United States, from Maine to Louisiana, he travelled thousands of miles on foot. In the daily journals of his expeditions to Labrador, the upper Missouri River, and the Old World, we are permitted to feel his presence and enthusiasm from day to day as he traversed distant and little known lands and saw for the first time new birds and other animals. In his European journals we have entertaining accounts of his experiences and emotions among the naturalists and servants of England, with glimpses of their lives which in several instances throw light on contemporary events in the field of natural science. The Labrador trip, made in 1833, was for the sole purpose of obtaining additional material for the 'Birds of America,' then in course of publication. The elephant-folio plates of this magnificent work,

described by a well-known bibliographer as "by far the most sumptuous ornithological work ever published," originally appeared in eighty-seven parts running from 1827 to 1838. The text, entitled 'Ornithological Biography,' was not begun until 1830, and appeared in five volumes between 1831 and 1839.

In his old age, having completed and published his *magnum opus*, Audubon became interested in mammals, and, in conjunction with Dr. Bachman, undertook the preparation of the splendid work entitled the 'Quadrupeds of North America.' Renowned the world over as a painter of birds, he was enabled, by means of his long training and skill with the brush and the versatility of his genius, to achieve if possible even greater distinction as a painter of animals. But he felt the need of personal acquaintance with the quadrupeds of our Western plains, which it was necessary for him to study and paint from living and freshly killed specimens. In order to do this he planned, and in 1843, when nearly seventy, carried out, an expedition to Fort Union, later known as Fort Buford, near the junction of the Missouri and Yellowstone Rivers. He was accompanied by his friend Edward Harris of Philadelphia, and took with him as assistants John G. Bell, the famous New York taxidermist, Isaac Sprague, the botanical artist, and a young man named Lewis Squires.

The journals of this trip are of surpassing interest. To the historian and student of Americana they furnish glimpses of early frontier life, and notes, interspersed with prophetic visions, of commerce and conditions along the Missouri River; to the ethnologist they give truthful pictures of the appearance, dress, and character of the Indians; to the naturalist they offer entertaining accounts of the discovery and habits of new or little known species, of the abundance and manner of hunting wolves, buffaloes, and other big game, and observations concerning the former ranges of animals no longer found in the region. Two days after his arrival at Fort Union, Audubon witnessed one of those remarkable feats of horsemanship for which our Western riders are renowned.

"After dinner," he writes, "Mr. Culbertson told us that if a Wolf made its appearance on the prairie near the fort, he would give it chase on horseback, and bring it to us alive or dead; and he was as good as his word. It was so handsomely executed that I will relate the whole affair. When I saw the Wolf (a white one), it was about a quarter of a mile off, alternately standing and trotting; the horses were about one-half the distance off. A man was started to drive these in; and I thought the coursers never would reach the fort, much less become equipped so as to overhaul the Wolf. We were all standing on the platform of the fort, with our heads only above the palisades; and I was so fidgety that I ran down twice to tell the hunters that the Wolf was making off. Mr. Culbertson, however, told me he would see it did not make off; and in a few moments he rode out of the fort, gun in hand, dressed only in shirt and breeches. He threw his cap off within a few yards, and suddenly went off with the swiftness of a jockey bent on winning a race. The Wolf trotted on, and ever and anon stopped to gaze at the rider and the horse; till, finding out the meaning (too late, alas! for him), he galloped off with all his might; but the horse was too swift for the poor cur, as we saw the rider gaining ground rapidly. Mr. Culbertson fired his gun off as a signal. I was told, that the Wolf would be brought in; and the horse, one would think, must have been of the same opinion, for although the Wolf had now reached the hills, and turned into a small ravine, the moment it had entered it, the horse dashed

after, the sound of the gun came on the ear, the Wolf was picked up by Mr. Culbertson without dismounting, hardly slackening his pace, and thrown across the saddle. The rider returned as swiftly as he had gone, wet through with a smart shower that had fallen meantime; and the poor Wolf was placed at my disposal. The time taken from the start to the return in the yard did not exceed twenty minutes, possibly something less."

The book is attractive and well made. Some of the illustrations are from unpublished drawings by Audubon himself; of the others, no less than twelve are portraits of him at different periods of his life. In addition to the biography and journals, the work contains his famous 'Episodes.' These, no less than fifty-eight in number and filling more than three hundred pages, cover a wide range of topics, such as "The Prairie," "The Earthquake," "Colonel Boone," "Natchez in 1820," "A Tough Walk for a Youth," "Niagara," "The Burning of the Forest," "A Long Calm at Sea," "Death of a Pirate," "Wreckers of Florida," "A Moose Hunt," "The Eggers of Labrador," "A Ball in Newfoundland," "Scipio and the Bear," "A Kentucky Barbecue." They show, perhaps better than his more formal writings, the keenness of his appreciation of human nature, the kindness of his heart, the power of his imagination, and the vigor and versatility of his pen.

Life and Letters of Harriet Beecher Stowe.
Edited by Annie Fields. Boston: Houghton, Mifflin & Co. 1897.

Mrs. Fields's contribution to the making of this book is, as the title-page denotes, that of an editor. We feel her presence less than in her charming sketch of Mrs. Stowe, which was published in a volume with other things a year ago, but that is probably because there is less of her relatively here than there. She has been able to avail herself freely of Mrs. Stowe's Life, as written by her son while his mother was still living, and of the Life of Lyman Beecher, many passages in which, written by Mrs. Stowe, give the best possible account of her own childhood and youth. It is interesting to find the death of Byron making much the same impression in the Litchfield parsonage as in the Somersby rectory, Alfred Tennyson, aged nine, going about moaning "Byron is dead!" and carving it upon the sandstone ledge, and Harriet Beecher, aged seven, crushed by her father's "Byron is dead—gone," and lying down in the pasture and wondering what had become of his soul. It was characteristic of Lyman Beecher that he thought if Byron "could only have talked with me and Taylor, it might have got him out of his troubles." His intensity was a bad thing for his daughter Harriet, who wore herself out with morbid introspection while she was still a child. At the tender age of twelve we find the Hartford minister examining her for church membership, and asking her, "Do you feel that if the universe should be destroyed, you could be happy with God alone?" She answered "Yes," but may have been thinking at the time of the relative satisfaction of being much alone with her sister Catherine, who was nothing if not exigent in her demands upon her. It was Catherine's life-long sorrow for a lover whom she believed to be eternally lost that furnished Mrs. Stowe with the motif of her 'Minister's Wooing.'

The experience of the child in one re-

spect was prophetic of her maturity. From Litchfield she went to Boston, from Boston to Hartford, from Hartford (following her father's star) to Cincinnati. It was so all her life long. She was continually on the move. Her domestic life was without any local permanence, and it abounded in disturbing elements. From Cincinnati she went to Brunswick, Me., from there to Andover, from there to Hartford, and each separate place had its own incidents of upheaval and unrest. When she was not broken down her husband often was. She no sooner gets back from a long absence from him at a water-cure in Vermont than he must go to the same place for fifteen months upon a stretch. It was a kind of Castor and Pollux life they lived. The kindest things are said about him, but, for all her miserable health, she seems to have been the oak and he the clinging vine. Mrs. Stowe imagined that Casaubon in 'Middlemarch' was intended for Mr. Lewes, but her own Dr. Stowe was much more like that futile scholar. He once mistook his wife for a ghost, and in general he could but imperfectly distinguish between things real and visionary. Nevertheless, while his family, like that of the real Casaubon, "augmented itself annually," or frequently, he united with the wolf at the door to urge Mrs. Stowe into a literary career, and had the good sense to advise her to drop her original middle name (what it was we are nowhere told) and become famous as Harriet Beecher Stowe.

At Cincinnati there was much pecuniary anxiety and much sickness and depression. The same conditions persisted in Brunswick and further on, her literary earnings never keeping pace with the demands upon her purse. Meantime her household cares were heavier than she could bear, and she was so organized that even the literary work, to which her gravitation was pronounced from her youth up, brought her as much pain as pleasure. It kept her in a perpetual fidget, her agreement to do any specified thing having a paralyzing effect upon her mind. Altogether our general impression of her life, as revealed in this book, is that it was restless and unhappy. Great sorrows combined with petty troubles and profound anxieties to make it so. Her son Henry, the apple of her eye, a student at Dartmouth, was drowned; her son Frederick, who had done service and been wounded in the war, mysteriously disappeared in San Francisco, and was never heard of more; worst of all was the misery caused by the scandal in which her brother Henry was involved. By all means the most affecting document in the book is her long letter to George Eliot concerning that frightful business. It is a pity that one who did so much for others' happiness and for the freedom of the slave should not have reaped the satisfaction from the doing of these things which she so well deserved, and we would gladly be persuaded that our impression is not justified either by Mrs. Fields's disclosures or by the facts in their entirety which lie back of these.

The importance of Mrs. Stowe's life to literature and politics was such as to justify a much fuller presentation than Mrs. Fields has given us. We have everywhere a sense of her detachment from the course and meaning of those events of which 'Uncle Tom's Cabin' was one of the most significant. For example, where she is telling the story of the Cincinnati life, there is not a

word concerning the secession of Theodore D. Weld and his anti-slavery coadjutors from Dr. Beecher's seminary. When we come to the writing of the great book, we miss the atmosphere of the time; and yet perhaps it is better so than to have gone too far the other way. There is a good letter to Frederick Douglass, pleading for the churches against his arraignment of their pro-slavery spirit. As in all previous accounts of Mrs. Stowe's life, we feel almost painfully her lack of preengagement with the subject of 'Uncle Tom's Cabin.' We feel it less now than before, yet still much, and wonder that so little observation and so much of divination went to the making of the book. It looks very much as if "the cry of the children" inspired it primarily, and only secondarily the cry of the slave. Mrs. John T. Howard furnishes an account of its production strangely at variance with Mrs. Stowe's. 'Dred' was pronounced a better work by the most competent critics, but the public did not agree with them. The fact is, that Mrs. Stowe's genius was less artistic than it was ethical and humane, and in proportion to her confidence in it as such was her success.

Her visit to England after her first great success was a triumph which put her simplicity to the severest tests, but it was equal to them all. This had an amusing illustration, in another sense, when she offered some of her husband's theological writings to the *Christian Union* at the same rates as her own. So much has been written of her belief in spiritualism that it may be well to notice that she said of it, "Sadly and soberly we say that, if this be communion with the dead, we had rather be without it." The Byron episode is touched only lightly by Mrs. Fields. The explanation given is that "she always spoke and behaved as if she recognised herself to be an instrument breathed upon by the Divine Spirit . . . to the prejudice of what appeared to others a wholesome exercise of will and judgment." From her youth up she had strange "fallings from us, vanishings," and the last years of her life made these continuous in an aggravated form, leaving her friends the merest shadow of her proper self to love and cherish.

A Short History of Modern English Literature. By Edmund Gosse, Hon. M.A. of Trinity College, Cambridge. D. Appleton & Co. 1898. 12mo, vi and 416 pp.

Mr. Gosse has neither the accuracy of a first-class scholar nor the insight of a first-class critic, but wide reading and long practice of the art of criticism combine with a good deal of originality to render this treatise of interest and value to all readers. Mr. Gosse's errors are oftener the result of inattention than of ignorance of the latest authorities. No doubt the questionable taste of many of his metaphors is partly due to haste of composition and the strain of saying something new. We notice, for instance, Sir Thomas Browne "dancing on the tight-rope of style," as Tennyson rising to a "rose-flushed ecstasy of plastic beauty." Some critics may reply that the former expression is suggested by the opening sentence of the 'Christian Morals,' a treatise of which it is a not inappropriate criticism. We should, however, prefer a simpler style throughout in an historian of literature.

Two chapters treat of pre-Elizabethan

literature. Ten Brink is generally followed, and with excellent results. We regret a marked contempt for the Middle Ages which mars many of the appreciations. Of course, anything valuable concerning Chaucer as an exponent of ideas peculiarly mediæval could come only from a closer study than Mr. Gosse has given to the period. Sir Thomas Malory is praised with true feeling. To Sackville the author is more severely just than Saintsbury, and we may also commend him for ranking Greene above Peele. But the general treatment of the drama is unsympathetic. Even Webster is very slightly treated; Ford is apparently reckoned his equal. If Randolph is mentioned at all, it should be as the author of "Amyntas," one of the very few charming pastoral dramas in English. Jonson is attacked, root and branch, without mention of the 'Sad Shepherd,' the exquisite lyrics, or the noble prose of 'Timber.' The last was praised by Swinburne above Bacon's 'Essays,' and with this estimate Mr. Gosse might agree, for he says of the "sagacious 'Essays'": "No work in the English language has been praised with more thoughtless extravagance." It is unfortunate to discuss Drayton only for his 'Poly-Oblion,' and a little misleading to call Daniel and Skelton "laureates" without further explanation. We could wish for more than the bare mention of William Browne of Tavistock, and a little less ferocity towards the poetry of John Donne. Hooker and Jeremy Taylor receive sympathetic appreciations.

The founding of the Royal Society after the Restoration is admirably treated. Wycherley is stamped as "a ruffian of genius," but the treatment of Dryden is a little inadequate. In the eighteenth century Mr. Gosse is thoroughly at home, and parallels between French and English literature are copious and suggestive. We may object, however, to the statement that, "during the sixteenth and seventeenth centuries, common sense had been by no means characteristic of the English race." It is the author's great familiarity with the eighteenth century that predisposes him to make the following suggestive remark: "For all his excessive attachment to revolutionary ideas, Shelley retains more of the age of Gray than either Keats, Coleridge, or Wordsworth. . . . Sweep away from Shelley whatever gives us exquisite pleasure, and the residuum will be found to belong to the eighteenth century."

The usual tribute is paid to the difficulty of selecting from Victorian authors, but, in his limited space, Mr. Gosse has done well. We miss Clough, and among the many excellent criticisms that of George Eliot is conspicuously poor. We are glad to find Mr. Huxley recognized as a master of English prose, and it is something to have contrasted Browning and Tennyson in an original way. The Epilogue is a plea for the doctrine of evolution as a canon of criticism.

We have observed the following misprints: *seventeenth* century for *fifteenth* (p. 43); *Malcore* for *Malore* (p. 53); and *John Davenant* for *William* (p. 175). The book is simply and attractively bound, and has an index.

Die Allgemeine Zeitung, 1798-1898. Beiträge zur Geschichte der deutschen Presse. Von Ed. Heyck. Munich: 1898. Pp. iv, 353.

As early as 1798, the publisher, J. G. Cotta, had planned the issue of a daily newspaper,

under the title of *Allgemeine Europäische Staatszeitung*, under the editorship of the poet Schiller. Indeed, about a year later, after much discussion, a contract was duly signed, in which "Hr. Hofrath Schiller" agreed to edit the proposed journal at a fixed salary of two thousand florins and other possible perquisites, dependent upon the financial success of the enterprise. Soon afterward Schiller reconsidered the matter, repented of the engagement, which he had entered into with reluctance, and was released from its obligations on the plea of ill health. An additional, if not the principal, reason for withdrawing was his absorbing interest in the projected literary periodical *Die Horen*, which he conducted from 1796 to 1797. Cotta then entered into negotiations with Dr. Ernst Ludwig Posselt, a man of some reputation as a jurist and historian, and with decided talent as a publicist, and on January 1, 1798, the first number of the journal appeared at Tübingen, under the title of *Neueste Weltkunde*. It was a very small affair compared with a newspaper of to-day, being a single sheet of four pages, divided each into two columns about eight inches long and three inches broad. The contents consisted of the first half of an editorial on the state of Europe, with reflections on the glorious results of the French Revolution since 1789—an event, the writer declares, which has produced as great a convulsion in the political world as would be produced in the physical world if the Alps from Mont Blanc to Istria should plunge into an abyss, England be swallowed up by the sea, the Rhine and the Danube disappear, and Africa be rejoined to Spain by an upheaval of the land. The new journal was heartily in sympathy with these political changes, and rejoiced at the impotence of the old despotisms in their efforts to establish a *cordon sanitaire* in order to prevent their subjects from being infected by the contagion of the principles that had proved so fatal to tyranny on the Seine. "No wall of bayonets will be thick and strong enough to resist the passage of opinions."

That a paper expressing such liberal sentiments should soon come into conflict with the censorship was inevitable, and, in a little more than two months after its first appearance, Austria and Russia began to complain of its "audacious conduct," and finally succeeded in compelling the Duke of Würtemberg, "for the preservation of public order and tranquillity imperilled by such writings," to issue a decree for its suppression. This decree took effect on September 8, 1798, and on the following day the paper appeared at Stuttgart under the title of *Allgemeine Zeitung* and the editorship of L. F. Huber. Its publication was not interrupted nor its character changed in the slightest degree. On October 13, 1803, it was again prohibited, and in consequence of this procedure transferred to Ulm, which then belonged to Bavaria. Seven years later the Peace of Schönburg assigned Ulm to Würtemberg, and on September 1, 1810, the *Allgemeine Zeitung* was removed to Augsburg, and thence in 1833 to Munich, where it still remains. That the journal survived all efforts of the censors to kill it is due to the strong particularistic spirit which then prevailed in Germany, and rendered each petty potentate jealous of all the others and eager to protect the victims of their tyranny. This narrow provincialism, although a source of political weakness, tended unquestionably to foster a certain degree of intellectual li-

berty and individual independence, which a single autocratic sovereign would have easily and effectually destroyed. The paltry despotisms, by thwarting each other's aggressions, unwittingly promoted the growth of freedom and the gradual formation of an irresistible current of public opinion, which finally swept them away.

It may be said without exaggeration that the history of the *Allgemeine Zeitung* reflects more fully and faithfully than that of any other journal the history of German civilization during the past century. There was no great movement during that period in art, literature, science, religion, or politics, whose progress may not be traced and character appreciated by a careful study of its columns; and there was hardly a man eminent in letters or in any department of research, or prominent in public affairs, who did not belong to its numerous body of regular and occasional contributors. Of these one of the earliest and most distinguished was Goethe, whose first contribution appeared October 12, 1798, and his last January 9, 1832, less than three months before his death. About the only notable exception to this rule was Schiller, who, although taking a lively interest in the journal, as his correspondence with Cotta shows, seems to have sent but a single communication to it, namely, a personal puff in the form of a short notice that on September 4, 1803, the drama of *Wallenstein* was represented at Weimar "in the most high presence of their royal majesties of Sweden," and that "the author of the piece and of the History of the Thirty Years' War received from the King a costly diamond ring."

Prof. Heyck's centenary *Festschrift* gives a very interesting and instructive account of the growth and influence of the *Allgemeine Zeitung* during the early stages of its development, but the execution becomes more and more sketchy and inadequate as the work progresses, and does scant justice to the subject, and especially to the *Beilage* as an organ of culture in recent times. Scarcely any mention is made of the many leading men of science, like Liebig, for example, who used this journal as the best medium of communicating the results of their researches to the general public; and the conspicuous part it took in the discussion of the Vatican decrees of 1870 by Döllinger, Friedrich, Johannes Huber, Reinkens, and other rejecters of papal infallibility is strangely ignored. But with all its deficiencies, particularly in the cursory treatment of the events of the last forty years, the volume is a valuable contribution to the history of the German press and of German culture. The paper's circulation reached the highest point in 1848, when it had 11,155 subscribers; but its influence in moulding public opinion always depended on its superior social and intellectual quality, rather than on the number of its readers. It may be said to its credit that it never indulged in sensationalism of any sort, or pandered to popular prejudice for pecuniary gain, but always pursued the high and even tenor of its way without even asking whether such a course would pay or not. On this point the publishing house of Cotta, through three generations, showed no sign of wavering, and cheerfully preferred any deficit in revenue to the slightest defection from principle. The same spirit animates their successors since 1889.

La Préface de Cromwell. Par Maurice Souriau. Paris: Lecène, Oudin & Cie.

Twelve years ago M. Maurice Souriau published an admirable work under the title 'De la Convention dans la Tragédie Classique et dans le Drame Romantique,' in which he took an impartial view of the æsthetic and literary value of these two opposite forms of the drama, and brought out, with singular acuteness and accuracy, their characteristic differences. Without allowing himself to be carried away by enthusiasm for the one or the other, he showed clearly the beauties of each and wherein the Romantic drama had improved on the tragedy. At that time such impartiality was not common among writers. Romanticism had been displaced by realism, and naturalism was busy gaining the ear of the public. Now M. Souriau gives us a new book, still more interesting, and composed in the same spirit of critical impartiality and independence of judgment—'La Préface de Cromwell.'

The volume is divided into two parts. first, an introduction, in which we have a careful study of the influences which acted on Victor Hugo, then a young man; and, secondly, the text of the Preface itself, copiously annotated and commented on. The work is serious, well wrought out, and in the highest degree useful to a proper understanding of the real Hugo and his influence on the whole literature of France in the nineteenth century. We have here none of the malevolent bitterness and gall which mark the "biographie haineuse" of Biré, nor, on the other hand, anything of the extravagant praise of Paul de Saint-Victor or Théodore de Banville. It was time, indeed, that we should have a critical study of one of the most important works of the great poet, written dispassionately and with a single eye to truth. The example set by M. Souriau may well be followed henceforth by all critics and students of Hugo.

M. Souriau meets at the outset the reproach so often addressed to the poet of having changed his opinions with his years; of having never had any stable views on literature or art; of having one moment adored certain principles, and the next having utterly cast them from him with unspeakable contumely. He shows, on the contrary, what reasonable students of Hugo could not help perceiving, that instead of brusque and inexplicable changes of view, there took place in the poet's mind a slow but sure evolution of thought, the germs of which are evident in his very earliest works, and that he was never fettered by opinions and never allowed himself to be interned within a form or a theory, because he consistently pursued one purpose, and, as the light became clearer to him, he went forward more resolutely. This is in direct contradiction to the plan adopted by Biré, which consisted in putting the very worst construction possible on everything the poet ever wrote or did; but Biré determined to blacken Hugo's character and to destroy his reputation as a man and as a writer. His is a *parti pris*, and so evident, so plainly hostile, that it happily loses much of its force, though it cannot be denied that he succeeded in damaging Hugo in the eyes of a large number of people.

It will come in the nature of a surprise to many to learn, on the authority of the passages quoted and referred to by M. Souriau, that Hugo "never allowed himself to be imprisoned within the pale of Romanticism," for if there be one belief deeply rooted in

most minds, it is that Hugo was a rabid Romanticist to the end of his days. The truth is, that Hugo kept of Romanticism what was permanently good and useful, and discarded the rest; that some of his disciples, having carried the Romanticist principles too far, he was held responsible for their errors. This is always the case with the leaders of great schools in literature; Ronsard in the sixteenth and Voltaire in the eighteenth century being familiar examples.

Another reproach which has been hurled at Hugo, which was hurled at him by the critics of 1837, as well as by the Biré brood, is that the famous 'Preface' is a mere rehash of ideas already in common circulation in his day, and that it lacks any originality whatsoever. This also is refuted by M. Souriau, who is not content with dogmatic assertion, of which, indeed, we find little trace in his book, but uses the only convincing method, that of proofs drawn from facts plainly evident to all unprejudiced minds and from the consequences of the publication of the 'Preface' itself. Undoubtedly the ideas of Chateaubriand and De Staël are to be met with in the 'Preface,' and equally surely are other ideas, in the air, as the saying is, at that time, to be met with; but the man who gave expression to those of the latter class is Hugo, and none else. And this is no slight claim to originality, as even Boileau, the uncompromising critic of the seventeenth century, allowed. The presentation of the ideas of Chateaubriand and De Staël, in a way at once new and forcible, gave these a power they had not previously possessed. But, apart from these facts, M. Souriau shows conclusively that the 'Preface' contains many ideas purely Hugo's own.

This critical edition has an added value in the very full notes and references, in which the erudition of M. Souriau is never suffered to exhibit itself for its own sake, but is always applied to the task of enlightening the reader and facilitating the researches he may be induced to make. The book is, in brief, one of the most valuable additions to the literature on Hugo and Romanticism which we have had for many a long year.

Select Documents Illustrative of the History of the United States, 1776-1781. Edited with notes by William MacDonald. Macmillan. 1898. 8vo, pp. xiii, 465.

In this attractive and well-arranged volume Prof. MacDonald has brought together the texts of ninety-seven documents, of which all but four belong to the constitutional period. His aim is to furnish a collection of texts available for class use. The need of such a collection is impressed on the minds of teachers of history in colleges and high schools, for text-books and lectures abound in allusions to or abstracts of documents which can really seem living only to those who read the texts.

The value of such a work as Prof. MacDonald has prepared depends on four factors: such a selection of texts as may illustrate the chronological succession of important events; such a selection as may fairly represent the various kinds of documentary material; the choice of really essential extracts; and the accuracy of transcriptions. The first of these criteria may safely be applied to this book: if the reader lets his mind run through the

succession of important events in the public, official history of the nation, he will find no large episode which has not illustration here in some typical document. The ground is well covered, and special effort has been made to illustrate the slavery conflict. The range of material is by the author's plan limited. A third of the extracts are from statutes and treaties; another third from executive messages and reports. The rest is made up of congressional documents, state documents, and five special documents, viz., Taney's contract with the Girard Bank, the Constitution of the American Anti-Slavery Society, the Dred Scott Decision, the Amendment of the Peace Congress, and the Confederate Constitution. Perhaps some diplomatic material might well have been included, such as the Orders in Council and Decrees of 1807; but on the whole the choice is very sensible, and there is sufficient variety in the subjects of the texts.

That such a collection is somewhat arid lies, perhaps, in the nature of things. Documents which, like most of these, set forth accomplished facts, in careful detail, are hard to read and hard to remember. Prof. MacDonald has introduced some texts like Adams's message on the X Y Z, the Report of the Hartford Convention, the Webster-Hayne Debate, and the Ostend Manifesto; but most of the extracts have the solid weight of the statute-book. Even the immortal Declaration of Independence, Articles of Confederation, Ordinance of 1787 and Constitution are printed in so many places that one grudges the tenth of the book given up to them. On the other hand, we could wish that one or other of the declarations in justification of the South Carolina ordinance of secession, virtual preambles, had been published in connection with it.

The authorities used are few, most of the extracts coming from congressional documents of various kinds, where verification is simple. Several of the treaties are taken from the Revised Statutes of the District of Columbia instead of from the official Treaties and Conventions. While the text of the early constitutional documents prefixed to the Revised Statutes of the United States is legal and may be quoted in courts, an exact transcription from the originals of some of the verbatim reprints would have been more suitable for an historical collection like Prof. MacDonald's. The introductory notes are readable and helpful. In general the book is well chosen, well fitted together, and likely to serve a useful purpose.

British Central Africa: An attempt to give some account of a portion of the territories under British influence north of the Zambesi. By Sir Harry H. Johnston, K.C.B. With six maps and 220 illustrations. Edward Arnold. 1897. Pp. xix, 544. L. 8vo.

"A Cinderella among the Protectorates" is Sir Harry Johnston's quaint way of indicating at once the present insignificance and the future prominence of the country which he has governed with such ability and now in this work describes so well. It is a singularly comprehensive book, containing a mass of well-digested information about the land, its appearance, resources, fauna and flora, inhabitants, their languages and history. Though there are necessarily many dull details of facts and dry scientific lists, yet much of the text possesses a geniality and originality which we have found quite cap-

tivating. His description of the physical features of the Protectorate, for instance, is supplemented by graphic pictures of characteristic scenes—a river flowing between banks of palm-trees; the tropical forest, wonderful for its lush vegetation and gorgeous color; the high, grassy plateau with its grazing herds of antelopes, a native village, an Arab town, and a mission station. To a useful catalogue of the outfit of an intending white settler, and the diseases to which he will be liable and the best methods of treating them, he adds an entertaining series of imaginary letters written by a young man to his friends in Scotland. In them he tells at length of his experiences in his journey from the coast to the interior, his life at Blantyre, on a coffee plantation, in buying and clearing land, in hiring native laborers, his hunting adventures, and his inevitable fever. The chapter on missionaries frankly states their mistakes and failures from the author's point of view, yet describes their far greater successes, and closes with a charming account of the reception by a missionary of a white traveller who, at the end of a long journey, comes to the station fever-stricken and exhausted with toil and privation. It is one of the most beautiful and touching pictures of some phases of mission life—not without its shadows—which we remember to have read, and is doubtless the faithful representation of some of the author's personal experiences.

The historical chapters are something more than a bald record of events. There is a sketch in miniature of the way in which the British Empire has been and is being built up. It shows with what pains, what courage, what unselfish devotion, and at what cost of valuable lives a great territory, rich in natural resources but unfruitful because of the ignorance and savagery of its inhabitants, is slowly but surely being made productive, the home of a peaceful and industrious people. British Central Africa consists of all the British possessions north of the Zambesi; but the Protectorate, about which this work is chiefly concerned, includes only the Shire Highlands and the adjacent territory on the south and west shores of Lake Nyasa. Its meagre history begins, practically, with the advent of Livingstone in 1856, though the first white settlement, by missionaries, was not made till a few years later; and consists largely in the struggle, only just completed, with the Arab slave-hunters and their native allies. Sir Harry's summary of results since the organization of the Protectorate is more interesting from the promise which they give for the future than for their present magnitude. Still, 390 miles of road and 80 miles of broad path; a revenue exceeding \$100,000, and a trade of more than half-a-million; a postal service with twenty offices and 500,000 pieces of mail matter annually; the slave-trade exterminated, and native laborers paid no longer with cloth and beads but in cash, and having bank accounts—all this, with soil fit for raising cotton, coffee, wheat, or for grazing, and with untold riches in gold and iron, certainly justifies Sir Harry in looking forward to a time when India will be reproduced in British Central Africa.

If in the first half of his book the author has shown himself a capable administrator and historian, in the second he makes it evident that he is a keen and diligent observer and collector of plants, birds, and animals, and that to an intimate scientific

knowledge he joins the appreciation of the artist for beauty of form and color. These chapters on the botany and zoölogy of the country are also enlivened by personal touches which show his interest in and sympathy for everything in nature—with one exception, the insects. Against them he inveighs with amusing vehemence as things seemingly "created for an almost evil purpose." His account of the natives gives in minutest detail facts of great interest to the ethnologist; and if it seems to show that the negro of south central Africa has been retrograding for some centuries past, yet it furnishes reason also to hope that an upward turn has come, which "may, with steady strides, bring him upon a level at some future day with the white and yellow" man. That in individual cases this level has been reached is shown by a remarkable prize essay, printed in an appendix, on the useful trees of British Central Africa written in the Ci-nyanja language by one of the native scholars of the Blantyre Mission School.

The attractiveness of the volume, as well as its usefulness, is greatly enhanced by the numerous illustrations (some of the most beautiful being reproductions of the author's own drawings and paintings) of characteristic scenes, notable types of the fauna, flora, and native races, dwellings, and native industries. There are also portraits of those Europeans who have been foremost in aiding Sir Harry in his work of organizing and up-building. Some admirably clear maps show the physical features, rainfall, distribution of native tribes, administrative divisions, missionary stations, and foreign settlements. Several botanical and zoölogical appendices, vocabularies, and an excellent index complete the enumeration of the merits of this work, which is an important contribution to the highest class of the literature of Africa.

The Subconscious Self and its Relation to Education and Health. By Louis Waldstein, M.D. Scribners. 1897. 8vo, pp. 171.

This suggestive little book decidedly repays perusal. We do not say that its psychology is always clear or sound. By *subconscious* perception, Lewes, who introduced the term, meant *subliminal* perception, perception not amounting to sensation, but of an obscure kind. But Dr. Waldstein applies the word to any feeling which, without an unusual effort, cannot be brought to the focus of attention. The general theme of the essay is stated in a passage which we abridge, as follows:

We make a distinction between *conscious* impressions and others associated with them, though not within the narrowed circle of our attention, the *subconscious* impressions. We are active and selective relative to the conscious, passive only in respect to subconscious impressions. But the latter class is, however, permanently registered, and forms a constituent part of memory. Impressions here called subconscious are by far more numerous than those designated as conscious. The accumulated contents of our memory govern our emotions, our thoughts, and actions, and therefore that portion of our memory made up of subconscious impressions, and their aggregate must necessarily play a great part in our individual life.

The author goes on to describe a "mood" (what the Germans call *Stimme*) very much as psychiatrists have done, tracing it largely to unfocused organic sensations. Indeed, in many passages he seems to assume that

the distinctive character of emotion, or at any rate of emotionality, is the exaggeration of the unfocused consciousness; but this is riding his horse too hard. Moreover, quite in contrast with most psychologists, he often allows himself to speak as if associations were particularly prominent with unfocused ideas, forgetting that this is only half the truth, since those associations which do act, act more strongly with the focussed ideas. Upon this general theme the author descants in a very interesting manner; and even when his argument is open to suspicion, his conclusions are wise. We all know that the soundest wisdom is not always the best reasoned. There is a kind of "horse sense" upon which we learn to rely all the more that it springs from the larger and "sub-conscious" part of our nature; and with this Dr. Waldstein is well equipped.

Sans Mari. Par Mme. V. Le Coz. Paris: Armand Colin & Cie.

Sale Juif! Par Louis Dollivet. Armand Colin & Cie.

Nowelles Grecques. Par D. Bikélas. Paris: Didot.

Andronike, the Heroine of the Greek Revolution. By Stephanos Theodoros Xenos. Boston: Roberts Bros.

Vivette; or, the Memoirs of the Romance Association. By Gelett Burgess. Boston: Copeland & Day.

Mme. Le Coz's 'Sans Mari' is another of the series "Pour les jeunes filles," and shows that the French are stepping bravely along the path opened for them by our many writers of stories for girls, such as Mrs. A. D. T. Whitney; without, however, so much of the sentimental religious tone into which we are apt to fall. The tale of the young girl's convent life and of her plunge into gay society is well enough told, but as we do not sit down to mourn hopelessly if our daughters are not married at twenty-five, the point of view borders on the ridiculous to an American. This story is not as good as some of the others in the series.

Were Louis Dollivet's 'Sale Juif' a well-composed book it might be much to the point just now, intending to show the deep-lying hatred of the Jew in Paris; but though it begins with some pretty pictures of bourgeois life in that city, the little romance of the Jewish surgeon and the Catholic girl is so flatly quenched that one does not care to follow the hero in his hasty and inconsequent wanderings among foreign hospitals and his coreligionists. In fact, he is stupid. And so is the book.

Bikélas's short stories are written with a graceful touch, a gentle humor and pathos which show the most pleasing side of the Greek character, its childlike simplicity and confidence. They are truly Greek and not French, however much the translation may make them seem related to the Gallic tale, and the illustrations strengthen the national flavor. Here are the devoted priest; the charitable peasant and the doctor; the timid, self-sufficient young lawyer who fancies that he can be a soldier among the fierce Cretans, and learns better—in short, the tragedies and the kindness of limited communities of any nationality, only that here we seem to see something like the gentle softness of the fawn with an occasional glimpse of the slyness of "Brer Rabbit."

Such quiet, gray tones contrast strongly with the scarlet glare of the next work on

our list. Prof. Grosvenor has given us a readable translation of Xenos's historical novel, which tells the events of the revolution of 1821, so similar, as he says in his preface, to the scenes of the melancholy war just ended. In our prosaic, civilized world it is difficult to believe in the possibility of so many hairbreadth escapes by flood, fire, and sword as the heroine experienced, Athena-like as she appears; but some scenes in the book make it worth reading as illustrative of more general history. Such are the beautiful descriptions of Scio and its people, and the fearful tragedies of the conquest of the Islands; the vivid pictures of the sieges of Missolonghi and the battle of Navarino, and the terrible desperation to which the wretched nation was reduced before the tardy recognition of its rights was granted. Everything is a strange and seemingly involuntary confirmation of what has just been before us—the devotion of the masses of the patriotic peasants, and their betrayal and sacrifice again and again by avaricious, treacherous, and cowardly leaders. There runs through the story a strain of sorrow, bitter, truly, but unprejudiced, and the weakness as well as the heroism of the national character is exposed; so that our sympathies for the unfortunate people are enlarged and our hopeless feeling that they are as caught in a net is reinforced. And what the fowler will do with them we know not. The death of Andronike in a convent, whither she had fled under the protection of the Russian Empress, and the beauty of the last moments when she sinks down though crowned with flowers to celebrate the freedom of her country, is a fine climax; and we leave her with more of human feeling than has perhaps attached to her during all the course of her almost superhuman struggles.

Such of the present generation as have time seem to enjoy amusing their fancy with fantastic impersonalities like Vivette and her companion, the director of the Romance Association. To keep up with such a very nimble wit, most people need a more sustained wing than the flutterings of the Lark. However, a gentle sarcasm and merry dialogue relieve the book somewhat of its aimlessness, and an idle half-hour may be enlivened by glancing through 'Vivette.'

Hindu Manners, Customs, and Ceremonies. By the Abbé J. A. Dubois. Translated from the author's later French MS. by Henry K. Beauchamp. Oxford: Clarendon Press; New York: Henry Frowde. Two volumes, 8vo, pp. 730. 1897.

This interesting and useful work is a translation of an account of the condition of India at the opening of the present century, as given by the French missionary Dubois in the time of his long residence among the Hindus (1792-1823). Most of the Abbé's life in India was spent in the Madras territory; the coloring is therefore rather that of southern India. The picture which he draws is vivid and it is sometimes painful in its details; but it sheds much light upon the people of Hindustan in his day, and it contributes in large measure to a better understanding of the spirit of older Indian literature. After his return from the East, the Abbé lived almost as a recluse in Paris, and died there in 1848. The book he has left is a monument to the zealous Christian worker's memory. The fervid earnest-

ness, the straightforward honesty, and the genuine modesty of the writer awaken sympathy and lend a certain attraction, or even charm. The description of the suttee, or widow-burning, which the Abbé witnessed with his own eyes on two memorable occasions, is most exciting.

Dubois's book has been accessible before in English, but only in an imperfect form; the present version gives, for the first time, the complete work which the author himself revised in 1815, and it is now edited with notes, corrections, and a biography of this early pilgrim to the East. Last, but not least in importance, the prefatory note by Max Müller, introducing the volume, also lends an interest to these volumes, which the larger libraries should acquire, which lovers of travel and of life in foreign lands will enjoy, and which students of India will read to their advantage.

The Nation.

NEW YORK, THURSDAY, MARCH 3, 1898.

The Week.

Gen. Sherman dropped in upon a gathering of clergymen in Washington, ten or twelve years ago, and was rallied a little on venturing among so many heralds of peace. He rejoined, in his swift, incisive way, "You gentlemen in black coats are the men who make war. We of the army and navy simply end the wars which you bring on." It cannot be said, however, that the clergy as a whole are now adding anything to the war fury, except as their words are distorted by lying newspapers. Nearly all the references from the pulpit to the *Maine* disaster are moderate and calming in tone. The President himself listened to a peace sermon in Washington on Sunday. Certainly if ever the ministry feels itself called upon to withstand the active powers of darkness, the need of opposing and exposing the diabolical newspapers which are trying to lie the country into war must be obvious. The trouble is that the lying is so devilish that it perverts even words of truth and soberness that any sane and honest man may speak. It seems impossible to give the lie to these venal and unspeakable sheets in so explicit a form that they will not twist it into an explicit endorsement. Luckily, the lying has been done on such a monstrous scale that nothing these papers say is now credited by any rational man without independent confirmation. A long course of lies, which, like the father that begat them, are gross as a mountain, open, palpable, is at last working out the natural result of breeding universal distrust of anything seen in print. But the liars go jauntily on their way to the lake of fire prepared for them, and

"—blind and naked ignorance
Delivers brawling judgments, unashamed,
On all things all day long."

Nothing could be more curious than the contrast between the wild aspect of the first pages of our penny dreadfuls and the calm demeanor of the persons who are seen reading them. If half of what the "scare" headlines reveal were true, the first impulse of the reader would be to remove his family to a place of safety, dispose of his property as best he could, and make arrangements to leave the country. A few years ago the mere sight of a newspaper got up in this extraordinary style, with headlines in bill-poster type reaching quite across the page, would have started a panic. People would have inferred that nothing less than a most dangerous condition of affairs could have led the

editor to such unusual demonstrations of alarm. Now they are read with entire passivity, even although they declare war to be imminent, and indicate that a majority of the American people, including those of them who are in power, are either lunatics or maniacs. The new journalism has been steadily raising the tone of its yelling till it has reached the highest limit possible. The louder it shrieks, the less attention is paid to it. What would remain for it to do in case of real danger, or a real war, it is difficult to imagine. The resources of type have been about exhausted. Nothing in the way of larger letters can be used, unless only a single headline is to be given on the first page. Red ink has been resorted to as an additional element of attraction or terror, and if we had a war, the whole paper might be printed in red, white, and blue. In that case, real instead of imitation lunatics should be employed as editors and contributors.

The chief trouble between the United States and Spain at the present time is not the disaster to the *Maine* in Havana harbor. Nobody really thinks that the Spanish Government or its military or naval officers caused that disaster or intended that it should take place. If it was caused by a private person, we have no means of knowing whether he was an adherent of Spain or of the Cuban rebellion. He may be an insane person. He may have perished in the explosion. Leaving that disaster out of the reckoning, the preëxisting trouble remains; that consists of a mutual misunderstanding, and therein lies the danger. The two nations do not look at the same facts in the same light. The Spaniards think that we want to acquire the island of Cuba. It belongs to them. It was theirs centuries before we became a nation. They think that we want to take it from them for our own use and behoof, and that all our disclaimers of such a purpose are hypocritical and false. In point of fact, we do not want the island at all. One of the most powerful deterring influences which have held us aloof so far is a reluctance to become responsible for the future social and political condition of the island if it were wrested from Spain by us. Moreover, it angers us to be charged with a selfish motive in reference to Cuba. This is the way Spain misunderstands us.

We misunderstand Spain in a different way. We look upon her first as a monarchy. Our knowledge of the monarchical governments of Europe as they exist to-day is extremely vague, and of Spain the vaguest of all. To the great

mass of Americans—to those who have not travelled abroad or who have not had the advantage of schooling in political science under modern masters—the Spain of to-day is the Spain of Cortez, of Pizarro, of Philip II., of the Armada, and of the Inquisition. More Americans have had their conceptions of Spain moulded by the writings of Prescott and Motley than by all other influences taken together. These writings are true of the time to which they relate, but not of the present time. They are true just as the speeches of Burke and Chatham were true of the Government of George III., but not of that of Victoria. Perhaps as many Americans fail to distinguish between the England of 1776 and that of our own time as between the Spain of Alva and that of Castelar. We can remember a time, during a former rebellion in Cuba, when Charles Sumner thought it necessary to make a speech against our interference, pointing out the fact that Castelar was then at the head of the Government of Spain and that the world contained no better republican than he. Castelar still lives, and his voice has been heard in remonstrance against the misconceptions that we have formed concerning Spain and Cuba.

It is to be remembered, by people who think at all about consequences, that the Cuban trouble would not end with the expulsion of the Spanish. We should then find ourselves in possession of an island desolated by war, and inhabited by a mongrel race unused to self-government, grossly ignorant and superstitious. Consequently, any one who is working out a plan of campaign, should work out at the same time a plan for the reorganization of civil society in the island by the United States. We are not saying this by way of joke or sarcasm. We mean seriously that the performance of some such task will be one of the inevitable consequences of victory; and if we are to dispose of the Spaniards as easily as we think we are, it is not a bit too soon to begin to think about it. If Cuba is to be a dependency of ours, how are we to govern it? What class of men are we to select for the purpose? Are we to allow popular suffrage to have any share in it? If we admit the island as one, two, or three States of the Union, what kind of addition will these States make to the Senate? What effect will this have in producing further annexations—Hawaii, other West Indian islands, Mexico, and the South American states? The doctrine that "all will come out right in the end," on which Americans have in the past relied so much, and with so much success, was, it must be remembered, based on the fact that our problems were dealt with by a ho-

mogeneous population, possessing a common political training and traditions. As soon as we began to admit another race to a share in the work, things did not "come out right in the end." The admission of the negroes, for instance, to a share in our government, indispensable as it was as a guarantee against their oppression, has not come out right yet. Its very advocates at the North have actually abandoned the assumptions on which they supported it, as seen in their scheme for the annexation of Hawaii. They now say that men of an inferior race need not be consulted about their political destiny.

Prime Minister Sagasta's assertion that Spain cannot consent to refer the Cuban troubles to arbitration is only what was to have been expected. Some sanguine people have been hoping that if the worst came, and war seemed inevitable, England or Germany might interpose with good offices and ask that arbitration be resorted to instead of arms. But Sagasta declares that the Government of Spain will "reject every act tending to cast the slightest shadow upon the indisputable sovereignty of the nation, or to diminish its liberty of action in any territory over which the Spanish flag floats." We cannot blame Spain for this. She regards Cuba as a part of her inalienable territory just as truly as we consider Florida a part of ours, and will no more hear of discussing the question of giving up Cuba than we should of surrendering Florida. Moreover, Spain's attitude towards arbitration is only what we have taught her. We have ostentatiously declined to consider arbitration applicable in cases touching territory or honor. We had a treaty of arbitration pending with England, and then so mangled it out of shape with restrictions and qualifications, tending to make it ridiculous and to prove that we did not believe in arbitration at all, that the whole thing was finally thrown overboard as an offence in the nostrils. We had our boasted project of pan-American arbitration, but brushed it contemptuously aside when the Chilean flurry occurred. It does not lie in our mouths to find fault with any nation for being unwilling to arbitrate international difficulties. We have had the opportunity of giving arbitration new sanctions and dignity, and flung it away with a Jingo whoop. Now we cannot complain if that chicken, with many others that have gone out of our own Jingo henery in the past eight years, is coming home to roost.

The Administration evidently has ceased to push the Hawaiian annexation scheme with the zeal which it manifested at the opening of the session. The President appears to have learned that it would be a very bad thing for the

party if he should carry through what is really a personal project, not justified by the platform upon which he was elected, repugnant to prominent Republican Senators and prominent Republican leaders in the House, and condemned by public sentiment. The movement to secure an early adjournment of Congress helps the opposition to annexation, since if the Senate can be kept busy with other matters, the Hawaiian scheme can be held in the background until it is too late to pass even a joint resolution. Considerations of party advantage operate to the same end. The Republican managers in the House naturally shrink from having an Administration measure come up in that body which is earnestly opposed by Speaker Reed, Chairman Cannon of the appropriations committee, and many other Republicans who sympathize with Representative Johnson of Indiana in his earnest protest against it last week. The *Maine* incident has also served to injure the chances of annexation. Once men began to think of war as possibly near, they realized how much better prepared for war the nation is without Hawaii than with it. If there should be a conflict with Spain, we should want all our war vessels for use in it, and should be handicapped if we were compelled to keep some of them in Hawaiian waters for the defence of those islands.

The incident serves to emphasize a lesson which the developments of the last few weeks have been teaching—the value of discussion to a democracy. It is now three months since Congress met and the Senate took up the treaty for the annexation of Hawaii. The treaty was sent in by a President who had but recently been inaugurated and who made annexation an Administration measure. The vast power that a new executive possesses in the early part of his term, through the control of the patronage, combined with the natural inclination of partisans to sustain the head of their organization in a policy to which he had sought to commit it. Various motives of self-interest impelled hesitating members to yield to the insistence of the President. Nobody doubts that if the advocates of annexation could have forced a vote without discussion early in December, the treaty would have secured the requisite two-thirds vote, and the irrevocable step would have been taken. To-day the most sanguine among them admit that the treaty cannot be ratified, and the opponents of the scheme believe that they can defeat the attempt to reach the same end through the passage by both branches of a joint resolution. Three months of discussion have sufficed to show that public sentiment is overwhelmingly against the scheme, and the prospect for its defeat after deliberation is now as good as was the outlook for its success before such deliberation.

Congressional proceedings on Washington's Birthday usually are either suspended entirely, or are humdrum and perfunctory in their nature. But the session of the House last week was rendered notable by a striking speech from Mr. Johnson of Indiana, a Republican member, which was most appropriate to the anniversary. Mr. Johnson improved the opportunity which the rules permit to discuss questions of general public policy while an appropriation bill is up, to make an emphatic and impressive protest against the annexation of Hawaii. He opposed the scheme because the people of Hawaii, outside the small governing class, are against annexation; because the population are ignorant, and it is absurd to take in a large body of such ignorance at the very time when we are legislating against the admission of individual immigrants who are ignorant; because our system of government is not adapted to a colonial policy; because annexation of Hawaii would establish a bad precedent, which we should be urged to follow at an early day, and the cry of to-day, "Give us Hawaii," would be to-morrow, "Give us Cuba," and the next day, "Give us Samoa"; and because "the internal reforms which our country demands present a field broad enough to enlist our best efforts. The purification of the ballot, the crushing of the rings and Trusts which plunder our people without stint, the restriction of immigration, the establishment of a fixed and stable standard of value, and the reform of our banking laws, afford work enough for us to do." Mr. Johnson closed with an earnest appeal that, if the Senate shall send to the House a joint resolution for annexation, the Representatives may "have the moral courage to say 'No' to a policy which will lead, God alone knows where." Significant as was such a protest by a leading Republican Congressman against a policy advocated by a Republican President, its plauditory reception by the body to which it was addressed was still more significant.

South Carolina feels keenly the shame of the frightful crime by which the colored postmaster at Lake City was killed, and members of his family killed or wounded, by a mob of whites who had set their home on fire in the middle of the night. Nothing could be asked for more appropriate to the occasion than the editorial expressions of the *Columbia State*, and the *Charleston News and Courier* has been equally outspoken in condemnation of the atrocity. The murder of the postmaster is the sixth lynching that has occurred in South Carolina since the beginning of the year, and the Charleston editor holds the State authorities indirectly responsible for the latest crime because "they have made practically no effort whatever to stay the hand of violence." He goes still fur-

ther, and welcomes the opportunity now presented for the federal Government to interpose, as "the State authorities have demonstrated their inability to deal with such crimes against the law." Time was when scarcely the preoccupation of impending war could have kept the Republicans in Congress from vociferating for such interposition, even in a case not distinctly federal, like this.

Croker's declaration in favor of the constitutional amendment providing for biennial sessions of the Legislature injures its passage by the Assembly as already by the Senate. The Democratic members from the interior of the State have been favorably disposed towards it from the start, and, with Tammany supporting it, there will be hardly anybody outside of the Albany representatives in opposition. Much speculation is indulged in as to the cause of this change of base, the Tammany members having only last week recorded themselves against advancing the measure. The really significant feature of the incident is the light which it throws upon the dummy character of the modern legislator under the boss system. His only business is to obey orders, and this he must do even when it requires him to oppose one week the very thing that he argued in favor of the week before. It is no wonder that men of character and ability are not found in the Legislature under such a system.

We have now four bosses, two in each party, who are seeking openly to direct the Legislature at Albany. Platt and Black are doing this work for the Republicans, and Hill and Croker for the Democrats. All four take the common ground that the members of the Legislature have no individual will or desire in the matter; that they are sent to Albany, not to deliberate upon matters of public interest and legislate to the best of their ability for the good of the State, but to obey "orders" from the bosses. Platt comes on from Washington on Sundays and gives his orders in person to the leaders of the Republican majority in the two houses. Black summons the Republican members to his office and tells them what he wants them to do with measures for reforming primaries and securing biennial sessions of the Legislature. Croker writes a formal letter to Senator Cantor, which the latter gives to the press, telling him what he wishes the Democrats in the two houses to do. It matters not a particle that the course which Croker favors is exactly opposite to that which the Democrats have been pursuing. Cantor promptly calls a caucus, and it is taken for granted that the Democrats will turn around. The only doubt which exists about it lies in the fact that Hill, who issues his views in the form of bulletins through the press, is opposed to Croker on some points,

and may take some of the rural Democratic members with him.

The receipts, bar and other, at Mr. Croker's club are likely to be small for some time to come, owing to the "squeezing" which many of the members have suffered in Wall Street during the last few days. This misfortune, coming on top of failure to get the civil-service regulations broken down in order to turn the minor places in the municipal departments over to Tammany, is likely to precipitate a crisis in the Club's finances. The decision not to move into a new and larger club-house was made just in the nick of time. Mr. Croker reached it, it is said, because the income of the Club was not proving to be so great as had been anticipated. The members, as a body, having parted with the greater part of their ready money in paying their initiation fees and buying their dress suits, had little money to spend in drinks and dinners and suppers. If they could all have got "places," as they hoped to do, this would not have been the case, but the damnable civil-service law has proved to be an insurmountable obstacle, for a time at least, to such possession. Now, as if this were not hard luck enough, comes the war-scare, with the slump in Wall Street sweeping away all the profits that had been made through the "tip" on rapid transit, and carrying with them a lot of money in "margins" which the rank and file of Tammany had put up on what they supposed was a "sure thing" in elevated railway and Metropolitan stock. What is the good of a club membership and a club suit if you have no money in your pocket, and the credit system cannot be worked? If you pawn your suit, you cannot go to the Club without danger of giving offence to Mr. Croker. If you retain the suit and go to the Club, filled largely with members, like yourself, impecunious, what enjoyment can you look for? What is the inevitable consequence? Why, the Club is deserted, and members are forced back into the saloons where they can "take something" on the proceeds of their sold or pawned club suits.

The new Irish local-government bill seems to give general satisfaction to all parties. It is a much greater triumph for the popular party than the English County Councils were. In England, it is true, the county government was taken away from the gentry, but the gentry were men of the same race and religion as the people, and on excellent terms with them. In Ireland the counties have been governed by the grand juries, made up almost exclusively of Protestant landlords chosen by the sheriffs, and as hostile to the Catholic masses as they could well be. As far as honesty in the spending of county money went, it has been tolerably good government for the

last sixty years, but one utterly indifferent to popular opinion. What the English Tory ministry feared, as Mr. Balfour's bill of five years ago showed, was that, if the voters got hold of the machinery of county governments, they would punish the landlords by unfair or excessive taxation. Accordingly, in that first attempt at Irish local government, the new County Councils were surrounded by restrictions and had less real power than our Municipal Assembly. It was accordingly withdrawn amid general laughter. The Irish members would have none of it. The difficulty has been got over in this bill, in the Tory way, by paying half the landlords' taxation by grant from the imperial treasury. With this the landlords are, of course, much pleased, and the Radicals hardly less so, because it brings English money into the country. Consequently, all parties have hailed it with approval. Behind all this, however, lies a still more potent reason for satisfaction. Mr. Balfour has consulted the Irish in drawing the bill. This used to be considered by Englishmen as "foul scorn," of which nobody but Gladstone could be guilty. In O'Connell's day a consultation with him by the Whigs was treated by the *Times* as little short of a compact with criminals. Time and experience have brought wisdom. The Conservatives have begun to treat Irishmen as having something to say about the management of their own affairs. May be it will be the dawning of a better era. May be some of the Tammany men will go over, and show the natives how to astonish the world by corruption and rascality.

The French Government has evidently embarked on a policy of repression as rigid and as intolerable to free men as the prosecutions set on foot by the German Emperor. He considers slighting reference to his sacred person treasonable; in France it is the army which it is *lèse-majesté* to breathe a word against. Crime for crime, we think the German is less fantastic, less fraught with danger, than the French. There may be excuse for holding that the Head of the State so stands for law and order and national dignity that railing accusations against him cannot be tolerated; but the army is another affair. In the Zola case the army has been represented by officers who, whatever their military virtues, have shown themselves most inimical to the paramount civil virtues—respect for truth and for law and a desire to do justice. When a wretched rouse and intriguer like Major Esterhazy can insult the court and go out into the street to be greeted with frantic cheers of "Vive l'armée!" we get an idea of the baseness and very unworshipful nature of the majesty before which France appears willing to prostrate herself.

EXCITABILITY.

If we examine closely the cause of the success of our yellow journals in the lying business, we shall find it almost invariably in the excitability of a portion of our population. It is to minister to this excitability, to increase it, play on it, and get money out of it, that most of their lies are told and their pictures published. In fact, it may be said that they live by it. They could not make money in this way out of a calm, phlegmatic public. It would be like asking a grandfather or old uncle to have a game of marbles or figure at a masked ball. The reasons why so many of us are excitable, and therefore fall a ready prey to the trade liar, are not far to seek. We come in the main of a very serious race, and have grown up from generation to generation under a very solemn view of life and death. We were probably, down to the close of the last century, as grave, as hard to rouse into overwhelming emotion, as either the English or Dutch from whom we sprang. But the astonishing prosperity of the country after the close of the Revolutionary war threw the whole community off its balance, and begot the "peculiar people" theory, which made the experience of mankind seem of little value to us, and threw the homely Poor Richard wisdom of the olden time completely into the shade. It seemed as if our nation had been brought into the world in order to show the worthlessness of precedents and the emptiness of ancient saws. Hope began to fill the air as it had never before done in human history. Life seemed to lose half its anxieties, through the general confidence that every year would bring its own prosperity, that comfort was at last to be had without too much frugality, competence without too much toil. Recovery from disaster became so easy that the old-world fear of bankruptcy and other misfortune seemed silly. Population and wealth increased in a degree unknown to financiers and statesmen. Simple ability began to have rewards poured in on it as never before. And this exhilaration was intensified by the quality of the atmosphere. American air and sunshine seemed to have been devised for a new race of men, who knew nothing of gloom either of the soul or of the weather.

Naturally enough, man began on this continent to adapt his manners to his surroundings. Calm, caution, hesitation are the characteristics of people who doubt, who have had misfortunes, who grow less well off as they grow older. They did not become the denizens of the New World. It began to seem "un-American" to be cast down, to be disheartened by any mischance, or to refuse to be easily elated. In fact, easy elation, quick action, indisposition to deliberation, be-

came rapidly cherished national characteristics. The American boy was brought up to be easily excited, but always in the direction of joy and hopefulness. He was not to lament or wall over anything. Fires, battles, insolvency, were always to touch new springs of strength and vigor. His eagle was always to scream and flap its wings on the smallest provocation. He was to remain always young. He was to be afraid of nobody and nothing. He was always to be able to conquer in war and do the wise thing in peace.

This beatific condition lasted until the rebellion, and after it. The war was in some degree sobering, but the falsification of nearly all the hostile vaticination about it deprived it of the educational effects which wars usually have. We became pleased with the rebellion because it was so big, and with the debt because it was so heavy. We began paying it off with merriment, as if paying national debts was a "raising bee," and we almost refused to get back to specie payments, because this seemed commonplace and a sign of doubt. The tariff men were the first to take advantage of this tremendous cheerfulness. They said: "See how jolly and hopeful they are. Let us make them pay up. They won't complain, no matter what duty we clap on their clothes and tools. They will say, it is American to have things dear; that love of cheapness is a fad of the fusty Old World." So they began to try their tariff on us, and made it heavier and heavier as the years rolled by, but we never squealed. It would have been European or English to squeal, so we bid them pile it on, and see how Americans could bear taxation and how they revelled in dearness.

That the press liars forbore so long to follow the example of the tariff men is surprising. We seemed just the material for lying newspapers to make money out of, a hopeful, credulous people, fond of wonderful stories about our own strength and prowess, and as boastful about our own capacity as the old bards about the exploits of their chiefs. "Let us stuff them," at last said the Liars; "they will buy and believe anything we invent." Our success in the war of 1812, when any trading schooner could be converted into a man-of-war by putting guns on board of her, and when we learned to fight on as long as the carpenter could stop up the shot-holes, prodigiously fostered our readiness for naval warfare. But the invention of the iron-clad, with its electrical, clock-like machinery, its exposure to shells bursting between decks, its tendency to be sunk by unseen torpedoes, is a serious blow to us. The iron-clad is essentially a solemn machine. It inspires gravity. It is essentially a kill-joy. There is no room for jollity on it. Then the quick-firing guns are hostile to valor. There seems to be only one way to show con-

tempt for them, and that is by letting their bullets into your body. But it is an ill wind that blows nobody good. They are worth double the old wooden ships to the lying newspaper reporter. He can weave ten yarns about an iron-clad for one about a brig, or sloop-of-war, or a frigate, or a first-rate. There is a mouthful in the term "battle-ship" to which neither frigate nor first-rate can lay claim, and for boys and loafers it is a mine of mystery and wonder. So between the iron-clads and eagerness for excitement, the lying newspaper, following on the greedy tariff man, has been able to make a pot of money out of our excitability.

But his good times are going. As our problems multiply and our sky becomes more overcast, the vainglorious and happy American of Jackson's day grows rarer. Unwillingness to believe becomes more general. Impossibilities increase. We are less sure of the future. The newspapers begin to find that there is money in preaching calm as well as in denouncing caution and calling for revenge. We hear more and more that judgment is a thing to be "suspended" until you know the facts; that, in truth, judgment is mainly meant for suspension, and that if it is not suspended, it ceases to be judgment. We are entering, in fact, on another world, in which the new American smiles gravely over the jigs and hornpipes of the old one. *Tempora mutantur et nos mutamur in illis.* as Croker would say.

THE SITUATION IN SPAIN.

It was announced on Friday that a royal decree was at once to issue dissolving the Spanish Cortes and fixing the election of Deputies for the new Cortes on March 23. The half of the Senate chosen by popular vote will be elected on April 3, and the Cortes summoned on April 25. Cuba and Porto Rico are to choose their representatives in the national Parliament at the same time.

No one, of course, has the slightest doubt what the result of these elections will be. In Spain the Government always wins. This is one of the "cosas de España" of which natives will speak to you with wide-eyed wonder that you should find them strange. The whole thing is arranged most amicably in advance. The Minister of the Interior, as we should call him, sends for the leaders of the opposition party, tells them how many seats the Government has decided it must have, how many are to be conceded to them, asks them to name the notabilities of their parties they would like returned, and from what districts, and the affair is arranged with the best of feeling on all sides. And the agreement is executed to the letter. Once or twice a minister has had the chagrin to see the voters in Bilbao, Barcelona, Madrid, and a few other stirring centres of population succeed in electing capiti-

dates of their own; but such accidents are rare. In the existing Cortes the Conservatives had about 275 Deputies, the Liberals of all shades 110, the Carlists 10. The composition of the next Cortes is already announced in advance of its election. It seems the Liberals have decided that they must have 300 Deputies, in order to show a sweeping popular approval of their course. They will graciously allow the Conservatives a matter of 70 seats, the Carlists their 10, the groups of Republicans a score or so, if they do not, as in the last election, refuse to vote at all. The Socialists, who have pretty steadily refrained from taking any part in what they call, not without warrant, "the political comedy," are proposing to put forward candidates in several of the cities.

If Spain had no graver difficulties to face than that of renewing her Cortes in this facile way, men might call her happy. But her finances are confessedly worse than confused. Even before the Cuban war her debt was burdensome, her deficit chronic, and her credit impaired, and the frightful drain of men and money to which she has been subject in Cuba for three years past has driven her to loan after loan, on harder and harder terms, until now it is credibly reported that she can borrow no more, and that there is grave doubt if the interest on her former loans will be punctually paid. Yet Marshal Blanco's demands from Cuba are urgent in the extreme. He requires \$8,000,000 a month for war expenses. He asks also for \$4,000,000 a month on account of arrears due the army, navy, civil servants, pensioners, and contractors. These arrears amount to \$80,000,000.

There can be no question that Spain is financially embarrassed. In an annual budget of \$150,000,000 to \$160,000,000, interest on Spanish debts absorbs nearly \$65,000,000. This is an alarming state of affairs. Then there is the war debt piling up every day. How is that to be taken care of, even supposing the war to end speedily? Ruined Cuba cannot for years at least pay even as much as she was paying before; and the added indebtedness incurred on Cuban account must amount to \$300,000,000. How to provide for this, how to apportion the shares of Spain and of Cuba, is so tough a problem that no attempt was made to solve it in the new scheme of Cuban autonomy. The difficulty was met by adjourning it to some indefinite time in the future.

These facts about the political and financial situation of Spain should delude nobody into thinking that Spain will not fight if forced to. In fact, the more desperate the plight of a nation, the more likely it is that she will fight. She has nothing to lose. Indeed, it may be plausibly maintained that Spain has much to gain, even by going into a war where she would know herself predestin-

ed to be beaten. The Cuban indebtedness is variously estimated at from \$400,000,000 to \$590,000,000. This debt, if Spain were to lose Cuba by war, she would undoubtedly repudiate, or scale to a vanishing minimum. There is her great money stake even in a losing contest. She would have, besides, the powerful motive of maintaining her ancient proud bearing, of yielding only to a nation of five times her population and twenty times her resources, instead of to a handful of rebels, and of demonstrating that Spanish pride and spirit remain unbroken if beaten.

Senator Sumner, when spoken to by "Bull Run" Russell about the possibility of the South taking up arms, was contemptuously incredulous. "Never!" he exclaimed. "They are too crafty. Bullies! Braggarts! They would be assassins, some of them, if they dared—but fair fight, never!" We hear no little magnificent scorning of the Spaniards in just that vein, and it is as lamentably mistaken. The Spanish people are as patriotic a race as ever lived. The impulse of a splendid past is still upon them. Traditions of national valor, dating from a time when their infantry swept Europe and their navies drove the dreaded Turk from the Mediterranean, are a part of their life-blood. Threatened bankruptcy, certain defeat in the long run, will not for a moment deter that proud nation from fighting for its honor. It was a Spanish paper, the *Imparcial*, which said defiantly some months ago that a bankrupt nation might still be a fighting nation. We must not deceive ourselves on this point. Spain is no doubt anxious for peace. She will no doubt make every concession to us or to the Cubans compatible with her dignity and honor as a nation. But if driven into a corner she will unquestionably fight.

A NEW KIND OF PRIMARY.

The bill which the advocates of honest primaries in this city have prepared and sent to Albany is a decidedly revolutionary measure. It does away entirely with the old style of primary, so far as the great political parties are concerned, and substitutes in its place an election under control of State officials and at the expense of the State. It proposes to take away the control of the primaries from the political organizations almost as completely as the new ballot system has taken from them the control of elections. Instead of being, as at present, subject to no law except the will of the boss, primaries will be held under legal regulations closely resembling those which apply to our elections; and the boss and his Boys will be deprived of all those privileges which at present make the primaries the centre of their activities and the chief seat of their power, for both the enrolment of voters

and the balloting at primary elections will be removed from their control.

The bill proposes to put the primary elections of all parties in cities of the first and second class under a primary law. It provides that any voter, on any of the four days set apart for registration preceding an election, shall be given an opportunity to enroll himself as a member of a political organization. After he has registered his name as a voter, he will be asked by the registration officials if he wishes to enroll for the purpose of participating in a primary election. In case he does he will name the political party with which he expects to act, and his name will be placed upon its rolls. In case his right to enroll with a party is challenged, he must sign a declaration or answer certain questions to show that he is in general sympathy with the principles of the party which he has named, and that his present intention is to vote with it at the ensuing election. The declaration is in the most liberal terms, and affords ample opportunity for any voter, who wishes to have political affiliations, to ally himself with one party or another. In case a voter who, for any reason, has failed to enroll himself during the four days of registration, desires to do so, he can do so subsequently at any time, except the period of thirty days immediately preceding the official primary days, by filing with the proper custodian of the rolls a written statement embodying the declaration required, in case of challenge, on regular registration days.

All voters, enrolled in either manner, are entitled to take part in the official primary elections which are to be held on what will be known as primary day, which is to be the seventh Tuesday before the general election. This would place it early in September. When delegates to State conventions are to be chosen, an additional primary day is fixed on the Tuesday following the first Monday in June. The elections on primary day are to be conducted in much the same way as regular elections. They are to be in charge of the regular election inspectors, and the members of all parties are to vote in the same room. The polls are to be open throughout the day, so that there will be no meeting at any particular time. Official ballots are not required, but all ballots are to be of a prescribed size and shape, and each party is to have an easily distinguishable color. Each voter is required to prepare his ballot in a booth, to fold it in such a way as not to reveal its names, and to deposit it in the box set apart for the ballots of the political party to which he belongs. The conduct of the elections is to be in all important respects like that required at regular elections, which includes, we infer from the text of the bill, the keeping away from the polls of all electioneering and bulldozing persons, or those whose chief

business in politics has been the running of primaries. The vote is to be counted under the same conditions as at regular elections, with watchers in behalf of the parties and candidates, and announced officially when the result is reached.

The bill also provides for revision by the courts of all the proceedings taken under it, and gives the Supreme Court summary jurisdiction, upon complaint of any citizen, as to the neglect or misconduct of any official acting under it. Violation of the act is made a misdemeanor, punishable by a fine of not less than \$100 nor more than \$1,000, or by imprisonment of not less than three months nor more than one year, or by both fine and imprisonment. Political parties which polled less than 10,000 votes at the last preceding election are exempt from the law in so far that they are permitted to hold unofficial primaries, subject to certain regulations.

These are the main features of the bill; we have given only an outline of its general provisions. There are matters of detail which are of more interest to politicians than to the general public. The great advantages of the bill are, first, that it abolishes the old primary utterly in abolishing a meeting of any kind; second, that it insures publicity for the rolls of all parties, which are to be open at all times for inspection, and published in the same manner as the registration lists are; third, that by giving all voters an opportunity to enroll on the day upon which they register, thus putting the question before them at a time when it is most likely to receive favorable consideration, and not requiring special effort on their part, like going out in the evening to some unknown place, the chances for obtaining a large enrolment are greatly increased; fourth, that by having an entire day devoted to primary voting, the hours extending from eight A. M. to eight P. M., and having all the danger of a conflict with the Boys removed, the average citizen will be far more likely to attend to his primary duties than he has been heretofore.

The measure may not be a perfect one. It is entirely possible that it has defects which might enable the bosses and their men, in case they allow it to become a law, to "beat" it, and use it for their own purposes. But, admitting all this, it is an experiment in the right direction, and a trial of it would furnish a very interesting study. It would serve as a test of the disposition of the average citizen to bear his part in this branch of the business of government.

FRENCH CRIMINAL PROCEDURE.

A good deal of astonishment and some laughter have been excited by the Zola trial in Paris, and a large number of Frenchmen have been annoyed by the general disposition of the Anglo-

Saxon world—that is, the public of America and England—to sympathize with Zola, and condemn or ridicule the procedure under which he has been convicted. This is not unnatural. We probably do not completely understand French feeling in the matter; but it is plain, on the other hand, that many excellent Frenchmen do not understand ours. A little explanation, therefore, may do good.

In the first place, there is no use in trying to justify to an American or Englishman a secret proceeding, by which a man is deprived of life, liberty, property, or reputation. A large number of officers of high standing pledged their word of honor in Paris that Dreyfus had been properly convicted and was guilty. One general asked leave to address a few remarks on this subject to the jury before he gave his testimony. We are asked, in short, to believe that Dreyfus is guilty because so many men of high character say so. Here is where the Anglo-American and the French public first part company. If in America or in England all the clergy and all the citizens of highest repute were to come forward and offer to swear that a man who had been secretly tried and convicted deserved his fate, they would be received, as the French generals have been received here, with shouts of laughter. The reason is that for two centuries, in Anglo-Saxon jurisprudence, a "fair trial" has meant a public trial, and the submission to the public, in the presence of the prisoner, of all the proofs against him. At least two hundred years have passed since it was possible among English-speaking men "to go upon, or send upon" any one, to use the words of Magna Charta, upon evidence not produced in a court open to the public, or for any "reasons of state." Therefore, there is for us no getting over the secrecy of Dreyfus's trial. No certificate of fairness from any one, were it the Pope of Rome, will satisfy the public that a man was lawfully ruined or executed if he was tried in secret. An offer of one by anybody sounds to us like a joke.

In the next place, we are startled by the fact that the French not only have no "rules of evidence" like ours, but have none at all. A trial like Zola's, therefore, without rules of evidence strikes us as comic. Here is Fitzjames Stephen's account of the difference in the matter of evidence between the French system and ours:

"These leading rules, though qualified by important exceptions, are rigidly enforced in practice, and their enforcement gives to English trials that solid character which is their special characteristic. They seem to be quite unknown in French procedure. Witnesses say what they please and must not be interrupted, and masses of irrelevant, and often malicious, hearsay, which would never be admitted into an English court at all, are allowed to go before French juries and prejudice their feelings. The old rules of evidence, which were in use before the Revolution, and were drawn from the

middle-age version of the Roman law, were exceedingly technical and essentially foolish. They were accordingly abolished absolutely, and nothing was put in their place. The essentially scientific though superficially technical rules of evidence which give their whole color to English trials, and which grew up silently and very gradually in our courts, seem to me to be just what is wanted to bring French trials into a satisfactory shape; but the evils of the old system were so strongly impressed on the authors of the 'Code d'Instruction Criminelle' that destruction was the only policy which presented itself to their minds." ('History of Criminal Law,' vol. I., p. 548.)

In fact, the investigation in a French criminal trial is carried on just as investigations are carried on in private life. If a private individual wants to form an opinion as to whether somebody, say in his own household, has done something, he gets information in any way he can from any quarter whatever. Hearsay, circumstantial evidence, the talk of interested persons, the gables of children, are all collected by him, and on it all he forms his own theory of probability. Half of it would probably be rejected in a legal proceeding in our courts, but this is the way in which most men regulate their own conduct of life and carry on their own business. The French carry it into their legal proceedings for want of anything better. The *dossier*, which is made up by the *juge d'instruction*, about a prisoner when he is first apprehended, is very like the "story" which, with us, would be collected by a newspaper reporter. Everything that he can get hold of, good, bad, or indifferent, likely or unlikely, is tossed into the basket, and the prisoner is harassed by cross-examination on it by the judge. The consequence is that a French trial never seems to us fair or serious. The evidence of the generals in Zola's trial about the propriety of Dreyfus's conviction sounds like a comedy.

Moreover—and this is the worst of it—the popular excitement which has attended the trial about "the honor of the army" and about the Jews, reminds us here painfully of some of the great judicial tragedies of French history. We think of other cases in which French courts were undeniably influenced by popular clamor. It was the clamor of the Catholic populace which led the Parlement of Toulouse to convict poor old Calas of the murder of his son, although this populace was in the habit of celebrating the massacre of St. Bartholomew as a public festival. There was neither evidence nor a shade of probability against Calas. But the Parlement, of more than twelve judges, took the popular view, summoned all sorts of witnesses who shared it, extracted Calas's guilt from them by leading questions, broke the old man on the wheel, and expected his confessions under torture to furnish evidence to convict his sons and wife. When this failed them, they were compelled to discharge them, and when, under Voltaire's whip of scorpions, they were compelled to re-

verse their finding, and do what could be done to rehabilitate the afflicted family, one of the arguments against this scanty justice was that to reverse was to acknowledge mistake, and this would injure the prestige of the court.

The fate of the Chevalier de Labarre, a youth who was "roué" on evidence that would convulse one of our public schools, was a similar scandal. He was convicted of "irreverence" and "blasphemy" under popular and ecclesiastical clamor. In both these cases the courts convicted an innocent man mainly to safeguard some great public interest, which happened in both these cases to be what was called "religion." Remembering these things, and others like them, our public naturally asks whether this clamor against the Jews and frantic concern about the "honor of the army" has not led to the sacrifice of an innocent man. It asks this question, and nothing but ample publicity will appease its suspicions.

Let us say finally that the French procedure is simply the old English procedure. The trials of Throckmorton, of the Duke of Norfolk, and of Raleigh in the sixteenth century, were very much what goes on in a French court to-day. The judges, the Attorney-General, and the prisoner all "went for each other" as fiercely as they could, and with as little regard for rules. Most people remember the savage way in which Coke treated Raleigh. It was not till after the Revolution of 1688 that English criminal procedure became marked by the present order and decency, and that the presumption of innocence on the part of accused persons secured a lodgment in our jurisprudence. Stephen ascribes this to the growing strength of the Government, which gradually became so great that it became easy to be indulgent towards prisoners and captives. Whether this theory be correct or not, it would go some way to account for the continuance down to our day of the French presumption that an accused man is probably guilty. Ever since the Revolution, no French government has been sufficiently strong to give any indulgence to accused persons. The interests of the State seem to require that indicted men should be found guilty. And so deeply has this theory entered into the public mind that when "justice" gets hold of a man, there is little sympathy for him. His wrongs do not touch the popular imagination, and the judge and the procureur are allowed to harass him without mercy. The supposition that he is being sacrificed to protect some body or person in authority, does not rouse popular indignation.

M. RENÉ DOUMIC.

PARIS, February 15, 1898.

At the end of this week Prof. René Doumic sails from Havre for New York in order to inaugurate at the Cercle Français of Harvard University the lectureship on French

literature recently established by Mr. J. H. Hyde of the senior class. As M. Doumic's name is comparatively new in the French world of letters (even the latest edition of Vapereau contains no mention of him), some account of him and his work will probably be welcomed in American university centres where he is about to appear—Yale, Columbia, Chicago, probably Cornell and other institutions, besides Harvard, will listen to him—and where I predict he will excite much admiration.

I begin, therefore, with what does not exist—a brief and strictly biographical notice of M. Doumic, including a list of his published books. René Doumic was born in Paris on March 7, 1860, so that he is not yet thirty-eight years old, and belongs himself to "les Jeunes" whom he celebrates in one of his latest volumes. He was educated at the Condorcet Lycée, perhaps the best of the Paris secondary schools. He has always been a hard and brilliant student, for he was graduated *licencié-ès-lettres* in April, 1879, with the highest honors, was first at the examination held in the same year for entrance into the Superior Normal School, and was again ranked first at the *agrégation* examinations of 1882. From 1882 to 1896 he taught literature in the lycées of the provinces and Paris, but has been on leave of absence since the last-mentioned year. In 1887 M. Doumic began to contribute to the newspapers and periodicals, in which year he was made dramatic critic of the venerable daily, the *Moniteur Universel*, continuing to fill this post till 1894. In the meantime he wrote for that highly respectable but ultra-conservative bi-monthly the *Correspondant*, and that once important weekly, the *Revue Bleue*. In 1893 he formed a connection with the quondam famous *Journal des Débats*, where he has ever since published literary *chroniques* and critical articles. It was in August, 1893, that M. Doumic made his first appearance in the *Revue des Deux Mondes*, where, during 1894 and 1895, he had charge of the department of dramatic criticism, and where he has, since the last date, conducted, with so much authority, the *chronique littéraire*, succeeding, in this department, M. Brunetière. In 1896 M. Doumic was created a chevalier of the Legion of Honor in recognition of his literary merits.

M. Doumic's first volume was a school-book, 'Histoire de la Littérature Française,' and it has been followed each year by one or two volumes, until the series has attained the respectable number of eight, all of which have to do with literature or men of letters. The list is as follows: 'Portraits d'Écrivains' (1892), 'De Scribe à Ibsen' (1893), 'Écrivains d'Aujourd'hui' (1894), 'Les Jeunes' (1895), 'La Vie et les Mœurs au Jour le Jour' (1895), 'Études sur la Littérature Française, Première Série' (1896), 'Essais sur le Théâtre Contemporain' (1896), 'Études sur la Littérature Française, Deuxième Série' (1897). Nor are there any signs of M. Doumic's literary fecundity becoming exhausted. On the contrary, it is evident that even greater and better things are sure to come from his pen. He is even now engaged in writing the chapters on the drama in the nineteenth century for Petit de Julleville's 'Histoire de la Littérature Française,' a monumental work which has already been mentioned several times in your columns. For Hachette's series of the 'Grands Écrivains Français,' M. Doumic is to prepare the volume on Lamartine. And finally,

these Harvard lectures, which M. Doumic has only just completed, are to form part of a work not yet finished, to be entitled 'Mouvement Intellectuel en France au XIXe Siècle.'

The Harvard lectures are devoted to French Romanticism. The first is of a general nature, a seeking after the origin of Romanticism, an attempt to define it and to mark the different stages of its development. Then will come three lectures on lyricism—on Lamartine and Alfred de Vigny studied only in their lyric poetry; on Victor Hugo's work prior to 1840, the date at which M. Doumic fixes the limit of Romanticism; and on Sainte-Beuve's poetry and that of Alfred de Musset. The drama of Romanticism will occupy two lectures, in which M. Doumic will deal briefly with the theories of the Romanticists concerning the stage and what they pretend to have borrowed from foreign dramatic writers. He will characterize the plays of Victor Hugo, will dwell briefly on those of the Elder Dumas and of Alfred de Vigny, and will enter more at length into an examination of the plays and proverbs of De Musset. Another lecture will be given up to a consideration of the *romans de passion* personified in George Sand, and still another to history, beginning with Augustin Thierry and ending with Michelet. In his final lecture, M. Doumic will give in full and in order his own views and conclusions concerning the whole subject of French Romanticism.

What these opinions will be it is not very difficult to divine, for, scattered through M. Doumic's published writings, is more than one dictum on this subject. In his study of the elder Dumas in 'De Scribe à Ibsen,' to give but one example out of many, we find him saying: "One of the dogmas dear to Romanticism teaches us that the requirements of art are incompatible with the conditions of a regular life. . . . But this theory is erroneous," he goes on to add, and then makes a vigorous thrust at all Bohemia. These two devices, so often attributed to Romanticism, "Le beau c'est le laid," and "L'extravagant vaut mieux que le plat," find no refuge in M. Doumic's mind, where order, beauty, and high morality rule supreme. It is safe to say, therefore, that he will not be an unqualified eulogist of French Romanticism, but, while admiring its many fine qualities, will ruthlessly condemn its faults, ridicule its extravagances, and even sometimes anathematize its fuglemen.

But not the least admirable feature of M. Doumic's performance will be its oratorical quality. That there will be good and high thinking in what he says cannot be doubted. His printed books and the success which has accompanied him both as a student and as a teacher, put this beyond question. When, in addition, he may be pronounced in several essential particulars a real orator, the treat which awaits his hearers will be seen to be no ordinary one. It is true that his thin, highly pitched voice may be against him, for it probably will not carry to the rear of our public halls or large college lecture-rooms, especially as he is accustomed to speak in the Lilliputian La Bodinière and Salle des Mathurins. Nor will his gestures contribute to his success as a lecturer. Seated in his chair, he keeps continually bending forward and backward, marking the end of every phrase, almost every word in fact, with a short, awkward little movement of the forearm and hand, which is rendered the more

stiff and ungraceful by his keeping the elbow pinned tightly to his side. This action goes on for five or ten minutes with the right arm, varied now and then with a more ample gesture with the two arms, and then the left forearm and hand go through the same motion while the weary member rests. The most expressive part of this act is in the fingers, which are all brought together at the end of the thumb, against which they are pressed more or less firmly, in order to give greater or minor emphasis to the speaker's words. But it is the excellent choice of these words, the brilliancy with which they are marshalled, the clearness and pointedness of the statement, the humor of the expression, and the occasional bursts of passionate eloquence (which strike with all the more force because they come from a rather cold exterior), that cause the hearer to overlook and even forget these shortcomings of voice and gesture. Then, too, M. Doumic's enunciation is very distinct and measured. He speaks slowly most of the time, so that even ears not much accustomed to the French language will be able to catch almost all that he says. When, however, he works himself up to a pitch, the words flow very rapidly, and then it is that many of his American listeners will have to content themselves, I fear, with his oratory rather than with his thoughts and language.

M. Doumic's tendency to indulge in humor, wit, irony, is pronounced. His lectures are thickly besprinkled with these turns, as are his books, whereas his conversation, curiously enough, is almost free from them—is, in fact, so sober as to be almost solemn. 'La Vie et les Mœurs,' for example, is one series of amusing and clever skits. But perhaps the chief reason why M. Doumic's lectures are so enjoyable lies in the fact that they are neither read from a manuscript nor committed to memory; memorizing, as he once remarked to me, "gives to the word something that is cold and without accent." He has two ways of proceeding. When he has to treat a question of the hour, a modern literary subject, M. Doumic writes his lecture in full in order to bring out clearly his ideas for his own edification, and he then delivers it on these same lines, reproducing the order and substance of the manuscript, but without confining himself to the exact penned words. When, however, he speaks on classical themes, with which he has become very familiar through teaching them for the past fifteen years, M. Doumic does not write out his lecture, but provides himself only with a few notes on a slip of paper, and trusts to improvisation for the rest. This is his constant practice in the classroom. In both cases he avoids as much as possible any reference to manuscript or paper, "always striving to keep in direct communication with the audience"—as he expresses it, "eyes looking into eyes."

M. Doumic, in his American tour, will reap considerable advantage from M. Brunetière's visit to our universities last year, for the latter has, in many respects, prepared the way for him. M. Doumic not only belongs to the same critical school* as M. Brunetière

and resembles him in many respects, but has come forward into the literary arena under his protection and guidance. It is not rash to predict that when M. Doumic is received into the French Academy, as he surely will be in the not distant future, the editor of the *Revue des Deux Mondes* will be one of his "parrains." In fact, M. Doumic does not try to disown this high patronage. On the contrary, he appears ever ready to acknowledge it publicly and to show that he is even proud of it. Thus, the dedication of the first series of his 'Études sur la Littérature Française' is addressed to "My dear master"—that is, M. Brunetière—and runs as follows:

"In begging you to accept this dedication, I but recognize a debt, for it was you who, by calling me to the *Revue des Deux Mondes*, offered me the occasion to write these essays. But besides this I have always drawn largely on your advice, your ideas, your works. These essays owe much to you. It is a pleasure as well as a duty for me to make this statement. I am happy to offer you this proof, feeble though it be, of my respect, my devotion, and my profound gratitude."

Like M. Brunetière, M. Doumic is opposed to schoolboy athletics (see his amusing skit, "Nouvelle Sorbonne," in 'La Vie et les Mœurs'). But Brunetière's influence, or, if you prefer it, the resemblance between the two minds, comes out strongest in M. Doumic's distaste for Zola and Zolaism, for this author's works and his methods. In the volume just cited is an excellent bit of ironical writing which dwells on the Barnum side of Zola's character, "whose art consists in making something out of nothing." Doumic is, again, a disciple of Brunetière in holding that eloquence has its part in the teaching of literature. In his essay already cited on Brunetière, M. Doumic praises him for having "restored to literary instruction a singularly discredited element—eloquence." That M. Brunetière practices what he preaches you had a good opportunity last year of confirming, and that M. Doumic follows in his footsteps in this matter has already been shown in this letter; and my opinion, I feel sure, will also be shared in a few weeks by the American university public.

"There exists a sort of hollow declamation," M. Doumic says in the essay just named, "made up of oratorical movements and bombastic phrases, by means of which some professors and many lecturers have succeeded in so disgusting studious listeners that they have forced them to prefer even impoverished dryness. But can any one believe that the grand university lectures which made the first half of this century famous would have produced such a deep impression on the public mind if Villemain, Guizot, Michelet, and the rest had contented themselves with a simple *exposé* of facts, without binding these facts together and without expressing their own opinion concerning them? To bear in mind not simply that what one says is of interest to those in search of mere instruction, but that it is also linked with the general welfare of humanity, and to express these truths with inward feeling based on patient study and carefully reasoned conviction—this is quite the contrary of mere declamation: it is eloquence."

Perhaps I may add in closing, that M. René Doumic will be accompanied in his American tour by his brother, M. Max Doumic, a well-known Government architect,

son, and that criticism is not natural history nor any other science. It is essentially an art." It is to be noted that this extract is from the essay on M. Brunetière in Doumic's 'Écrivains d'Aujourd'hui.' This same view will be found more than once in Brunetière's works, and especially in his 'Questions de Critique' and 'Nouvelles Questions de Critique.'

who has undertaken a mission from the Minister of Fine Arts to study the architectural movement in the United States, and especially the installation of our libraries. M. Max Doumic, I may further say, received his first medal at the Salon of 1894, is the only French architect who has won the Salon recompense known as the Prix de Paris, and is occupied at this moment in executing some restorations for the city of Douai.

THEODORE STANTON.

ENGLISH LITERATURE IN THE ENGLISH UNIVERSITIES.

LONDON, January, 1898.

The attempt to teach English, and especially English literature, as a separate subject is a comparatively new thing among the universities everywhere. That this attempt should be newer in England itself than elsewhere seems paradoxical enough, but it is a fact perfectly explicable from the traditions of English education and the ancient and ingrained conservatism of the older English universities. Changes, however, are rapidly coming on, even at Oxford and Cambridge, and the national literature, if not yet completely taught, has attained at Oxford at least recognition as a fit subject for examination, and thus, by implication if not otherwise, for teaching also.

Naturally it has long seemed an anomaly that of the hundreds of American students who annually go abroad to carry on advanced study in the English language and literature (the greater number of them in the German universities), so small a proportion should resort to England and the English universities. It is not surprising, perhaps, that Germany should attract the students of Germanics and Linguistics, but, with the recent widespread and rapid development of the college study of literature considered in its critical, æsthetic, and historical aspects, it is surely to be wished that the sounder traditions of English æsthetic feeling in matters of literature and the less scholastic tone of English literary criticism should be brought to bear and made operative in a school of literature in one or more of the English universities, where, among other things, especial provision should be made for the resort of foreign students who are seeking to study the literature of England in the land of its origin. I say that this is to be wished; but I suppose that, as a matter of fact, with the addition of a professor of English literature and some two or three assistants to render effective in actual instruction a plan which now exists, for all except Old and Middle English topics, chiefly on paper, the new Honour School of English Language and Literature at Oxford would come near to providing the opportunities desired. But Oxford now, as always, is in favor of making haste slowly, and a certain insular and reactionary element there opposes and retards the progress of the reformers. Cambridge would probably be found more well-disposed to the new ideas, but Cambridge lacks the means requisite for the carrying out of such considerable changes and additions as such reforms involve. Meanwhile, it is within the range of future possibilities that the new London teaching university, whose present establishment, in one form or another, seems to be practically assured, may take the lead of both Oxford and Cambridge in the new studies, and ultimately make London one of the world's

*Here is M. Doumic's definition of criticism: "Criticism is not a science and it cannot become one. Between the object which criticism has in view and the object of all the sciences there exist fundamental differences which it would be exceedingly dangerous not to recognize. Science is general. The powers of science stop where the individual commences. Now, literary history has to do with the great writers, men of genius, for the very purpose of determining what there is in them that is individual and therefore irreducible. . . . You may compare a literary work to a plant, but it must not be forgotten that this is only a compari-

centres for advanced study in English as in other branches. Certainly the policy of the present university (with its affiliated institutions), while holding, with English insistence, to the overweighted examination system, has in other respects been generally the most liberal and progressive of all.

Outside of the older universities, among the numerous English colleges of recent foundation and in the Scotch universities, English studies are rapidly growing; and, while the number of courses and the amount of class instruction in English literature since Chaucer, except that which is of a comparatively elementary nature, seem to be still rather limited—the primary emphasis still being laid on the intensive curriculum and on the final tests by examination to which everything in English education is subordinated—it should be noted that these studies are based on a safe if somewhat obsolete educational tradition, and that a body of competent teachers, animated with progressive ideas, has these studies in charge. Moreover, the definite limitation of the curriculum, while lessening the stimulus to highly specialized research afforded by the more flexible and more ambitious courses in many German and some American universities, has the compensating advantage of leaving the teacher free, after once his routine is mastered, for independent and unfettered critical and productive work. Such work, of highly respectable quality and quantity, we are already beginning to receive from this class of English scholars.

The soul of a college is in its teachers, and the status and progress of recent English college work dealing with English subjects perhaps cannot be better exhibited than in the following list* of college instructors in English in Great Britain, most of whose names, attached to the title-pages of recent publications as authors or editors, are already known to American readers. The list exhibits fairly the comparative strength of the departments of English of the several colleges and universities concerned. (I have not attempted to account for any of the colleges for the teaching of women.)

OXFORD:

A. S. Napier, Merton Professor of English Philology.
John Earle, Rawlinsonian Professor of Anglo-Saxon.
W. J. Courthope, Professor of Poetry.
Joa. Wright, Deputy Professor of Comparative Philology.
E. de Salicourt (University College), Lecturer in English Literature.
Rev. H. C. Beeching, Lecturer in English Literature.

CAMBRIDGE:

Rev. W. W. Skeat, Professor of Anglo-Saxon.
I. Gollancz, University Lecturer in English.
Prof. E. Dowden (Trinity College), Clark Lecturer in English Literature.
Rev. J. H. Gray (Queens College), Lecturer in English Literature.
A. J. Wyatt (Christ's College), "Recognized Lecturer."

UNIVERSITY OF LONDON:

J. W. Hales, Examiners in English Language, Literature, and History.

UNIVERSITY COLLEGE, LONDON:

W. F. Ker, Professor of English Philology.
T. Gregory Foster, Lecturer in English Language and Literature.

KING'S COLLEGE, LONDON:

J. W. Hales, Professor of English Philology.

*Compiled from 'Minerva, Jahrbuch der gelehrten Welt,' 1896, and from 'Whitaker's Almanac,' 1896, and revised from the calendars or circulars of the institutions mentioned.

C. D. Webb, Professor of English Philology.

VICTORIA UNIVERSITY:

(1) *Owens College, Manchester.*

A. W. Ward, Principal.

T. N. Toller, Professor of the English Language.

Oliver Elton, Lecturer in English Literature.

(2) *University College, Liverpool.*

Walter Raleigh, Professor of Modern Literature and the English Language.

R. Friebsch, Lecturer in the English Language.

(3) *Yorkshire College, Leeds.*

A. J. Grant, Professor of Modern History and English Literature and Language.

MASON UNIVERSITY COLLEGE, BIRMINGHAM:

W. M. Dixon, Professor of English Language and Literature.

W. A. Brockington, Assistant Lecturer in the English Language and Literature.

UNIVERSITY COLLEGE, SHEFFIELD:

G. C. Moore Smith, Professor of English Language and Literature.

UNIVERSITY COLLEGE, BRISTOL:

Jas. Rowley, Professor of Modern History and English Literature.

C. Ord, Lecturer in Modern History, English Literature, and German.

UNIVERSITY COLLEGE, NOTTINGHAM:

J. E. Symes, Professor of History, Literature, and Political Economy.

F. E. Bumby, Professor of Anglo-Saxon and Middle English.

DURHAM COLLEGE OF SCIENCE, NEWCASTLE UPON-TYNE:

J. W. Duff, Professor of Literature.

RUTHERFORD COLLEGE, NEWCASTLE-UPON-TYNE:

J. Greenfield, Classics and English.

C. Menmuir, Classics and English.

UNIVERSITY OF WALES:

(1) *University College of Wales, Aberystwyth.*

C. H. Herford, Professor of English Philology.

F. W. Moorman, Assistant Lecturer in English (until recently).

(2) *University College of Wales, Bangor.*

W. L. Jones, Professor of English Language and Literature.

(3) *University College of Wales, Cardiff.*

C. E. Vaughan, Professor of English Language, Literature, and History.

(4) *St. David's College, Lampeter, Wales.*

Hugh Walker, Professor of English and Philosophy.

UNIVERSITY OF EDINBURGH:

George Saintsbury, Professor of Rhetoric and English Literature.

G. G. Smith, Lecturer in English.

S. A. Robertson, Examiner in English.

UNIVERSITY OF GLASGOW:

Andrew C. Bradley, Professor of English Language and Literature.

Robt. Adamson, Professor of Logic and Rhetoric.

D. H. Crawford, Assistant in English.

UNIVERSITY OF ABERDEEN:

H. J. C. Grierson, Professor of English Language and Literature.

C. I. Beattie, Lecturer in English.

J. H. Lobban, Examiner in English.

UNIVERSITY OF ST. ANDREWS:

W. S. McCormick, Lecturer in English.

(Wm. Knight, Professor of Moral Philosophy).

UNIVERSITY COLLEGE, DUNDEE:

W. S. McCormick, Professor of English Language and Literature.

R. E. Hannay, Lecturer in English Language and Literature.

THE ROYAL UNIVERSITY OF IRELAND, DUBLIN (Examining University):

Thos. Arnold,

Jos. Darlington,

S. J. MacMullan,

Geo. F. Armstrong,

Mary T. Hayden,

Fellow, English Language and Literature.

THE QUEEN'S UNIVERSITY OF IRELAND:

(1) *Queen's College, Belfast.*

S. J. MacMullan, Professor of History and English Literature.

(2) *Queen's College, Cork.*

G. F. Savage-Armstrong, Professor of History and English Literature.

(3) *Queen's College, Galway.*

Sir Thos. Moffett, Professor of History, English Literature and Mental Science.

THE UNIVERSITY OF DUBLIN:

Edward Dowden, Professor of Oratory and English Literature.

Leaving out of account the more independent curricula of the Scottish and Irish universities and a few sporadic cases in England, there are two well-defined types of curricula in English in these institutions. There are, first, the courses in those colleges which aim to fit for the examinations of the University of London. The requirements of the University of Wales offer some modifications of the London scheme, but the two curricula are essentially similar. Most of the recently founded "University Colleges" in England offer the London type. The second type is that of Oxford, adopted also by several of the smaller colleges affiliated with Oxford. The courses designed to meet the present requirements of the London examinations, in the Pass and Honor schools, generally cover the following ground: Anglo-Saxon Grammar and Reader; Chaucer's "Man of Lawes Tale"; usually four courses in the "History of English Literature" divided into periods, viz., 1558-1603, 1603-1625, 1625-1660, 1660-1689, in which the books especially examined upon are the following: Spenser's 'Shepherd's Calendar' and the 'Faerie Queene,' Book I., Shakspeare's "King John," "Tempest," "King Lear," and "Hamlet," Lamb's 'Specimens of the Elizabethan Dramatists,' Bacon's 'Essays,' Milton's "Comus," "L'Allegro," "Il Penseroso," "Lycidas," and 'Areopagitica,' Browne's 'Religio Medici,' and portions of Ward's 'English Poets.' In other years other periods and texts are chosen. English history and literature are generally combined in the same courses. Preliminary to this work are courses preparing for the "Matriculation Examinations" in the History of the English Language, the Principles of English Rhetoric and Grammar, and the study of selected modern authors.

The Oxford scheme, now in effect as an examination system (the first set of examinations has already been held), is much more comprehensive and thoroughgoing than any other, and, barring what seem to an outsider to be two radical defects, should be of a sort to attract the foreign student—if, indeed, Oxford desires the foreign student.* These defects are, first, the fact, already mentioned, that the scheme is as yet largely a scheme on paper; and, secondly, the inordinate emphasis put upon the examinations. To most English educators it is accepted as axiomatic that the examination is the test and crown of a curriculum, to the point almost that examination even more than instruction is held to be the primary function of a university. American students looking towards England should bear in mind that this fact is always to be reckoned with. The Oxford scheme, it will be remembered, involves the following points: first of all, the study, tested by examinations, of three main topics required of all candidates, followed by or together with a special subject similarly tested for more advanced, detailed, and original study, selected as a general rule from a list of some fourteen suggested subjects (e. g., "Italian literature as influencing English literature down to the death of Milton"). The three main topics are: (1) Por-

*On the regulations and provisions for advanced studies at the two English universities, see 'The Student's Handbook to the University and Colleges of Oxford' (The Clarendon Press, 1895), ch. xi., 'Special Study and Research'; and MacAllister, 'Advanced Study and Research in the University of Cambridge' (The University Press, Cambridge, 1896).

tions of English Authors ("set books") from "Beowulf" to Shelley's "Adonais"—perhaps some thirty-five or forty texts, "to be studied (1) with reference to the forms of the language; (2) as examples of literature; and (3) in their relation to the history and thought of the period to which they belong"; (II) the History of the English Language (including Gothic); and (III) the History of English Literature, including "the History of Criticism and of style in prose and verse." But as a stricter safeguard, perhaps, than any other against easy-going "modern" methods, and "with the object of connecting ancient and modern literature," "it is provided that no one may be admitted to the English Honor School unless he has either obtained Honors in some other Final Honor School or has satisfied or obtained Honors from the Moderators in Greek and Latin Literature." The Board of Studies and the Examiners are charged with the duty of seeing that, in the first three main topics, "as far as possible equal weight is given to language and literature"; in his "special" subject the candidate may as he chooses concern himself with the language, or with literature, or with both.

I note in passing that to the Board of Studies is assigned the curious but important task "to name periods of the history of English literature, and to fix their limits." The periods thus named (or rather not named in five cases out of eight), with limits somewhat arbitrarily fixed, are as follows: to 1150; 1150-1400; 1400-1558; 1558-1637; 1637-1700; 1700-1745; 1745-1797; 1797-1850. I notice, also, that at Oxford, as in England generally, greater weight and attention are accorded to the literature of the Restoration and neo-classical periods than critical opinion in America generally is willing to grant to it. Those portions of the last Oxford examinations, as well as those in the Cambridge Medieval and Modern Language Tripos* which bear upon English literature, seem to me to be thoroughly sound and at the same time "literary" in substance and spirit.

The point in which the English universities all unite is that the study of English literature shall not be dissociated from that of either English philology and linguistics or that of the other great European literatures. The English tradition, moreover, holds firmly to the historical spirit. Nowhere else, perhaps, are the texts themselves studied with more minute thoroughness, yet at the same time the literary and social history of the great literary periods is not slighted and depreciated, as has recently been the tendency with some American writers and in some American universities. A marked turn towards the study of comparative literature, as exemplified in the work of Profs. Herford, Ker, Dowden, and Saintsbury, is noticeable of late, rather, perhaps, outside of Oxford and Cambridge than in those centres. This tendency will perhaps before long get itself organized in actual university teaching.

In the new University Colleges throughout England, entrance examinations in English are generally required; and in the faculty of hardly any of them, however small, is there lacking a Professor or Lecturer in

English. But the work of these colleges is generally of a comparatively elementary nature, and is more systematic and uniform than that of the American universities. Here, as in the older English universities, the study of English literature is still on too new and precarious a footing to permit of any welcome being accorded to the idea, which is here and there gaining ground in America, that this study should be made a cultural and coördinating study rather than primarily a disciplinary study. As things now are, the study of English literature must serve the same ends, be subject to the same tests, and compete point by point with other and older branches of study.

In the Scotch universities two interesting experiments in the study of English are being tried. At Edinburgh and at Glasgow honor degrees in English literature are now offered.* At Edinburgh the emphasis is put upon (1) "Rhetoric and the Principles of Literature," and (2) the History of English Literature, with especial attention to a selected period, including a list of set books. At Glasgow, besides the language and "British" History as subsidiary subjects, the General History of English Literature from 1350 is the main topic; involved with this topic is the study of a special period; so, too, three of the greater authors (chosen under certain limitations) are selected for special study and mastery.

To the advanced student, however, who knows methods, is capable of independent work, and can make his way amid the vast materials of the place, the British Museum, with its staff of experts and men of learning in every department, its unrivalled collections in English literature, and its hospitable and admirably organized system, is and will remain the great post-graduate university of England, and the Mecca for the American student who visits England with the aim of furthering his studies in English literature.

FREDERIC IVES CARPENTER.

Correspondence.

THE PROPS OF YELLOW JOURNALISM.

TO THE EDITOR OF THE NATION:

SIR: Most of us who manage to preserve a little sanity in spite of the stench of the yellow journalism constantly in our nostrils, would feel a lively satisfaction if we might some day see, as predicted in the *Nation*, the readers of those sheets "arrested at the news-stands and locked up."

But are we to stop with locking up the readers, whose minds have fallen, little by little, victims to a morbid craving for sensation? How about the merchants who, by their advertisements, furnish the props for these rotten enterprises? Shall they go scot free who give money for missions and all good works out of one pocket and pay their thousands to these filthy newspapers out of the other? Nothing amazes me more than to see these advertisements cheek by jowl with the most execrable, abominable, shameful evidences of journalistic meanness, menda-

*So, too, at Owens College, Manchester, there is an interesting scheme of an Honor School in English, involving as prerequisite "a competent knowledge of Latin and of at least one modern language," and covering in literature such topics as follows: "(1) Specimens of English in its several stages, (2) Outlines of English Literature, (3) an Essay, (4) a Special Period of English Literature, with prescribed books, (5) an English Author or a selected subject from English Literature, (6) the History of Criticism, (7) a Dissertation on some subject selected by the candidate."

city, and bad taste. The wealthy owner of a great "department store," who is also prominent in an evangelical congregation, and a good patron of the advertising columns of a paper which reeks with yellowness, justified this last, saying to me that when he advertised, he thought only whether or not such and such a medium reached the people most likely to purchase his wares. "I don't stand in my door," said he, "and assure myself of the morality of every shopper before letting her buy of me." Perhaps an equally confused idea of responsibility possesses the minds of the eminent men of letters whose contributions are seen in these papers, and the prominent clergymen, lawyers, and physicians who put their signatures to interviews with yellow reporters.

This good-natured yielding on the part of men of influence to the solicitations of the yellow journalists is one of the most discouraging signs in the whole miserable business.

WILLARD EMERSON KEYES.

BOSTON, February 24, 1898.

THE MAINE DISASTER.

TO THE EDITOR OF THE NATION:

SIR: Even if it should be shown that the *Maine* was blown up by a Spanish mine or torpedo, that would not by any means prove that the crime was committed by Spanish hands. In fact, the probabilities would be the other way. The author of a crime is, almost always, the person who profits by it. Let us see what the Spaniards and the Cuban insurgents respectively would probably gain or lose by the destruction of the *Maine* by a Spanish torpedo or mine, supposing that such a crime was thereby fixed upon Spain:

CONSEQUENCES TO SPAIN.

War with the United States, defeat, bloodshed, humiliation, financial ruin, revolution, anarchy, civil war, overthrow of reigning house and government. Loss of Cuba.

CONSEQUENCES TO THE CUBAN INSURGENTS.

Independence of Cuba.

There is not the slightest doubt that there are in the Spanish army in Cuba hundreds of Cuban spies. It is probable that they have made it their business to ascertain the position of the mines and torpedoes in Havana harbor. Supposing that it was known to them that, by touching a certain button, Cuba could be freed. Is it not certain that a man (perhaps one in a hundred) would arise desperate enough to do it? He would probably reason, in his unbalanced mind, that the good to be gained for his country more than counterbalanced the evil of the act. The only argument against my view of the case is the difficulty of getting at the apparatus for firing the mine, and obstacles infinitely greater than this have been overcome again and again by conspirators; for instance, remember the explosion in the Winter Palace at St. Petersburg, where the space under the flooring of the dining-room was filled with explosives in the very abode of royalty and under the eyes of the royal guards.—Yours truly,

MAXWELL WILLIAMS.

CHICAGO, February 24, 1898.

[An army correspondent writes in a similar vein, as follows.—ED. NATION.]

"Should a torpedo have caused the dis-

*I am indebted to the kindness of Prof. A. S. Napier, who has done so much for the new School at Oxford, for a copy of the Oxford examination papers, and to that of Prof. J. W. Hales for a set of the Cambridge questions.

plosion, it was a *Cudua* (not Spanish) missile, aimed at the *Alfonso*, which miscarried. It is incredible that the Spanish authorities could either have used or connived at the use of a Government torpedo. That would precipitate what they wish to avert—foreign war, besides the practical treachery involved. No unofficial Spaniard could have access to a torpedo or could manipulate it, any more than he could a ten-inch mortar or any other piece of ordnance. And although doubtless there are many Spaniards, civil and military, in Havana who would not be sorry to have the *Meine* destroyed, its destruction in that way would be impracticable.

"On the other hand, we know that the insurgents have been freely supplied with arms and ammunition, including dynamite, from the United States. They have been skirmishing on land within sight of Havana—on previous occasions—and undoubtedly there are adherents of their cause in that neighborhood. Now, it is perfectly possible for the Junta to procure in the United States or England an auto-mobile torpedo, of which there are several varieties, and it is presumed that such could be launched from the shore or from a small boat without insuperable difficulty. To destroy a Spanish man-of-war in the harbor would be a great stroke, and, in the absence of a Cuban navy, would be easier than to do so at sea. Very well, if a torpedo was used, either the ship itself was mistaken in the dark—the two seem to have been lying about 200 yards apart—or, while passing through the water, the torpedo was accidentally deflected, and struck the *Meine*."

"THE EFFECT OF AMERICAN ON ENGLISH POLITICS."

TO THE EDITOR OF THE NATION:

SIR: In his interesting, but, in some respects, inconclusive, article on this subject in the *Nation* of January 20, "An Observer" appears to me to lay somewhat undue stress upon the influence exercised by the experiments in municipal government in the United States upon municipal politics in this country. No doubt the recent mayoral election in New York has been followed with great interest here, and it would be absurd to suppose that we could learn nothing from it that would be of use to us in the conduct of local government in our great cities. But on the other hand, it would be affectation to pretend that the success of the one-man system of local government in America, if it does prove a success, will lead to any serious modification of the essential character of our own municipal institutions.

Of course, they are not perfect, but they have at least stood the test of sixty years' trial—for the main principles of the municipal corporations act of 1835 are still in operation—and in that period they have achieved results which the municipal reformer of New York or Philadelphia would give much to obtain. For the most part our large towns are governed with economy and efficiency, and though jobbery is sure to occur here and there, there is certainly none of that licensed jobbery on a huge scale which obtains under the party system in America. Nor can it fairly be said, as "An Observer" rather implies, that the best men take no interest in municipal affairs. The contrary would rather seem to be the case. On the other hand, there is not much to attract the worst men, as there is in America. Our municipal servants, from the Town Clerk down to the policeman, hold their positions on a tenure practically as stable as that of the members of the civil service of the state. The number of offices at the disposal of a newly elected Mayor or Town Councillor in this effete country would move a high-toned Tammany politician to scorn.

Under the circumstances, it is hard to see why we should seek out "some honest man," and "give him extraordinary powers and a long tenure of office." I can imagine the amused surprise of a citizen of Liverpool or Birmingham on being told that responsibility could not be brought home to his Town Council, and that it would be much better to elect a dictator for a long period of years.

The case of London is no doubt different from that of other large cities of Great Britain. It is only of late years that an attempt has been made to treat the metropolis as a municipal whole, and to evolve unity out of the diverse local authorities which formerly shared—and indeed still do to a large extent share—in its government. The battle between centralization and "tenification" is not yet decided; but whatever be the result, there is small likelihood of the adoption of the American system.

The fact is, that the municipal institutions of Great Britain and of the United States cannot be treated as analogous, and the problems to which they give rise are entirely different in character. If it is true, as I have contended, that we are not likely to benefit much by copying any of the forms of American local government, on the other hand it is not probable that the adoption of our English forms would, under present circumstances at least, be of much value to the American municipality. For there would still remain the terrible iron-bound machines of Croker and Platt, and their kindred organizations, and the extraordinary doctrine of "the spoils" would still prevail. While America retains the spoils system and tolerates on her neck that Old Man of the Sea, the Boss, she can never enjoy any decent scheme of municipal government, whatever form of charter the State Legislature may adopt. The forces of human nature would be too strong for her. As Great Britain does not obey the spoils doctrine or writhe in the toils of a party system like that of the United States, it is clear that she is not subject to the same class of dangers either in municipal or in national politics.

No doubt it suits politicians like Lord Salisbury, to whom the London County Council is a perpetual bogey, to solemnly warn the electors that it may develop all the evils of Tammany Hall. But Lord Salisbury is not always careful to get up his brief, and he has here displayed an astonishing ignorance both of Tammany and of the London County Council, which his friends have ever since been busily trying to explain away. Possibly, however, he has managed to frighten a few people who have only a very vague knowledge of the real conditions of the American municipal problem. In a sense, this sort of thing can be described as an influence of American upon English politics; but who could take it seriously, or admit that it is likely to have such far-reaching consequences as "An Observer" seems to apprehend? G. C. M.

LONDON, February 17, 1898.

THE RAWLINSON MSS.

TO THE EDITOR OF THE NATION:

SIR: Having seen the gratifying notice of the catalogue of the Rawlinson MSS. in this library, which appeared in the *Nation* of the 11th of November last, but observing that the writer of that notice was aware of the existence of only two volumes, I think

it will interest him, and I hope others of your readers, to be informed that two more volumes have appeared, comprising 1,516 MSS. of the same collection, designated under the letter D. The first of these volumes was published in 1893, and the second has just now been issued. They will be followed by a third volume containing an exhaustive index of persons, places, and things. Much relating to America will be found; and one manuscript of special interest is described under the number 1352, being the original autograph copy of John Elliot's 'Christian Commonwealth,' as sent by him to be printed in England.

W. D. MACRAY.

BODLEIAN LIBRARY,
OXFORD, February 15, 1898.

HARRIET SHELLEY'S LETTERS.

TO THE EDITOR OF THE NATION:

SIR: In a notice of a recent volume of the 'Dictionary of National Biography,' in your number for December 30 last, you question the existence of a reprint in book form of the letters of Harriet Shelley to Catherine Nugent, originally printed in the *Nation*. Such a reprint, however, was issued in 1889, and a copy is now before me. I do not know the extent of the impression, but it must have been very limited.

I remain, dear sir, very truly yours,

R. GARNETT.

BRITISH MUSEUM, February 17, 1898.

Notes.

Mr. J. N. Larned, the well-known librarian of Buffalo, and author-editor of the 'History for Ready Reference and Topical Reading,' is to edit an annotated bibliography of American history, a work projected by Mr. George H. New York, and to be published by the American Library Association. About a thousand titles will be selected of books such as "readers in American history need most to have valued for them, either in commendation or warning," through notes appended to each title by way of appraisal ("with full knowledge, with sound judgment, with absolute sincerity"), and accompanied by the critic's signature. This is quite a practicable undertaking, as current treatment of new books would not be.

Thackeray has no biography, but he is to have a "Biographical Edition." This is the title finally chosen for the new and revised edition of his works, which is to be edited by Mrs. Richmond Ritchie, and is to be published in thirteen volumes. The order is to be chronological, each novel to be given in a single volume, and each volume to have its separate introduction. Many of Thackeray's letters, hitherto unpublished, are to be included, in addition to new drawings and sketches by him, facsimiles of his manuscript, and several portraits not before reproduced. Among the latter are those by MacIise, loaned for the purpose by the Garrick Club. The publishers of this notable edition are Smith, Elder & Co., London, and the Harpers of this city. The first volume is set down for appearance on April 15, and thereafter one volume a month is to be issued.

Charles Scribner's Sons' spring announcements embrace 'The Poetical and Prose Works of Lord Byron,' in twelve crown ec-

tavo volumes, edited from a new text, with many fresh additions, by Ernest Hartley Coleridge and Rowland E. Prothero; a uniform nine-volume edition of 'Novels and Stories by "Q."' (A. T. Quiller-Couch); 'Odes in Contribution to the Song of French History,' by George Meredith; 'Worldly Ways and Byways,' by Eliot Gregory (the *Evening Post's* papers of "An Idler"); 'Tales of the City Room,' by Miss Elizabeth C. Jordan; 'The Unquiet Sex,' magazine papers by Mrs. Helen Watterson Moody; 'Music: How It Came to be What It Is,' by Miss Hannah Smith; 'How to Name the Birds,' by H. E. Parkhurst; 'The Eugene Field I Knew,' by Francis Wilson; and 'Seven Months a Prisoner,' by J. V. Hadley, Judge of the Circuit Court of Indiana.

In the next few months we may expect from Little, Brown & Co., Boston, 'Memoirs of James Kent, LL.D.,' by his great-grandson, William Kent; a new edition, under the care of Prof. George H. Howison, of Soule's 'Dictionary of English Synonyms and Synonymous or Parallel Expressions'; a musical story, 'The Duenna of a Genius,' by Mrs. Frances Blundell; 'Hassan, a Fellah,' a Palestine romance, by Henry Gillman; and the D'Artagnan Edition of the romances of Alexandre Dumas, in fifty volumes, with thrice as many photogravure plates. In conjunction with Sampson Low & Co., they will publish also the following: 'All the World's Fighting Ships,' by F. C. Jane, illustrated, the second volume of William L. Clowes's 'History of the Royal Navy,' and a new edition of 'Ironclads in Action,' by H. W. Wilson, with a preface by Capt. Mahan.

Col. Higginson's 'Cheerful Yesterdays'; Dr. Griggs's 'The Pilgrims in their Three Homes—England, Holland, and America'; Mrs. Wiggins's 'Penelope's Progress,' a tour in Scotland; Henry B. Fuller's 'From the Other Side,' four stories of transatlantic travel; Bret Harte's 'Tales of Trail and Town'; Hopkinson Smith's 'Caleb West'; and 'The Children of the Future,' by Miss Nora Archibald Smith, are speedily forthcoming from Houghton, Mifflin & Co.

Count Tolstoi's 'What Is Art?' will be issued immediately by T. Y. Crowell & Co., who will also make a book of Dean Farrar's 'Great Books,' now appearing in the *Independent*.

'Eastern Journeys' is the title of a book by the late Charles A. Dana, which is to be issued at once by D. Appleton & Co.

The Baker & Taylor Co. announce 'The Twentieth Century City,' by the Rev. Josiah Strong, D.D., and 'Life, Death and Immortality,' by William M. Bryant, LL.D.

Meyer Bros. & Co., No. 1132 Broadway, New York, will shortly bring out 'Pearl Necklace of Women's Thoughts,' translated from the French by Henri Pène du Bois.

The April issue of the *Portfolio* (Macmillan) will be 'The Later Work of Titian,' by Claude Phillips. The same house is bringing out 'The Genesis and Dissolution of the Faculty of Speech,' by Joseph Collins, M.D.; 'Four-Footed Americans,' by Mabel Osgood Wright, illustrated; 'Stories from the Classic Literature of Many Nations,' by Bertha Palmer; 'Tales of the Enchanted Islands of the Atlantic,' by Col. T. W. Higginson; and 'Topics on Greek and Roman History,' by A. L. Goodrich.

'Curiosities of Popular Customs,' as well as of "Rites, Ceremonies, Observances and Miscellaneous Antiquities," is the subject of an illustrated volume of over a thousand

pages by William S. Walsh (Philadelphia: J. B. Lippincott Co.). It is in great measure a compilation, the author mentioning eight different books which he has placed under contribution. The "staple" of the book is stated in the preface to be "the strange and out-of-the-way things usually left out of current works of reference"; but for some reason the fact is not mentioned that the author has mainly devoted his energies to customs, observances, and information connected with religion. In other words, the title of the book would imply a range of topics outside its actual limits. Of customs connected with saints' days, church-festivals, and holidays there is an abundance. The arrangement is alphabetical, but there is no conspectus of titles or analytic index.

The Queen's Jubilee is well past, but a dateless commemoration of it, 'Sixty Years a Queen,' by Sir Herbert Maxwell, Bart., M.P. (London: Harmsworth; New York: E. & J. B. Young & Co.), is mentionable at almost any time. In this handsome quarto the story of the reign is told agreeably and with fairmindedness, if not without bias such as belongs to an occasional production of this sort. About Chartism, Fenianism, the Sepoy rebellion, the China wars, the Crimean war, we do not expect to read the verdict of posterity. Material progress, literature, and science are taken account of, and the whole narrative is a useful popular survey of a memorable period. It ought, therefore, to have been furnished with an index. The illustrations are numerous and excellent, and are much enlivened by caricatures from the pencil of the DoYLES, of Leech, Tenniel, and Du Maurier.

While the new National Library is being pictured and described, it is well that the great neighboring pile should be more than superficially repictured and redescribed, as is done in 'The National Capitol; Its Architecture, Art, and History,' by George C. Hazelton, jr. (New York). The work fulfils the promise of its title in a very satisfactory manner, with the aid of numerous illustrations. It is handsomely printed, and has a literary readableness as well as a permanent value for reference.

The 'New Astronomy for Beginners,' by Prof. D. P. Todd (American Book Company), will be found a very pleasing book for more than one class of students. Notwithstanding its professedly elementary character, it seems to contain all that the general non-scientific student at college could wish to learn of the subject. It is distinguished from all other books of the kind with which we are acquainted by the number and felicity of its illustrations. In some chapters, geometrical ideas are introduced which we fear students below the college grade will not find it easy to master; but these may be passed over without detriment to the usefulness of the other parts of the book.

The conscientious preparation of Mr. William C. Harris's 'Fishes of North America' has caused long delays in the appearance of the several parts. The "field work" (that is, the painting of portraits from live fish) had not been finished when the enterprise was started, but we are now assured that the series (numbering eighty) is at last virtually completed, so that the editor of the *American Angler* becomes free to devote himself to the text. Parts 11-14 bear monthly dates in 1896, but have been recently issued. They deal with the carps, the tar-

pon, the big-eyed herrings, the bonefish, etc., and have each two excellent lithographic copies of oil paintings of specimens not always related to the accompanying text, as, the common sunfish, horned pout, rock bass, sea bass, tautog, etc.

From Henry Frowde we have three more parts of Poole's 'Historical Atlas of Modern Europe from the Decline of the Roman Empire,' to which the editor contributes maps of the ecclesiastical organization of the Spanish peninsula, Europe in the time of Otto the Great (962), and Germany under the house of Hohenstaufen (1133-1254). Other maps are of Scotland (about 1600), by G. Gregory Smith; France in the thirteenth century, by W. E. Rhodes; the Eastern Roman Empire in the tenth century, by Prof. Bury; Western Asia under the Mohammedan Dynasties (970-1070), by S. Lane-Poole; and the house of Savoy in Italy, by Miss K. Dorothea Ewart.

The 'Correggio' in Knackfuss's 'Künstler-Monographien' (Bielefeld: Velhagen & Klasing; New York: Lemcke & Büchner) is by Henry Thode. Noticeable among the copious illustrations are the general views of the roof-paintings in San Paolo at Parma, showing the arrangement in situ of those lunettes and ovals so often reproduced separately in photographs and engravings.

The St. Louis Mercantile Library begins a modest series of Reference Lists in a useful way. The first number displays the Library's store of Missouri and Illinois newspapers, 1808-1897, in chronological arrangement, and adds an account of the manuscripts relating to Louisiana Territory and Missouri. This last is in line with the labors of the historical-manuscripts commission of the American Historical Association, whose valuable first report has just been issued.

The chief feature of the San Francisco Sierra Club's Bulletin for January is a translation of Dr. Filippo De Filippi's account of the Prince of Savoy's successful expedition last year to the summit of Mt. St. Elias, which spent forty days on a snowy footing. The article is accompanied by a chart of the route, views, and a portrait of the modest leader. Mr. John G. Lemmon continues his 'Conifers of the Pacific Slope—How to Distinguish Them,' with several illustrations.

Mr. F. G. Jackson's account of his three years' exploration in Franz-Josef Land is the prominent feature of the *Geographical Journal* for February. The main result of his adventurous journeys seems to have been the mapping of the southern part of the archipelago, and, it may be added, the conviction that it is "one of the worst" routes to the pole. A study of the geological collections brought back by the expedition appears to show that the islands are fragments of a vast basalt-plateau, probably the "grandest example of volcanism in the world." On account of the absence of warm southwesterly winds, the flora is "more scanty and stunted on the whole than that of almost all the other Arctic regions." There are certain plants, however, as poppies and four species of mosses—brilliant green, red, and golden yellow—which give color to the landscape. The only land mammalia are the bear and the fox, but three new species of birds were discovered. The northern lights were disappointing, though occasionally they were brilliant enough "to cast a shadow and to eclipse stars below the third magnitude." The highest region—

ed temperature was 43 degrees Fahr.; the lowest, —64 degrees. The Journal also contains Dr. Mill's elaborate classification of geography with arbitrary symbols, presented at the Toronto meeting of the British Association.

The *Scottish Geographical Magazine* for February contains an interesting account of Somaliland by Mr. A. E. Pease, M. P. After a brief sketch of the recent history and political relations of that country, its native races, their appearance, customs and origin, he describes two very successful hunting expeditions made in 1896-97. He deprecates in emphatic terms the rumored agreement of Lord Salisbury's Government to relinquish a large part of the country to Abyssinia in return for its "good will in the Nile valley." It means simply the abandonment of the friendly Somalis, "who have till now delighted to call themselves British," to the exterminating or enslaving raids of their hereditary enemies.

The principal place in the Consular Reports for February is given to an apparently careful and painstaking account of coffee culture in Hawaii, by our Consul-General, Mr. William Haywood. Detailed information, in answer to numerous inquiries, is given in regard to labor, wages, the best methods of acquiring, clearing, and planting land, and the outlay required. The general impression is left that money can be made by an industrious person with from five to ten thousand dollars capital. But the industry is still so young that the estimates of the profits when the plantation has reached its full bearing stage (in seven years), range from 12 to 75 per cent. Appended is a list of the 222 coffee-growers in the islands, with the number of trees or area of each plantation. The Hawaiian sugar-crop for 1897 is estimated at 248,576 tons, or almost exactly the same as that of the previous season. The world's sugar production for 1897-98 is given by a German authority as 4,925,000 tons beet-sugar and 3,460,000 tons cane-sugar. The largest producers are Germany and Java respectively. There are several reports from China, the most interesting and valuable, perhaps, being that upon the kind of labels and trade-marks which are popular with the Chinese.

George L. Pilkington, a lay missionary recently killed by the Sudanese rebels in Uganda, was a remarkable linguist. Graduating from Cambridge, England, in 1888, with a first-class in the Classical Tripos, he went to Africa in 1890. During the journey from the coast he learned the language from the carriers so rapidly that within three months after his arrival at his post he had prepared a *Luganda Handbook and Vocabulary*, "the first accurate one ever published." By the middle of the next year he had translated the Psalms and the New Testament, with the exception of the Gospels, and in four years more the whole of the Old Testament, a few of the Minor Prophets excepted, together with seventy-two hymns, two catechisms, a devotional book, and a history. Another side of him is shown in an extract from a journal of a fellow-missionary published in the *Church Missionary Intelligencer* for February: "Archdeacon Walker has got a football out from England, and Pilkington has been diligently coaching the boys. It is very comic to see him, as he enters with great earnestness into it. . . . I, with my boys and about ten others, stood Pilkington and another lot. We got two goals each."

He was only thirty-three when he was killed, and was probably the best-known white man in Uganda and most beloved by the natives; and in his death, to quote from the obituary notice in the *London Times*, "the cause of civilization in Africa has received a severe blow."

It gives us pleasure to record that the broader view has prevailed among the alumni of Harvard College, and that, by a majority of more than 12 per cent. in a total vote (by circular ballot) of some 3,100, they propose to extend the suffrage for Overseers "to all graduates of five years' standing from any department of the University."

We have received the first circular of the Baltimore Association for the Promotion of the University Education of Women, inviting applications for a foreign fellowship, of \$500, for the scholastic year 1897-'98. In the award of this fellowship, preference is to be given to college graduates who are either Maryland women or women who have identified themselves with educational interests in Baltimore. The requirements set by the Baltimore Association for its first fellow are those hitherto specified for the fellowships awarded by the Association of Collegiate Alumnae. Candidates, "preferably graduates of not more than five years' standing," should file their applications in writing, by March 20, with any member of the committee on award: Mrs. Christine Ladd Franklin, No. 1507 Park Avenue; Dr. Mary Sherwood, "The Arundel"; Dr. Lillian Welsh, the Woman's College. While no competitive examination will be held, the committee propose to select from among the qualified candidates that one who, in their judgment, through original gifts, previous training, energy, power of endurance, and health, is best fitted "to attain distinction in her selected line of work." The required evidence of such ability and promise includes her college diploma, testimonials from professors and other competent judges, the very important qualification of thoroughly good health, a statement of the work in which she proposes to engage, and "last, and of chief importance, examples of her scientific or literary work, in the form of papers or articles, or accounts of scientific investigations which she has carried on."

An obvious though not quite self-correcting error occurred in our issue last week in the title of Prof. MacDonald's 'Select Documents Illustrative of the History of the United States.' The period covered is 1776-1861.

—The promotion of interest in local chronicles, antiquities, and folk-lore is a branch of business all over the world, and if the State of New York is not very rich in material, zeal in the use of what exists is the more noticeable. The 'Chronicles of Tarrytown and Sleepy Hollow,' by Edgar Mayhew Bacon (G. P. Putnam's Sons), come from a bit of New York immortalized by Irving; but Mr. Bacon has contrived to add a good deal not to be found in his writings. The book is a small one, but is fully illustrated, and contains an interesting plate of André's capture, from a print in the possession of Dr. Coultant, and a map of the Sleepy Hollow country, showing the old Manor House, or "Flypse's Castle," the mill, the Dutch church of Sleepy Hollow (we are glad to see that an effort is being made to repair and preserve it), and some other landmarks. There is little left, and the days of the Van Cortlandts and Bayards and Philipsees are long gone, and on certain portions of the map appear

the new names of the patroons of our days, the Goulds and Rockefellers, whose villas overshadow the little antiquities of the sleepy old Dutch hills and valleys, with the garish splendor of a very modern day. Time softens all things, and perhaps in their day Vredryk Flypse and his "set" were not altogether patterns of all the virtues. The author notices the scandalous stories about Captain Kyd, who, if he was really "squared" by some of the earlier Tarrytown magnates, apparently dealt with them honorably, just as the land-pirates who have succeeded him do with rich people now, if properly approached. Another little volume of the same sort, plausibly published by the same firm, is 'Reminiscences of an Old Westchester Homestead,' by Charles Pryer. This consists mainly of local ghost stories of a very primitive kind, such as may be found wherever dulness is.

—Notes of a journey made through Nicaragua in 1895 by Henry I. Sheldon have been put together in a volume called 'Notes on the Nicaragua Canal' (Chicago: A. C. McClurg & Co.). We cannot make out that the author shows any special authority to speak about the canal, but he makes very sweeping statements as to the political questions likely to be raised by its construction. Thus, he says (p. 178) that should we construct the canal, directly or indirectly, "we could not share its control with any European Power," and that "it will be impossible for Great Britain to maintain the provisions of the Clayton-Bulwer treaty." But why? The only reason given is that we have tried to get England to accede to a modification or abrogation of the treaty, and have failed. Of itself this proves nothing, except that England stands by and insists on non-exclusive control under the treaty; the real question is whether we can show any reason why England ought to recede. If not, she probably never will, and the only remaining question would be, Should we compel her by force? The book seems to be intended to advance the building of the canal, but we can imagine nothing less likely to do this than publications which assume that the canal, as soon as built, will be a *casus belli* between the United States and England. Mr. Sheldon is here an imitator of the voluble Keasbey, whose idea of a canal is that of a sort of *mare clausum*, which we can forbid anybody entering, and hold against the world in arms. This would no doubt be magnificent, but it would not be a canal. On the engineering questions involved, which are really the only ones of any present consequence, Mr. Sheldon does not undertake to decide. The two things that he seems to think he really makes clear are, first, that the canal will be sure to pay at once, and, second, that we must never let any one help us to keep it open.

—A small illustrated pamphlet, 'On Portraits of Christ in the British Museum,' by Cecil Torr, M.A. (London: C. J. Clay & Sons), is in form and title a description of the portraits in question, but in reality is a discussion of the chronology of Christ's life. The fact that Jesus is represented in certain third or fourth-century portrait-busts as a beardless youth, while in works of later date he always figures as a bearded man, taken in connection with the further fact that, in a number of early pictures of the baptism, Jesus appears as a mere boy, while John is represented as a man of mature years, suggests to the author of the pamphlet the question whether we must not re-

vise the accepted chronology of Christ's life and conclude that he began his public ministry when a mere boy and was still a youth at the time of his crucifixion. A new investigation of the familiar data supplied by the Gospels and Josephus leads Mr. Torr to answer this question in the affirmative, and to put the birth of Christ in 6 or 7 A. D., when Quirinius, who is mentioned in Luke ii., 1, is known to have taken a census. Jesus is then supposed to have begun his ministry at the age of sixteen or seventeen, and to have been crucified when not more than twenty years old. It is suggested by Mr. Torr that the mistake in the commonly accepted chronology arose from a confusion of Jesus with John the Baptist, by which the latter's birth-date was assigned to the former. This radical revision of the traditional chronology of Christ's life, interesting as it is, rests upon too precarious a foundation to command any wide assent among scholars. The portraits which are regarded as so suggestive are much too late to be of any real historical significance, and the difficulties in our written sources are not in any way lessened—they are, in fact, greatly increased—by the change of date.

—The tenth annual report of the Society for the Diffusion of Christian and General Knowledge among the Chinese for the year ending October 31, 1897, shows a surprising expansion of work since the Sino-Japanese war. Largely supported by Scottish and other merchants in China, including natives, the society aims to pierce the dense ignorance of the masses by means of popular publications, in the vernacular, of science and unsectarian religion. Since November 1, 1896, a total of 199,200 copies of books containing 12,147,900 double pages or leaves has been issued. The works most numerous sold, at a cost barely above that of printing, have been Dr. Y. J. Allen's thoroughly trustworthy 'History of the War' (of 1894-'95), Ries's 'Education of Mankind,' Mackenzie's 'History of Civilization,' T. Richard's 'Reform,' Allen's 'Value of Truth to the Individual and National Character,' and 'What has the English Government Done for India? A Mirror for China,' 'Outlines of the History of Thirty-one Nations,' and 'The Aims of Protestant Missions in China.' The past year has been the most successful known to the Society, the sales yielding \$12,146.91 as compared with \$817.97 in 1893. Chinese publishers who have pirated the Society's publications have been restrained from and fined for reprinting these books, because the natives who print "for revenue only" leave out the criticism of bad customs and much else that does not please them. Dr. Y. J. Allen, editor of the monthly *Review of the Times*, which circulates 3,300 copies, is the chief author on the list. Recently offered the headship of a university by Sheng, the General Director of Railways in China, Dr. Allen declined, but instead prepared by request a code of rules and regulations for a national system of modern education. The chief places of gratuitous distribution of ethical and intellectual publications are the examination halls, in which 24,000 students assemble, as, for example, at Nanking. Those at Changsha, in the anti-foreign province of Hunan, were, during the last September examinations, lighted by electricity. The centres of distribution and sale are a dozen, from Mukden to Yunnan.

WINSOR'S WESTWARD MOVEMENT.

The Westward Movement: The Colonies and the Republic West of the Alleghenies, 1763-1798. With full cartographical illustrations from contemporary sources. By Justin Winsor. Boston: Houghton, Mifflin & Co. 1897.

The name of Justin Winsor is indelibly associated with American historical literature. As editor of 'The Narrative and Critical History of America,' and as author of important works on geographical discovery on this continent, he displayed a rare knowledge of sources and a critical appreciation of their worth. As a cartographer he was easily first among American scholars, and his attainments in this field lend to his works a peculiar value. The present volume arouses the melancholy interest which always attaches to the last work of a great scholar's life. Not only is it Dr. Winsor's final contribution to scholarship, but it concludes the story begun in 'Cartier to Frontenac' and continued in 'The Mississippi Basin.' The three volumes together form a continuous history of geographic discovery and exploration in America, together with some account of the political arrangements by which the region east of the Mississippi was disposed of.

The westward movement of the Americans on the seaboard encountered four powerful antagonists—the Indians, the English, the French, and the Spanish. The first were the aboriginal possessors of the land, and were unwilling to retreat constantly to the West without making a determined resistance. The second antagonist had two objects in view in dealing with the colonists—to keep them within reach of the trade of the mother country and to hold them in due subjection. France, by giving Canada and the region north of the Ohio to England, would establish a constant menace between the colonies and the mother country, while by confining the young republic to the Atlantic slope, she would propitiate Spain, whose interests demanded that no rival Power should be allowed to approach the Mississippi. The history of the westward movement is the history of the contests with these four antagonists and their final vanquishment.

The story of the long contest with the Indians is taken up at the treaty of Fort Stanwix (1768), where the famous Property Line, a futile attempt to prevent settlers from encroaching on the lands of the Indians, was drawn. The forces which lay back of the westward movement were far too strong to be held in check by such an arrangement, and the terms of the treaty were laxly observed. Settlers continued to pour over the mountains and down the Ohio, and they showed little regard for treaty stipulations. Congress, however, recognized the obligation of the treaty, and induced the Indians in a second treaty of Fort Stanwix (1784) to relinquish the Ohio as their boundary, and to retire toward the Northwest. After the organization of the Northwest Territory, much of the time of Governor St. Clair was spent in efforts to quiet the Indian title. Throughout these difficult negotiations, the action of the Confederation was hampered by the attempts of the individual States to make separate treaties with the Indians. Furthermore, it was found to be impossible to induce all the tribes concerned to yield their assent to the treaties

proposed, and in these cases the question of title had ultimately to be settled by force.

In their efforts to prevent the spread of American settlements, the Indians were ably assisted by England. It was her object to secure the control of the vast region between the Appalachians and the Mississippi, and to this end the royal proclamation of 1763 forbade the granting of lands or the making of settlements beyond the sources of the rivers flowing to the Atlantic. With the same purpose in view the Quebec Act of 1774 annexed the region in question to Canada. This measure was peculiarly gratifying to France, for it was a recognition of her ancient claim that this territory belonged to Canada; and should the fortunes of war or diplomacy ever enable her to regain her lost possessions in America, she would then take advantage of England's acknowledgment of her contention. Before the news of the passage of the Quebec Act reached America, the Dunmore war began, and the outbreak of the Revolution in the following year diverted men's attention to other subjects.

Some of the most important results of the Revolution were due to battles fought in the West. The campaigns of General George Rogers Clark, beginning in 1778, overthrew British authority in the Northwest and compelled the British to assume the defensive from the Ohio to the Great Lakes. But the defeat of the British troops and the capture of many of the most important British posts were not the only results of Clark's victories. The terror of his name detached from England many of her Indian allies. How far this detracted from the British strength may be seen in the fact that Haldimand attributed it to the capriciousness of the Indians that Clark was not expelled from the Northwest. The fruits of Clark's campaigns were gathered when the treaty of peace was made. It may be questioned whether Winsor does not undervalue the importance of the conquest. Clark did more than make "it easier for the American Commissioners, who negotiated the treaty of 1782, to include this ample domain within the American Union." It would not be far wrong to say that he made it possible, for without his victories the claims of the United States to the Northwest would have had a very meagre basis.

In his chapters dealing with the relation of France and Spain to the Revolution, Winsor exposes with admirable clearness the purely selfish motives which led to the intervention of France. Anything that would weaken England was sure of the support of Vergennes. In like manner Spain saw that the safety of Louisiana required that England and her dependencies should be kept back from the Mississippi. This it was which induced Grimaldi to advise his royal master to contribute a million dollars to the cause of the Americans. The contribution was not made, but, prior to the outbreak of the war between Spain and England in 1779, the Spanish Governor of New Orleans maintained a most friendly disposition toward the Americans, supplying them in 1776 with 12,000 pounds of powder and rendering other valuable assistance. But in the settlement of the boundary question at the final peace, the United States had no reason to be grateful to either of its quondam allies. Both France and Spain desired to confine the new republic to the Atlantic slope. That satisfactory boundaries were finally secured was largely due to England, who, doubtless, was

equally actuated by purely selfish motives. She had to choose whom she would have as neighbor on the Canadian border, and she found a kindred race less objectionable than aliens under Bourbon dominion. The importance of these territorial arrangements was clearly seen at the time. Luserne wrote to Vergennes: "The Americans, in pushing their possessions as far as the Lake of the Woods, are preparing for their remote posterity a communication with the Pacific." The consummation of this prophecy was less remote than its author thought.

The conclusion of the treaty of peace and the recognition of the independence of the United States did not terminate the territorial difficulties of the new government. Efforts were still made to prevent it from taking possession of the domain awarded it. England, on the side of Canada, and Spain, on the side of Louisiana, endeavored to retain for a time part of what they had lost. The action of both countries was involved in a maze of intrigues with the Kentuckians and other Western Americans—intrigues which were made possible by the seeming indifference of the national Government to the commercial and political interests of the West. On the ground of the action of the States with regard to the loyalists, and also as security for the payment of the British debts, the British ministry refused to relinquish the Western posts. It was not until the negotiation in 1794 of the much-abused Jay treaty that the question was settled. At the same time, Spain persisted in retaining the eastern bank of the Mississippi south of the Yazoo, and plotted to establish a Spanish protectorate south of the Ohio. The disaffection among the people of the West gave the Spanish considerable hope of success, and it was not until the negotiation of the treaty of San Lorenzo in 1795 that the danger was averted. For three years longer, however, the Spanish held military posts in American territory. At last, in 1798, the posts were evacuated, and the United States came into possession of the territory awarded it by the treaty of 1783.

The weakest parts of Mr. Winsor's work are those dealing with the development of political institutions in the West. Not only is the treatment of the subject very brief, but the interpretation placed upon political measures in many instances cannot be accepted. An example of this is in connection with the Ordinance of 1787. The fulsome praise meted out to this measure for so many years seems to have led to a reaction in Winsor's mind, and to have made him place a lower estimate upon its influence in shaping the history of the West. It may be true, as he says, that the Ordinance was made up of glittering generalities akin to the declaration that all men are born free and equal—a phrase which was thought in Virginia to have nothing to do with slavery, while in Massachusetts it was held to abolish slavery. It may be true, also, that the Ordinance contained nothing new, and that many of its provisions were never enforced. Granting all this, the history of the time would not warrant the following conclusion:

"So the Ordinance of 1787 introduces us to nothing new in human progress. There was doubtless that in it which proved a guiding star for future legislation, as in the struggle over the slavery question in Illinois; but it may well be questioned if later enactments, without such a beacon, and keeping in sight the interests of the community as they arose, would not have made

of the Northwest all that it has become. The provisions of this fundamental law were operative just so far as the public interests demanded, and no farther, and the public interests would have had their legitimate triumph unaided by it. The Ordinance simply shared this condition with all laws in communities which are self-respecting and free."

The history of the slavery controversy in Indiana, where the people repeatedly sought to obtain the abrogation of the sixth article of the Ordinance, is a sufficient refutation of this conclusion. In this instance, at least, the Ordinance was more than a beacon-light. It was a positive restraint, without which slavery would undoubtedly have been admitted to Indiana.

The literary workmanship of the volume cannot be commended. At its best, Winsor's style is cumbersome, and it is often obscure. But a more serious defect of the work is the entire absence of bibliographical data. Aside from the notes to the maps, there are no references whatever to the sources. This is more than a defect; it is a serious loss to scholarship, for no one had a more extensive or a more accurate knowledge of the sources and authorities of this period of Western history than had Winsor.

TYLER'S LITERARY HISTORY OF THE REVOLUTION.

The Literary History of the American Revolution. 1763-1783. By Moses Colt Tyler. Volume II. 1776-1783. G. P. Putnam's Sons. 1897.

The second volume of Prof. Tyler's scholarly and readable study fully bears out the promise that the earlier volume gave; and while there is obviously far less ease in the classifying and treatment of the more heterogeneous bookmaking of the period from 1776 to 1783, the author has nevertheless grouped his material in such a way as to produce a most satisfactory result. Prof. Tyler notes that, with the actual passage of the Declaration of Independence, argument ceased, and the publications on both sides became tinctured with the elements of derision and hate. Perhaps no better proof could be found that the cleavage had ceased to be partisan, and had become national; but for this very reason the products of the press become far less interesting from the literary point of view, and it is easy to see that the author has found his material neither as important nor as usable as in the earlier controversial period.

The more we dwell on his deliberate omission of the state paper, which we are forced to confess is correct if we are to treat literature in its narrowest sense of belles-lettres, the more we regret it, not only because the state paper played an essential part in our Revolution, but because in it is to be found the expression of the greatest intellectual ability then extant in this country. When a people of very limited education are engaged in fighting an unequal contest, and at the same moment are rebuilding their governments, they have too much work on hand to devote any of the mental power of the country to the production of belles-lettres; and if only the latter range of literature is considered, it is obvious that a very great injustice is done to them. Just as, later, the slavery issue for thirty years absorbed the minds of the ablest thinkers and writers in our country, to the injury and almost disregard of pure literature, so, during

the Revolution, the strongest minds were pondering how man was to devise a government that should maintain an equilibrium between anarchy and tyranny, and which should be strong enough to check men in wrongdoing and weak enough to check them in nothing good. Yet one may search Prof. Tyler's two volumes in vain for any consideration of the Bills of Rights and Constitutions then framed, although into them was put the best intellectual vigor of the men who built a nation. The Constitution of Pennsylvania, framed by Franklin, Rittenhouse, and others, which represents the extreme swing towards a pure democracy, and that of New York, framed by conservatives like Jay, Gouverneur Morris, and R. R. Livingston, which represents the doubts of the outcome of self-government, are as important and illuminative as any of the addresses of the First Congress, if not as the Declaration of Independence itself. Not merely has the author passed over these exponents of the thought of the time, but also over the controversial literature they produced. John Adams's 'Thoughts on Government,' Braxton's 'Address,' Rush's 'Four Letters,' Parson's 'Essex Results,' Dickinson's 'Essay of a Frame of Government,' and the equally vital outlines of government drafted by R. H. Lee, Jefferson, Madison, and others, are either barely alluded to or are not mentioned at all.

So, too, most of the other political controversies of the Revolution are neglected. There are admirable surveys of much of the work of Samuel Adams, William Livingston, Thomas Paine, and Franklin, but the important newspaper or pamphlet writing, after the Revolution was fairly started, of Hamilton, Duane, Rush, the Lees, Wharton, W. H. Drayton, Gouverneur Morris, and others is passed over without reference. Even the last-named writer's very important 'Observations on the American Revolution,' which he prepared for the Continental Congress, is neglected. The whole literature of the controversy over the disposition of the Western lands, in which lay the germ of America's future greatness, and which marked such a radical departure from all previous systems, is unnoticed; and the pamphlet war over paper money is equally slighted, though in the essays of Franklin, Hamilton, Morris, Pelatiah Webster, Tench Francis, Paine, and Barton are to be found the true beginnings of American political economy, as well as sound views on questions which have been constantly recurrent in our history.

The greatest difficulty, however, that the author was forced to encounter was in his study of the literature of the South, and we wish he might have applied some of his capacity for research, which is indicated in so many parts of the present work, to this hitherto neglected section of our literature. One would suppose, from what is found in the books that have already appeared, that there was no literature south of Virginia in pre-Revolutionary and Revolutionary days. Prof. Tyler gives us more or less information concerning some of the writings of Drayton, Zubly, and Laurens, but even these accounts are seriously defective. Thus, Laurens's first publication, a pamphlet on American custom-houses (1768), and the able answer of Egerton Leigh, Chief Justice of the Colony, are not cited; and the same fate is accorded to the anonymous 'Considerations of Certain Political Transactions of the

South Africa of To-day. By Captain Francis Younghusband. Macmillan. 1898.

This book is made up of the letters and telegrams addressed to the London *Times* by Captain Younghusband, while acting as the correspondent of that journal during the recent stirring episode in South Africa. Appearing after Mr. Bryce's 'Impressions of South Africa,' which we recently noticed, such a book as this is at a disadvantage. Hardly any one will care for both books, and of the two Mr. Bryce's has much the more permanent value. It so happens, however, that Captain Younghusband takes up the story of the Transvaal just where Mr. Bryce left it, and his narrative therefore constitutes a sequel to the larger work. This sequel contains the history of Dr. Jameson's raid—an event of sufficient dramatic interest and political significance to command attention. As Captain Younghusband was on the spot at the time of the raid, and is not only a trained observer but also a brilliant writer, what he has to report cannot be neglected by those who wish to follow South African affairs closely.

We do not need to dwell on the circumstances of this remarkable raid, as they are still fresh in the memories of all who read the newspapers. Suffice it to say that Captain Younghusband describes the situation with remarkable fairness. He does justice to the Boers, while stating the case of the Uitlanders in its full strength. Their grievances do not seem to have been outrageous, and their unrest is evidently due chiefly to the knowledge that they are in the majority, while having no voice in the government, together with their conviction that they are the superior and the progressive element in the community. The failure of their attempted coup d'état is likely to prevent such attempts in the immediate future, but unless the Boers make some concessions it seems improbable that they can permanently hold so numerous and vigorous an element in subjection. If the peace can be kept for a while, Captain Younghusband gives reasons for believing that concessions will gradually be made.

The reader cannot repress a smile when he turns to Captain Younghusband's account of affairs in Natal. There is an immigration problem there, but it is the English who are in possession, and immigrants from British India who menace their supremacy. If we would understand the feelings of the Boers, we need only look at Captain Younghusband's description of the feelings of the English settlers of Natal. The full statement of the parallel would take us too far afield, and we must limit ourselves to commending it to the attention of students of politics. Here also Captain Younghusband shows himself impartial and open-minded. The control of his English sympathies and prejudices which he displays illustrates the governing capacity of his race. As to his observations on South African matters in general, they accord in the main with those of Mr. Bryce; and, had the latter not covered the ground, Captain Younghusband's book would deserve careful attention. It is at all events so readable that whoever takes it up will be likely to finish it.

The French Revolution. By Justin H. McCarthy. In two volumes. Vol. II. Harper & Bros. 1898.

Seven years have elapsed since the first volume of this work appeared—a delay which

might seem to require some explanation from the author. He vouchsafes none, nor does any very satisfactory one suggest itself to us. The French Revolution, it is true, is not an exhausted subject. New materials are being constantly exhumed, new light thrown upon it, and perhaps its proper history remains to be written. But it is not apparent that Mr. McCarthy has made much use of new materials; his work, in fact, might have been produced immediately after that of Carlyle. Nor is it of a character to make its relation to its materials of supreme importance. The public can hardly be expected to accept Mr. McCarthy's impressions as conclusive, or even as presumptive evidence, and he lacks the judicial faculty of "summing up." He gives us the testimony of this witness and of that, not concerning himself much with the question of credibility. This testimony is often contradictory and often plainly false; but that does not particularly disturb him. What he aims at is to produce a dramatic effect, and he has little disposition to omit a telling anecdote because it lacks authenticity.

It is true that Mr. McCarthy occasionally corrects some popular misconceptions. He shows pretty clearly that the Bastille was an innocuous and almost disused old keep, and that the atrocities committed by its destroyers were far worse than those supposed to have been committed on its occupants. He presents an intelligible and consistent view of the character and conduct of Marie Antoinette, and in general it would not be too much to say that his estimates of the prominent actors in the great tragedy are such as have been confirmed by history. We may go so far as to say that, on the whole, readers who depend on Mr. McCarthy for their knowledge of the French Revolution will not be seriously misled. He is not a philosopher, but he is capable of telling a story, and that, after all, is what the French Revolution must be to most people. To be graphic is the main thing in story-telling, and Mr. McCarthy is nothing if not graphic.

As we remarked on the appearance of his first volume, Mr. McCarthy necessarily invites comparison with Carlyle, a fact of which he cannot be unaware. Possibly he thinks that Carlyle's style might be advantageously made smoother, that its shadows might well be lightened. There is no disputing about tastes, and we cannot deny that McCarthy is easier reading than Carlyle, as Tupper is easier reading than Browning. Some people, indeed, cannot stomach Carlyle, and they may fancy this book. But those who can appreciate Carlyle's power will have little disposition to read what will seem to them a feeble imitation of the work of a great master.

Burke's Peerage. Sixtieth edition. London: Harrison & Sons; New York: G. P. Putnam's Sons. 1898.

The sixtieth edition of one of the most remarkable monuments ever constructed for the gratification of human vanity represents also a vast amount of curious research, and is a mine of information on the involved subject of social pedigrees, with every facility for ready reference. The "genealogic and heraldic dictionary," as it is called in the preface, has grown into a volume of portentous dimensions (nearly two thousand pages), the greater part of which is printed in exceedingly fine type. This state-

ment will furnish an idea of the quantity of printed matter between the covers. More than 1,600 pages are devoted to the peerage and baronetage; 150 or so to such lesser social fry as knights and privy councillors; and the remainder to a record of the foreign titles of nobility held by British subjects, the holders of various orders, rules of precedence, and other fashionable distinctions.

One feature which is likely to be especially useful to the student of social mysteries is the long alphabetical list, filling seventy-five double-column pages, of the surnames of the nobility and their connections, by blood or matrimony. This is rightly denominated the "key to the work," although some experience is necessary before it can be handled with facility. The array of heirs apparent or presumptive will be scanned with special interest, doubtless, by one class of female readers, and would be doubly fascinating to them if the statement of social were accompanied by one of financial standing. To the cursory reader the most attractive features of the book, probably, will be the coats of arms and the description of the various orders of knighthood. But it is needless to enlarge upon a standard work like this.

BOOKS OF THE WEEK.

- Bennett, Prof. C. E. *Laelius de Amicitia*. Boston: Benj. H. Sanborn & Co.
Bibliographie der Deutschen Zeitschriften-Litteratur. Band I. Leipzig: Fr. Andr. Nachfolger.
New York: Lemcke & Buechner.
Brander, George. *William Shakespeare: A Critical Study*. 2 vols. Macmillan. \$5.
Castle, Agnes and Egerton. *The Pride of Jennico*. Macmillan. \$1.50.
Chapman, J. J. *Emerson, and Other Essays*. Scribners. \$1.25.
Clerke, Agnes M., Fowler, A., and Gore, J. E. *Astronomy*. [Concise Knowledge Library.] Appleton.
Coutts, William. *The Works of Horace Rendered into English Prose*. Longmans, Green & Co. \$1.75.
Davenport, H. J., and Emerson, Anna M. *The Principles of Grammar*. Macmillan. 65c.
Duffy, Sir Charles Gavan. *My Life in Two Hemispheres*. 2 vols. Macmillan. \$8.
Erveux, L. d'. *Les Renaissance de l'Amie Paris*. Chamuel; New York: Lemcke & Buechner.
Frankland, Mrs. Percy. *Pastor*. [Century Science Series.] Macmillan. \$1.25.
Harper's Bazar. 1897. Vol. XXX. Harpers.
Harper's Magazine. 1897. Vols. 94 and 95. Harpers.
Harper's Weekly. 1897. Vol. 41. Harpers.
Hof, J. H. van't. *The Arrangement of Atoms in Space*. 2d ed. Longmans, Green & Co. \$1.75.
Horn, Adolf. *The History of Greece*. Vols. II., III., and IV. Macmillan. Each \$2.50.
Hornung, E. W. *Young Blood*. Scribners. \$1.25.
Knorz, Prof. Karl. *Das Deutschland der Vereinigten Staaten*. Hamburg: J. F. Richter.
Lebon, André. *Modern France, 1789-1895*. London: Unwin; New York: Putnam. \$1.50.
Lee, Sidney. *Dictionary of National Biography*. Vol. LIII. Smith-Stanger. Macmillan. \$3.75.
Lefroy, A. H. F. *The Law of Legislative Power in Canada*. Toronto: Toronto Law Book & Publishing Co.
Leverett, Edith. *Rhymes*. Boston: Damarrell & Upham.
McManns, Blanche. *How the Dutch Came to Manhattan*. E. R. Herrick & Co. \$1.25.
Meyer, Elard Hugo. *Deutsche Volkskunde*. Strassburg: Trübner; New York: Lemcke & Buechner.
Mowbray, Martha B. *Child Culture in the Home*. F. H. Revell Co. \$1.
Müller, Prof. F. Max. *Auld Lang Syne*. Scribners. \$2.
Murray, J. A. H. *A New English Dictionary, Frank-Law-Fry. G-Gaincoming*. (Vol. IV.) Oxford: Clarendon Press; New York: Henry Frowde. \$1.25.
Norris, W. E. *The Fight for the Crown*. Harpers. \$1.25.
Pendleton, Louis. *Carita: A Cuban Romance*. Boston: Lamson, Wolfe & Co. \$1.25.
Pool, Maria L. *The Red-Bridge Neighborhood*. Harpers. \$1.50.
Progress in Women's Education in the British Empire. Longmans, Green & Co. \$2.
Riley, J. W. *Pipes o' Pan at Zekesbury*. [Homestead Edition.] Scribners.
Ring, Thomas. In the Tolls. F. T. Neely.

The Nation.

NEW YORK, THURSDAY, MARCH 10, 1898.

The Week.

The appropriation of \$50,000,000 in a lump sum by Congress for the national defence will probably make for peace rather than war. Spain does not want war with the United States, and will want it less than ever when she sees that American sentiment is united in support of the President. There is probably some politics in the appropriation also. It gives the Republican party the lead in preparing the country for any emergency that may arise. The Democrats must join the procession, but their place is necessarily in the rear. The effect of an expenditure of \$50,000,000 in the present state of the national finances, without any increase of revenue, would be so disastrous that we may safely reckon that no more of it will be actually spent than is necessary. It is true that we have the money in hand, but it is the remains of the last \$100,000,000 bond issue of the Cleveland Administration. The gold reserve in the Treasury is now large, but it is liable to depletion at any time in consequence of the excess of expenses over receipts in the general fund; and whenever it is observed to be sinking we may look for a renewal of trepidation in the money market. Nobody has a clearer perception of these facts than Secretary Gage and the Republican leaders in the House. The latter, some little time ago, cut down the estimates for fortifications from about \$11,000,000 to \$4,100,000, which is the best possible guarantee that the money now voted with such a lavish hand will not be spent without due consideration. Of course, all such movements as this \$50,000,000 appropriation are charged with a certain amount of danger. They feed the yellow journals, cause temporary declines in the stock market, but are not necessarily provocative of war. We fail to observe any increase of Jingoism in consequence of it. Your true Jingo politician is one who wants war when there is a clear sky and no great probability that his demands will be gratified; but when the winds do blow he generally goes below.

The enormous danger that lies in an unbridled press—the danger of plunging nations into war in mere wantonness or as a means of making money by the sale of extras—is recognised by the great Powers of the continent of Europe, which have laws adapted to the purpose of suppressing incendiary publications, and sending the offending editors to prison, not arbitrarily, but with very little delay. We have no such laws

here, because we have no strong neighbors on this continent. If we were flanked on one side by a Power like France and on another by one like Germany or Russia, a press censorship would be just as necessary as a Health Department. The right to publish matter tending to bring on a war, whether the matter itself be true or false, is not a whit more sacred than the right to land from a ship without first passing the scrutiny of a quarantine officer. The three thousand miles distance that lies between us and Spain muffles the defiance hurled by our yellow journals and the answering ones of the *Globo*, the *Correo*, and the *Imparcial* of Madrid, leaving them free to "scoop" each other and the public without much harm. One of our yellows says that its Madrid dispatch of Thursday was stopped by the censorship—for good reasons, no doubt. It is evident, too, that much matter must have been suppressed before, since Friday's papers contained a deal of hot stuff telegraphed from London from the Madrid papers of February 17, regarding the resignation of Minister De Lome—matter that would have been printed under head-lines from one to two inches high and a foot long if it had been fresh, but which is now tucked away in an obscure corner without any headline at all. The censorship has its uses.

Our usually cool contemporary, the *Chicago Tribune*, follows up its article declaring that "war exists" with one showing why it ought to exist, the inference being that it exists figuratively, only, at the present time. A figurative war is cheaper than an actual one, and therefore to be preferred on some accounts. The *Tribune's* reasons why war ought to exist are of a varied character, implying great penetration on the part of their discoverer into the deeper springs of human action. One of these is that "it [war] would wipe out mugwumpery, which is trying to choke out the vigorous life of the nation." This is said to be one of the desirable consequences of a war with Spain. But why not of a war with England, or Japan, or Turkey, or Chili, or Germany? Is there anything about a war with Spain that should make it peculiarly destructive to mugwumpery? As for war in the abstract, if we can imagine such a thing, its most pronounced advocate hitherto has been the Hon. Theodore Roosevelt, who is also, in the opinion of many Republicans of the Empire State, strongly tinged with mugwumpery. Indeed, the *Chicago Tribune* has been under suspicions of the same sort. Now, we object strongly to wiping out mugwumps by means of a war with Spain. But the wiping-out process, according to

the *Tribune*, would not only stop the mugwumps. "It would be the end," it tells us, "of the 16 to 1 abomination." Really it does amaze us to learn that the mugwumps and the Bryanites are both to disappear in consequence of a war. Why are we to look for this result? "Because," says our Chicago contemporary, "the people, seeing the country in the condition of war, would soon make an end of any conspiracy to swindle creditors with 44-cent dollars." There is a certain lack of consecutiveness here which implies that the writer has forgotten that the first act, or nearly the first, in our civil war was the suspension of specie payments and the issue of an irredeemable currency which sank gradually so that in July, 1864, we were using 35-cent instead of 44-cent dollars.

A curious illustration of the confusion of mind about governmental expenditures which generally prevails is afforded by an editorial article in the *Columbia (S. C.) State*, one of the best newspapers in the South, on the business aspects of a war with Spain, particularly as regards its part of the country. It holds that "many productive industries would be greatly stimulated; the transportation of men and war stores would increase the earnings of the railroads; provisions would rise in price, benefiting the farmers who make a surplus; there would be a large expenditure of money by the Government, and this would at once vivify trade; work will be easier to get, whether in the army or in places vacated by those who may enter the army; those dependent on the killed will be pensioned; they will not be left to starve, like the dependents of the victims of peace." From first to last there is not a suggestion that it is going to cost anybody a cent to pay for the great stimulation of industries, the increased earnings of the railroads, the pay of the soldiers, and the pensions to the wounded or disabled and those dependent on them. Apparently the editor of the *State* thinks that this would all be clear profit, which we shall miss if we escape war.

The Madrid newspaper *El Nacional* proposes that the island of Cuba be sold to the United States on condition that we assume the Spanish debt appertaining to it, that we allow Spain to enjoy for a certain time her tariff privileges, and that we guarantee life and property to the Spanish inhabitants of the island. The first of these conditions—the assumption of the Spanish-Cuban debt, amounting to \$400,000,000 at the lowest calculation—is the only one worth much attention. Supposing that Spain might, at some time in the near future, come to

the opinion which the *Nacional* advances, is it at all likely that Congress would assume that debt—a gold debt, by the way—and make the taxpayers of the United States pay the interest on it? The chances of such a step are not one in a hundred. The truth is, that if the island were offered to us as a free gift we should be by no means in haste to accept it. Possession of it as a part of our assets has never been a motive with the people at large, although a few persons who have pecuniary interests there would be glad, of course, to have their property put under a flag capable of protecting it. The spur that pricks us on has been the spectacle of a people near our shores fighting for independence. This is a motive which bears no mercenary tinge. It may be a mistaken one in the sense that we have too hastily assumed that the insurgents are “the people of Cuba,” but it is not soiled with the desire of gain. We wish that Cuba may be free, but if it were free, we should be not more eager to annex it than we are to annex Hawaii. Therefore we should be not at all inclined to pay money for it. Further discussion of the subject may be postponed till there is some evidence that the *Nacional* represents the opinion of Spain in making the suggestion of sale, which is scarcely credible. We do not believe that any government could hold power at the present time which should even entertain the proposal of selling the island. Yet the time may come when Spain will be compelled to drop it, either with or without compensation.

The Hawaiian annexationists in Congress are evidently puzzled to know what to do next. The Senate committee on foreign relations discussed the subject for hours on Saturday, and finally decided to let the treaty remain before the Senate a while longer. The more ardent advocates of the scheme are exceedingly loath to abandon the treaty, although nobody any longer pretends that a two-thirds vote can be secured. They recognize that the failure of the treaty not only will prevent annexation by the easiest method, but will foreshadow the defeat of the project by any method. A joint resolution must take its chances along with other legislative matters before the Senate; and, worst of all, it must encounter public discussion before that body, which is what the annexationists most dread. Then, if it shall ever get through the Senate, the resolution must go to the House, to encounter the hostility of the Speaker and other prominent Republicans, and to be subjected again to the dreaded ordeal of debate. The fatal difficulty in the way of the scheme is confessed by its friends to be the growing force of public opinion against it. The Washington correspondent of the *Tribune* reports that “it is apparent to the friends of the conven-

tion in the Senate that some steps must be taken at once to carry out the President's policy, if the impetus of public sentiment in favor of annexation is not to be materially lessened or practically lost.” Here is a proper characterization of annexation as “the President's policy”—the party's policy having been defined in the St. Louis platform of 1896 as “control of the islands”—and a plain admission that whatever impetus the Administration gave its scheme last December, has been practically lost by three months of discussion. The Republican press is speaking more and more plainly regarding the President's indefensible course in this matter.

The Senate committee on commerce has, by a unanimous vote, made an adverse report upon the nomination of Henry Demas as Naval Officer for the Port of New Orleans. It is a curious circumstance that the anniversary of inauguration should thus coincide with an incident which strikingly illustrates the weakest side of Mr. McKinley's Presidential career. Demas is the most notorious reprobate among the host of disreputable men whom the Republican party in Louisiana has developed since the war. He is a negro who took to politics for “what there was in it” as soon as his race was given the suffrage, and has “made a good thing of it” during the quarter of a century since he started. He became a member of the Legislature in the reconstruction period, and was conspicuous for his corruption from the first. He was the paid agent of the Louisiana State Lottery in the Legislature, and received a stipend of \$100 a month from that company for years, going regularly each pay-day to draw his money. Besides, he had two lottery offices given him by the company, which paid him additional sums in commissions on the sale of tickets. He was a Republican member of the State Senate when the governorship was in dispute between Packard, Republican, and Nicholls, Democrat, after the election of 1876, and was one of the four Republicans who finally abandoned the Packard Legislature and joined the Nicholls body so as to give the latter a quorum, receiving therefor \$10,000. Demas displayed the same qualities of treachery and corruption twenty years later. When the canvass for delegates to the Republican national convention in 1896 opened, he professed to be an ardent supporter of Mr. Reed, took money from the latter's friends to defray the expenses of the campaign, and wrote the Speaker a letter promising his support. Later, he “fopped” to McKinley, and openly boasted that he had “thrown” Reed, and would be rewarded therefor with a good federal office.

All these charges against Demas are

made by Louisiana Republicans of high standing, who have also shown that he is as disreputable in private life as in public. Notwithstanding this information, Mr. McKinley appointed Demas Naval Officer during the recess of Congress last September, to the disgrace of the civil service of the nation for nearly half a year. The President delayed sending the nomination to the Senate as long as possible, in the hope that the storm of public indignation would “blow over,” and the entire influence of the Administration has been exerted to secure confirmation. Despite all that Senator Hanna could do, however, every Republican member of the commerce committee was constrained to join with every Democrat in making an adverse report.

The Bryan Democrats in Kentucky are at it again. They have passed a bill in one branch of the Legislature to prevent the making of contracts payable in gold, and to make gold and silver a legal tender in payment of debts on equal terms. The latter clause is of no consequence, unless it seeks to enlarge the legal-tender acts of Congress, in which case it is a mystery. Kentucky has not the power to coin money. Nor, in our belief, has it, or any State, the power to say that people shall not make contracts with each other payable in gold, or in tobacco, or in building-stone, if they choose to do so. The only one of the legislatures in session in 1897 to pass an anti-gold contract law was that of Washington, which enacted that all debts are payable in lawful money or currency of the United States, regardless of any provision in the contract of indebtedness. Like measures were introduced in Alabama, Arkansas, Georgia, Missouri, and Tennessee. In the last-named State the measure was adopted by the House. If Kentucky goes on and passes it, we hope that somebody will bring the constitutionality of the measure before the courts at once. It will not be necessary to warn capitalists to keep away from a State which betrays an intention to cheat creditors, and is prevented from doing so only by the superior authority of the federal Government.

Everything now indicates that “harmony” is to prevail among the Pennsylvania Republicans. The situation was this: Quay wanted to pick out his own man for Governor—he has never yet realized his ambition to own a Governor—and to reflect himself to the Senate; Dave Martin of Philadelphia and Chris Magee of Pittsburgh naturally thought this was a little too much, and threatened to make trouble for the boss; many Republican business men were anxious to beat Quay's favorite for the governorship. Under these circumstances Quay has coolly thrown over this favorite,

and notified Martin and Magee that they may pick out the Governor if all hands will turn in and reflect him to the Senate, which is perfectly satisfactory to the Philadelphia and Pittsburgh leaders. No further controversy among the Republican politicians is expected; and, with "harmony" restored in the management of the party, the business men who have been protesting against bossism will doubtless lose their interest in the independent movement. Quay will get another six years in the Senate, and amicable arrangements for the government of the State will be made between Quay, Martin, and Magee.

The verdict of the town elections continues to be heavily against the Republican party in this State. In the 25 counties in which elections have been held, the Democrats have made a total gain of 75 Supervisors and the Republicans a total gain of '3, leaving a net gain of 72 to the Democrats, as compared with the elections of 1896. The drift of popular sentiment is, in fact, all in the direction of the Democratic party, and is the natural result of two years of Platt-Black-Payn administration at Albany. That the warning is not heeded by the Governor is shown by the appointment which he made last week for Superintendent of Prisons, Mr. Collins of Troy. All that is said in disparagement of Mr. Collins may not be true, but there seems to be no dispute of the fact that he is a thoroughgoing machine politician of the type which ought not to be trusted with the very large amount of patronage associated with the prison department of the State. The appointment is, in fact, in line with that of Lou Payn, showing that the Governor is still determined not to yield to "irresponsible assault or intolerant clamor." The idea that he can carry the State by strengthening the grip of the machine upon his party seems to have complete possession of him.

The main reason for Gov. Black's willingness to concede most of the new primary methods which the reformers are advocating, is to be found, doubtless, in the provisions which he has had introduced for the holding of special primaries this year. The regular method, after this year, will be to afford all voters an opportunity to enroll on the regular days of registration. Of course, since the primaries to elect delegates to the State conventions this year must be held before the registration of voters, some especial arrangement must be made for an enrollment upon which to hold those primaries. The provisions advocated by the Governor are for enrollment by certificate from April 17 to 30, and a general public enrollment for all parties on May 10. This will, of course, be a very different thing from offering to every

voter an opportunity to enroll when he registers, and it will be much easier for the machine men to get a majority in such an enrollment. If the reformers accept the plan, enroll their names, go into the Republican primaries, and are outvoted in them, the result will be that a Black delegation will be chosen to the State convention, and they will be deprived of all excuse for revolting and supporting an independent ticket. In other words, they will be "harmonized" into silence. The Governor is willing to take the chances of machine injury in the more remote future if he can secure this advantage now.

Why should Senator Page, who is a Republican, favor a change in the law which would enable Tammany Hall to put Paddy Diver upon the City Magistrates' bench? Why should he be able to get a Republican committee to report favorably his bill making this change, and why should there be danger of its passage through a Republican Legislature? These are questions which strike at the very foundation of Republican politics in this city, that foundation being an offensive and defensive alliance between Tammany and machine Republicans for "spoils." Mr. Page's bill amends the present excellent law, which provides that no person shall be eligible to the City Magistrates' bench who has not been a practising lawyer for at least five years, in such a way as to make eligible any man who has served as a Police Justice for two years. The only object of this change is to lower the standard of qualification—that is, to admit to the bench the very class of men who were tipped off it when the old system was abolished in 1895. Mr. Page has the impudence to say, "Tammany will not put back on the bench the same kind of men—Tammany would not dare to," which is a novel view for a Republican to take. He also says: "It is absurd to require that a Police Justice shall have had five years' experience as a lawyer. Joseph H. Choate may be an able lawyer, but he would not make an able Police Justice." This is the usual Tammany argument—that because the police courts sit in judgment upon toughs and blackguards, you should have toughs and blackguards to dispense justice in them.

The decision of the Supreme Court in the Nebraska freight-rate case marks the swing of the pendulum in the opposite direction from that of the Granger cases of twenty years ago. Although full control over railroad rates was not, in the latter cases, conceded to State Legislatures, it seemed probable that eventually it would be. In the Nebraska case it is declared that in no event can a State Legislature deprive a railroad of net earnings altogether, if the business of-

ferred to it is sufficient to yield such earnings, and that if necessary the courts will inspect and to some extent regulate the rates charged for traffic even when wholly within the limits of a State. "While," says the opinion, "rates for the transportation of persons and property within the limits of a State are primarily for its determination, the question whether they are so unreasonably low as to deprive the carrier of its property without such compensation as the Constitution secures, and therefore are without due process of law, cannot be so conclusively determined by the Legislature of the State, or by the regulations adopted under its authority, that the matter may not become the subject of judicial inquiry." This is only another way of saying that railroad property cannot be confiscated by a State any more than that of an individual can be—a proposition that will surely be sustained by the public opinion of the country at large, and probably by that of the State to which it particularly applies, as soon as the people shall have calmly reflected upon it.

A very ludicrous libel suit against the London *Daily News* was tried recently before the Lord Chief Justice, and disposed of by him in his usual effective and unceremonious manner. A solicitor at law, who had been at one time engaged to a girl, but had been thrown over by her, had persisted in his attentions to such an annoying extent that she had appealed to the authorities, and had had him arrested and put under bonds to keep the peace. In its account of these proceedings, the *Daily News* had set him down as a "Love-Stricken Solicitor." This was one of the causes of complaint. When it was put before the Lord Chief Justice, he said: "Well, I presume that is true. I do not see any excuse for him unless it is." When next complaint was made that the report of the proceedings had been so much condensed that it was incomplete, the Lord Chief Justice asked: "Do you mean to say that a newspaper is bound to put in every word that is said? Why, it is a very mild report." When the counsel for the plaintiff, seeing the attitude of the Lord Chief Justice, said he should be content if the jury were permitted to say whether in their opinion there was a libel or not, his Lordship convulsed the court-room by saying: "I am not going to rule that it was not a libel. It is for the jury. If you wish it, I am quite prepared to put the question to the jury; but if I do, it will be with the strongest intimation on my part that they would make themselves ridiculous if they found that there is any libel. You cannot make bricks without straw." The jury at once volunteered the information that they were convinced there was no libel, and judgment was entered for the defendant, with costs.

CUBAN AUTONOMY OR INDEPENDENCE?

A foreign critic has said that the United States and Spain seem to be rushing into a war with each other against the will of the governments of both countries. This is true in case the governments of the two countries are tolerably but not absolutely firm in their resolve to avert it. If they are really determined to prevent it, there is a plain way to accomplish that result. The United States, fortunately, has never committed itself to the opinion that the rebellion in Cuba has the support or sympathy of a majority of the bona-fide inhabitants of the island. The postulate that they are a majority is extremely dubious. Indeed, the evidence runs strongly to the contrary. On the other hand, we are committed to the opinion that Spain ought to grant autonomy to the island, and hence that the measure of autonomy now granted ought to have a fair trial. The rebels have refused it. They have refused even to consider it. They have put to death one Spanish officer who had sought a conference with them on the subject, and have threatened death to any others who may make a similar attempt. In rejecting the offer of autonomy they are "banking" on the United States, expecting to drag us into a war on the margin of difference between autonomy and entire independence.

This raises the question, What is meant by Cuban independence? Does anybody imagine that if all Spanish officials and Spanish troops were at once withdrawn, quiet would be restored to the island? Would such a step be the prelude to peace, or to a new revolution with two or possibly three presidents and legislative bodies struggling for the mastery of the island? Is it imaginable that the cultivated people of Havana and the property-owning classes of the other cities would tamely submit to the leaders of guerilla bands, some of whom were brigands by trade before the present revolt began? Independence has come to have a meaning in our ears derived from our own war of independence, but no such analogy can be found in the condition of Cuba. Our ancestors of the Revolution had a government, an army, a Congress, and a fair majority of the people in each and all of the colonies. They had George Washington for a leader, whose name alone stamps that struggle with a character of sublimity. They had a diplomatic standing in the world and an alliance with France, offensive and defensive.

The difference between our ancestors and the guerilla bands of Cuba is enormous; yet the word independence is lightly applied to the latter as though the consequences of granting independence to Cuba would be the same that they were in our own case. The truth is that nobody can say what new scenes

of disorder would result from such a step. Judging from the example of the other Spanish-American colonies, half a century of intestine strife and bloodshed would ensue unless we should seize the island and impose peace on the warring factions. Would that be an easy thing to do? Suppose that the rebels do not like our rule, as very likely they would not after trying it a while. Are we to furnish the troops to put them down and restore order? Suppose that the other side, the opponents of the present rebellion, should not like our rule, and that their discontent should end in a fresh revolt. Should we bombard or blockade Havana thereupon?

These are questions for our Government to consider. Shall we plunge into the calamity of war for the sake of a few straggling bands who are hiding in mountain fortresses, burning cane-fields and sugar-mills, and stopping the industries of the peaceful inhabitants, and who probably represent only a minority of the people of the island, and who refuse even to consider the offer of autonomy which Spain has offered them at our instance? It seems incredible that such a step can be desired by any thinking person in the United States. We believe, in fact, that it is not desired by any considerable number, whether they may be classed as thinking or unthinking. We believe that a campaign of education and of religion—for it is evident that the clergy of the country, both Protestant and Catholic, are almost a unit against an aggressive war—would result in an overwhelming victory for the Administration if it takes firm ground that autonomy must be fairly tried before any further steps are taken on our part.

We are very near the parting of the ways, where we may take a step that will change our entire destiny. The possible consequences of a war, not in self-defence, but of our own seeking, are so tremendous that no man who holds the issues in his hands can possibly be justified in taking the initiative in bringing on hostilities. The first thing that would happen would be the shattering of the prosperity which has just dawned upon us after the panic of 1893. We have already had forewarning of disaster in the sudden fall of United States 4 per cent. bonds of 1925, which declined four points within a few days after the explosion on the *Maine*. A similar decline of British consols would have meant a general upheaval of Europe. Why was there so great a fall of our national securities on so small a provocation? Simply because everybody believes that with the very beginning of a war the gold standard would be put in jeopardy. We might or might not drop to the silver basis. We might even go lower than that, as we did during the civil war. It is the element of uncertainty that causes the mischief. There is a

party pretending to be the majority that desires a depreciated currency, regards it as a good thing, and hence would seize every occasion and opportunity of war or peace to bring it about. No man can tell what would be the financial outcome of a war. All that we know now is that, as regards our standard of value, we are in a state of unstable equilibrium. This is the reason why our securities tumble so easily. This is the reason why people begin to hoard money in safe-deposit boxes as soon as any dark cloud appears on the horizon. Experienced bankers are of the opinion that several millions have been withdrawn from the channels of circulation for hoarding purposes since the explosion on the *Maine*. This is the reason why every little incident like the dispute about Consul-General Lee sends a tremor through the stock market and through all business circles.

THE DECLINE OF THE PORT.

The report of the Chamber of Commerce, made on the 3d of February, on the decline of the commerce of this port, followed the annual message from the Governor, recommending a commission of inquiry into the causes of this decline and into the best mode of arresting it. This again has been succeeded by the introduction of a bill in the Assembly by Mr. Laimbeer to carry out the Governor's suggestion. The report of the Chamber of Commerce makes only two recommendations, one that "the differentials" existing in the rates of railroad freights to Philadelphia, Baltimore, and Newport News should be abolished, and the other that our channels should be deepened. It showed that while there was an increase of more than \$100,000,000 in exports over the whole country in 1897, there was a decrease of \$23,000,000 at the port of New York. New York has lost in shipments of cotton, breadstuffs, and provisions, but has gained in the exportation of locomotives, cycles, and other merchandise. But the Chamber evidently attaches most importance among the causes of the decline to the railroad "differentials," and to the defects of the harbor.

It is always a little dangerous to suggest to New Yorkers that their prosperity is affected in any degree by moral as well as by material agencies, yet we cannot help saying that if the Governor's commission confines its inquiries about the decline of the port to "differentials" and channels, its report will be incomplete and therefore unsatisfactory. If the government of this city during the past twenty-five years, and the account we ourselves have been compelled to give of it, have had no effect on the business of the port, it is contrary to all human experience of ports and governments. This experience has shown that no port, however favorably situated, either as regards harbor or communi-

cation with the interior, has long maintained its supremacy under bad government. Spain has several ports as good as New York. Constantinople has a better one, but none of them attracts much commerce. A large part of the attractions and advantages of all ports lies in the character of the officials with whom traders have to deal, their honesty and civility. It has always been so. Even in the Middle Ages, the Hanse Towns and Venice relied fully as much on the quality of their laws, the integrity of their rulers, and the soundness of their currency to preserve their business, as on their mercantile capacity.

Considering what has been known and believed about our harbor masters and health officers, for the last thirty years, the wonder is that so much foreign trade has reached us. For at least that period shipowners have been complaining of the way they had to bribe harbor masters in order to secure a convenient berth at our wharves and keep it. T. C. Platt was Quarantine Commissioner at this port, in defiance of the Governor, for seven years. Does any one believe that he was occupied during this period in promoting the commerce of the port, and making access to it easy? Even within two years we have known of a case in which an impudent and ignorant subordinate of the Health Officer boarded one of the large transatlantic liners in the upper bay, when the captain was on the bridge, directing the difficult progress of his ship through numerous craft steering in every direction. The Health Officer sent for him to come down to sign formal papers, on a lower deck, fully ten minutes away from his post. He naturally and properly refused. The result was a delay of his steamer so that she missed the transshipment of the lighter portion of her cargo to the West Indian liner which was leaving that day. There were no "differentials" here or want of water in the channel. The agent of the French Line had to confess before the Lexow committee that he had to bribe heavily even the policemen on the dock. Doubtless if the private records of every shipowner who uses the port were got at, it would be found that the amount he had to spend in corrupting the port officers, in order to be able to transact his business in peace and quiet—health officers, custom-house officers, harbor masters—had made a bad hole in his profits, leaving the annoyance quite out of the question.

It would be a little ridiculous if American merchants were to admit, even in fun, that the business of a great port could be successfully carried on for an indefinite period by inexperienced men, holding their places by short tenures, for reasons wholly political and in no way commercial, and expected to turn over a portion at least of their illicit gains to a political party. Does any one

suppose Croker is interested in the growth of the port, or knows anything about the reasons why ports rise or decline? Why, Jenkins is "slated" for the next Health Officer, in complete disregard of his record in 1892. Nothing is more wonderful about our condition than the way in which we persuade ourselves that foreigners know nothing about all this, or even like it; that when a ship comes up the bay the captain is thinking of "differentials" and the depth of water, and not at all of the way in which the Health Boys, the Harbor Masters, and Quarantine Officer and the custom-house officers will deal with him. The remarks of Mr. Washington at the meeting of the Birth Committee a fortnight ago, showing how a Birth Celebration would advertise New York in foreign ports, were as good as anything in comic literature. Why, it is the best advertised city on earth, but what brings it advertisement is not the goodness of its port, or the uprightness of its merchants, or the riches of its rich men, but the badness of its government, the extraordinary spectacle of a municipality of the first order ruled by ignorance, incompetence, and corruption. We do not say this accounts wholly for the decline in our commerce, but we do say that any inquiry why our commerce has declined which leaves this out of account, will be partial and incomplete.

THE LONDON MUNICIPALITY.

The fight between the two parties in the municipal election in London is not difficult to understand. The Moderates simply represent the Conservatives and Lord Salisbury, and are opposed to a consolidated administration under one municipal government. They object to having the large and rich parishes like Kensington and Westminster cease to have control of their own revenue, and be obliged to share the burdens of the poorer parishes in the East End. They object to having the ground rents of the great landholders at the West End subjected to taxation for general municipal purposes. They object to the purchase of the street railways by the municipality. They object to the purchase of the water-works by the municipality. They object to having work done by the municipality directly, instead of by contractors. They object to the extensive schemes for housing the poor which the Progressives have on foot. Finally, the two parties are radically divided on the subject of religious education in the schools. In fact, it is radicalism and conservatism arrayed against each other.

As regards the first point, there is little doubt that the desire of the Conservatives to have the Council broken up is due chiefly to their fear that it would train up a set of politicians in the nature of bosses, who would convert it into a little parliament or Jacobin club, which

would seek to overawe the Parliament at Westminster. For this reason Lord Salisbury has wished to substitute for it a set of little municipalities or "boroughs," each with its own taxation and the management of the greater part of its own affairs.

Moreover, the West End distinctly does not wish to take care of the East End if it can help it. The heavy taxpayers wish to have their taxes, if possible, spent on themselves. But behind all this there is the fear of growing socialism, the fear of some kind of leveling process, they do not well know what. As well as one can make out from the discussion which is constantly raging, however, there does not as yet appear to be anything in sight to dread, except the consolidation of the city into a great corporation in which the burdens will be equally distributed and the benefits also. Strange as it may appear to us, the question of the honesty or competency of the employees of the corporation has not once been raised during the canvass. It has not been charged that any one was unfit for his place, or got it through favor or corruption, or through being the favorite of an old pugilist in Whitechapel or Southwark. No one seems to expect to get a place through the election; there is no "slate." No "dead beat" or saloonkeeper talks of getting his dues at last out of the public, or of being able to lay up something for his old age. The discussion seems to have turned entirely on public questions. To be sure, the Liberals were generally on one side and the Tories on the other, but neither has discussed the sugar bounty, or the treaty with China, or the South African question. Both have talked of water-works, of taxation, of the employment of city labor, of the purchase of street railways, of education in schools, and of the needs of the poorer districts, but there has been no talk of imperial interests. The issues were not issues of war or peace, but of plain domestic concerns.

Much electioneering as there has been, it is not likely that Lord Salisbury's fears about the growth of politics will ever be realized, as long as there are no spoils. Places are to a politician what manure is to a plant. Before he becomes really dangerous to the public, you have to dig around him and dung him with "spoils." You have to let him know that if he "hustles" he will get something; that for the first time for months, it may be for years, he will receive regular wages; that his pay will no longer depend on diligence or industry of any description; that he will no longer be watched by any one who has anything to do with the work, and that if he pleases a boss somewhere who does not care how the work is done and never sees it, he may have an easy time. This state of things is not likely to arise in an English town for a good while, but it is the

state of things which demagogues are trying to bring about in every democratic town in the world. Lord Salisbury shows his fear of it by complaining that so many men are already devoting their whole time to the work of the Council, although they serve without pay. He evidently thinks they are already concocting "politics."

There are undoubtedly some narrow ends of wedges in the administration, if we may judge from our experience. Men who really devote their whole time to the questions now before the Council may eventually devote their whole time to getting votes for the Council. The water companies and street-railroads may eventually "put up a job" on the Council, by paying a boss heavily for buying their enterprises at high rates, or for not buying them at low rates; or the great landowners may pay him for getting the Council to "let up" on the ground rents, or the contract system may be wholly abandoned, in order that the laborers of the Council may have time to deliberate on politics. But London probably thinks itself guaranteed against these things by the fact that the democratic world seems to be at last waking up about city government. Democracy begins to see that it is its manner of governing cities which is bringing disgrace on it, and may eventually ruin it; that "forewarned is forearmed." New York has probably given an invaluable lesson to all the cities in Christendom by showing what may result from trusting to luck.

FRENCH "EVIDENCE."

M. Demange, one of the leading men at the French bar, was, for the reason that he was eminent, chosen as the counsel of Dreyfus before the court-martial. He has made an extraordinary statement since the trial, in the *Matin*, a very respectable journal, which is copied entire in the *Temps*, which stands now at the head of the French press. We cannot reproduce it all textually, but we shall give a fair account of what he says.

When M. Demange was retained by Dreyfus's brother, he went to see Dreyfus in his prison, and asked him, not if he was innocent, for he assumed that he was, but if there was anything in the *dossier*—any document, that is to say— which might embarrass him when produced. Dreyfus denied that there was. M. Demange then satisfied himself that if the trial was public, acquittal was certain, and he directed all his efforts to avoiding a trial either wholly or partially secret. He determined, for this purpose, to agree to make no inquiry into the origin of the "bordereau," but to confine himself to showing that Dreyfus had not written it. But these efforts were vain. At the first hearing, when the word "pièce unique" was mentioned, the "huis clos," or secret trial, was imme-

diately ordered. The discussion then began, and M. Demange says he speedily destroyed all the garrison cackle about Dreyfus's thefts of documents, and so dealt with police reports about him that the prosecution abandoned everything except the authorship of the "bordereau," or memorandum. Here we must let M. Demange tell his own story:

"Every one knows now the famous proof of the handwriting. In the text which, under dictation, Capt. Dreyfus wrote in a hall surrounded with mirrors, he remarked that in one place a word had got out of line, while all the rest, before and after, was written with a regular and firm hand. But—and this is startling—it was not in this momentary irregularity of the writing that M. Paty du Clam saw what he professed to think a sign of trouble, but in the fact that this irregularity was only momentary, and that Dreyfus so soon recovered himself. It was his recovery (*la répossession de soi-même*) which, in the opinion of M. Paty du Clam, determined his conviction! He even added—a strange admission and worthy of remembrance—that had Dreyfus issued victorious from this test, he (Paty du Clam) would have abandoned the accusation."

Then comes something droller still, considering that a man's fortune and liberty were at stake:

"This conviction is founded on another observation still stranger, the *foot proof*. M. Paty du Clam said to the tribunal that emotion, in natures of great self-possession and capable of concealing their feelings, often shows itself by the trembling of the foot when the legs are crossed. When he went to surprise Dreyfus in his bed, he affirmed before the tribunal that he found in the accused this sign of guilt, which, added to the former one (the irregularity in the written line), strengthened his conviction. Before these stupefying revelations we had at once to have consultation with the bar, to see in what way these fantastic means of investigation should be met."

Oddly enough, somewhat similar evidence was accepted in this country in the trial of Gen. Fitz John Porter for failure to support Pope. One witness testified, and the Judge-Advocate also, that Fitz John Porter's looks previous to the battle showed that he was going to commit treason. To such follies can men go when they have a "reason of state" in their heads.

M. Demange's account of another, and very prominent, witness is very entertaining:

"Col. Henry affirmed with assurance—that he had long known—that 'there was a traitor in the fourth bureau, and that it only remained to discover the thread, and that he had discovered it, owing to indications which he could not specify.' Here everybody present started up in surprise. One of the Judges requested him to be more precise, and tell how these indications reached him. Col. Henry replied, 'that he could not say more, but that he got them from a person of whom he was as sure as he was of himself.' At this moment Dreyfus, who, in the presence of these strange revelations, had shown great excitement, started from his seat, and, addressing the witness, said: 'Who is this person? Let him be brought here. Let us hear him; let us see him. Nobody will know his name. We are in secret session. Nothing can prevent his coming.' To these pressing entreaties, in which we joined, the officer continued his resistance, and at last, turning to Dreyfus, pronounced, theatrically, these words: 'Monsieur, I am an officer; a soldier's cap should ignore what he has in his head.'"

M. Demange then goes on to tell that

while in the provinces, in the spring of 1896, he fell in with an old legal friend who told him that he had been dining some time after the trial with one of the officers who sat in the court-martial, and asked him how it was that such a man as M. Demange, who had been present at the trial, still believed in Dreyfus's innocence. "Because," said the officer, "naïvement," "M. Demange has not seen what we have seen," and then told of the "pièce secrète" shown to the court after the trial was over. The astonished lawyer then said to the officer: "Never tell this to any one else, for if Dreyfus has committed *lèse-patrie*, you have committed *lèse-justice*." M. Demange adds that some one said to Mathieu Dreyfus in his office: "Doubtless your brother is innocent, but your duty is to sacrifice him to the honor of France."

We are afraid false notions of the "honor of France" and of "the honor of the army" are at the bottom of the whole of this wretched business. The popular excitement in defence of the ruin of a soldier by a secret trial, on evidence not submitted to him and which would startle Betsy Frig, is one of the most painful features of the case, and says little for the progress of moral ideas in democracies. It reminds us, too, a little, of the rascalities of which some men among us are ready to be guilty for "America."

THE TRANSVAAL SITUATION.

The question at issue between President Krüger, now beginning his fourth Presidential term, and Chief-Justice Kotze is of the utmost political importance, and likely to affect most seriously the immediate future of the Transvaal Republic. Briefly stated, the struggle is to determine whether the High Court of Justice shall be, like our own Supreme Court, independent of the Legislature or subservient to it, whether it shall have the right to test the validity of a law by reference to the written Constitution of the state, or whether it shall be forced to recognize in the Volksraad a legislative authority overriding that of the Grondwet itself. As matters now stand, the President has summarily dismissed the Chief Justice and appointed a creature of his own to the highest judicial office in the republic, on the understanding that the enactments of the Volksraad—practically, that is, of the President himself—shall *ipso facto* be the law of the land.

Americans do not need to be told what utter legal and constitutional chaos would result in their own land from a similar suppression of the powers of the Supreme Court. The confusion is worse confounded in the Transvaal, where a small and ignorant minority, holding all the legislative offices, are bitterly hostile to the majority, who,

though they own half the land and pay nineteen-twentieths of the taxes, are yet without any real share in the government of the country. Chief-Justice Kotze has been the one safeguard of the rights and property of the Outlanders against the oppressive legislation of the Boer oligarchy. During the twenty years he has sat on the bench in South Africa, he has won for himself a reputation not so greatly inferior to that of John Marshall in America or of Lord Mansfield in England. He has vigorously claimed for the judiciary its rightful place in the government, as the living voice of the Constitution and the sole judge of what is and what is not the fundamental law of the state. His dismissal has roused the gravest apprehensions among the Outlanders. Their fortunes, holdings, occupations, are now absolutely at the mercy of the majority in the Volksraad. For twenty years they have enjoyed taxation without representation. Now they are to taste taxation without justice.

The question whether the Grondwet of 1858 embodies a rigid or flexible constitution has always been a disputed point among lawyers even in Pretoria and Johannesburg. President Krüger's action has, at any rate, settled that. The Grondwet is now declared to be so much waste paper, and its provisions alterable by the Volksraad without reference to the people. As is natural with a document drawn up by pastoral stock-farmers with little legal knowledge or experience in government, it is a crude, cumbersome, and often obscure instrument. Among its 250 articles no mention is made of any scheme of amendment. Its general spirit, and the fact that it was enacted by a Volksraad specially elected *ad hoc*, incline one to believe that its framers intended it as the fundamental law of the republic, alterable only by the specific vote of the whole people. Parts of it have always been so regarded. Other clauses, again, have been virtually nullified by act of Volksraad without protest from the judiciary. Such has been the fate of the provision that three months should be allowed the people for the purpose of expressing their opinion of any proposed law. In general one may say that by the prevailing Roman-Dutch law of obsolescence by contrary practice, the Grondwet has come to be regarded as a flexible and not a rigid constitution. The judiciary has adopted the fatal policy of compromising instead of following the example of the United States Supreme Court. In cases where the transgression of the Constitution has seemed slight and unimportant, no resistance has been offered to the Volksraad; but in other and more vital cases the High Court has reserved to itself the right of declaring an act unconstitutional and therefore void.

Obviously such a haphazard system

could not continue for ever. The time was bound to come when the Volksraad and the judiciary would be brought into serious conflict. Chief-Justice Kotze foresaw the inevitable result of the gradual encroachments of the Legislature, and tried—quite ineffectually—to rouse the Boers to the danger of neglecting to guard their Constitution. The collision came at the end of 1896, when the Chief Justice declared the alien immigration act and the press act unconstitutional—both violently oppressive measures, and therefore dear to the President's heart. The Volksraad, at the bidding of Mr. Krüger, who was himself spurred on by the governing Hollander clique, at once passed resolutions requiring the judges to pledge their recognition of the acts of the Legislature as the supreme law. This the Chief Justice refused to do. The crisis was deferred for a time by the compromise of March, 1897. By this compact the High Court agreed not to question the laws and resolutions of the Volksraad, provided that, "as soon as possible," the Grondwet should be established upon a higher basis than any ordinary enactment, and the court be made entirely independent. The court observed its part of the agreement faithfully enough, and gave the Volksraad a free hand through the whole of the last year; but Mr. Krüger, whose finer qualities are often marred by the low cunning of a farmer who has been mixing too much with lawyers, has not proved equally true to his word. He signalized his reflection to the Presidency last month by abruptly dismissing the Chief Justice. The chances, therefore, of the Grondwet being reaffirmed or strengthened or even respected, are singularly remote. The Chief Justice has not taken his dismissal lying down. He has adjourned the High Court *sine die*, and denied with much vigor the right of the President to turn him out. But Mr. Krüger has the love of his people as well as their ignorance to back him—not to mention the war-chest—and it is fairly safe to assume that he has accomplished his object and made the Transvaal judiciary dependent on and subject to the Volksraad.

The directness of this blow at the Outlanders cannot fail to embitter the relations between Great Britain and the Transvaal. President Krüger has learned something since Dr. Jameson's criminal blunder. He realizes the folly of attempting to play off Germany against England, and he is probably too astute not to know—certainly too astute not to conceal his knowledge—that though the word suzerainty was omitted from the convention of 1884, the *thing* suzerainty was contained in it clearly enough. It is only in the direction of internal reform that this cool and wary old Boer refuses to move. Many of the demands of the Outlanders must be judged by an

impartial observer to be unequivocally just; yet not one of them, except the demand for the use of English in some of the elementary schools, has been granted. The dynamite monopoly still continues to oppress the mining industries without benefiting the republic. The railroad tariffs still remain unreduced, in spite of the emphatic recommendations of the industrial committee appointed by the Volksraad. The unwarrantable restrictions on the franchise are still in force. Government is still in the hands of a corrupt and incompetent minority, who tax and harass the wealth-producing and business portion of the residents to their heart's content. A prudent statesman would not add to this list of anomalies, least of all by such a blazing irregularity as the open prostitution of justice. It may easily be found within the next few months that President Krüger has for once been betrayed by his self-confidence into dangerously overreaching himself.

LARROUMET'S RACINE.

PARIS, February 10, 1898.

One of the best writers of the day, M. Gustave Larroumet, has undertaken to write a book on Racine in Hachette's series, "The Great French Writers," a publication which is very successful, and deservedly so. Some of the volumes are excellent, others are indifferent, if not bad; but, on the whole, the series is of great interest. It seems audacious to undertake a new life of Racine and a new analysis of his work, but our *fa-de-dieu* critic does not see things as the critic of 1830 did before him. Criticism, like history, takes a new color in every new generation. M. Larroumet represents eminently the modern criticism, which may be called analytic criticism, inspired by the method inaugurated by Taine. It is a sort of dissection of the subject. The work of an author is considered as the outward expression of his inner life; and biography becomes an essential part of the critical work. Racine may be said to have, more than many others, profoundly felt the influence of his education, his own passions, his friendships, his private and social life. The sentiments which he expressed were in a great measure the sentiments which he experienced.

He was born at La Ferté-Milon, a small town of Isle de France in the Valois, on December 22, 1639. He was the first son of Jean Racine, collector of the salt-tax, and of Jeanne Sconin. The office held by his father conferred on him a sort of nobility. The family had had arms for two generations, and, curiously enough, there was a swan in these arms (the harmonious poet was often compared to Virgil, the "Swan of Mantua"). There was also a rat in them, but the poet had the rat struck off when he had them registered in 1697; he kept only the swan, though the two beasts together made a kind of rebus—*Rat-oygne* (Racine). He became an orphan at the age of four, with a young sister. He was brought up in his grandparents' house, where his grandmother, Marie des Moulins, proved a second mother to him. In 1649 she became a widow and retired to Port Royal des Champs, and the young Racine was sent to school at Beau-

vals. There he remained four years. In 1655 he was called to Port Royal, and admitted among the pupils of the Fathers, in the school founded by Saint-Cyran. There were never more than fifty pupils in it. This education had an extraordinary influence on Racine. The methods of instruction were admirable: each professor had a very small number of pupils; the children were conducted by persuasion and gentle means—no harsh discipline, no brutality; the professors took care to use the best writers of antiquity, Greek and Latin—they had no second-hand books; they read with their pupils in the original text. They taught the doctrine of Jansenism—the impossibility for man to arrive at moral perfection by his own merits, the necessity of the divine grace, the easy triumph of passion over man if passion is not arrested by the help of God.

The tender and delicate nature of Racine, his pliable intelligence, were admirably adapted for such discipline. He became imbued with the Old and New Testament, with Greece and her famous authors. We still possess his copy of the Bible, covered with notes. I was so fortunate as to find his *Æschylus*, with his name in it and a few notes. Many of his favorite books are found in some famous libraries—not the books, of course, which he had at school, but those which he used as a man, which he always had very well bound. They are all the great classics of antiquity, Greek and Latin. The tragedies of Sophocles and Euripides took such possession of him at school that he spent days learning them by heart in the woods round Port Royal. He found accidentally the Greek novel of *Theagenes and Chariclea*. He was reading it when one of the fathers, Claude Lancelot, took the book away from him and threw it in the fire. Racine procured for himself another copy, which had the same fate; he learned the book by heart in a third copy, which he brought to Lancelot, saying to him, "You can burn this one as well as the others."

The first verses which Racine wrote were in Latin, an ode "Ad Christum," which has been preserved. This was followed by several French odes on the "Promenade de Port Royal des Champs," easy, fluent, inspired by the scenery of the valley, which the Fathers of Port Royal themselves called the Desert, and which in the language of the time was thought "savage," while to our eyes, accustomed to the horrors of high mountains, it seems merely agreeable. By a strange contrast (but all fine characters have contrasts) the tender Racine had an ironical tendency in his nature. His early letters show well this singular mixture. He does not remain completely under the severe influences of Port Royal. After three years, he leaves the school in October, 1658, at the age of nineteen. He takes his year in philosophy at the Collège d'Harcourt.

In Paris Racine made many friends, some of whom were in the theatrical world. He knew La Fontaine, some comedians of the Theatre of the Marais and of the Hôtel de Bourgogne. He promised some actresses to give them parts in the plays he was beginning to write. His friends of Port Royal were afraid, and wrote to him letter after letter, or, rather, as he said, excommunication after excommunication. The young poet printed in 1660 an ode on the marriage of Louis XIV. with Maria Theresa, with the title, "The Nymph of the Seine." It was a commonplace production, but Colbert sent

him a present of a hundred louis, and soon afterwards put him on the pension list for six hundred livres, in his quality of man of letters. His uncle, Vicar-General of Uzès, tried to make him take orders at that time, and Racine had to pay a visit to Uzès. He arrived there at the end of 1661, and was lodged in a tower which formed a pavilion in the episcopal palace, and which may still be seen. Racine found himself there in exile; he compared himself to Ovid among the barbarians. He corresponded with his friends in Paris, sometimes in prose, sometimes in verse. He waits in vain for the ecclesiastical call; he studies theology in vain. His mind is in Paris, in the northern part of France; he does not like the south, its climate, its inhabitants. At last he loses patience, and returns to Paris in July, 1662.

He had given up the idea of being a priest, but, thanks to the efforts of his uncle, he obtained a benefice, the priory of Sainte-Madeleine de l'Épinay, in the diocese of Angers. The young prior had some lawsuits with his rivals, a circumstance to which we owe the amusing comedy "Les Plaideurs," the only comedy which he ever wrote, and which is still sometimes played. Besides this priory, Racine obtained two others, Saint-Jacques de la Ferté and Saint Nicolas de Choisel. We still find him in possession of these priories in 1673, when he was in the midst of his theatrical career.

The death of Racine's grandmother broke the last tie with Port Royal, and he gave himself now completely to the theatrical world. He made the acquaintance of Molière, who gave him, it is said, the subject of his first tragedy, the "Thésaïde," which was represented on the 20th of June, 1664. His aunt, Sister Agnes, made a futile appeal to him: "I write to you in the bitterness of my heart. . . . I have learned that you associate more than ever with people whose name is abominable to those who have any piety," etc. Nicole wrote to a friend, speaking of Racine: "A novel-writer and a theatrical poet is a public poisoner, not of bodies, but of souls." Racine wrote in answer a letter which he did not sign, and which was an attack on the solitaires of Port Royal, "a masterpiece," says M. Larroumet, "of spite and wit." This quarrel with Port Royal lasted ten years. Racine said later to the Abbé Tallemant: "Sir, it is the most shameful part of my life, and I would give all my blood to efface it." In reality, the rupture was only apparent; we find the spirit of Port Royal in all the work of Racine. Boileau became very intimate with Racine; they met regularly, with La Fontaine, Chapelle, Furetière, some gentlemen of the court and officers, sometimes in their own houses, sometimes at the cabaret, the "Mouton Blanc," the "Pomme de Pin," the "Croix de Lorraine."

"Alexandre le Grand" was Racine's second tragedy. It was first recited at the Hôtel de Nevers, before a fine assembly—La Rouchefoucauld, Pomponne, Madame de la Fayette, Madame de Sévigné and her daughter. The first representation (December 4, 1665) took place before Monsieur, brother of the King, and his wife, Henrietta of England, the great Condé, and his son the Duke d'Enghien, the Princess Palatine, Anne de Gonzague. The success was great, but the audience was divided; the generation of the Fronde was faithful to Corneille, the new generation adopted Racine. Racine was twenty-five years old when "Alexan-

dre" was played. His noble face is well known as engraved by Edelinck. He gave a part in his play to Mlle. du Parc, who was admired by Molière and the old Corneille, and he felt a violent passion for her. He wrote for her the part of *Andromaque*. He dedicated this admirable tragedy, his first masterpiece, to Henrietta of England. Curiously enough, "Andromaque" had not as much success as "Alexandre," though it is infinitely superior. Racine's triumphant career, however, begins with "Andromaque." He next produced "Britannicus," "Bérénice," in which Champmeslé, the best actress of the day, played the principal part. The great Condé admired the tragedy of "Bérénice" so much that he applied to the piece two verses which are found in it:

"Depuis trois ans entiers chaque jour je la vois,
Et crois toujours la voir pour la première fois."

Racine wrote for Champmeslé the tragedy of "Phèdre," in which she could develop her fine qualities; Champmeslé is forgotten, but "Phèdre" is immortal. "Mithridate," "Bajazet," "Iphigénie" complete the cycle which precedes the religious tragedies of Racine—"Esther" and "Athalie." "Phèdre" was the crown of the first cycle, and there was a long interruption between "Phèdre" and the religious dramas.

Racine had always remained secretly attached to Port Royal; he had been for a time intoxicated by theatrical success, by the world's applause; but in the preface to "Phèdre" he speaks already of "reconciling tragedy with a number of people celebrated for their piety and their doctrine, who have condemned it lately." Racine made his peace with Nicole, with Arnauld; he resolved to abandon the theatrical career, and he married (in 1677) an orphan, Catherine de Romanet, who belonged to a very honorable family. The great Condé signed his contract. Racine led from this time a quiet, domestic life. He was induced, as is well known, to write again, only at the request of Madame de Maintenon, for the demoiselles de St. Cyr. He had been appointed historiographer to the King, and accompanied him at the siege of Namur. He had seven children by his marriage, two sons and five daughters, and practised all the virtues of a good father. Four of his daughters entered convents; only one was married. One of the boys entered diplomacy and died young. Louis Racine became a poet—that is to say, he wrote a poem with the title "La Religion."

I can only, in ending, recommend Larroumet's work; it is full of matter and in every respect interesting.

THE ARTS AT MYCENÆ.

ROME, January, 1898.

The technical indications in a former article, on the remains of Mycenæ, look to conclusions which have a very great importance in relation to the discoveries connected with the name and researches of Schliemann, and which, unless they can be controverted, dissipate definitely the hypothesis of the high antiquity of either the tombs in which the treasures now at Athens were found, or the palace at Tiryns. If it be true that no knowledge of the art of stone-cutting, properly speaking, was possessed by the people who restored the façade of the great tomb at Mycenæ and built the second tomb, known as that of Mme. Schliemann, besides adding

to the Lion gate the relief of the lions—which conclusions are to me indisputably shown by the technical evidence—it follows that wherever we find stone-cutting, i. e., with chisels, we are in the presence of work posterior to that which is recognized by the greatest authorities as of the seventh, or at furthest the eighth, century B. C., at which former date the stone-saw and most probably the tube-drill were, according to tradition, introduced; a date which strengthens the opinion of those authorities as to the epoch of the relief of the Lion gate.

To resume, for convenience of comparison, the facts which are, I believe, indisputable: The work done with "the stone-hammer and plumb-line" of Hesiod, which comprises all the earliest style of the remains at Mycenæ, and was done by splitting, hammering, and trituration, is earlier than the seventh or eighth century, by an indeterminate period. The stone-saw and stone-drill appear at that epoch and any chisel-work is later; and from all the researches I have been able to make, there is in the Hellenic world no proper stone-cutting, i. e., chisel-work, earlier than the sixth or at furthest the seventh century. I believe the former to be the limit, with possible exception of work in the soft volcanic stone, of which in the Italian sphere all the earliest cut-stone work consists, as this material can easily be worked with the bronze tools which have come down to us from ancient times. I assert that no hard stone, such as the limestones usually employed in Greek building, can be indicated as in use earlier than the sixth century, and I accept the opinion of the authorities which put the date of the Lion relief at the earliest in the eighth century.

Now, in the constructions which envision the tomb that once contained the Mycenaean treasure at present in the museum at Athens, there are stones coming from various stages of the decay of Mycenæ, both of the earliest epoch and of the two later, showing the use of the tube-drill and the chisel respectively. This alone indicates that the tomb and surrounding structure are later than the sixth century. But there is still stronger evidence of this comparative modernity in the treasure itself. In the *Ephemeris* of 1894 (part 3) there is an article on this subject by Mr. Nicolaides, which shows in its illustrations a fragment of a silver vessel (part of the treasure) with a besieged city—a portion of the walls with their defenders and archers and slingers fighting outside the defences. This Mr. Nicolaides maintains to be a representation of the siege of Troy, and, as the most celebrated siege of antiquity, it may be assumed to be so. But what, in any case, is decisive of the epoch in which it was made, an absolute proof that it is subsequent to that siege, is the fact that the walls of the city there represented are in regular, parallel courses and rusticated, which features cannot be found in any Hellenic walls earlier than the sixth century (or, as I believe, the fifth). The position of the relief in the tomb precludes the idea of its being of accidental and later inclusion, and the inevitable inference is that the tomb is that of a sepulture later than the sixth century B. C.

This conclusion would in fact alone account for the curious and otherwise inexplicable mélange of objects of various epochs and evidently of different stages of art. It is that at which I had arrived from the first examination of the tomb and its contents;

and the condition of the interred bodies at the moment of discovery made it inconceivable that a date corresponding with Schliemann's theory should be assignable to it. The form of the grave, so entirely different from everything known elsewhere of the interments in Hellenic usage of any epoch, made this problem an insoluble one from the beginning, and so it still remains, on any other hypothesis than that it was ethnologically and chronologically an intrusion into the Hellenic locality. The probability of its being a reinterment has been admitted by some of the most strenuous advocates of its assignment to an extreme antiquity, and is an hypothesis indispensable for the explanation of the manner of inhumation, the secrecy of it, and the circular and Stonehenge-like monument which crowned it. The discovery by Tsountas of the great virgin beehive tomb near Sparta, with objects belonging to the earlier period of those found at Mycenæ, gave an intelligible clue to the mystery; and that of the immense collection of tombs, many rifed in ancient times, in the immediate vicinity of Mycenæ adds to the evidence in favor of my original hypothesis, viz., that the Schliemann tomb was a late interment, in which the treasures of a chief of a band of temple or tomb-robbars had been deposited with the bodies of the family of which he was the head.

As the researches of Tsountas proved, among other things, that the city had been reoccupied after the period of its supposed destruction and abandonment by the Argives, and had been inhabited down into the Roman conquest, the possibility of such an occupation as would permit the reinterment is, I suppose, undeniable, and the hypothesis solves every problem connected with the treasure. Have we any indications of such a state of affairs as would render this hypothesis, *a priori*, probable? This I propose to show to be the case. Among the fragments of Diodorus Siculus ("The Virtues and the Vices," ed. A. F. Miot, Diodore di Sicile, vol. vi., p. 490) is this:

"Pyrrhus, after having given up to pillage the city of Aegæ, residence of the kings of Macedonia, left in it a Gaulish garrison. The men who composed it, having learned that formerly there was, according to ancient usage, the custom of burying in the royal tombs large sums of money [treasure?] with the dead buried there, violated these tombs, divided the treasure which they found there, and scattered the bones. This violation of sepulture drew down the public malediction on Pyrrhus, who did not, nevertheless, dare to punish the Gauls, necessary to him in his warfare."

That is to say, until the entry of the Gauls in Greek territories, the tombs had been preserved from pillage by the religious scruples of the inhabitants, which is, *en resè*, in accordance with all that we know of the period and people; and the Gauls, having no reverence for the religious prejudices of the Greeks, pillaged the graves of their kings as well as their temples. The plunder of the royal tombs in those parts of Greece to which they had access is the natural consequence.

The solution of a barbaric inhumation was proposed by the great Russian archaeologist, Stephani, at the time of the discovery, but his attribution to a period subsequent to the beginning of the Christian era was easily shown by Prof. Gardner to be untenable, and his hypothesis has, consequently, been left out of account. The Russian was, however, I believe, right in the general conclu-

sion, and only misled by the analogies between certain finds in Russia of a later date which bore a very perceptible relation to those of Mycenæ. The evidence brought forward by Mr. Nicolaides is so precise in its bearing on the date of the workmanship of the vase in question that it seems to me to dispose definitively of any archaic attribution to the inhumation of Mycenæ.

The technical evidence given by the remains on the palace site of Tiryns bears directly on the solution of that problem, and in as decisive a manner as that on the tomb. The slabs of limestone found in the ruins of the palace are worked with the stone-saw and the tube-drill; nothing appears of the earlier manner of working, the conglomerate finished by trituration—all that is in situ is of the stone-saw period, and, consequently, must be brought down into the early period of Hellenic work proper. Its attribution to the pre-Homeric period is, therefore, incorrect. During the discussion of this question at a meeting of the Hellenic Society of London, called *ad hoc*, which my engagements did not permit me to attend, this point was not brought out, and Dr. Middleton, who was there the most authoritative supporter of the view of Drs. Schliemann and Dörpfeld, based his opinion on the presence in the ruins of stones worked by the stone-saw and tube-drill. But in subsequent conversation with me on the subject, he admitted to me that he was not aware of the technical distinction between the archaic and the seventh-century methods, and had attributed both kinds to the former period. As his opinion was the most decisive adduced at the meeting, it carried with it the great weight which his almost unequalled knowledge of antique processes gave, and was considered by many of those present conclusive. It had, however, as I have shown in my former letter, ignored the most important distinction due to the subject. The other problem, i. e., whether the limestone slabs found at Tiryns bearing the evidences of the use of the stone-saw and tube-drill formed part, in the situation in which they were found, of a palace of their epoch, or, as I believe, had been re-employed in a palace of the Byzantine times, the ruins of which covered the Acropolis of Tiryns, remains unaffected by this evidence, while the contention of Dr. Jebb, Mr. Penrose, and myself, that the ruins are not those of a pre-Homeric edifice, agrees with the conclusion based on all the technical evidence here adduced. W. J. STILLMAN.

Correspondence.

WHAT JEFFERSON AND MADISON WOULD HAVE SAID.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "X" in the *Nation* for February 17 suggests the dignified and genial attitude which Washington and Lincoln would have taken on such an incident as the De Lome letter. Without laying too much stress on an affair now happily past and unhappily overshadowed by more gloomy events, it may be worth while to point out that two difficulties arose, nearly a century ago, which, taken together, are almost a parallel to the De Lome affair. In 1804, the Marquis of Casa Yrujo tried to incite a newspaper editor to attack the Ad-

ministration, for which, with other reasons, his recall was soon after demanded. He refused to leave the country, and in 1806 published in the newspapers some of his own violent letters to the Secretary of State.

In 1808, after the French subversion of Spain, De Onís was sent over by the Bourbon Government. The United States declined to receive him as a Minister, but he remained as an unaccredited agent, enjoying the hospitality of the country. A semi-official letter to the Captain-General of Caracas fell, in 1810, into the hands of the American authorities, and President Madison sent it to Congress. The message and the letter are so characteristic that it seems worth while to transcribe them. They may be found in American State Papers, Foreign Affairs, III., 404. In 1815 De Onís was recognized as Spanish Minister, and negotiated the Florida cession of 1819.—Very truly yours,

ALBERT BUSHNELL HART.

CAMBRIDGE, February 28, 1898.

January 10, 1811.

To the Senate and House of Representatives of the United States:

I communicate to Congress, in confidence, the translation of a letter from Luis de Onís to the Captain-General of the Province of Caracas.

The tendency of misrepresentations and suggestions, which, it may be inferred from this specimen, enter into more important correspondences of the writer, to promote in foreign councils, at a critical period, views adverse to the peace and to the best interests of our country, renders the contents of the letter of sufficient moment to be made known to the Legislature.

JAMES MADISON.

PHILADELPHIA, February 2, 1810.

The administration of this Government, having put the stamp upon the servile meanness and adulation in which they stand in relation to their oracle, Bonaparte, the day before yesterday, by their direction, Mr. Eppes, the son-in-law of the former President, Jefferson, made a proposition that a Minister should be immediately sent to Joseph Bonaparte, at Madrid. This was supported, in the committee in which the House then was, by Mr. Cutts, who is the brother-in-law of President Madison. There were various debates, there were howlings in the tribunals, there were sarcasms against the Supreme Central Junta, and many trifling observations from one party and the other, among which mention was made of the arrival of a minister from the Supreme Junta, and of this Government's having wisely refused to receive him; and, at length, a vote was taken, from which it resulted that, for the present, no minister was to be sent to Joseph.

In the annexed paper you will see all the debates, which, for want of time, I have not been able to have translated. If your excellency should not be informed, by my former despatches, of the mode of thinking of the present administration, this alone will show the little hope there is of obtaining any thing favorable from it, but by energy, by force, and by chastisement.

The facility—I again repeat it, and I will repeat it a thousand times—with which American vessels are admitted into our colonies, preferring them to our own, makes these people believe that our weakness does not permit us even to talk to them on equal terms, much less to take measures which may injure them. From hence springs the great opinion (*la grande opinion*) they have, that the intruder, Joseph, will rule in Spain and her colonies; and hence the incitement to their scandalous conduct in promoting, by every means in their power, the machinations of Joseph to make himself master of our colonies, as if upon that depended their happiness.

The determination of making war on Eng-

land, and of treating Spain with contempt, supposing that her nullity did not entitle her to any thing else, was taken by the present administration some time since, though it was not in them the determination of reason. To accomplish it, they thought of forming an alliance, offensive and defensive, between France, Russia, Denmark, Sweden, and the United States; and some even suppose that it is formed. With this object they have sent Mr. Adams to the court of St. Petersburg, in quality of minister plenipotentiary, directing him to examine on his way (*haciéndole recorrer al paso*) the courts of Stockholm and Copenhagen; but, notwithstanding this, if England should display her energy, in however small a degree, and if, on our part, some vessels should be sent to their coasts, and some troops should draw near to Louisiana, there is reason to believe that we should see these provinces separated and divided into two or three republics, and, consequently, they would remain in a state of perfect nullity. We should soon have from the republic of the north, which would be our friend, all the supplies which are now drawn from the others, who would perish from poverty and quarrels among themselves.

This country is now without a cent, with a deficit of four millions of dollars in her revenue, with not more of an effective army than six thousand despicable men, of whom two thousand five hundred, that they had at New Orleans, are reduced by death to six hundred; and although they have passed a law for one hundred thousand, much time and money will be necessary to organize them. Its navy is for the most part disabled, although they propose to arm it, and the whole of it is reduced to eight or nine frigates. The blindness of these people is such, that the Secretary of the Treasury (Gallatin), speaking with Colonel Joseph de Gonzales, late Governor of Puno, who, from his having come from the Havana, Mexico, and other provinces, he believed (not knowing his integrity) to be one of the many emissaries of Napoleon, the *caste* which abounds most here, offered to him the constitution of Paine, and other papers relative to the liberty which here they dispute about, persuading him to send them to Mexico and our other colonies, and that he should endeavor to induce them to unite themselves to this republic; that here they were ready, if this succeeded, to move near to them, or even to place in their country, the seat of Government. These, sir, are the ideas with which this administration is animated. Notwithstanding, at the time they observed this conduct, they sent General Sumpter in the character of minister plenipotentiary to Rio Janeiro.

God preserve you many years.

LUIS DE ONÍS.

To the CAPTAIN-GENERAL of the Province of Caracas.

A NEGLECTED SCIENCE.

TO THE EDITOR OF THE NATION:

SIR: Surely, singing may claim the title of a divine art, and no less should the training of the vocal instrument be considered a science requiring as thorough knowledge of the anatomy, physiology, and hygiene of the parts involved as is required for the whole system in the case of the physician. From the days of the Greeks to the present time, there has been a lamentation over the asserted decadence of the singer's art continuous with the evolution of the song-form in its various phases, and the changing of standards of what shall in each epoch be held artistic singing. Most of those who have studied the question most carefully will probably feel that on the whole the art of song interpretation has kept fair pace with the higher ideals of the present day. Be this as it may, when the vast army of vocal pu-

pils is considered, the number of truly great artists is appallingly small, and even the number of singers who use their voices so as to insure long life to their instruments, and a tone which appeals alike to the heart and ear of the audience, is out of all proportion to the number of teachers and scholars.

Unfortunately, the profession of voice-training is still at the mercy of the almighty-dollar grabber. Any individual is free to herald himself as a Vocal Instructor, whether or no he has had proper preparation either in the knowledge of the vocal instrument or in the science of imparting knowledge. Strange to say, not one teacher in a hundred knows that any literature of the subject exists outside of a few volumes of solfeggio and other exercises; much less do they have any idea that there is any use in trying to learn anything from books—a statement which will be received almost with incredulity by educated people.

Since incompetent teaching and crass ignorance of the voice as an instrument, not of wood and metal, but of living tissue, are undoubtedly to blame for the yearly ruin of many thousands of beautiful American voices, it would seem as though some action might properly be taken to restrict the practice of voice-training by law to those who had thoroughly prepared themselves according to a truly educational standard, such as is now requisite to practise as a physician, lawyer, apothecary, or even plumber, because ignorance which may harm the pupil client is, or should be, considered criminal. How this can best be brought about is an open question, requiring no less immediate action because of the difficulties involved. It certainly should be included in the educational problems of the day; and when we take into account the close relation of proper voice use to the individual, in the sense both of a delightful accomplishment and of an active factor for augmented health through deep breathing (a cure for a large portion of the nervous troubles of which we hear constant complaint), the question becomes one of unusual interest.

For the benefit of those interested should be noted the publication begun in the February number (1898) of the *Musicien* (Hatch Music Co., Philadelphia) of what is said to be the first bibliographical list of works on "Voice-Production and the Art of Singing" ever published in any language. It will include about six hundred titles, and all readers are requested to show their interest by cooperating to make the list accurate and complete.

Now that our leading colleges (Columbia, Yale, and Harvard) have recognized the value of music as a useful factor in a college curriculum, it would seem as though we might look to them for assistance in driving the charlatan and the quack from the vocal profession.

J. STANFORD BROWN.

NO. 1 BROADWAY, NEW YORK, March 3, 1898.

THE RETALIATION OF FINAL G.

TO THE EDITOR OF THE NATION:

SIR: In commenting on the suppression of *g* in the ending *-ing*, so widely prevalent, as shown by a correspondent's surprising array of examples in the *Nation* of February 17, you say:

"The suppressed *g* partly avenges itself in this country by attaching itself in speech to final syllables in *s*, as 'certing,' 'certingly,' for certain, certainly."

This peculiarity of speech, frequently heard in this country, seems to have been a characteristic of the northern English dialect, as the following examples from literature, ready at hand, would indicate:

"And enterit in a lusty gairding (garden) gent."—Wm. Dunbar: *The Thissil and the Rois* (1508).

"This gud knyght said: deyr Cusyng (cousin) pray I the."—Henry the Minstrel; *Walsell* (1461).

"And sum were eke that fallyng (fallen) had so sore."—James I. (of Scotland): *The Kingis Quhair* (1433).

"All those quhillk fundung (funden) bene on lyve" (all those which be found alive).—Sir David Lyndesay: *The Monarchie* (1552).

It made its way into standard English in the expression, *much beholding* (beholden), frequently met with in Shakspeare and in general literature:

"A justice of peace sometimes may be beholding (beholden) to his friend."—*Merry Wives*.

With this may be compared *unknowing* for *unknown* in *Roister Doister*:

"Neque lux, neque crux, neque mourners, neque clinke;
He will steal to heaven, *unknowing* to God, I thinke."

E. A. A.

UNIVERSITY OF MISSOURI, March 5, 1898.

FOREIGN EXPRESSAGE.

TO THE EDITOR OF THE NATION:

SIR: An American residing in Munich, Bavaria, received recently from New York a package containing ten copies of a book sent through Pitt & Scott's Foreign Express Agency. The prepayment of the package by the sender cost \$1.50. After the lapse of nearly a month the package reached its destination via Antwerp and Frankfort, with additional charges of two marks (fifty cents) for "boundary expenses," "custom-house," etc. There are no such expenses levied by the German Government, and all books are imported free of duty. If the ten books had been sent by mail in three or four small packages, the whole cost would have been ninety cents, and they would have reached their destination in two weeks. Comment is unnecessary. P.

PROF. STOWE AND CASAUBON.

TO THE EDITOR OF THE NATION:

SIR: It is certainly to be regretted that the generally excellent review of the 'Life of Harriet Beecher Stowe' appearing in your last issue (February 24) should contain a characterization of Dr. Stowe which all who knew him must immediately recognize as markedly inadequate and misleading. To some it may appear even unjust and unkind—though doubtless the reviewer meant to be perfectly fair, and was only unfortunate in the sources from which he was compelled to draw his information. Yet it would seem that, had it been a fact, as he asserts it was, that Dr. Stowe labored under a certain constitutional inability to distinguish between "things real and visionary," it was an infirmity that should have endeared him to one who can allude to Mr. Casaubon's family as "augmenting itself annually," when, as a matter of fact, Mr. Casaubon unfortunately had no family.

Such misquotation of a well-known author would lead us to surmise that Dr. Stowe

and Mr. Casaubon are not the only "futile" scholars whom our century has produced.

CHARLES EDWARD STOWE.

SIMSBURY, CONN., March 1, 1898.

[It was of "the real Casaubon" that we wrote that his family augmented itself annually ("s'augmente annuellement," in the words of the Town Council of Geneva). Mr. Stowe, by consulting Mark Pattison's 'Life of Isaac Casaubon,' p. 485, will find that he had by his second wife "seventeen children and no more" from 1588 to 1612.—ED. NATION.]

Notes.

Houghton, Mifflin & Co. will publish 'French Essayists and Romancers,' by Mlle. Blaze de Bury; 'The First Republic in America,' by Alexander Brown; 'Washington versus Jefferson,' by Moses M. Granger; Poems by Mrs. Florence Earle Coates; the second and concluding volume of Hannis Taylor's 'Origin and Growth of the English Constitution'; 'Unforeseen Tendencies in Democracy,' by Edwin L. Godkin; and 'Tales of the Home Folks in Peace and War,' by Joel Chandler Harris.

M. F. Mansfield will publish directly 'The Picturesque Thames, from London to Oxford,' by John Leyland, with 300 full-page illustrations.

A new story, by Albion W. Tourgee, 'The Man who Outlived Himself,' is to be issued by Fords, Howard & Hulbert.

Lamson, Wolfe & Co. publish immediately 'Marching with Gomes,' by Grover Flint.

An authorized translation of Brunetiere's 'Manual of the History of French Literature' is in preparation by T. Y. Crowell & Co., who announce also 'The Poems of Shakspeare,' edited by George Wyndham.

Brentano's have nearly ready a translation of Stendahl's 'Le Rouge et le Noir.'

W. H. Mallock's new book, 'Aristocracy and Evolution,' will bear the imprint of Macmillan Co.

March announcements of D. Appleton & Co. embrace 'Studies of Good and Evil,' by Prof. Josiah Royce; 'Psychologic Foundations of Education,' by Dr. W. T. Harris; 'A History of Italian Literature,' by Dr. Richard Garnett; 'A French Volunteer of the War of Independence (The Chevalier de Pontgibaud),' translated and edited by Robert B. Douglas; 'The Animal World,' by Frank Vincent; 'The Story of Animal Life in the Sea,' by Sydney J. Hickson; and 'The Disaster,' a story of the Franco-Prussian war, by Paul and Victor Margueritte.

'The Year's Art' (London: Virtue; New York: Brentano's) is rapidly approaching its majority. The volume for 1898 is the nineteenth annual issue, and is marked by all the good features acquired in this period. The Artist's Calendar has been grafted on to an Artist's Diary. The 'Notes on Architecture' for the past year are continued. Among the twenty-seven artist portraits we observe Mr. Joseph Pennell's. There are the usual memoranda of select pictures from the provincial exhibitions; the list of engravings published in 1897; the invaluable Directory of Artists, and the Arts and Crafts membership appendix. The editor, Mr. A. C. R. Carter, notes with regret the death of Sir Frank Lockwood, whose legal distinction was not incompatible with clever-

ness in caricature. In fact, his portrait was published in 'The Year's Art' for 1895 in the series of "Eminent Black-and-White Artists."

'The Story of a Red Deer,' a little book by the Hon. J. W. Fortescue (Macmillan), apparently written for young people, is equally fit for older ones to read, and, indeed, is full of interest for any naturalist or lover of nature. It is the biography of an Exmoor stag from his earliest calfhood to the day when, in the fulness of matured strength and vigor, he plunges over a fall and ends his life after a gallant race before the hounds. He and his mother and kin are friends to all the wild natives of the moor and forest, and they talk together and help each other through the troubles and dangers of an animal existence in a way which Mr. Fortescue so describes as to make it seem perfectly natural and as if it could hardly be otherwise. The friendly teachings of Aunt Yeld, a spinster hind, the talks and warnings of Lord Salmon, and the egotistic optimism of Bunny are all in strict accordance with what one familiar with these creatures would expect them to do and say, and there is nothing in the book untrue to Nature interpreted by one who loves her and has by long intercourse fathomed her secrets.

The 'Tales of the Real Gypsy,' by Paul Kester (Doubleday & McClure Co.), are six in number, and are followed by an appendix. The stories, though rather highly drawn, especially the first one, 'A Rommany Guldo,' are not devoid of charm for those interested in these fascinating people, but are encumbered with such an amount of untranslated Gypsy words and phrases as to make them in parts unintelligible to the ordinary reader. Mr. Kester's own knowledge of the Gypsy language does not keep him from inaccuracies in the use of it. For instance, chavo is a boy, chavi, a girl, and he makes the Gypsy mother in the first story call her boy by the feminine name. Loose as Gypsies are in the use of their practically unwritten language, they never call a boy a girl. Mr. Kester has also changed the spelling in many instances from such as is generally current—"fedarar" (better) Smart and Crofton spell "ferradair" or "fettadair"; "chel," a fellow, is spelled "chal" by Borrow, Leland, and Crofton. The appendix, especially in its "Traits and Characteristics" and "Facts about the Gypsies," is interesting and instructive.

Why works on economic geology should be weak, and, from a scientific standpoint, inconsequential, may be difficult to explain, but such is the fact, and Prof. A. B. Willmott's 'The Mineral Wealth of Canada' (Toronto: William Briggs) is no exception to the rule. It is a brief general treatise on ores and minerals, their occurrence and uses, with special reference to Canadian localities, so that whatever importance it has is as an economic geology designed for Canadian students. It is a pity that it is not a safer guide, for the present activity in the development of the mineral resources of Canada will assure the book an extensive sale. This means, then, a perpetuation of ideas concerning ore deposits which should have been consigned to the limbus *fatuorum* long ago. To read in these days of great fissures in the earth remaining open at such depths as would be necessary for subsequent filling with ores, is somewhat discouraging in the face of all the evidence to the contrary. The author could hardly have done worse than

select Louis's classification of ore deposits as a basis for discussion, but faulty interpretation of vein phenomena need not necessarily have followed, even after laying so bad a foundation. The introductory chapter on minerals and rocks is so absurdly insufficient that it might better have been omitted in favor of an index, if space was a consideration. The references to authorities are very good, and constitute one of the few valuable features of the work.

A 'Bibliography of the Metals of the Platinum Group,' by Dr. James Lewis Howe, professor of chemistry at Washington and Lee University, has been published as No. 1084 of the "Smithsonian Miscellaneous Collections." The purpose of the work is "to enumerate the articles upon the metals of the platinum group found in scientific literature to the close of the year 1896." The author has not attempted to follow certain divisions of the subject which are outside of the department of chemistry, such as the use of platinum in electrical apparatus, in photography, and in connection with the X-rays. The work is published on the recommendation of the committee of the American Association for the Advancement of Science having charge of indexing chemical literature.

There has hitherto been no convenient guide for English students to the language now generally spoken in Persia, such grammars as those of Forbes and Clarke giving rather the quasi-classical Persian of India. The lack is well supplied by Dr. Fritz Rosen's 'Modern Persian Colloquial Grammar' (London: Luzac & Co.), which contains a short outline of the grammar, with dialogues and specimens of narrative prose. The statement of forms is generally clear and the arrangement is good. Numerous extracts are given from the diaries of the late Shah, Nasir-eddin. His Majesty is supposed to write good Persian, and, by employing the colloquial form, has done much to raise it to the dignity of a literary language. His remarks on European things and persons are simple, often naive, but always intelligent and kindly.

Volume 7 of the 'Oeuvres Complètes de Christiaan Huygens,' published by the Société Hollandaise des Sciences, is now in the hands of American subscribers. It embraces the correspondence from 1670 to 1675, leaving twenty years of the life and the works proper still to be accounted for. Of the 626 pages of this solid and sumptuous quarto, 64 are occupied with the very admirable indexes. The text is abundantly fortified with figures and facsimile reproductions, and contains among other things a good process reproduction of Edelinck's portrait of Huygens. A slight abatement of interest in astronomical topics is seen, and an increased interest in philosophy and practical life. The English correspondence is particularly important.

The eleventh volume (Second Series) of Proceedings of the Massachusetts Historical Society covers the years 1896-'97 (May to June). It is exceptionally rich in substantial biographical sketches, with portraits, including a belated one of Rufus Choate, a fair-minded performance. Dr. A. P. Peabody, O. W. Holmes, J. R. Lowell, Leverett Saltonstall, and Henry Lillie Pierce are the subjects of others, and the last three names imply that much of our recent political history in the struggle for independent voting and non-partisan appointments to the civil service is touched upon in the respective

memoirs. The President, Mr. Charles Francis Adams, in October, 1896, could not resist the occasion of the pending crisis to review the Presidential elections which he remembered, and to place the peril of Bryan's success beside that of McClellan in the election of 1864. His remarks will be found suggestive even by those who question his general position that our affairs would have taken much the course they did had the elections been reversed in every other instance besides these two. The humor of this volume is furnished by an extract from a dispatch of Minister Lowell's, at Madrid, which nurses delightfully a news item about beating the octroi on petroleum at the city gates, by means of women of a naturally deficient contour.

In the third "Quarterly" of the Texas State Historical Association, Miss Brownie Ponton and Mr. Bates H. McFarland aim to establish a new itinerary for Cabeza de Vaca's wanderings across the continent. No larger bibliographic knowledge than may be had from a few English translations (mostly inexpert), scant personal familiarity with the country involved (except a small and least significant portion of it), and almost entire innocence of its ethnography—these are poor equipments for attacking so recondite a theme. Until some one shall have acquired a tithe of his mastery of the documentary "sources," the ethnology and the physical geography whereby conjointly the itinerary of Vaca must be tested, Bandelier's determination of it will not be shaken. That may possibly be when some other scientist, his match in other preparation, shall have trudged studiously afoot (as Bandelier did) over as many miles of the Southwest as Vaca, and over the better part of Vaca's route. Any serious knowledge of New Mexico would convince these ambitious young students in the University of Texas that—as Bandelier proved years ago—Cabeza de Vaca never saw any portion of the Territory; and that is the only vital point in the whole matter.

The Meteorological Bureau of the Argentine Republic has published the eleventh volume of its 'Anales,' which is devoted to an account of the climates of San Jorge, Isla de los Estados, Chos-Malal, Paramillo de Uspallata, and Potro Muerto. The volume contains tabulated results of observations and a discussion of the temperature, atmospheric pressure, humidity, nebulousity, rainfall, and winds in each of these localities.

The latest volume of 'Memorias' of the Royal Academy of Sciences of Madrid is occupied by an elaborate memoir by D. Mariano de la Paz Graells, entitled 'Fauna Mastodológica Ibérica.' This is a description of all the mammals of the Iberian peninsula, beginning with genus homo and ending with Lagomys, or "rat-hare." The work includes a bibliography, a glossary, and a discussion of methods of classification. The concluding portion contains an historical and ethnographical account of the inhabitants of the country and articles on the improvement and acclimation of animals. In an appendix is a bibliography of the prehistoric anthropology of Spain, by D. Gabriel Puig y Larraz. The volume is illustrated by plates and maps.

The Bulletin of the Société de Géographie, just published, with the exception of the report on the medals given by the Society in 1897, is wholly devoted to accounts of two expeditions in West Africa. Capt. Imbert

describes an unexplored region to the north of the middle Senegal, almost uninhabited on account of the raids of the Moors. On the side of a precipitous mountain, of a formation apparently very similar to that of Roraima in Guiana, he discovered a village of stone huts, which he believes to have been constructed by a race nearly contemporaneous with the cave-dwellers. Capt. Julien gives a summary of the political and scientific results of his expedition in north-eastern French Congo, involving a graphic description of the construction of a post by a band of 400 natives, which is interesting as showing their capacity for organized work.

The principal contents of the first number of *Petermann's Mitteilungen* for this year are a statement of the geographical results of the Horn Expedition to Central Australia, and an account of the crossing of Borneo in 1896-'97 by Dr. Nieuwenhuis. There is also a description of the "Moraine-amphitheatre" of the Lago di Garda, by Prof. T. Fischer. Maps accompany each of these papers.

The German "Poole's Index," whose inception we lately noticed, now comes to us through Lemcke & Buechner ('Bibliographie der Deutschen Zeitschriften-Litteratur'). It covers the year 1896, deals with the contents of about 275 principally scientific German periodicals, with all available information as to authorship, and, of course, with precise references to the source of each article. Deficient titles have been supplemented to indicate the nature of the subject; and subject cross-references are abundantly supplied. Abbreviations are not excessive, and the typography (in the Roman character) is admirably clear. The form is small quarto, with two columns to the page. At the end is an alphabetical and numbered list of the periodicals indexed, from which medical and technical are excluded. The difficulties in alphabetical arrangement presented by an inflected language may be well studied here, especially in the entries under generic rubrics, like *Heerwesen*. A specimen entry is: "Der Militarismus im Reich der Poesie, v. M. Spicer. 189 [the conventional number of the periodical]. III. 252-69." This modest undertaking, for which F. Dietrich is responsible, will, we trust, meet with the success which it merits.

—The *Atlantic* for March has an interesting article on the "Social and Domestic Life of Japan," by K. Mitsukuri. Why Japan should be the first Oriental state to assimilate enough of Western civilization to make it capable of entering the family of nations is a puzzle, and will remain so, even to the reader of this article. If we went further and said that it is obviously a puzzle which will never be unriddled, we should not risk very much. In reading this account we catch glimpses of a double social order in Japan—that in which we live, and of which our historians and anthropologists have investigated the origins, and at the same time another world, remote and alien from us, but a pleasanter world, perhaps, in many respects than our own. The statement that the "most precious heritage" of the country from the past is the imperial dynasty sounds like that devotion of the Englishman to the Empire, the Queen and royal family which we replace by devotion to the flag or the Constitution. This sentiment of allegiance has nothing to do with feudalism, for the feudal system in Japan was abolish-

ed a generation ago, as everybody knows. All this may be stated in terms of Western and comparatively modern development; but the moment we go below the political superstructure, we find ourselves in the presence of social strata which go back to the beginning of time and are clearly connected with race peculiarities and religious habits lying entirely outside our horizon. Occupations are hereditary (a point much discussed just now in "theatrical circles" is what the great actor Danjuro, having no male child, will do for a successor), and is a family rather than an individual concern. Filial piety and a sort of immortal family continuity are both Japanese. At the next step we come upon a custom which to our habit of thought seems grotesque: in almost every middle-class house live "students," who are usually given board and lodging, and, in return for these, "answer the calls at the front entrance" and do other menial work. They do not seem to be apprentices. The article by Judge F. C. Lowell on "The Municipal Service of Boston" contains a very neat suggestion for those engaged in studying the "municipal problem"—that the municipal legislature in cities like Boston and New York plays a part in the body politic like that played by the vermiform appendix in the human body, before the operation for appendicitis was introduced. "Physicians tell us that this has no discoverable present use except to become the seat of disease."

—The *Century* is full of a great deal of interesting information about the Klondike: John Sidney Webb contributes a paper on "The River Trip," about which he speaks with authority, while Edward S. Curtis gives an account of the rush over the mountain passes. Both articles are illustrated. After reading them we feel that we have been reading an old story told under new conditions. Most of the incidents of mining life and features of mining society we have heard of in California and Australia. But the physical obstacles to be overcome in the Northwest are so serious that it is hard, even now, to believe in their being surmounted. The most readable paper in the number is on a very old subject—the Mammoth Cave—by John R. Procter, formerly State Geologist of Kentucky, with astonishing pictures by André Castaigne. Sara Y. Stevenson's glimpses of "Mexican Society in Maximilian's Time" contain one or two points of interest. Everything that she says about the unfortunate Maximilian goes to show that he was the victim of his own misunderstanding of his situation. Had he chosen to leave Mexico, he might have done so, but, like Napoleon, who sent him there, he was the dupe of his own fancies and day-dreams. Unlike Napoleon, he was disinterested, and went on dreaming long after the latter had rung the curtain down on his Mexican fiasco. The details here given of the episode, coming as they do from an eyewitness, have a certain historical value.

—In *Scribner's* for March, Mr. Walter A. Wyckoff begins his second volume of adventures among "The Workers." The scene is now in Chicago. "Hitherto I have been in the open country, and have found work with surprising readiness. Now I am in the heart of a congested labor market, and I am learning by experience what it is to look for work and fail to find it." The account of his first night in Chicago is not very different from what might have been anticipat-

ed, but Mr. Wyckoff seems as usual to forget that he is not a laboring man; his experiments are not real attempts at solving the "labor problem." No sane laboring man who should attempt, without friends, or home, or "character," or claim upon any one, to wander about by night in a "great, wicked city" could possibly hope for much assistance outside a station-house; and for an educated man, who has no training as a laborer at all, to make the attempt, is merely to engage in a laborious masquerade. This chapter really relates to the proceedings of a gentleman turned tramp, and the author is to be congratulated upon having survived the very disagreeable night of which he gives an account. As usual, the profanity and bestiality of his temporary associates are what most strikes him; we doubt if the workers as a rule will like to have "Clark" taken as a typical laboring man. An honest workman, driven by desperation to the point of accepting silver from a street-walker, would hardly burst into exultation over the fact that "There's two beers in this." Under the title of "A Pompeian Gentleman's Home Life," E. Neville-Rolfe gives an entertaining description of the recently unearthed house of Aulus Vettius.

—A novelty in magazine literature is to be found in a pair of associated papers in *Harper's* on Austria—one by "an Eastern diplomat," the other by Mark Twain. Which throws most light on the great Austrian problem, it is difficult to say. The diplomat declares that the solution lies in the detachment of the German portion of the country, the extension of Germany to the Adriatic, and the creation of a veritable *Oester Reich* out of what is left, with Slavs, Magyars, and half-a-dozen other races as the component parts, and Hungary at the head. Mark Twain gives a semi-humorous account of the great sitting in the Reichsrath when Dr. Oton Lecher spoke for twelve hours (breaking all human records) in order to prevent the Government's pushing through the *Ausgleich*, while those of the opposite party, led by the great Wolf, made the House a pandemonium in an attempt to thwart the design of Dr. Lecher. Such scenes in a legislature present a problem of their own with reference to the future of Austria. Diplomats are proverbially expert at reading the riddles of the future, but any one who can tell to what the policy of Germany in the hands of the present Emperor will lead must have a dash of omniscience. Schoolboys in Germany are taught history and geography at once from a map on which the successive accretions to Prussian power within the past hundred and fifty years are exhibited; the question suggested being, "What will the present proprietor add to the domain?" Du Maurier's second instalment of "Social Pictorial Satire" contains an interesting account of Charles Keene, and a little essay on the whole subject from the time of Hogarth to himself; the illustrations are from *Punch*. The writer says of his own style, "The people I meet seem to me more interesting than funny," and he adds that he is well content to draw them "without any attempt at caricature." "Sam Weller, if you recollect, was fond of 'pootiness and wirtue.' I so agree with him. I adore them both, especially in women and children."

—Expert testimony of a kind to insure respect and induce conviction was that of M. Louis Havet at the Zola trial. This wit-

ness, a professor in the Collège de France and at the Sorbonne, attacked the famous memorandum or bordereau from the side, not of comparative chirography, but of mannerisms in script and in style—in other words, from the schoolmaster's point of view. He found Dreyfus impeccable in his French idiom, but careless of accents, omitting or misplacing them with French negligence carried to an extreme, and treating his cedillas in the same manner, with absolute inconsistency. Esterhazy, on the other hand, is most scrupulous in the matter of accentuation, and goes so far as to place the grave accent on the capital A of the preposition à—a nicety quite un-French, and indeed not rigorously observed even by printers. As to idiom, his writing abounds in turns of expression which betray one to whom the French language is not native. In the bordereau occurs the accented A; and the writer's "orthographic habits" otherwise accord with Esterhazy's, such as his perseverance in the practice (discountenanced by the Academy in 1878, and now obsolescent) of connecting *très* with the following adjective by a hyphen. The idiom further shows that the writer belonged in one of two classes—"those who know French badly because they have been ill-taught, or those who think in a foreign language," as Esterhazy's own style reveals that he does. If, concluded M. Havet, a Dreyfus document came before him as a French exercise, he would endorse upon it, "Très bien"; and this could not possibly be allowed to the bordereau.

—One of the recent anthologies which have come our way is edited by Mr. Arthur Waugh and published, in this country, by Henry Holt & Co. Its object is to bring together the choicest pamphlets which have appeared since the Elizabethan period, or at least as many of them as can find room in a series of four small octavo volumes. When one considers the sheer bulk of this class of literature, he will perceive the inevitable limitations of such an enterprise. Several single collections, ranging from 20,000 to 50,000 tracts, have been formed. Carlyle testifies that the British Museum contains above 36,000 on the Civil War alone, and yet Dr. Johnson calls the reign of Queen Anne "The Age of Pamphlets." Every variety of writer, from the most irresponsible Grub Street hack up to Edmund Burke, is represented among these fugitive pieces, and the subjects vary no less widely than the authors. Mr. Waugh begins his preface by stating the criterion which he has observed. "The object of the Pamphlet Library is to set before readers who are interested in the literary and constitutional history of our country [England], the text of those pamphlets or tractates which, besides possessing the only saving qualities of distinction and style, have also exercised a striking influence upon the current of events." Our sole criticism is that when "saving qualities of distinction and style" are made a test, all but classics are excluded, and choice is narrowed to a small circle of the standard authors whose works are not difficult of access. Thus, besides Sexby, whose dedication of "Killing No Murder" is given, the volume of Political Pamphlets represents only Halifax, Arbuthnot, Steele, Swift, Bolingbroke, Junius, and Burke. The selections are very well chosen, and it is useful to have them printed in conjunction; but, leaving out less than three pages of Sexby, there is no reason why

this part of the series should not be entitled, "Political Tracts by Great Masters of English Prose." Thus it will be seen that the volume, while full of excellent matter, does not illustrate the history of English politics in any novel way. Pursuant to Mr. Waugh's plan, "pamphlets of political, literary, religious, and dramatic significance" are to be digested under their respective heads. We have received three of the four volumes indicated by the preface, and as they do not take up the last two subjects, we gather that religion and the drama are to be bound together, or that the number of volumes will pass the limit which was first set. The literary tracts, from their bulk, have been published in two parts. Mr. Waugh is assisted by sub-éditors, Mr. A. F. Pollard taking charge of politics and Mr. Ernest Rhys of literature. The one furnishes an introduction of 22 and the other of 31 pages. Each of these essays seeks to gauge the importance of the selections which accompany it, and to give them a setting in their present context. The work is skilfully done in both cases, and the series, though its title may require a little interpretation, deserves well of book-buyers in point of matter and of form.

PERKINS'S FRANCE UNDER LOUIS XV.

France under Louis XV. By James Breck Perkins. In two volumes. Boston: Houghton, Mifflin & Co. 1897.

During the five years which have passed since the publication of 'France under the Regency' Mr. Perkins has made good use of his time. His present subject is better than the preceding one, and, perhaps, considering this, he has taken unstinted pains to prepare for the execution of a worthy book. One need not beat about the bush before praising the outcome of so much labor. Mr. Perkins has produced a piece of sound scholarship without slighting either arrangement or style. He shows a just appreciation of values, holding a fair balance between the importance of his period and the importance of his reader's time. At no point can he be accused of wilful diffuseness. He is unconcerned with the national prejudices which have distorted so many histories of this age. In a word, we have before us a treatise which deserves to be read and considered carefully. It is well prepared, well digested, and well written.

One is frequently reminded that it has been the fate of France during the last 109 years to furnish the world with political object-lessons. But her career as an instructress began before the Revolution. One of Mr. Perkins's good qualities is that he is not for ever pointing morals. We have failed to find a single passage in which he sapiently philosophizes over the corrupt and crippled government of Louis XV. A casual remark here and there is all the guidance one needs in reaching the conclusion that democracy will be hard pushed to invent and execute a more shameful series of failures than France endured under the "Bien-Aimé." There is a vast difference between accepting this result as an abstract proposition and holding it with conviction. Mr. Perkins has very few novelties. His merit lies in solidity of proof and directness of statement. He is the more severe upon the old régime because he is just and moderate in expression. He reminds one of

Aretino's epigram: "If you really wish to damage a man's character, tell the truth about him."

The France of Louis XV., with her twenty million inhabitants, her inherited prestige, her economic resources, her settled absolutism, and her intellectual leaders, claims a great deal of direct attention; yet we imagine that almost every one who studies her history during this epoch has an ulterior purpose. He does not rest content with collecting information concerning the wars of the Polish Succession, the Austrian Succession, and the Seven Years. He does not regard the administrations of Fleury and Choiseul as things complete in themselves. He is much more apt to view the reign in the light of certain overshadowing relations and effects. He is hurrying on in mind to the Revolution, or to the triumph of Prussia, or to the spread of the British Empire. With all three of these grandiose movements the age of Louis XV. is unmistakably connected. One effects a real economy of time in reaching them by way of Versailles and its court. Without seeing how the monarchy was degraded from its central place in popular affection, one cannot approach the Revolution. Without seeing how a fatuous council squandered the dynamic advantages of France's political position, one cannot understand the rise of German military or British naval power.

When the war of the Spanish Succession closed, France was confessedly weak. What it had cost to foist an impotent Bourbon upon a nation that hated her and her royal family was not known at the time, even with Marlborough's victories fresh in remembrance. Yet before Fleury's death the country had renewed herself, and was, moreover, giving promise of a new wealth. No extraordinary wisdom was required to retain at least a place of distinction. True national prosperity would have been more difficult of achievement, though with the normal advance of the middle class it was not impossible. Had a Richelieu been needed at the Foreign Office, and a Turgot at the Financial Bureau, Louis XV. might be excused for neglect to secure them. A Ministry of All the Talents would probably have proved troublesome, and certainly was unnecessary. Average common sense in seizing the chances which the European situation presented might have made France conterminous with the province of Gaul and the centre of a colonial system. A warlike, patriotic, and skilful race, with enormous physical advantages in its favor, was humiliated by the incredible folly of its government.

We should have been glad to see Mr. Perkins devote rather more space than he does to a careful delineation of the man whose defects of character were the chief cause of this mischief. Individually he deserves little notice, though the degree of his intelligence was higher than has generally been supposed. But the more debased his life and the more callous his indifference to public duty, the more necessary it becomes to depict him as he was. A full-length portrait of Louis XV. is indispensable to an artistic contrast between the issues at stake and the spirit with which they were waged. Mr. Perkins at different times and places gives us touches of character; what we miss is a lively and faithful account of how the King conducted himself while the realm was going to the dogs. We are not, of course, referring to

unsavory episodes, but to the routine of court life in all its dreadful ennui. The same sort of description which Mr. Perkins gives of the life led by Stanislas Leszczyński at Nancy would, *mutatis mutandis*, have been serviceable in showing how the absolute master of the most prominent European state used his opportunities. We have little to find fault with when we come to Louis's part in foreign politics. While apathetic in nearly everything, his leanings towards association with the Spanish Bourbons were reasonably strong, and Mr. Perkins hits off his misplaced zeal. Careless to the point of criminal folly where the national interests of France were involved, he extended a generous patronage to the children of Elizabeth Farnese. If Don Carlos wanted an establishment in Italy, he should have it as a free gift from the head of the Bourbon family. Kings haggling over terms in forming alliances with relatives present the spectacle of bourgeois traders. In this spirit the Family Compacts were drawn. "If we were not charged with obtaining a principality for Don Philip," wrote Argenson after the victories of Maurice de Saxe, "we might keep our conquests in Flanders for ourselves."

Passing from the sovereign to his reign, we shall attempt to touch upon only two of its aspects. Firstly, it forms a notable chapter in the emancipation of Europe from mediævalism, and, secondly, through the Seven Years' War, it is connected with some of the most surprising political developments which our century has witnessed. When Dubois and Orleans both died in 1723, to be followed by Bourbon acting under the young King, the modern spirit seemed pretty thoroughly shackled in France. Religious toleration was far from being achieved, the power of the crown was despotic, and criticism was in its swaddling-clothes. Before Louis's death, persecution had stopped, public affairs were publicly discussed, and a class unknown to France since the death of the communal movement was established on the solid cornerstone of wealth. Comparing England and France in 1726, one observes that the former enjoyed to a much greater extent the advantages which flow both from agriculture and from commerce. France had more arable soil, but the country's progress was hindered by its system of land tenure. Without a change of social and political conditions, the scope for improvement in this direction was small. To be sure, the number of peasant proprietors in 1789 has often been underestimated, but no general revival of agriculture could precede the abolition of privileges. The case was different with commerce. Even under the barbarous political economy of the last century, with its incessant paternalism, with its chartered companies, with its monopolies, and its half-defunct guilds, trade could and did expand. If the middle class in England drew its prosperity from more sources than were available to the bourgeoisie, French commerce nevertheless made strides under Louis XV. It provided the intellectual basis of the Revolution by enormously increasing that part of the community which, being neither privileged nor submerged, was intelligent, active, and ambitious. Recollecting that Mr. Ruskin becomes excited when the present greatness of England is ascribed to her coal, we trust we do not appear too physiocratic in claiming commercial origin for a large share of the changes wrought during this reign. Mr. Perkins sets store by Law, who con-

tainly did kindle a wonderful amount of interest in business speculation on a large scale.

Of more consequence still was the peace which Fleury, aided by Walpole, gave Europe. Twenty-five years of repose came like a godsend to France. England did not benefit more by the reign of Henry VII. The commercial wealth of fifteenth-century Italy was no more a cause of the Renaissance than was the commercial wealth of eighteenth-century France a cause of the Revolution. Fleury's part in the revival extended far beyond exchequer reforms. He made the royal *corvée* a blessing in disguise, and, by settling the coinage, changed the whole nature of credit. The livre, which, as Mr. Perkins tells us, had been reduced to one-seventy-second of its Carolingian value, became honest money in June, 1726. We cite his comment both for its historical truth and for its contemporary application. "The currency was at last established on an immovable basis, and this measure did more to accelerate the increase of wealth and the development of industry than all the commercial codes at which Colbert so earnestly labored. . . . Of all the causes which assisted in the industrial development of France in the eighteenth century, this, which has received the least attention, was perhaps the most potent."

We would briefly connect with this subject of commerce and industrial progress Mr. Perkins's chapters on the intellectual and social changes of the reign, and on the influence of literature. They are, in our opinion, his best. To write without tediousness of Voltaire, Rousseau, and the encyclopædists is in itself creditable, following as one must do now in the wake of many eminent critics. Mr. Perkins is successful because his ideas represent reflection applied to genuine knowledge.

With Mme. de Pompadour and Bernis for advisers, with Richelieu and Soubise for generals, Louis XV. found himself confronted in the Seven Years' War with two greedy and determined governments controlled respectively by Frederick the Great and William Pitt. The million men who perished in the contest did not throw their lives away in a dynastic quarrel—that is some comfort. Whatever the immediate cause, imperial questions were unfolded long before the end came, and every one save the King of France played as though for double or quits. That Mr. Perkins writes for an American audience is clear from his assumption that we know enough about the French and Indian War. He reserves his space for Europe and the East. One of his general contentions—and this has reference to our own country—is that the French did not lose their colonies from lack of national aptitude. They showed marked ability in establishing a hold on inferior races, adapting themselves skillfully to circumstances, and making a good impression where the English had only aroused prejudice. When the fight began, officers and men fulfilled all reasonable expectation. "In India, Duplex was the equal of Clive; in America, no one displayed military or political talents superior to those of Montcalm; most of the officers of the navy did the best that was possible with the material that was furnished them: the root of the evil was at Versailles."

The most scientific and philosophical of modern historians must sometimes feel the need of a hero. Mr. Perkins, unable to find

one in France, turns Frederick of Prussia to account. We hasten to state that our author preserves ethical standards intact, and never once enters Droysen's amusing plea that Frederick considered himself morally justified in seizing Silesia. It is hard to maintain an attitude of indifference in the presence of sheer ability. Mr. Perkins would be a rare bird indeed if he let slip the chance to diversify his pages with the comments of one who to a quick wit added a sharp word. Arneith has helped him noticeably in presenting the acts and character of Maria Theresa, though her bitter implacability is allowed to shine through his narrative. Connecting the Queen of Hungary with her most notorious female contemporary in France, we may say that Mr. Perkins renders full justice to Mme. de Pompadour's accomplishments. Even in hell there are gulfs of varying profundity. Mme. de Pompadour was graceful and had large views. Beneath her circle was the deeper depth of the Du Barry.

Mr. Perkins affords the reviewer a scant glean of slips and mistakes. If he falls into any serious errors of fact, they have eluded us. At rare intervals he leaves the path of mathematical exactness, but the following examples will prove that our worst censure of this nature is but slight: Vol. I., p. 23: "There were no families in France during the eighteenth century exercising a political influence to be compared with that of the Bedfords, or the Pelhams, or the Newcastles in England." As family stems one would hardly distinguish between the Pelhams and Newcastles. Vol. I., p. 337: "For the first time the cry was heard, 'Long live Frederick the Great!'" Many a sovereign has been thus greeted in his lifetime, but since Charlemagne, only Peter of Russia and Frederick of Prussia have retained the title with posterity." Is it quibbling to recall the Saxon Emperor, Otto I., and Alfred of England? Vol. II., p. 449: Mr. Perkins implies that Voltaire was out of France when living at Ferney. "The events of the Revolution would not have frightened Voltaire into conservatism. His body he would have kept safely at Ferney, but reactionary principles would not have been advocated by his trenchant pen." Ferney was close to the frontier but still in France. We cite two or three cases of this kind to emphasize Mr. Perkins's accuracy, not his inaccuracy. In proportion to the bulk of the work the number of slips is insignificant.

DANISH ARCTIC EXPEDITIONS, 1605-1630.

The Danish Expeditions to Greenland in 1605, 1606, and 1607; to which is added Capt. James Hall's voyage to Greenland in 1612.

The Expedition of Captain Jens Munk to Hudson's Bay, in Search of a Northwest Passage, in 1619-'20. Edited with notes by C. C. A. Gosch. London: The Hakluyt Society. 1897. Cxvii., 204, pp. and cxviii., 184 pp. 8vo, with maps and illustrations.

In several previous volumes the Hakluyt Society has published new editions of the original accounts of all the English voyages in search of a Northwest Passage to India which were undertaken between 1576 and 1632, when, after the return of Foxe and James, the search was discontinued for a considerable period. These voyages form a distinct and connected series. Between the

years indicated, only one expedition was sent out with the same object from any country besides England, viz., the Danish expedition to Hudson Bay under Jens Munk in 1619-'20; and inasmuch as that expedition was piloted by Englishmen and was intended to follow up the results obtained upon some of the English voyages, it may fairly be looked upon as closely connected with the latter. The Society, therefore, deemed it desirable to complete the series of works relating to the expeditions in question by adding an English version of Munk's narrative of his voyage; especially since Munk's book, which was published in Danish in 1624, has never been translated into any other language, and its contents have been known to the world at large only through the medium of incomplete and unreliable abstracts. This having been decided upon, it was also resolved to supplement the English version of Munk's 'Navigatio Septentrionalis' by the addition of the voyages of James Hall from Denmark and England to Greenland in 1605, 1606, 1607, and 1612. The latter were in some respects forerunners of Munk's expedition, and form with it a notable chapter in the history of Danish Arctic enterprise. Nor were these Danish voyages to Greenland without connection with England and the English voyages in search of a Northwest Passage, since the chief pilot, James Hall, to whom the credit of the discoveries made chiefly belongs, was an Englishman, while one of the vessels of the expedition was commanded by another Englishman, John Knight, who in the following year directed one of the English expeditions above referred to. John Cunningham, a Scot, was in charge of the expedition of 1605, and afterwards commanded one of the vessels on the second voyage. In addition to other reasons which made the reprint desirable, by joining together the accounts of all the voyages to Greenland in which Hall took part, it has been possible to collect in one place all that is known of the life and work of a man who occupies a very honorable place among early Arctic explorers.

The present work consists of two distinct parts, or "books," each constituting a volume complete in itself and with its own index. Book I. contains reprints from Purchas (1625) of Hall's own accounts of the voyages of 1605 and 1606, and of Baffin's account of the voyage of 1612; also a reprint of Gatonbe's relation of the latter voyage, taken from Churchill's 'Collections of Voyages and Travels.' To these are added another account of the voyage of 1606 by Hall himself, accompanied by maps, now first printed from a manuscript in the British Museum, and translations of two Danish accounts of the voyages of 1605 and 1606. Two appendices follow, one treating of an ancient chart now preserved in the Royal Library at Stockholm, of much interest in connection with Hall's voyages, and here reproduced in photolithography. The final chapter or second appendix discusses one of the mythical islands of the boreal Atlantic which long held a place on the charts, under the name of Busse Island.

Book II. contains a translation of Jens Munk's 'Navigatio Septentrionalis,' made from the edition of 1624, and corrected by means of Munk's original manuscript, which is still preserved in the University Library of Copenhagen. This is preceded by a brief but interesting biography of Munk himself, in which some curious and widely received

errors relating to his life and death are corrected. The volume is completed by a voluminous commentary on the voyage and the map prepared by Munk and illustrating his contributions to geography.

The discovery of Greenland by Icelanders in the tenth century, and the possession by Norway in the thirteenth century of colonies in both Iceland and Greenland, are matters of historical record. Later, with Norway, these colonies became a part of the dominions of the King of Denmark. The communication between Greenland and Denmark, after having been kept up for five hundred years, entirely ceased in the fifteenth century, owing to various causes. Of these the principal one was, perhaps, the fact that, the revenue from Greenland being specially allotted to the royal household, the trade had become a monopoly, and was neglected when war and other pressing affairs took up the attention of the King. The existence of this distant dependency was, however, not forgotten, and, during the sixteenth century, the proposition that the former communication should be reopened was several times mooted, partly on account of the interest felt in the fate of the Scandinavian colonists, who were still supposed to exist, and partly in the hope that a profitable trade might spring up. Nothing, however, was done until the matter was taken up by King Christian IV., who sent out three well-equipped expeditions in 1605-6-7, for the purpose of ascertaining the best route to Greenland, of exploring the land, of searching for the old colony, and of re-establishing there the dominion of the Crown.

The expedition of 1605 consisted of three vessels of the Danish navy under the command of John Cunningham, assisted by James Hall, who acted as first officer and pilot. The latter was a man of some Arctic experience, and may have accompanied Davis in 1586. The expedition sailed on the 2d of May, and took the route between the Orkneys and Shetland and so nearly due west to Davis Strait. When near Greenland, one of the vessels, commanded by Lindenow, separated from the others, on account of some difference of opinion as to the best route, and forced its way through the ice to the coast, where, after various perils, it made harbor and remained several days trading with the natives for furs, making prisoners of two Greenlanders, who were carried back to Denmark. Cunningham and Hall, with the other vessels, continued to the northward, reaching the coast on the 12th of June, at a point which they named King Christian's Fjord, now recognized as Itivdleik Fjord of modern maps. Thence Hall in the pinnace explored the coast northward nearly to Disco Bay. What was supposed to be a silver mine was discovered on this excursion. After Hall's return to the vessel on the 10th of July, the expedition sailed for Denmark, carrying with them four natives whom Cunningham had captured in accordance with his instructions; the object of this abduction doubtless being to procure men who, after some teaching in Denmark, might be used as interpreters on future voyages. As a set-off it may be mentioned that the expedition landed two condemned criminals in Greenland and abandoned them there; this being construed by the authorities as an act of clemency, giving to these wretches some faint chance of preserving their lives. Both incidents

throw a curious light on the customs of the time.

In 1606 five vessels were sent out under the command of Lindenow, with Hall as pilot; but only two seem to have reached Greenland, where most of their energy was expended in loading up with the supposed silver ore. On this occasion, also, several natives were secured with their boats and carried away by force. These people, though treated kindly in Denmark, did not survive long, and it is told that the last one made a desperate attempt to get back to Greenland from Denmark in his kayak, was overtaken and brought back, and thereupon pined away and soon died.

The ore brought back turned out to be worthless, and the second voyage resulted only in disappointment, but the King decided to make one more effort to find the ancient colony, and in 1607 two vessels set out for this purpose, under the command of Carsten Richardson, the course of the navigation being placed in the hands of Hall. They took the same route as before, but kept more to the northward, reaching the eastern coast of Greenland between the parallels of 63 degrees and 64 degrees. They were prevented from landing by the pack ice, and, after many fruitless endeavors, were obliged to set sail for home. It was not until the middle of the century that another attempt was made to discover the site of the lost colonies. In 1612, however, a private expedition was sent out by certain merchant adventurers of London, under the command of Hall. Nothing is known about the precise object of the voyage, but as a goldsmith was sent with them it may be surmised that faith in the supposed silver mine played a part in it. Two vessels were dispatched, which skirted the Greenland coast from the vicinity of Godthaab northward. The larger vessel was left in the southern Isortok Fjord, while Hall explored in the smaller one. On his return he took his ships to Itivdleik, and then started in the smaller one for the silver mine. Halting in Amerdlok Fjord, on the 22d of July, Hall was killed by a Greenlander, with a dart, as he was in a boat alongside the ship. He was buried on one of the islands; his comrades proceeded to the mine which the goldsmith tested and found wanting; after which the expedition returned to England.

The expedition of Munk, in 1619, was sent out to search for a Northwest Passage, on the western shore of Hudson Bay, where the incomplete explorations of Button in 1613 left room for hope of a practicable outlet to the westward. It was composed of two vessels of the Danish navy, a sloop called the *Lamprey* and a small ship named the *Unicorn*. The party comprised sixty-four men and officers, and sailed from Denmark May 9, 1619. They sighted the southern extreme of Greenland, entered Frobisher Bay, passed through Hudson Strait to Hudson Bay, and finally entered the estuary of the Churchill River, the "Hubbarts Hope" of the early explorers, now known as Port Churchill. Here the party wintered. They were unsupplied with proper clothing or equipment for an Arctic winter, their barber surgeon was utterly incompetent, the men gradually succumbed to scurvy and cold, and by spring only Munk and two others were left alive. These, by great exertions and after great hardships, got the sloop out of her winter quarters and succeeded in reaching Norway in September, 1620.

The journal of Munk is of pathetic interest, picturing with artless simplicity their sufferings and his final escape, which, under the circumstances, bordered on the miraculous. The journal shows him in a most favorable light as regards everything but Arctic experience. He opens his heart to the reader, who feels that he is dealing with a true man. While the voyage was by no means without geographical results, the account of it is more interesting as the story of a good and simple soul, sore beset, yet maintaining faith, hope, and courage.

The volumes exhibit the usual elegance of the Society's publications, and are well indexed.

A Short History of British Colonial Policy.
By Hugh Edward Egerton. 1897. London: Methuen & Co.

Mr. Egerton's modest preface disarms the critic. He apologizes, not being an author of eminence, for adding to the number of books, but reminds us that while various phases of colonial policy have been treated, no one has hitherto dealt with the subject systematically on historical lines. But on many accounts we must pronounce his apologies unnecessary. A brief glance will satisfy the reader that a valuable and interesting book lies before him, and from the multiplication of such books the world does not yet cry to be delivered. The author does not attempt a narrative of events, the evolution of a story from a mass of authorities. He proposes to give a mass of opinions, and therefore to allow the authorities to speak for themselves. The free employment of quotations which results from this method produces an agreeable variety in the style, and adds weight to the conclusions of the author.

Five periods are recognized—the period of beginnings, that of trade ascendancy, that of systematic colonization and the granting of responsible government, that of the *laissez-faire* principle, and that of "Greater Britain." When Englishmen began to establish colonies, the Government had no colonial policy. It chose the easy course of letting the colonists take care of themselves, and, in the cases where it undertook to govern, it very soon abandoned the task, and contented itself with a formal recognition of its authority. But by the middle of the seventeenth century the merchants of England had come to influence the policy of its Government, and for a century at least the theory was unquestioned that colonies existed for the good of the trade of the mother country. The great wars of the earlier half of the eighteenth century were wars for commercial supremacy; the colonies were defended against other Powers that they might be made use of by English merchants. The mercantile system, however, caused the loss of the American colonies, and the treatment of those that remained became much more liberal. For a time there was something like a policy of systematic colonization, together with a disposition to grant self-government; but with the victory of free trade, and the resulting prosperity, there came a feeling that, since the colonies would eventually be independent, it might be as well for the mother country not to trouble herself about them. This feeling was short-lived, and at the envious outbursts of other Powers England awoke to the possibilities of a permanent colonial empire.

Such a work as this appeals as a whole primarily to Englishmen. To them it cannot fail to be wonderfully suggestive. They may well feel that the free spirit of their institutions has been the great cause of the prosperity of their colonies. The policy of the home Government, as carried out by the various functionaries that have attempted the regulation of the colonies, has been almost invariably unwise. Many excellent governors have been sent out, but they have been thwarted by the interference of the Colonial Office, or recalled by the change of ministers, before their judicious measures could take effect. Many foolish governors also have been put in charge of the colonies, and they have sometimes done irreparable mischief. Parliament long ago practically recognized its incompetency to legislate for the colonies, and the general result has been that the more important of them have taken the working out of their destinies into their own hands. The success of England's colonial policy, so far as it has been successful, may be fairly said to be due to its letting the colonies have their own way. The American colonies were lost by trying to govern them from England; the others would have been lost or ruined had not this practice been abandoned.

Readers of Mr. Bryce's 'Impressions of South Africa' will be interested in comparing his brief sketch of British policy with Mr. Egerton's detailed account. With some exceptions, the latter confirms Mr. Bryce's judgments, and it is highly satisfactory to find these independent writers reaching substantially the same results. Upon this part of Mr. Egerton's book, and upon those relating to the existing colonial possessions of England, we shall not dwell, although we may advise those who think that the development of the Dominion of Canada receives less attention from Americans than it deserves, to consult Mr. Egerton's pages. On the other hand, the policy of England toward those colonies which grew into the United States is a matter which deserves very different treatment from that which it has been the fashion to give it. The view taken in our school histories is, as a rule, shamefully inadequate and outrageously chauvinistic. We cannot but urge those who wish to teach American history that is true rather than popular to prepare themselves by studying Mr. Egerton's book. A full half of it is devoted to the affairs of the North American colonies, and it is a most valuable repertory of facts commonly ignored by our popular writers. Our country has recently escaped an appalling peril due almost entirely to the senseless traditional hatred of England instilled into the mind of every pupil in our public schools. We know of no better corrective for this feeling than such an impartial examination of the records as Mr. Egerton lays before us. His sympathies, so far as he displays them, seem to be rather with than against the colonies, and his research has been most extensive. He reveals much that was injudicious and exasperating in the conduct of the imbecile statesmen who had charge of the government of our colonies; but that these colonies were oppressed, according to the standard of oppression in those days, he conclusively disproves. We must confess that the reader will encounter some dry passages in this book. That, however, is to be charged to the nature of the subject, not to the author's treatment of it.

Evolutional Ethics and Animal Psychology. By E. P. Evans, author of 'Animal Symbolism in Ecclesiastical Architecture,' 'The Criminal Prosecution and Capital Punishment of Animals,' etc. D. Appleton & Co. 1898. Pp. 388, including a bibliography and an index.

To all "disinterested" lovers of equity and of anecdote and gossip this book will be welcome. It is a plea for a recognition of the inalienable rights (within limits which it must be confessed, are left by the author somewhat vague) of the lower animals to life, liberty, and the pursuit of happiness, and is composed, in the really charming proportion, for a scientific treatise, of a score of pertinent and often recondite illustrations to a unit of theory.

It should be said at once that the title of the book is unfortunate. To perhaps the majority of the "profession" in matters ethical the phrase "evolutional ethics" is chiefly significant of what the person who takes it seriously fails to understand. Happily, however, neither the phrase nor the special implications of it that offer themselves to criticism are essential to any portion of Prof. Evans's argument.

"The only firm foundation of animal ethics"—of the claim in behalf of animals to a recognition in the world of morals—Prof. Evans's thesis affirms, "is animal psychology. It is through the portal of spiritual kinship erected by modern evolutionary science that beasts and birds, 'our elder brothers,' as Herder calls them, enter into the temple of justice, and enjoy the privilege of sanctuary against the wanton or unwitting cruelty hitherto authorized by the assumptions and usurpations of man."

In primitive societies, Prof. Evans says, tracing not so much the implications of evolutional ethics (whatever in the language of reason that may mean!) as the successive stages in the history of morals, the only basis of moral obligation that is in practice recognized is bodily as distinguished from spiritual kinship—community of ancestry, membership of the same tribe. Societies less primitive recognize the bond of a common worship. Societies still less primitive recognize the bond of a common humanity, of a kinship that is spiritual. And to the benefits of a spiritual (and even of a physical) kinship the lower animals have every right.

It is in the elaboration of the last of these propositions that the most serviceable portion, we should say—the chapters forming the second part—of Prof. Evans's book consists. It is only on an anthropocentric theory of the universe that an anthropocentric ethics can be justified; and an anthropocentric theory of the universe is at the present day an anachronism simply. Earlier "speculators," notably theologians, have endeavored to make good a distinction between man as in some sort essentially possessed of rights, and the lower animals as in some sort essentially possessed of nothing of the kind, but they have been doubly ill-advised in their venture. The differences upon which they have fastened have been singularly devoid of ethical significance; and there is, in any event, no sufficient reason to believe such differences exist. In the chapters "Mind in Man and Brute," "Progress and Perfectibility in the Lower Animals," "Ideation in Animals and Men," "Speech as a Barrier between Man and Beast," and "The Aesthetic Sense and Religious Sentiment in Animals," Prof. Evans argues the case in the negative, and marshals admirably the evidence in support of it.

As our author is a scholar, he will not regard it as "small fault-finding" to note that he has in many places in this book not said what, plainly enough (he is always perspicuous), he means. It should also, perhaps, be said that in the matter of works on psychology in general the bibliography includes (too little or too much. It is difficult to conceive why works on psychology in general should be given a place in such bibliography at all; and surely, to choose one instance out of several, it is little better than caprice, in a case in which the analogy between man and brute is the main concern, to enroll Bain's 'The Senses and the Intellect,' and to omit his 'Emotions and the Will.'

La Jeunesse de Napoléon: Brienne. Par Arthur Chuquet. Paris: Armand Colin & Cie. 8vo, pp. 494.

Our Paris correspondent has anticipated our review of this work, but it may still be worth while to study the author's method. He has thought, and, as the result shows, has rightly thought, that full acquaintance with the surroundings of an historic person at each stage of his development will enable us better to understand the man. He has, therefore, devoted an opening chapter to the island of Corsica, its history, the character of its people, its relations to Genoa and to France, the aspirations of the people, their deep sense of oppression, their amiable traits as well as their intense explosive passions; their persistence, also, as shown in their vendettas and their attempts at revolution. He connects Napoleon with all this by sketching the traits in which the Emperor revealed himself as a true Corsican—vain, boastful, swept by gusts of feeling, careless of consistency or even of truth, bombastic, yet with a basis of great powers all his own, and the redeeming quality of never forgetting a kindness.

An outline of the family history traces the pedigree of both father and mother, and describes the peculiarities of each, both natural and acquired. We are made acquainted also with the circle of near relatives and friends, the nurse and the housekeeper, and the bitter poverty of the whole establishment which led the father to cultivate the friendship of those in power, and to beseege the Government to get scholarships for his children in the French public schools.

Brienne is shown to have been no military school in any proper sense, but only one of a dozen schools under the charge of different orders of priests, where children of decayed and impoverished members of the nobility were educated for the public service at the charge of the treasury. Beginning with a primary instruction, the scholars were taught an ordinary curriculum, including some Latin, mathematics, history, geography, etc. The differences among these schools have been traced by M. Chuquet with singular industry. He tells us the characteristics of the superior at the head of each, of the members of the faculties, and the special reputation which the schools enjoyed. We are thus made to understand just what the Brienne school was, and why the young Corsican with his Italian patois had to put time upon his French that others would give to dancing or to poetry, and was handicapped in his competition with his mates, who were native Frenchmen.

But the boy showed abilities which gave him the reputation of one who might have a future, though not high in class standing.

His success in mathematics made him choose the artillery as his corps when he was transferred to the École Militaire at Paris. At that time the artillery was the corps d'élite of the army, and represented the intellectual side of the military profession. It showed what stood for brilliant school work, therefore, when Bonaparte, a boy of sixteen, was sent by his school, second in a list of fourteen, to be examined at Metz in competition with graduates of other schools from all parts of the kingdom for admission to the artillery. The chief examiner was Laplace, the author of the 'Mécanique Céleste.' Bonaparte passed forty-second in a list of a hundred and eight, and was one of those immediately awarded a lieutenancy instead of being put on probation as a supernumerary. Considering his youth, for he was among the youngest of the competitors, his school work had been successful.

The author takes up with great detail the careers of Bonaparte's schoolmates, both at Brienne and at the École Militaire. It is full of interest, for it shows not only how many of them became distinguished in their country's service, but how close were the relations which the Emperor maintained with them after he acquired power. To have been his schoolmate or his teacher was a recommendation which never lost its power. As the list of those he employed or promoted grows, the impression deepens that, whatever his faults, he never lost the kindly recollection of his playmates and competitors in the schools. This was enough to make him erase a name from the list of émigrés, though the man had fought against the republic. It was enough to have professed repentance and the desire to return to France. What might seem a mere school list is skillfully worked up, enlivened here and there by contact with the great central figure, and made to have a cumulative effect in illustrating the personal qualities of Napoleon himself.

The chapter on "Garrisons and Leaves-of-absence," which closes the book, is a similar bit of good workmanship, in which the petty experiences of a young officer in his first stations and camps in time of peace are made to throw light upon the process by which Bonaparte was growing and developing in the period just preceding the great Revolution. A home visit to Corsica after seven years of constant separation from his family proved the genuine affection with which he loved them all, and the enthusiastic rebound of his feelings towards the picturesque but half-savage island of his nativity, of which he had dreamed that he might be the emancipator.

The extended studies of all phases of the circumstances surrounding the young Bonaparte seem in each instance to be carefully planned with a view to the creation of strong local color. A good deal of art was needed to prevent this from appearing to be the undue exaltation of unimportant details into significant facts by virtue of their mere connection with the hero; but M. Chuquet has had the ability to succeed in his task. He has made an atmosphere of time and place, of social and official relations, in which the young student seems very real and comprehensible, and fits into his place and his surroundings in a very natural way. As separate studies of school methods, of military life, of society both Corsican and French, and of the antecedents of men who made their mark upon their epoch, the book will

be very useful, apart from its connection with Napoleon.

Marriage Customs in Many Lands. By the Rev. H. N. Hutchinson, B.A., etc. With many illustrations. D. Appleton & Co. 1897.

In preparing this volume, the writer's object, so we are told, was not to discuss the scientific questions connected with the origin of marriage, but to present to the general reader a careful account of some of the quaint and interesting customs that have prevailed, or may yet be in force, in different portions of the world. In doing this, he was obliged to trust, in good part, to the works of travellers and others, and this has occasionally led him to the use of a terminology that might have been modified to advantage. Take, for instance, the statement that marriage by purchase prevails to some extent in India (p. 4), in Morocco (p. 98), among some of our own Indians, etc., etc., and it is difficult to reconcile it with the fact that, either wholly or in part, the so-called purchase money was handed over to the bride. Evidently in a case of this kind there was no question of buying and selling as we understand it, but rather it seems to have been an ingenious device for providing the young woman with a dowry. So, too, it seems hardly fair to say that she was bought, even if the father retained the whole of the purchase money, when she could at any time put an end to the transaction by refusing to carry out her part of the contract. Instances like these are, no doubt, survivals from the times when women were bought, but they are not bona-fide marriages by purchase any more than the custom of the Arabs, Turcomans, and others of "carrying off the bride" can be said to be a marriage by capture, when the woman is a party to the proceeding and actually consents at her seeming abduction. In other words, in these and all similar cases, the element of compulsion is wanting, and without it there can be no marriage either by purchase or by capture.

It is well also to remember that our author, even within the limits he has marked out for himself, does not profess to have exhausted the subject, and consequently that other forms of marriage may and, we may add, often do co-exist in those lands in which some of the more curious customs prevail. Penny weddings, for instance, and Fleet marriages, to say nothing of the purchase of a wife (p. 304), and "marrying over the tongue" or over a sword, have taken place in Great Britain within comparatively recent times; and yet to suppose that they were the only forms of marriage that existed in that country, or that they were even general, would be as great an error as it would be to infer that "spiritual marriages" were the rule in the United States because they had once been practised in Utah by the Mormons.

Useful as these hints may prove to the casual reader, they do not imply any reflection upon the author's plan of work, or upon the way in which he has carried it out. Indeed, so far is this from being the case that the very reverse is true; for it is no exaggeration to say that in the collection of quaint and curious customs he has brought together, and in the pleasant, gossiping manner in which he describes them, he fulfils to the letter the promise of his introduction. Literally speaking, in the search for mate-

rial, he takes us from China to Peru—among all sorts and conditions of men; and he shows us, as in a panorama, a number of the many ways in which marriages are or have been celebrated at different times and by different peoples. To enumerate a tithe of these customs would lead us far astray, and we content ourselves with observing that, while they differ widely in some of their details, yet, on comparing them one with another, and noting the peculiar features that give to each its distinctive character, they will be found, as a rule, to be survivals of marriage either by purchase or by capture. Even among ourselves—and we are graciously supposed to have wandered far from the savage originals—many of the ceremonies are but modified forms of the older customs. The best man, for example (p. 295), at a modern wedding represents the friend who in early times helped to carry off the bride; and the honeymoon, instead of being a pleasure trip, as it is with us, was a rapid and hurried flight from the anger of an outraged father. The bride's cake, we are told, takes us back to the *convivatio* of the Romans, and the habit of giving presents to bridesmaids and groomsmen is a relic of the days when women were bought, as was the charivari of the early French settlers in the Mississippi valley.

The illustrations, of which there are twenty-four, are taken from photographs or from "sketches drawn by artists well acquainted with the scenes which they depict"; and it is a pleasure to be able to add that they are much above the average of such work. The Hindu bride and groom, a Norway bride in full dress, and a Quaker wedding are perhaps among the more striking of these pictures.

The Expositor's Greek Testament: The Synoptic Gospels. By Alexander Balmain Bruce, D.D., Professor of Apologetics, Free Church College, Glasgow. The Gospel of St. John, by Marcus Dods, D.D., Professor of Exegetical Theology, New College, Edinburgh. Dodd, Mead & Co. 1897.

This book, for one of its class, is unusually attractive. The page is broad, the margins are ample, the typography is neat and fairly accurate, the paper of a dead finish and non-bibulous, and the volume so light that, although comprising some nine hundred pages, it can be held conveniently in one hand. It is so bound, too, that it lies open at any desired page.

The favorable prepossession thus created is in some respects confirmed by the contents. To be sure, it is a step of doubtful expediency to model a commentary after one which proved successful half a century ago, viz., Alford's; for, as the resources, so the needs of Biblical students vary with every generation. Moreover, the comparison which the avowed imitation suggests is one that the present work can ill sustain. Its marginal equipment, both as respects the critical apparatus and the illustrative references, is conspicuously inferior to its predecessor's, while its exegetical rivalry will not be universally conceded. It does, however, excel the majority of similar works, whether of earlier or more recent date, in what may be called practical exposition. Its general comments, particularly on the first three Gospels, are unusually fresh, terse, apposite, suggestive, as the editor's previous publications prepare one to find them. An

evident endeavor has been made, and with good success, to emancipate the teachings of Jesus from the limitations of time and place, and to show how they may become working forces in the life of to-day.

The feature of the work which will excite surprise is the taking of the so-called *Textus Receptus* as its basis. This step is all the more astonishing because of Professor Bruce's pervasive endeavor to break the domination of the "theological figment of inerrancy." That he should adopt a Protean and erroneous text, which has little but tradition in its favor, and is confessed to be "incomparably inferior" to recent attempted reproductions of the original, is inexplicable. The impression which this procedure gives of the present state of New Testament scholarship in Scotland is anything but complimentary. Probably nowhere else in Protestant Christendom would the perpetration of such an anachronism in a work of like pretensions with the present have been thought of. The editor's justifiable hesitancy about constructing a text ought not to have deterred him from at least adopting either that in which the leading critics concur, rendered accessible as it has been by Dr. Weymouth, or that which received the approval of the well-nigh two-score scholars of both continents who prepared the late revision of the English version. Congruously enough with this unintelligent conservatism we are treated to an account of the history of the printed text in which even the dates of the editions of Tischendorf and Tregelles are inaccurately given, and which betrays no sign that the labors of Griesbach, the editor who published a graded estimate of rival readings, in the light of the evidence available in his day, with a minuteness attempted by no other editor before or since, have ever been heard of. The comments made in the course of the work upon the standing textual problems are generally discreet; but the running citation of authorities, by reason of its meagreness, and its almost complete neglect of the early versions and fathers, amounts to little more than an ornamental fringe.

In the realm of strict exegesis Prof. Bruce's aim is not quite intelligible, nor are his results always sound. He does not shrink from quoting Greek and Latin authors without translating them, and on philological points is more likely to refer to Klotz, Lobeck, Hermann, Büchlein, Passow, than to Winer or Buttmann or Liddell and Scott, although the latter authors may be no less explicit, and are ten times as accessible to the average student. Viteau's works on N. T. Grammar and Blass's seem to be unknown to him; but due recognition is given to Goodwin and to Burton's 'N. T. Moods and Tenses.' In his occasional attempts to handle philological niceties, he sometimes burns his fingers: for example, "ἀγαλλίω is from ἀγαρ and ἀλλομαι, to leap much" (p. 100). "ἀναιδέα, Matt. xiii. 24, is an aorist used proleptically for the fut., as in I. Cor. vii. 28"; "ἀνάντης = a chance or stealthy meeting; ἀνάντης, an open, designed meeting" (p. 147); "ὁν recitative. . . introduces a suggested question: Why?" (Mk. ix. 28). His mode of dealing with delicate questions is illustrated in the Lord's prayer, where of the rendering "the evil one" he says, "The probability is in favor of the masculine. . . but the change in the Revision is unfortunate." In reference to the story of the Gadarene demoniac he says, "The demoniac is an insane man; our Lord's

'Go,' in response to his request to enter into the swine, is a misunderstood 'Begone'"; "there was doubtless a coincidence of the cure with the catastrophe"; "the number of the swine was possibly an exaggerated estimate." Of the various interpretations proposed for Matt. xxvi., 50, that adopted in the Revision, "Do that for which thou art come," is pronounced "the least satisfactory"; indeed, scant deference is paid to the Revised Version even in other cases (Mark vii. 19, for example) where it was mainly instrumental in introducing the translation now generally accepted. In several instances conflicting interpretations are introduced interrogatively and the reader is left to his own conclusions, a procedure recalling the famous exegete of the story who looked difficulties full in the face and passed on.

The desire of the author, evident alike in the Introduction and in the notes, to bring his work "up to date" in matters of criticism has made him somewhat unduly hospitable to theories which, if the future may be prognosticated from the past, are likely to prove ephemeral, and hence to give before long an antiquated cast to his work besides blurring somewhat at present the distinctness of its interpretations. The problem of the relation of our first three Gospels to one another through their underlying source or sources is one of the most delicate in literary criticism. But to solve it is the legitimate task of the critic, and not the prime business of the exegete. The latter's duty is to set forth the meaning which the given writer intended, or was originally understood, to convey by his language. To turn aside from that language to the consideration of conjectures about its origin, or its possible relation to similar utterances in other compositions, often tempts the interpreter to evade rather than discharge the task before him, and tends to confuse rather than enlighten his reader.

Prof. Dods, who deals with the Fourth Gospel, is largely exempted by the nature of the case from the temptation to blend criticism and exegesis. His preliminary account of the Gospel is fair and clear, although, like nearly all his predecessors, he fails to treat adequately of its internal characteristics in their relation to its genuineness. His exposition is carefully studied and sober, but lacks the pithy and condensed expression which gives freshness and movement to his associate's work. The latter is more helpful to the preacher, the former more valuable to the interpreter; but neither makes an indispensable addition to the apparatus of the thoroughly educated minister.

An Introduction to American Literature. By Henry S. Pancoast. Henry Holt & Co. 1898. 16mo, xiv, and 393 pp.

American Literature. By Katharine Lee Bates, Wellesley College. The Macmillan Co. 1898. 12mo, x., 325, and 10 pp.

Mr. Pancoast's is quite the best brief manual of his subject that we know—even better, for its humbler purpose, than the companion volume on English literature. National traits are well brought out without neglecting organic connections with the mother country. Forces and movements are as well handled as personalities, the influence of writers hardly less than their individuality. The book is patriotic without the scream of the eagle. While generally free from sectional prejudice, Mr. Pancoast (a Pennsylvanian) has in a few cases unduly emphasized

writers of the Middle States. Certainly we should not include among them Bryant, whose formative period was passed in Massachusetts, and whose poetry derives its local color from Hampshire County. Elsewhere New Englanders will find much to be grateful for. Mr. Pancoast is cordial to the South—thoroughly appreciative of Lanier and just to Poe. Slavery is not suggested as a trammel on the literature of the Old South, but the author is duly hopeful for the New South, with its rich and individual promise.

Miss Bates's book is far from satisfactory. Not to enumerate her many errors of fact, we may remark that her style is so allusive that even where she is correct she will often fail to give correct ideas to those not already informed. There are fatal mistakes of perspective. Edward Bellamy and H. W. Mable are mentioned in a book that does no kind of justice to Hawthorne. The last chapter, that on fiction, is quite the worst of all, and may suffer from haste in writing as well as insufficient study. There are rather unnecessary incursions into fields outside of literature, such as politics, music, and sociology, which exhibit blunders of almost the first magnitude. We intend to be candid, not cruel. Miss Bates has simply undertaken a task beyond her attainments. She has literary skill worthy of a better book. She is not often in bad taste, has humor, and says good things about life and books. One may frequently note a feminine charm in the insight that springs from affection. And here is a true saying: "In Jonathan Edwards and Benjamin Franklin, the two world-redeeming forces of spiritual aspiration and practical benevolence come into the sharpest contrast that our literature affords." The volume is attractively got up, and is illustrated with a fine collection of portraits. Both books are indexed.

The Sun's Place in Nature. By Sir Norman Lockyer. Macmillan. 1897. Pp. 360.

So far as form and style go, Mr. Lockyer writes well on every subject on which he employs his pen. Clearness is apparent, and vigor makes itself felt on all his pages. He has also done work that has given him a high place in the scientific world. And yet, with this double advantage, it is impossible to recommend his works, either to the student or to the general reader, as sources of well-digested and accurate knowledge of the subjects of which they treat. One of the most important canons of science warns the observer and investigator, in entering upon any difficult work, to guard against any preconception of what he is going to see or what conclusion he is going to reach. Another warns him against hasty generalizations. The best scientific workers of the day are so averse to setting forth theories in advance of having completed a sound basis for them, that they are quite content to let men of less reputation win the doubtful glory of having been the first to devise an explanation of some new fact. These canons Mr. Lockyer habitually violates. In making observations he is too much under the influence of preconceived theories to permit of confidence in his work until after it has been confirmed by others.

Eight years ago Mr. Lockyer propounded his "meteoritic hypothesis," that comets and nebulae are formed of loose collections of countless small bodies, like meteorites, which are

constantly colliding with each other, and thus, by "striking fire," give off the light by which we see them. Two streams of such bodies may come into collision, and then we see a new star. There is probably not a competent authority in the world who maintains this theory to be probable; even its possibility is yet to be proved, yet Mr. Lockyer continues to write of it as if it had a prima-facie case in its favor, and makes it the basis of many of his explanations of celestial phenomena.

The immediate occasion of the present work seems to have been the discovery within the past three or four years of several new elements, notably argon and helium. The latter was inferred to exist in the sun, but was first found on the earth in the rare Norwegian mineral *cleveite*. The characteristic of the work, as of others by the same author, is the predominance of argument. An immense array of facts are marshalled with great ability, but they are set forth rather to form the basis of argument than to group them into an orderly body of knowledge. In consequence, it is impossible to make an intelligible summary of what the book contains, or what the reader may gather by its perusal, beyond the obvious fact that the author is still an adherent of the meteoritic hypothesis. The latter is mentioned or assumed in some form at every step, its truth being taken for granted, and its consequences traced out as if it were an accepted principle. The title of the book seems somewhat misleading. Only on the last page of the book have we been able to find anything about the sun's place in nature; and the one sentence that contains the statement has the air of being put in to justify the title.

The Grand Tactics of Chess. By Franklin K. Young. Boston: Roberts Bros. 1893.

It has been said of a recent history of Napoleon that, whatever the reader may think of the writer's opinions, he must admit that his illustrations are beyond reproach. And so Mr. Young's readers may thank him for a multitude of diagrams, which in many cases elucidate an otherwise incomprehensible text. Chess is so complex a game that it is the first duty of a writer on the subject to follow the excellent advice given by the late Master of Balliol College—"not to write anything that is not perfectly intelligible and which cannot be expressed in words without symbols." From this point of view, what can be said of the following sentence, which is taken at random, and is neither better nor worse than hundreds of others in the book? "White occupies the logistic horizon, thus opening communication with the kindred hypothetical force, and enabling a portion of the latter to enter the topographical zone and effect a junction with the kindred determinate force, the united forces being the greater force as compared with the adverse determinate force." To the average chess-player this statement is almost as puzzling as elementary education to a Tammany Mayor. It may be that in some of his other writings Mr. Young has given a vocabulary of this new language, but he can hardly expect his readers to undertake such preliminary training without protest. What makes his peculiarities particularly annoying is the fact that he is really a fine player, and that his theories, as far as they can be gleaned from diagrams, are both sound and useful. We can only hope that he may find it to his advantage to descend to the vernacular.

BOOKS OF THE WEEK.

Arnold, Sarah L., and Gilbert, Charles B. A Reader for Fifth Grades. Boston: Silver, Burdett & Co.
Baedeker, Karl. Egypt Handbook for Travellers. 4th ed. Leipzig: Karl Baedeker; New York: Scribners. \$4.50.
Brailsford, H. N. The Broom of the War God. Appletons.
Carlyle, Thomas. Frederick the Great. Vols. III. and IV. (Centenary Edition.) Scribners. \$2.50.
D'Annunzio, Gabriele. The Maidens of the Rocks. G. H. Richmond & Son. \$1.50.
Day, Lewis F. Windows: A Book about Stained and Painted Glass. London: B. T. Batsford; New York: Scribners. \$1.50.

The Nation.

NEW YORK, THURSDAY, MARCH 17, 1898.

The Week.

The framers of the Constitution dreaded a powerful executive. They had themselves suffered, as their ancestors had suffered before them, from the tyranny of the King. They remembered how Parliament, over and over again, had come to the defence of popular liberty against the despotism of English monarchs. They feared that a strong President might overthrow the liberties of the republic which they were founding. They believed that Congress alone must have the power to declare war, because, as Story puts it, "the chief magistrate ought not to be clothed with a power so summary, and at the same time so full of dangers to the public interest and the public safety"; and that specific appropriations should be made by Congress, because, to quote Story again, "if it were otherwise, the executive would possess an unbounded power over the public purse of the nation." We have changed all this, and the unquestioned grant of fifty millions by Congress to the President, to be expended at his discretion, is only the final embodiment of a tendency which has long been plain to every observer. The American people no longer fear the executive, and they no longer trust the legislative body. This is equally true in city, state, and nation. In the present grave crisis we should halt the adjournment of the war-making branch of the Government, and gladly intrust the sole control of the controversy with Spain to the President, well knowing that he might, if he chose, take a course which would precipitate war.

Spain's alleged bankruptcy, as a reason why she will never think of fighting a nation able to vote \$50,000,000 in one lavish lump, is no new consideration. It was urged in 1875, when we were talking of armed intervention in Cuba, and Caleb Cushing, our Minister at Madrid, wrote a letter of warning to Secretary Fish on the subject. Spain's finances, he admitted, were in a bad way, but it would never do for the United States to "confide in a deficiency of financial resources standing in the way, if Spain be hard pushed, and stirred up to make sacrifices in case of a war with the United States." In the first place, she would find considerable resources to draw upon in a moment of desperation. There was really much wealth in the country which would come forward in case of war. The Spaniards were "a people preëminently sober in food and drink," and hence their armies can be "contentedly sup-

ported" very cheaply, as the Duke of Wellington observed. Moreover, it is by no means true that war cannot be carried on by a country in financial difficulties. Mr. Cushing wrote (and his words are just as pat to-day):

"The finances of Spain are not in a much worse condition than they were in the time of Charles V. and his successors of the Austrian dynasty. Great loans were rarer then than now. Spain relied much on wealthy Jews for anticipations, although Jews and Gentiles, in the matter of money-lending, incurred hazards quite in proportion to the profits, as illustrated in the hardships of the Jews in Spain, and the case of Jacques Cœur in France. In truth, the Fuggers of Augsburg are among the few houses of that class which remain to this day. Hence the terrible financial straits which the Philipps—II., III., and IV.—were constantly suffering in Spain. Nevertheless, they sustained great wars all over the world."

One of the inevitable consequences of war, or even of war talk, is to postpone any and all attempts to reform the currency. We were getting into a hopeful state before the *Maine* explosion took place. A sub-committee of the committee on banking and currency had been appointed to prepare a plan, and there was every prospect of an early report. What prospect is there of the consideration of that or any other domestic reform in the midst of the passions that accompany war? The business of killing the enemy and of burying our own dead and tending our own wounded will supersede everything else. So far from reforming the currency, we shall deteriorate it from day to day. It took us fourteen years to get back to specie payments after the civil war. Yet one of the most probable consequences of a war now would be a fresh suspension, and a strong political party opposed to resumption at any time, on any terms, and in favor of the lowest scale of depreciation possible. The admirable work of the Indianapolis convention will be submerged. What we have learned by experience in a financial way (and we certainly have learned some valuable lessons since the panic of 1893) will be forgotten. Heaven only knows when we shall be sufficiently composed again to resume rational discussion of financial questions, or what kind of ideas will be dominant after a war, especially if it be a war undertaken to prevent the wicked Democrats from carrying the next Congress and upsetting the gold standard.

Since the Senate committee on commerce, by a unanimous vote, made an unfavorable report upon the outrageous nomination by President McKinley of a most disreputable negro politician for Naval Officer at New Orleans, the members of the upper branch show a growing disposition to resume the exercise of judgment upon the appointments pro-

posed by the President. On Thursday a Pennsylvanian was rejected as Receiver of Public Moneys in Oklahoma, and a Texan as Indian Agent in Arizona, on the ground that such nominations violate the principle to which both parties are committed by their last national platforms, that appointments to Federal offices in the Territories should be made from residents. This action is the more notable because last year the Senate consented to repeated violations of this principle by the President, in one case to provide a place for a relative of Mr. McKinley.

The Republican city convention in Des Moines, week before last, adopted a resolution favoring the adoption of a civil-service system for the city based on merit and fitness, "believing it to be desirable in itself, and indispensable to the best results of municipal ownership of public franchises," which the platform also favored; and requesting the Senator and Representatives from Des Moines to favor the enactment by the Legislature of a general municipal civil-service law. The reform measure introduced in the Ohio Legislature proposes that the merit system may be introduced in any city if the voters shall declare in favor of it upon the submission of the question. The *Cleveland Leader* declares its firm conviction that, if the question of inaugurating this system were submitted to the voters of Cleveland, the proposition would carry by an overwhelming majority, and it also believes that a large majority of the people living in the cities of Ohio would approve the passage by the Legislature of the pending bill. All signs indicate that the reform is steadily gaining ground all over the country, through the public's growing appreciation of its great advantages over the spoils system.

Mr. John M. Good, who was elected Mayor of Springfield, Ohio, last spring, has been ousted from his office on a verdict by the Circuit Court that he was guilty of violating the corrupt-practices law of the State. This is the first decision of the kind, we believe, that has been made under any of the dozen or more corrupt-practices laws which we have in this country, although it is notorious that most of these are violated, more or less flagrantly, in every election. Mr. Good was elected as a Democrat by a plurality of 1,100. Under the law, which is known as the Garfield law, he was permitted to expend only \$144.50, the amount of the expenditure being regulated by the size of the constituency. Not only was it proved in court that his expenditures had exceeded the lawful limit, but in its verdict the court said

that his sworn return of expenses was wilfully false in every particular, and that all the expenses named were for illegal purposes. Furthermore, it was shown that he had made promises to appoint specified persons to office, which was also an illegal act under the law, sufficient of itself to deprive him of his office. There is great astonishment in party circles in Ohio over this verdict. Mr. Good has been performing the duties of Mayor for nearly a year, and there seems to have been little expectation that the court would decide against him. Suit was brought by the President of a Trades Assembly, who was moved to do so through failure of Mr. Good to fulfil a pre-election promise.

The most important aspect of the incident is its notification to all politicians throughout the State that a corrupt-practices law is capable of being enforced as rigorously as any other law. This was a lesson which it was very hard for politicians to learn about civil-service laws, which for years they regarded as play or "fool" laws, passed only to quiet reformers, and not to be taken seriously or obeyed literally. The Garfield corrupt-practices law is one of the most recent statutes of the kind that we have, having been enacted in 1896. It was brought before the Supreme Court recently, on a charge of unconstitutionality, but was upheld as constitutional. It is a fairly good law, but is less stringent in some respects than similar laws in other States, notably those of Missouri, California, and Minnesota. Yet we doubt if it has been so openly violated as these laws have been in nearly every election held since they were put on the statute-books. The California law especially has been treated with open contempt by many candidates, who have filed burlesque reports under it, yet there has been no effort made to enforce its provisions. Under the Ohio law, any elector may file with the Attorney-General charges of violation against a candidate, and the Attorney-General is directed to bring an action, but the elector must accompany his charges with a bond of \$1,000. In case the Attorney-General fails to act, the elector may bring suit himself. The burden thus placed upon the elector is a heavy one, and, unless he is animated by unusual zeal in the public interest, or by unusual personal animosity, he is not likely to undertake the task. If we could have in every State which possesses such a law an association or associations of men organized for the express purpose of seeing to it that all violators are brought to justice, there would soon be a change of attitude by the politicians.

Judge Woodward, who presided over the recent trial at Wilkes-Barre, Pa., of

the Sheriff and his deputies who fired upon the mob of riotous strikers at Latimer last year, seems to be a man of the same type as Judge Gary, before whom the Chicago anarchists were brought. It required both physical and moral courage in each case to insist that justice should be done when threats of actual violence were made in case of conviction, and it required also the judicial temper in its best development to make such rulings and deliver such a charge to the jury as should convince all fair-minded men that impartiality held absolute sway on the bench. Judge Woodward met all of these tests as well as Judge Gary. Nor are these exceptional cases, save for the intense interest felt in the trials. Our judiciary, as a whole, has well maintained its ancient reputation throughout the period in which labor troubles have subjected the bench to new tests of courage, ability, and fairness. So long as we can count upon a Gary or a Woodward in any emergency, we may retain unimpaired confidence in our courts.

A revolt of the right sort against Quayism in Pennsylvania has at last started. The movement to oppose the boss through the candidacy of a man who supported him only a few years ago could not arouse the spirit and enthusiasm which must be evoked in order to make the fight against Quay either threatening or inspiring. The leader in such a contest must be a man who has always been the outspoken opponent of bossism. Such a man is the Rev. Dr. Swallow, a plain-spoken and courageous clergyman, who is thoroughly informed as to the corruption of Quay rule, and who is not afraid to tell what he thinks about it. Dr. Swallow ran for State Treasurer last year as the candidate of the Prohibitionists, and gave the politicians of all parties a tremendous surprise by polling nearly 120,000 votes, and carrying about a dozen counties, including the one which contains the State capital. As the Prohibition vote the year before had been less than 20,000, it was clear that about 100,000 men had supported Dr. Swallow without any reference to his views on the liquor question, simply as a protest against boss rule. Some public-spirited citizens of Philadelphia, who were much impressed by his campaign last year, propose to put Dr. Swallow in the field this year as an independent candidate for Governor. Among the leaders in this movement are Philip C. Garrett (chairman of the old Committee of One Hundred), Archdeacon Cyrus T. Brady, and Mr. Herbert Welsh, while many other prominent citizens have already pledged their support to it. Dr. Swallow will stand, and his campaign will be watched with the greatest interest and the warmest sympathy by all friends of good government throughout the country.

The Populist Governor of Kansas has given out an address "going for" the Supreme Court of the United States, and it is announced that the pronouncement has the approval of the Populist Chief Justice of the State Supreme Court and of other prominent Populists. Its character may be sampled from the declaration that the recent decision of the highest judicial tribunal in the Nebraska railroad case "is an unclean victory in every aspect of the case, showing that, no matter how carefully the robes of justice are folded about the personnel of the Supreme Court, these robes can no longer conceal the cloven hoof of official malfeasance and usurpation." Gov. Leedy has decided to call a special session of the Kansas Populist Legislature to pass a maximum-rate bill of his own, which the Supreme Court cannot set aside without reversing its decision in the Nebraska case; and he serves notice that, "if the Court still pursues the corrupt and rotten practice that it has heretofore, by changing its decisions to suit the shifting interests of the railroad corporations, the remedy will be with the people in their dealings with the courts, or in building railroads of their own." The Republicans of Kansas will welcome this Populist plan of campaign. Leedy and his administration are already much discredited, and public sentiment has shown itself so much opposed to the extra-session scheme that the party must inevitably suffer from the unnecessary assembling of the Legislature.

Gov. Black is succeeding beautifully in his plans for the suppression of the inquiry as to the manner in which Superintendent Aldridge has spent \$9,000,000 in improving the canals. Over two months have passed and a beginning has not been made. One month was consumed in convincing the Legislature that the inquiry should be taken out of its hands and placed in those of the Governor. The Governor has been empowered for a month to select a commission to do the work. He has asked the Chamber of Commerce to select some persons to go on the commission, and it has done so. Still, no commission has been appointed. It is discovered now that the bill, drawn to meet the Governor's personal wishes in the matter, requires that the members of the commission shall serve without pay, and provides only \$10,000 for all expenses incurred in the inquiry. Under these unfavorable conditions, the Governor is said to be meeting with difficulty in finding men who are willing to go on the commission, and he is deeply pained by this fact. When it is borne in mind that the commission will be without power to compel the attendance of witnesses, or in other ways to secure valuable testimony, it is not strange that nobody of consequence cares to go upon it. Something

of this kind was foreseen when the Governor's plan was proposed, but he had it "jammed through" just the same, and the outcome vindicates his perspicacity. The inquiry is safely side-tracked till after election, and that was the main object to be accomplished.

The members of our Municipal Assembly from the Boroughs of Brooklyn, Queens, and Richmond are in a very enviable position as regards the use of city money for the Birth Celebration. The Mayor is in favor of an appropriation of \$50,000 as a starter for the celebration, and a resolution recommending it has been presented in both houses. Under the charter, no money can be expended in this way except "by the votes of four-fifths of all members elected to each house." This places a veto power in the hands of one more than a fifth of the members in each house, or six in the Council and thirteen in the Board of Aldermen. Brooklyn, Queens, and Richmond have thirteen members of the Council and twenty-four members of the Board of Aldermen. They have ample power, therefore, to hold up the appropriation indefinitely, and this they are determined to do. The Mayor has been very rigid in enforcing economy upon these boards, and has refused to allow them what they regard as adequate funds for setting their borough machinery in operation. Their turn has come now. They say that if economy is a good thing, the more of it the better, and that one man should not have a monopoly of indulgence in it. When the Mayor becomes convinced that there has been too much economy in the distribution of public money for the boroughs outside the old city limits, they will be able to take the view that it is not inconsistent with true economy to use \$50,000 or more of the public money for a Birth Celebration. Their position is a fine one, and we congratulate them heartily upon it. As a demonstration of the "home rule" possibilities of the new charter it is quite the most striking yet made.

Monday's heavy engagements of gold in Europe, for importation to the United States, bring the total imported or engaged within the past three weeks to \$21,000,000. This large and sudden importation, though doubtless emphasized by foreign purchases of our securities in the recent break of prices, is fundamentally a response to the money-market situation. The merchandise movement between this and foreign countries had, it is true, created a large credit balance in favor of the United States. But throughout last year, and during the first month of the present year, this balance was quite offset by the difference in discount rates between our own and foreign markets. During recent months,

in fact, the London rate for time loans had ruled actually above the New York rate. This situation made it both feasible and profitable for sterling bankers, instead of forwarding maturing bills to London for collection, to extend such bills through the use of funds raised in the New York money market. The result of this process was that, despite the large merchandise exports of last autumn, sterling exchange continued close to international parity, and the movement of gold was inconsiderable.

As it was the action of the money markets which made this situation possible, so it was the money markets which, three weeks ago, prevented its longer continuance. Active interior demand for money, in connection with the expanding trade exchanges of the West and South, foreshadowed a change in the New York money market more than a month ago. The recent uneasiness over the Cuban situation—causing, as such misgivings always do, a greater caution among the lending institutions—hastened and emphasized the coming change. The result was an abrupt advance in short-time money at New York from $3\frac{1}{2}$ to $4\frac{1}{2}$ or 5 per cent. Immediately, as will be inferred, the "holding-back" of sterling drafts became unprofitable. It was cheaper for foreign debtors on exchange to borrow in London than in New York, and for holders of unemployed capital there was a more remunerative field in the United States than in Great Britain. The fall in foreign exchange, and the consequent heavy remittances of foreign gold, were a logical result. Presumably, if the "war scare" subsides, it will be found that international balances and money market parities have been again restored. For by precisely this mechanical process just described European capital has supplied the needs of the local discount market while foreign borrowings in that market were reduced. The rate for loans in New York would, therefore, logically grow easier, even while the London rate was rising; a double movement which must render less and less profitable the further continuance of the drain from that market to the United States.

Sir William Harcourt's observation that England had no great trade interests at stake in countries where the people wear no clothes, goes far towards explaining the fact that English anxiety about affairs in China is so much greater than over occurrences in the Niger country. In Africa it is largely a question of securing strategic positions for the distant future; of making ready for colonists yet to be. But in China, opening now to the world in spite of herself, there already exists a vast market, and one which is capable of almost indefinite expansion. Capt. Younghusband's arti-

cle on Mantchuria in the last *Nineteenth Century* indicates the remarkable richness and promise of the province into which the Russians are now pushing their way. Here are the greatest forests of the best timber now left untouched on the earth's surface. Here are navigable rivers piercing the land in all directions; coal and mineral deposits; a soil well fitted for a varied agriculture; a hardy population numbering 20,000,000, in a province that might easily, Capt. Younghusband says, support 40,000,000. The imperilling of British trade, present and future, in such a region as this is a much more serious affair than a conflict over some wretched African outposts at Brussa. Yet the Russians are taking possession of Mantchuria with the slow push of fate. They already have nibbled away the land on the north; they already have possession of the chief seaports; by railroad building and the steady incursion of traders they make it clear that they mean ultimately to control everything. Who is to prevent them? China confesses herself unable to do it. Lord Salisbury, in broken health, is scarcely the man to challenge the Russian advance in Mantchuria. He is much more likely to propose, in the line of Mr. Curzon's guarded suggestion the other day, the seizure of other parts of Chinese territory as an offset to Russian predominance in the North.

The result of the latest referendum in Switzerland was the decision, made by an overwhelming vote on February 20, that all the railroads should be bought and managed by the Confederation. This was the more surprising as recent elections had all gone against centralized powers of government. A proposed Federal bank, a Federal monopoly of the match industry, larger control of the military by the general Government, had all been voted down. But the nationalization of the railroads went through with remarkable ease. The arguments which persuaded the voters seem not to have been based upon absolute reason. The question of buying the roads was skilfully mixed up with that of fixing the rates for freight and passengers. Every voter has dreamed of free transportation and frequent excursion trains, when once a benevolent Government got things in its own hands. Then there was the appeal to national pride. Were the free and independent Swissers going to let foreigners draw 6 per cent. on Swiss railroad bonds, and fix rates at their pleasure? No, said the indignant voters; we will buy the railroads of the foreigners, borrowing the money of them to do it, and making them take less than 6 per cent. on the loan, if they kindly will. And we will at once put down the rates, unless we have to keep them up in order to pay the interest on the money with which we buy the railroads.

THE GRANT OF FIFTY MILLIONS.

The country has now voted \$50,000,000 for national defence, but against what or whom must we defend ourselves? No man speaking with authority at Washington or anywhere else has said. We are absolutely in the dark as to who is going to attack us and why. Some of the Congressmen who have talked with the President may have been given to understand his reasons for wishing to put the country in a state of defence; but if so, they have not stated what those reasons are, nor has the President. Whatever favored Congressmen may know or suspect, whatever the President's advisers may keep locked in their breasts, the people as a whole have not one authentic word to guide them as to the policy of the Administration respecting Cuba, either in the past or in the future.

We will not say that this is a ridiculous or preposterous situation, but shall content ourselves with pointing out how unprecedented it is. It is safe to assert that no monarch or ministry could get from the merest semblance of a Parliament \$50,000,000 for war purposes without one lisp why it was needed and against whom. Mr. Cleveland, at the time of the Venezuelan upheaval, asked for only \$100,000, but even for that trifle he felt compelled to lay the whole correspondence before Congress. But there is a still closer precedent in the action of our Government at the time of the former Cuban rebellion and our threatened intervention. Secretary Fish sent a very important communication to Madrid on November 5, 1875. It did not lead to war, though it might easily have done so. It did lead to strained relations with Spain, and the rumors about the negotiations caused great uneasiness in Congress and throughout the country. Towards the end of January, 1876, Congress called upon the Secretary of State for the correspondence, and it was promptly laid before the House. If there was a reason for war or a danger of war, Congress then felt that it and the country were entitled to know it. Congress and the country seem content now to rest in entire ignorance.

The Cuban correspondence of Mr. Fish (Senate Doc. 213, 54th Cong., 1st Session) is interesting reading for other reasons. It shows how almost every phase of the present troubles was then met and peacefully disposed of. This is reassuring. Still more reassuring is it to find that President Grant took a definite position in November, which looked straight to war, and abandoned it in March, when by doing so peace could be promoted. On November 5, 1875, Mr. Fish wrote to Caleb Cushing, our Minister at Madrid, that the President had a "firm conviction" that "whatever might be the vicissitudes of the struggle, and whatever efforts might be put forth by the Spanish power in Cuba, no doubt could

be entertained that the final issue of the conflict would be to break the bonds which attached Cuba as a colony to Spain." But by March 1, 1876, President Grant had come to admit that "discovery and long occupation have made the island a possession of Spain, and the United States has no desire to disturb the relations which result therefrom." If a Grant could thus change front, may not even a McKinley waver?

There lives in honorable retirement in Princeton, N. J., a statesman whose fame, in spite of errors and defects, will, we believe, grow, and deservedly grow, for many generations. One of the most courageous and patriotic acts of his illustrious career was the issue of bonds, beginning with the contract of 1895, in order to procure money to save the national credit and ward off a business panic. It saved us from a genuine commercial catastrophe of the first order. He made a vain attempt to have these bonds made expressly payable in gold. For this transaction he was loaded with such abusive blackguardism as has seldom been heaped on a public man. Everything Republican orators and journals could do to make his loan a failure was done. Epithets of the grossest kind were poured on him. The illustrious Lodge joined the Populists and mining Senators in heaping vituperation on him. The contract under which the loan was made, Lodge, "the conscientiously equipped literary man," pronounced "on its face the blackest public contract ever made by the Government of the United States." The loan was a success, and gold came into the Treasury. When the Republican national convention met at St. Louis in 1896, its platform followed up the cue furnished by the Republican Congressmen. It said, speaking of Mr. Cleveland's administration:

"It has been a record of unparalleled incapacity, dishonor, and disaster. In administrative management it has ruthlessly sacrificed indispensable revenue, entailed an unceasing deficit, eked out ordinary current expenses with borrowed money, piled up the public debt by \$262,000,000 in time of peace, forced an adverse balance of trade, kept a perpetual menace hanging over the redemption fund, pawned American credit to alien syndicates, and reversed all the measures and results of successful Republican rule."

Well, if Mr. Cleveland had not borrowed that money, there would be none in the Treasury to-day except what has been received from the Pacific railroads. The vote of \$50,000,000 for national defence would have been a *brutum fulmen* unless the President had been authorized to borrow it by the sale of bonds. The silly boasting about it as "surplus" is purely mendacious. It is borrowed money left over from Mr. Cleveland's administration. It may be right and proper to use it, as it is being used, for purposes of national defence; it may be right and proper to give the President discretion in spending it, but it is wrong to lie about it. The *Tribune*

of Thursday published complacently the following extract from the *Daily Bond-buyer*:

"Nothing in all history, ancient or modern, can be regarded as a parallel to the vote of the United States Congress giving President McKinley authority to expend in his own discretion \$50,000,000 of the surplus gold in the United States Treasury for the national defence."

The rhodomontade of this needs no characterization; but it is also mendacious, and, by quoting it without comment, the *Tribune* makes itself a partner in the falsehood. There is no "surplus gold" in the Treasury. There is some borrowed gold in the Treasury. To call it "surplus" is a bald falsehood. One hundred times in history, both ancient and modern, rulers of states have been given borrowed money to use for military purposes, as our ruler has been.

On Tuesday of last week, Mr. Cannon of Illinois, chairman of the committee on appropriations, joined the ignoble herd of falsifiers and perverters as follows:

"Now, a word in conclusion. We have got the money in the Treasury to meet this appropriation if it is expended, and that, too, without resorting, in our opinion, to further taxation. Therefore, there is no coupling with this a proposition that would probably be made in most countries in the world under similar circumstances to levy additional taxes to meet the expenditure. I say again, we are satisfied that revenues to be yielded from present revenue laws will afford sufficient money to meet this expenditure and, in addition thereto, the ordinary expenditures of the government." [Applause.]

Almost every line of this statement contains an attempt to deceive. The suggestion that we have got this money in the Treasury, and, therefore, shall not need, if it is expended, to resort to "further taxation," is an undoubted *suggestio falsi*. First, Mr. Cannon tries to make it appear that this money is the product of taxation. It is not. It is the product of a loan made by Mr. Cleveland, as Mr. Cannon well knows. Second, he tries to make it appear that if other countries had this amount of borrowed money in the Treasury, they would not spend it, but would levy fresh taxes. This is untrue on its face. Third, he tries to make it appear that the present revenue law has produced, or will produce, this amount of surplus, when he knows well that the revenue has, since June 30, fallen short of ordinary expenditures by \$52,254,617. There is, therefore, a deficit, not a surplus, of that amount in the Treasury, and but for Mr. Cleveland's loan the Government would be now borrowing money, not only for national defence, but for ordinary expenses.

It is shocking to the moral sense that at such a moment, when we are all supposed to be more than usually impressed with a sense of public duty, when one of the most solemn problems which can arise in the life of a nation is pressing on us for solution, the leading men of a great party, and its leading journals, should fall to lying like clockwork about

the national finances. It is still worse that their lying should be that unusual, base kind which involves the slander and depreciation of a great citizen, whose silence in the presence of it all reflects far more credit on us than our readiness to hand over the money with which he has provided us to President McKinley without restriction. That we have among us one man who, after having done his duty and deserved well of the republic, can bear being lied about without a sign even of amusement, is worth more to us than half-a-dozen battle-ships.

AFTER INTERVENTION—WHAT?

The speeches exchanged by President McKinley and the new Spanish Minister on Saturday were brimful of peace on earth and good will towards men. Each pledged himself to do all in his power to promote the cordial relations existing between the two countries. Mr. McKinley was very impressive in declaring his intention to do so, and he was evidently sincere. It is to be noted, however, that while this exchange of courtesies was taking place, the stock market was "going all to pieces," and that the newspapers of Sunday morning, even those that are the least sensational in tone, published more than a full page of news items about preparations for war. Among these was an interview with Gen. Wesley Merritt, who professed his willingness to undertake the invasion of Cuba with 25,000 to 30,000 men.

This was an extraordinary outgiving from a high officer of the army, and would subject him to a severe reprimand under like circumstances in any country of Europe. It is in keeping, however, with our slap-dash way of doing the largest things, such as appropriating \$50,000,000 to be expended in the sole discretion of the President. Whether Gen. Merritt's idea of the size of the army needed for the successful invasion of Cuba is right or wrong, it raises the question what is to be accomplished by an invasion of Cuba. There are perhaps 100,000 Spanish troops in the island, the remainder of the 250,000 sent thither having succumbed to disease and the hardships of the service. It may be presumed that those who remain are acclimated and able to stand a good deal of pounding. Presuming that Gen. Merritt's 25,000 men would all escape the diseases of a tropical and malarious climate, and would dispose of the Spanish troops still there, what next?

There was a statement published in Havana the other day, signed by prominent citizens thereof, to the effect that 80 per cent. of the property of the island was owned by men who were not only opposed to the present rebellion, but opposed to autonomy also. This statement was published because the signers of it were opposed to Gen. Blau-

co's programme. They want the old system maintained, contrary to the declared wishes and purposes of Spain. Are we to put them down after we have disposed of the Spanish troops in the island? Supposing they should take arms to defend themselves against Gomez after the Spanish forces are wiped out or withdrawn. In the latter event there would be a republic in Cuba. All that prevents a republic in Cuba now is the Spanish authority. Remove that, and we have government by the majority, which is our ideal.

Even this simple thing has to be inaugurated and set going. In the case supposed, Gen. Merritt would be under the necessity of holding and administering in some fashion a territory 760 miles long—say, the distance from New York to Toledo—containing a population of 1,500,000, one-third being colored, and all unused to self-government, and the more intelligent part, as we have seen, opposed to that kind of government. In the event that we disestablish the present government we must put something in its place, and this must be done by elections. We must undertake in Cuba what we undertook in the South thirty-three years ago. It will be nothing short of reconstruction, but it will be more difficult than reconstruction in the Southern States was, because it must be imposed upon a people who do not speak our language, who do not think our ideas, and who will be sure to hate us if we try to coerce them. Add to these embarrassments the fact that the Cubans are Roman Catholics, while we are mostly Protestants, and we have as many incongruities as the British had originally in India. But there is this difference in the two cases. British rule in India in the first instance was the despotism of a private trading company, irresponsible to the last degree. We have nothing in our system of government which corresponds to it. We have no way of ruling a dependency except by the ballot. We should be obliged to impose upon Cuba, in the case supposed, what we actually imposed on the South after the civil war—that is, carpet-baggers, negro suffrage, and a chaos of institutions; and we should get our pay eventually in the addition to our Congress of two Senators and ten or twelve Representatives no better, but perhaps worse, than those whom the South gave us during the reconstruction period. If a local revolution or a Kuklux régime should follow, such events would be in accord with the course of Spanish-American republics down to the present day and with well-remembered events in our own history.

We have been told—indeed, we are told every day or two—that President McKinley is about to send in to Congress a number of consular reports about the condition of affairs in Cuba which will so powerfully stir the feel-

ings of our people that he will be compelled to intervene at once. If this be true, it is assuredly the part of wisdom not to send those reports to Congress at all, since the publication of them would not give us any rights, privileges, or powers that we do not now possess. We have been minding our own business until the present time, except so far as we have contributed to the relief of destitution in this island. If we are such a volatile people that we cannot bear to read tales of bloodshed and cruelty resulting from war in another country without rushing blindly to take part in it, then that is the best reason for keeping such exciting tales from the public ear. It is true that the Senate has called for these papers, if their production would not be incompatible with the public interests, but the President must judge whether such a communication is desirable at this time or not. If it is not desirable, the Senate resolution cannot excuse him for producing a state of feeling which may result in war. He should bear in mind, too, that a war which the conscience of the nation does not heartily support, a war which leaves a doubt in the mind of Christian men and women whether it is right for us to engage in it, is politically unwise and dangerous. The enthusiasm which the first smell of gunpowder creates will be a very feeble reliance unless it is sustained by the conviction of substantial citizens that we are following an imperative call to duty; that we have weighed the consequences, and that we have well considered what we are to do after we shall have successfully intervened in Cuba and assumed the responsibility of governing it.

"SUSPENSION OF JUDGMENT."

Capt. Sigabee of the *Maine*, in the first moments of excitement after the explosion, telegraphed to us all for a "suspension of judgment" about the causes of the tragedy. What he meant was simply that we should not form an opinion about these causes until we were in possession of all the knowable facts. No request could be more reasonable and human. But to make an examination of the tragedy with a view to forming a rational opinion about it, far from suspending our judgment, we ought to keep it in constant activity. Judgment means the faculty of the mind which discovers the relations between ideas and facts, or between different facts. Judgment is a constant collector and comparer of facts with other facts, or of facts with ideas. It is necessary almost at every moment of our existence. We need judgment in ordering our dinner, in crossing the crowded streets, or in buying a newspaper at the stand. A man without judgment is an imbecile, and a man who "suspends his judg-

ment" is a man who proposes to act like an imbecile.

There never has been a time in our history when the constant use of our judgment was more necessary than at this crisis. Those who have "suspended their judgment" during the last two or three weeks are either fools or knaves. In the first place, we have to use judgment, as we have said, in forming an opinion as to the cause of the explosion, and the first step to be taken for this purpose is the collection of facts and probabilities bearing on explosions on board men-of-war in general, and then on this explosion on board of this man-of-war in particular. The man who pays no attention to these facts or probabilities "suspends his judgment," and sinks to the level of the animal. An elephant feels a thorn in his foot; he looks up and sees a man near by; he concludes that it is the man who has pricked him, and, owing to the absence of judgment, rushes at him and kills him. A rascally newspaper man dislikes Spaniards, or wants a war to help to sell his paper, or is "short" of stocks and wants a fall, so "he suspends his judgment" and says the Spaniards blew up the *Maine*. If he finds the people do not believe him, he invents "proofs," and sells them at a cent a dozen. In other words, he pretends that his judgment is at work when he has really suspended it for purposes of his own, and is simply lying. In fact, "suspension of judgment," whenever there are any signs of war, takes place with us on a scale which is most alarming in a country in which public opinion is expressed through the newspapers. The ideal use of the press would be the giving of assistance to the public in the use of its judgment, by furnishing it with the facts and considerations necessary to make up its mind rationally—that is, under the laws of proof. The actual object of the Jingo press is to confuse the public mind by producing facts that are not facts and proofs that do not prove. So that a large portion of the "news" is very like raw meat for wild beasts. It makes them roar and lash their tails, and makes reason seem unnatural or ridiculous.

It must be said, however, that it is not only the Jingo newspapers which are to blame in this matter. Congress is nearly as much given to suspension of judgment about war as the press. When any President proposes a war to Congress, it hardly ever asks, "Why should we go to war? What has happened to make it desirable? Can we not get along without it? It will involve great loss of life and destruction of property." The Constitution intends that it should ask these questions, but it never asks them. There is no more discussion of war in the Legislature than in an Ojibway council. Judgment is instantly "suspended," and it says to the President,

"Here is \$50,000,000. Kill as many men as you can with it, and destroy as much property. You can tell us why you did it when it is all over." If judgment remained active, the two houses would find out first why there had to be a war, and whether there was not another way to the same end. Then they would examine our means of offence and defence, the state of our armament by land and sea, the extent of the enemy's resources, and, having ascertained all this, would say to the President: "Yes, by the exercise of our judgment, we have discovered that our quarrel is just, and that by employing force we shall probably attain our end, and we see clearly that no other course is open to us. But we cannot suspend our judgment at your request. The Constitution forbids it, and so do religion and humanity."

One of the greatest differences, not only between men and animals, but between adults and children, is the possession of this power of judgment by men and its absence in beasts and boys. It is through judgment that men learn fear of consequences. It is owing to want of judgment that horses run away, cows get mired, elephants tear down fences, and boys leave home to become bandits. Of all the acts performed by a nation, going to war with another nation is the most solemn and far-reaching in its consequences. Currency bills, tariffs, immigration laws, force bills, interstate commerce laws, are all trifling in comparison. None of them has results which can for one moment be compared to the results of war—the moral, material, and financial results. And yet there is no national act which is determined on with so little judgment. You could to-day get twice as much consideration from Jingoese for the purchase of a railroad or the improvement of a harbor as for a proposal to kill thousands of Spaniards and burn their houses. Why this should be we do not pretend to know. The ordinary explanation of philosophers is, the survival of the combative instinct of primitive savagery; but why has this savage instinct survived in this one field of human activity and not in others? I get my living by spinning, or weaving, or digging, and not by hunting or fishing. I treat my wife with tenderness, and relieve her of all hard work, instead of beating her and smoking in the sun while she toils. I send my children to school and church, instead of training them to take scalps and burn houses. I put the old in refuges, instead of leaving them to perish by starvation. I sit by the hour listening to a man, to whom I pay a salary, advising me to forgive my enemies, to cultivate charity, to return good for evil, to visit the widows and the fatherless in their affliction. Why, then, do I occasionally rush out and, with loud yells, make as many widows and fatherless as I can, and urge any blackguard I meet to tell

me stories that will make me more bloodthirsty and unforgiving? We do not know. It is one of the great mysteries of the universe, including human nature.

THE MORALITY OF CROWDS.

A Frenchman, M. Le Bon, last year produced a book entitled the 'Psychology of Crowds,' which, though containing many extravagant generalizations, especially in the latter part, is well worth reading in connection with any study of the phenomenon which is now occupying so much of our attention, called "yellow journalism." As we see to-day, in spite of all the ridicule that has been lavished on the "yellow journals," in spite of the daily exposure of their lying, in spite of the general acknowledgment of the mischief they do, in spite of the general belief in the baseness and corruption and satanism of their proprietors, their circulation is apparently as large as ever. The Government and decent people are still obliged, as much as ever, to keep contradicting their "fake" stories and to keep reassuring the public against their alarms. There is a widespread belief that one of them is short of "stocks"; that another has, just as if he were the devil himself, laid a large wager that he will bring on a war within a certain period. None of these things seems to produce much, if any, effect. We made inquiries the other day, about their sales, of a newdealer in a small suburban village. He told us he sold 150 of the *yellowest*, 110 of the next *yellowest*, 10 of the most blackguardly and unscrupulous, only 2 of the *Tribune*, and 1 of the *Times*; this after the yellows had been notoriously lying and trying to bring on a war for over two weeks. There was probably hardly one of these purchasers who, if questioned individually, would not confess that he did not believe a word he read in his paper. Yet it would be found on further talk about Cuba and the war, and the duty of our nation, and the conduct of the Spaniards, that his opinions on all these subjects, or on nearly all, had acquired a distinctly yellow tinge. You would not come across, in any of them, any signs that he had been seeking light at any of the sources from which civilized and Christian men are usually supposed to ask guidance about either public or private affairs, under trying circumstances.

M. Le Bon has an explanation of this which is at least worth attention. He treats a "crowd" as something entirely different psychologically from the individuals composing it—with different morals, different standards of belief, different views of expediency, complete indifference to the laws, customs, and traditions even of their own civilization. Of course, at an earlier period every one was familiar with all these as characteristics of what is called a "mob."

But, according to M. Le Bon, a considerable number of them have been transferred to a portion of the vast masses of electors by whom every democratic country is now ruled. He argues against the way in which some writers have condemned the conduct of crowds under all circumstances. "The crowd," he says, "is often criminal, without doubt, but also it is often heroic. It is crowds that are most easily persuaded to give their lives for the triumph of an idea or belief, and that can be most easily roused into enthusiasm for glory or honor."

Le Bon defines a "crowd" as a body of persons animated by the same thoughts and desires, for reasons they cannot formulate, which as individuals they would probably largely ridicule or repudiate. Under this definition, we may fairly call the victims of the greenback "craze" or the silver "craze" a crowd. It will undoubtedly also cover the readers of the yellow journals, and the Jingo goes generally. All these persons desire war for reasons they cannot state, or which as individuals they would disown. War is, now that slavery and polygamy are gone, the last relic of a barbarous world. It remains, unhappily, owing to the weakness of human nature, the only mode, in the last resort, of deciding disputes between nations. Three hundred years ago or later, it occupied a higher place than this, for it was a favorite amusement of kings and nobles. "I have loved war too much," said Louis XIV. on his deathbed. Every king had his wars, as he had his chase, and the Lodges and Roosevelts of those days kept halberds and crossbows over their mantelpieces, ready to be taken down whenever the King called on them to help him to punish some "insult" or seize some territory. The education of young men was mainly military. Killing people was considered the only profession fit for a gentleman. The whole modern world was infected with the same disease. The Roman idea that the proper use of war was to subjugate and introduce a higher civilization, gave way to the mediæval one, that the proper use of war was to humiliate somebody and show your power. A long war was waged between Bologna and Modena about the possession of a wooden bucket, which Tassoni, an Italian poet, has burlesqued in a delightful poem. In fact, from the year 500 to the year 1800 war seems to have been considered the chief end of man.

Since 1800 better ideas have taken possession of the world. It is true, armaments are larger than ever, but every Power protests its dislike of war and its firm determination to use its force only for defensive purposes. But it is, of course, impossible to deny to a great nation the influence which comes from the possession of great strength. Every nation is entitled to profit, even materially, by the civic virtues, the courage,

foresight, prudence, skill, and political sagacity which have built it up, and we are far from alleging that a nation like the United States, or England, or Germany has not the right to keep "a mailed fist" ready to enforce, if necessary, its own ideas of law and justice. But the ideas it enforces should be those of law and justice, and the use of the "mailed fist" should be resorted to only when all else has been tried and failed. It should never be forgotten that war is and must always be a judgment in your own cause, or, in other words, on its face a violation of one of the first principles of morality. Therefore, the greater the Power, the greater should be the morality behind the Power. No killing or house-burning any more, except as a dreadful and last necessity. No fights between nations over trifles light as air, or over barbarous notions about the impalpable thing called "honor," any more than between duellists. The necessity of war should be plain and its issue reasonably certain.

If all this be true, it is easy to imagine the wonder with which civilized men saw, three or four years ago, the beginning in America, of all countries in the world, of the Jingo movement, which maintained that war was a means of moral discipline; that national character suffered for want of war; that love of war should be taught even to children in order to make war easy. For two whole years these Jingo hunters hunted poor Mr. Cleveland towards war; even chaplains prayed that legislators might have a real swashbuckler temper. Since his time this bellicose mood has been kept alive by the Cuban affair, but the military gospel was losing some of its absurdities until the *Maine* explosion took place and the yellow journals began to sit on the matter. The "craze" then passed one stage further, and Le Bon's "crowd" appeared on the scene in its fullest development.

A leading Western paper, the *Detroit Tribune*, lately published an article which King Clovis might have written, had he known how to write, advocating war for business reasons, and showing that war is profitable, if not too big—views distinctly belonging to the year 500, and an extraordinary mixture of economical ignorance and animal ferocity. In the phrase, "That there is profit in war could not be so widely believed if it were not true," there is an illustration of M. Le Bon's theory—so apt that we are sending it over to him for the next edition of his book. If we went to any one of the individuals composing this editor's "crowd" and said to him, "Your business, you say, is languid and the future uncertain. Now, if I can show you that it can be greatly improved by killing a few men and burning three or four inhabited houses, will you come and help me to do it?" he would probably eject us from his premises with indig-

nation. But when "the crowd" says it, he believes it must be true, and that it is a perfectly proper mode of improving the times. Every man of the crowd probably has a wife whom he loves and children that are the delight of his life. He sympathizes deeply with other husbands and fathers. If you proposed to him to work off his woollens or cottons by killing a few of them, he would be shocked. But when "the crowd" proposes it, he sallies out and makes all the widows and orphans he can, and gloats with his neighbors over the sorrow and destruction he causes.

A NEW CHARTER FOR BALTIMORE CITY.

BALTIMORE, March 11, 1898.

Like the earlier flat towns of provincial Maryland, Baltimore Town was designed essentially as a market-place and entrepôt, where local traffic could be carried on, imports be entered, exports be cleared, and public dues and taxes be paid. It was endowed with no exceptional political or civil privileges, and had virtually no organic life of its own. Not until 1796, sixty-seven years after its erection as a town, were corporate life and privileges conferred. During the greater part of this period, administration remained vested in a board of designated commissioners, holding permanent tenure and filling their own vacancies—practically, a standing committee of the General Assembly. At the close of the Revolutionary war, Baltimore Town had clearly outgrown its original administrative shell. A form of government devised for a port of entry and strained to satisfy the needs of a straggling village was manifestly inadequate for an incipient city. A measure of local self-consciousness had developed with the events of the war, and, after a series of unsuccessful attempts, Baltimore City was incorporated by an act of the General Assembly, on the last day of December, 1796. A supplementary statute of the following year made the act of incorporation perpetual.

For one hundred years, this original charter has remained the basis of the corporate government of Baltimore. Its practical significance has long been reduced to a minimum by the mass of amendatory legislation enacted by successive General Assemblies. But it has never been displaced by a second fundamental instrument. The Constitution of Maryland of 1867 incorporated certain important features of the existing city government, but expressly reserved to the General Assembly the right of subsequent legislative control. From time to time, the accumulation of amendatory legislation has become intolerable, and relief has been afforded by the codification and incorporation into the statute law of Maryland of all laws relating to Baltimore. It is the latest of such codifications (article 4, "City of Baltimore," of the Public Local Laws of Maryland, 1888), together with a very considerable number of supplementary statutes since enacted, that constitute the actual "charter" of Baltimore. It has been described by a distinguished jurist of this city as "an incongruous medley of constitutional provisions and statutes enacted at various times and often for merely temporary purposes." To this might be added the equally conservative statement that no city in the United States has labored for so long a period under

a more antiquated, cumbrous, and inadequate instrument of government.

Intelligent agitation for a thorough revision of the charter culminated, last November, in the passage of an ordinance authorizing the newly elected city executive, Mayor Malster, to appoint an unpaid commission of eight persons to draft a new charter for the city of Baltimore, to be submitted to the General Assembly for enactment into law at the current session. Mayor Malster at once appointed a model "New Charter Commission," incidentally arousing by the excellence of his selections widespread anticipation of a reform administration—a sentiment which has excited keen interest in the course of subsequent events. The personnel of the commission was as follows: Hon. William Pinkney Whyte, who has served acceptably as Mayor of Baltimore and as Governor of Maryland; Hon. Ferdinand C. LaTrobe, who enjoys the distinction of having been seven times elected to the mayoralty, and who is intimately acquainted with every phase of municipal development; Dr. Daniel C. Gilman, President of the Johns Hopkins University; Mr. Samuel D. Schmucker, and Mr. George R. Gaither, jr., skilled lawyers of the city; City Solicitor Thomas Ireland Elliott; City Councillor Thomas G. Hayes, and City Attorney Lewis Putzel. The commission was bi-partisan in composition, and at once commanded public confidence and respect. It is within bounds to state that embarrassment would be experienced in attempting to select eight other citizens of Baltimore as familiar with the defects of the local political framework, or better fitted to suggest measures of improvement. The commission organized promptly by electing ex-Gov. Whyte chairman, and appointing Mr. Frederick T. Dorton Secretary, and at once set to work. The time available for the completion of the work was little more than three months; but by intelligent division of labor, harmonious coöperation, and extraordinary industry and devotion, a new instrument has been drafted within that period and submitted to the General Assembly within the past week.

The new charter represents a conservative adaptation of accepted principles of municipal reform to local requirements and established usage. In very few respects has there been a complete or radical departure from the administrative forms to which the citizens of Baltimore have long been accustomed. On the other hand, recognized elements of municipal improvement have been intelligently incorporated, and the influence of recent municipal reconstruction in the United States, notably in New York city, has been decided. The most important principles which have consciously governed the commission in the preparation of the charter, are:

- (1.) Location of definite responsibility upon the Mayor and all public officials.
- (2.) Minority representation and concentration of administrative duties in departmental boards.
- (3.) Separation of municipal from State and federal elections.
- (4.) Appointment of experts in all departments requiring professional knowledge and skill.
- (5.) Municipal control of public franchises.
- (6.) Check upon municipal expenditure and indebtedness.
- (7.) Removal of the public-school system from all possible political influence.

(8.) Public supervision of the indigent sick and poor while subjects of municipal aid.

The charter retains the traditional corporate framework—a Mayor and a bicameral Council. The term of the Mayor is extended from two to four years, and his salary and necessary property qualifications are increased. The lower chamber, or "First Branch," of the Council remains constituted of one member from each of the twenty-four wards of the city; but the term has been extended from one to two years. The upper chamber, or "Second Branch," heretofore composed of one member elected for two years from every two contiguous wards, has undergone important modification. The city is now to be divided into four "Councilmanic Districts," from each of which two Councilmen are to be elected for four years, one-half of the entire body retiring every second year. The President of the Second Branch is made an independent official, with the same property qualifications as the Mayor and receiving a salary considerably larger than the Councilmen proper, and is elected at large for a term of four years. Ordinances require for passage the votes of a majority of the members of each branch and the approval of the Mayor.

Fundamental characteristics of the new instrument are the concentration of power in the hands of the Mayor, and the unification of related departments of the municipal service. To this end, all administrative branches of the city government are arranged into departments, and subdivided into subdepartments, the heads of which are appointed by the Mayor. Regard for local conservatism prevented the Commission from vesting the power of absolute appointment in the Mayor, but the right of confirmation is transferred from the joint convention of the two branches to the Second Branch of the Council. The Mayor can remove any of his appointees without cause within the first six months of their term of office; thereafter only by preferring charges and after trial. The heads of departments and subdepartments are given absolute power of appointing and removing subordinates. They are also given the privilege of the floor of the First Branch of the Council, with the right to participate in the discussion of matters relating to their respective departments.

The departments of municipal administration, as provided by the charter, are: Finance, Law, Public Safety, Public Improvements, Public Parks and Squares, Education, Charities and Corrections, Review and Assessments. Under these are logically arranged as subdepartments the essential branches of the municipal service. In control of the department is a board, composed of the heads of its subdepartments. Thus, the Department of Public Improvements comprises four subdepartments—the City Engineer, the Water Board, the Harbor Board, and the Inspector of Buildings; while the Board of Public Improvements consists of the City Engineer, the President of the Water Board, the President of the Harbor Board, and the Inspector of Public Buildings. The subdepartments represent, with one or two noteworthy exceptions, existing municipal departments. Complexity has been reduced, and contradictions and duplications eliminated, but the endeavor of the Commission has throughout been to effect maximum improvement with a minimum wrench.

The nearest approach to radical change has been made in the financial department of

the city government. The municipal budget has heretofore been prepared and submitted to the City Council by a joint "Ways and Means Committee" of the two branches. The new charter provides for the creation of an entirely new Board of Estimates, composed of the Mayor, the City Solicitor, representing the Department of Law; the Comptroller, representing the Department of Finance; the President of the Second Branch of the City Council, representing the legislative department; and the City Engineer, representing the Department of Public Improvements. The Board of Estimates is required to prepare and submit to the City Council in October of each year a precise estimate of the necessary appropriations for the next ensuing fiscal year, arranged in three distinct lists: (1) departmental estimates, (2) estimates for annual appropriations, (3) estimates for new improvements. The City Council may reduce, but not increase, the several amounts fixed by the Board, and may not insert any new item. In the same manner the Board of Estimates is required to submit to the City Council an estimate of the annual tax levy, which may be increased but not reduced by that body. Any ordinance authorizing a public improvement to exceed in cost the sum of two thousand dollars must be submitted, after its first reading in either branch of the Council, to the Board of Public Improvements, for report as to its desirability, and to the Board of Estimates, for report as to the ability of the municipal treasury to meet the expenditure, and no ordinance can become valid until both of these reports have been received. The danger of floating indebtedness is reduced by the provision that if municipal revenue is insufficient in any year, there must be a *pro-rata* reduction in all departments; any surplus accruing must be credited to the general sinking fund. A supplementary bill appended to the charter limits the bonded indebtedness of Baltimore to 7 per cent. of its taxable basis.

The administration of the public-school system also undergoes wholesome reconstruction. The existing board of twenty-two Commissioners (one from each ward), appointed by the City Council, is replaced by a smaller body of nine Commissioners, appointed at large by the Mayor for a term of six years, one-third of the entire body retiring every two years. This board in turn appoints a Superintendent of Public Instruction, six or more Assistant Superintendents, and a number of unpaid school visitors.

In placing the municipal elections in May, distinct from the autumn State and federal elections; in providing expert service in departments wherein technical and professional skill is necessary; and in exercising municipal control over municipal franchises, the Commission has incorporated accepted principles of municipal reform. The provisions concerning franchises limit the grant of specific rights in or relating to public property to a term of twenty-five years, subject upon revaluation to renewals for a not longer period. In such grants the municipality may reserve the right to assume control of the plant, with or without further compensation, upon the termination of the franchise period.

Viewed in its entirety, the proposed charter is an admirable instrument, eminently creditable to the intelligence and conservatism of its authors. If enacted in its present form, it may not effect immediate reform—

tion in local administration, but it can hardly fail, as the Commission modestly claim, to "remedy many of the faults of the old law, and to provide such a law as will materially contribute to the future development and prosperity of the great metropolis of Maryland." The measure is now pending before the General Assembly in Annapolis. Intelligent sentiment is outspoken in its advocacy, and at this time of writing scarcely a voice has been lifted in opposition. A codification of existing local laws has been submitted for reenactment in conjunction with the new charter. The whole forms a volume of 350 printed octavo pages, and, with little more than a fortnight of the legislative session remaining, the mere bulk of the proposed legislation will perhaps serve as its most effective safeguard against mutilation. H.

CHARAVAY'S LAFAYETTE.—I.

PARIS, February 23, 1898.

There has been in existence for a few years a Society for the History of the French Revolution, which is very active, having already published eighteen octavo volumes on various topics. It may be said, in a sense, that everything is interesting in history, but some of these volumes have more value than others. M. Aulard, who lectures at the Collège de France on the subject of the French Revolution, which he has made his special subject, is one of the chief contributors. He has published the 'Secret Memoirs of Fournier l'Américain,' which might perhaps, be as well forgotten, as this Fournier was no better than a crazy fanatic; the 'Register of the Deliberations of the Provisional Consulate'; the 'Account of the Sitzings of the Deputies of the Communes, from the 5th of May, 1789, to the following 12th of June'; 'The State of France in the Year VIII. and the Year IX.' We find among these volumes some valuable documents, such as the 'Members of the Convention,' the 'Regicides,' 'Science during the Terror,' the 'Constituents,' the 'Members of the Imperial Nobility'—the Empire being evidently considered as a sequel of the Revolution.

A new volume has just appeared which is a complete biography of Gen. Lafayette. It has no less than 653 pages, and contains many illustrations, from engravings of the time. The author is not a writer, in the ordinary sense of the word; he makes no pretension to style, and, if he did, it would be unfounded. It is enough that his facts are exact. Exactitude, indeed, may be said to be his mission and his trade, for he entitles himself archivist-palaeographer. M. Étienne Charavay is very well known as a great dealer in autographs and as an expert in graphology. (He was one of the experts in the Dreyfus trial.) His ambition grew among the autographs and the manuscripts by which he is constantly surrounded, and he thought of using, himself, some of the documents which fell into his hands. In a literary sense, his biography of General Lafayette may be said, without too much severity, to be very indifferent; as an historical document it is almost irreproachable, and I believe that very few errors of dates or of facts can be found in this account of a most eventful life, which extended from 1757 to 1834, and was involved in the most important events in two hemispheres.

The chief documents which have been used by M. Charavay are the 'Mémoires de ma-

main,' written by Lafayette himself, and published in 1837, by his son, with the letters which accompany them, a document of the first order; the administrative and historical archives of the Ministry of War, where is found the correspondence of Lafayette during the first campaign of 1792; M. Doniol's publication, 'History of the Participation of France in the Establishment of the United States of America,' a work in seven volumes which gives all there is to be found on the question in the archives of the Foreign Office and the Navy. M. Charavay has used also the work of Mr. Charlemagne Tower entitled 'The Marquis de Lafayette in the American Revolution,' the national archives, and various fragmentary publications. With all the respect that must be shown to the historical school, which pretends to be scientific and chiefly documentary, we have often to regret that our modern historians are somewhat too dry, too much lost in details, too much wanting in general ideas; they are photographers rather than painters. We know a great deal about Lafayette after we have taken the trouble to peruse M. Charavay's volume, but we feel that something is wanting: the General's psychology has not been analyzed; he is not sufficiently alive; the play of human passions, mental perplexities, conscientious doubts—all that cannot be enumerated, seems to have escaped and vanished.

Gen. Lafayette will always be judged from two different standpoints. In America, as he was moved only by the most generous and noble motives when he volunteered to join the cause of American independence, his American reputation, if I may say so, can suffer no blemish; his name, which occurs even in the geography of the States, will be remembered for all time with veneration. Americans can certainly be said to have among their national characteristics a strong sense of gratitude; even to this day, I know that any person having a family relationship with Lafayette is sure of a warm reception in all parts of the Union. The letters written by Washington to Lafayette at different times, which are given in M. Charavay's volume, testify to the feelings which the revered founder of American independence professed for the young Frenchman who had left all the pleasures of the most brilliant court in the world, to partake of the dangers of a people fighting for its liberties. This portion of Lafayette's career is so well known in America that I will not dilate on it. I would rather consider Lafayette in that portion which was spent in Europe. As a Frenchman, the part which he played, though it was always inspired by the most generous and disinterested motives, is open to criticism; and no wonder, for he lived in those dangerous times when it is often more difficult to discover the path of duty than to follow it. Lafayette was often called the "hero of two worlds"; in one of these the hero had a much more difficult task than in the other.

We find him on the eve of the French Revolution among the members of the Assembly of the Notables which had been convoked by Louis XVI. for the reform of the financial system. A letter published by M. Bardoux in 'La Jeunesse de La Fayette' shows him in these colors: "To-day we visited M. de La Fayette. . . . It seemed as if I were in America rather than in Paris. There were a number of Englishmen and

Americans, for he speaks English like French. There was an American Indian in his costume, in place of a messenger. . . . This savage man calls him 'father.' . . . Everything breathes of simplicity. Marmontel and the Abbé Morellet dined there." La Fayette figures in the list of the Notables as "Monsieur Marie-Paul-Joseph-Roché-Yves-Gilbert du Motier, Marquis de La Fayette, Maréchal des camps et armées du roi, major-général dans l'armée des États-Unis de l'Amérique septentrionale." In the Assembly Lafayette introduced a memorial against the onerous contracts made by the state: "The millions abandoned to cupidity and depredation are the price of the tears and perhaps the blood of the people." The memorial ends with an appeal to "the justice and kindness which we know to be the natural sentiments of his Majesty." Lafayette was born with the feelings of the great English Whig families. He considered himself as the natural advocate of the people; but, far from being a demagogue, he was a born aristocrat, and all his instincts were aristocratic. It was said by the enemies of Lafayette that he bought some estates in Auvergne, in view of being made a duke, and that his opposition was caused at first by the fact that he did not get a dukedom. There are always mean people ready to find mean reasons; if Lafayette had been a duke, he would have been a duke with the sentiments of an English Whig duke; his behavior and his sentiments would not have been in the least affected by a royal favor which he would have considered a very natural one. The truth is, that he was essentially a liberal—so much so that, hearing the governor of the Dauphin, the Duke of Harcourt, speak of the books which ought to be placed in the hands of the young Prince, he said: "I believe that he would do well to begin the study of the history of France with the year 1787."

His popularity was very great. He wished to make extensive reforms in the state, but without convulsions. He took an active part in the provincial assemblies of Auvergne and in the second Assembly of the Notables. When the States-General was summoned, he was offered a nomination by what was called the *Tiers*; but he was a nobleman, and he refused it and was elected as a member of the nobility. (The Duke d'Orléans accepted a nomination by the *Tiers*, much to the disgust of the court and of the nobility.) His position was delicate in the States-General: he was elected by the nobility, his sentiments were those of the *Tiers*; he did not conceal them. When the three orders united in a National Assembly, he became freer. He was in the chair when the news arrived of the taking of the Bastille; he observed that "the dignity and the duty of the Assembly obliged it to continue calmly its deliberations." He did not approve of uprisings of the populace, but he would not separate himself from those who incited them, and he could not help feeling the intoxication of popularity. On the 15th of July, 1789, he was proclaimed by the people, "in the delirium of its enthusiasm" (such were his words), Commander-in-chief of the militia of Paris.

"I wished," he says, "to proceed to Versailles, but the chief of the city declared to me that, in order to save Paris, I must not go away for a moment. Forty thousand people are assembled; the fermentation is at its height; I appear, and a word disperses them. I have already saved the lives of ten persons

who were on the point of being hanged in various quarters; but this furious and intoxicated people will not always hear me. At this writing eighty thousand persons surround the Hôtel de Ville and say that they are deceived, that the troops must not leave Paris, that the King ought to come. They will recognize only what I have signed. When I am not there their heads are turned."

It might be said that this formidable popularity turned Lafayette's head also. He was the real king of Paris, while Louis XVI. was the king of Versailles. He organized the National Guard with the help of Colonel Mathieu Dumas, and gave it the tricolor cockade, "which," he said, "will make the tour of the world."

The famous days of the 5th and 6th of October marked at once his triumph and the weakness of his ephemeral power. He was obliged to follow to Versailles the populace which intended to bring the King and the royal family back to Paris. With great difficulty he saved the King and the Queen; he had to appear on the balcony of the château, to speak to the infuriated crowd, and to promise to go back to Paris with the King. He had on this occasion one of those inspirations which speak more loudly to a crowd than words. He took Marie Antoinette on to the balcony, presented her to the people, and kissed her hand. The Queen had, not long before, been obliged to fly, half dressed, from her room; several of the Gardes du Corps had been murdered in defending the door of her apartment. The royal family returned to Paris under the protection of Lafayette. The King seemed to be his prisoner; he had himself become the prisoner of the Revolution. The fatal days of the 5th and 6th of October marked the beginning of the era of disorders which culminated in the horrors of the Terror.

Correspondence.

MINOR CONSEQUENCES OF WAR.

TO THE EDITOR OF THE NATION:

SIR: No doubt many of the larger results of war for Cuba have been closely considered by the principal business men of our country. The large sums of money to be suddenly raised, the probable waste and expensive fiscal errors such necessities may involve, the far-reaching changes in manufacturing and commercial industries, all to be retraced after the war, with destruction to some and danger to all—all these subjects have no doubt been earnestly pondered by those who have most at risk.

Of course, the military success of such a war can be in no doubt. It would be a contest of national vigor against senility, of wealth against poverty, of unlimited credit against financial exhaustion, of seventy against seventeen millions of population, with three thousand miles of distance to restrict the already scanty resources of the weaker party. We must suppose that Cuba will inevitably and quickly be occupied, when we may expect annexation to be urged by every needy patriot in search of a job. Glory may be left out of the calculation.

The result of annexation on our national institutions, laws, and character may be inferred from the modifications all these have suffered from the recent creation of half-a-dozen fraudulent States without propor-

tionate constituencies. But there are also certain minor consequences likely to be disastrous to localities, which are worth considering, especially by such localities. Take the State of Florida as an illustration. We may say, in general terms, that if that State be divided equally by an imaginary east and west line, it will be found that the inhabitants of the northern half are chiefly occupied either in nursing back to life their thrice destroyed orange cultivation, or in entertaining idle or well-to-do Northern visitors. Neither of those useful callings is likely to build up or sustain a very powerful Commonwealth. But the people of the southern, and at present the most growing, half now find almost their only industry either in illicit trade in contraband of war, or in manufacturing American tobacco into "Havana cigars" by importing and disguising it with a small proportion of the unrivalled Cuban leaf. On this last and principal industry the entire profit is maintained by the enormous American duties on finished cigars. But such duties will disappear with annexation, and all "Havana" cigars will again be made in Havana, as they were prior to the heavy duties caused by our civil war, which have ever since been maintained and occasionally increased.

For the United States at large that may be a small matter, not even comparable with the far greater loss, for instance, of the Cuban sugar duties. But of such prosperous centres of the Florida industry as Key West the result will be ruin. Its numerous factories and population must go, and with them the rapidly growing values of railroads, real estate, and all fixed improvements. The unprofitable drainage expenditure of millions by Mr. Disston and others has demonstrated that the southern half of Florida is chiefly an irreclaimable swamp. Hence to destroy or remove its only profitable industry is to reduce it to the uninhabited condition it had always retained till within a few years past. In that case, can the precarious industry of the northern half maintain the values placed there recently by Northern capitalists? Nay, can they maintain a State organization at all? or must not what is left of it become a corrupt political borough, like certain far Western "States," living on the sole industry of "politics," supported by Federal taxation wrung from other communities?

Will this inevitable result of annexation escape the Florida statesmen, or are they indifferent to it? I. J. W.

PHILADELPHIA, March 14, 1898.

OUR OWN NAVAL STATION IN THE PACIFIC.

TO THE EDITOR OF THE NATION:

SIR: In discussing the Hawaiian question some time ago in the *Nation*, I assumed that nobody would tolerate an argument that we ought to have a naval station in the Pacific for purposes of offensive war. Defensive reasons, I had imagined, would alone be urged. I perceive, however, that many of our patriots, of a more aggressive turn, demand a naval arsenal in those waters as the base of a sprightly campaign or two against China, or Japan, or Russia, or, at any rate, against the foreign shipping of the Pacific. Now, taking this argument seriously, where in all reason could we better locate such a station than on islands we already own, the Aleutians?

The Aleutian Archipelago (*Ultima Thule* no longer) is, it may surprise many to learn, almost within the path of all ships plying between our western coast and Asia. This is true whether the voyage is from San Francisco or from Seattle. In the former case the ship has but little farther to go until she reaches her course north and west of Seattle and skirts the Aleutians. Acquiring our geography from the flat maps of the school-room, we may, of course, be surprised to learn this, just as it was at first surprising to learn that a ship bound from New York to England must, apparently turning a corner, shave the coast of Newfoundland. It may also be surprising to be told that many of these islands are not further north than Dublin or Liverpool, and some of them further south. Enjoying the Japan current, the Gulf Stream of the Pacific, they possess a climate sufficiently genial for the works and habitation of civilized man. Nor are they deficient in safe refuge for vessels. Dutch Harbor, on one of them, is already a port well known to mariners, a stopping-place for all ships bound for the mouth of the Yukon, and a most important point for our revenue fleets in the south Alaskan waters, the Arctic, and the Bering Seas. Yet it is, at the same time, but a very little north of the course of almost the entire shipping between Asia and North America. If, then, we wish a naval station from which either to menace or protect that shipping, the location is the best attainable.

Against this what can be urged on behalf of Hawaii for similar uses? Is Hawaii in the path of all that valuable and rapidly increasing commerce? By no means. A ship calling at Honolulu, between either San Francisco or Seattle and Yokohama or Hong Kong must lose three or four days in doing so. Not one ship in a dozen—perhaps I might even say in twenty—calls at the Hawaiian Islands on such a voyage, whether coming or going. Both steam and sailing craft pass far to the north and close to the Aleutians. In the Australian shipping alone is Hawaii in the path of vessels. The Australian traffic, however, can make no pretensions to the volume of the Asiatic. As to their relative growth, at least, no one would institute a comparison. Not only this, but as a base of offensive operations against Asiatic countries, the Hawaiian Islands are several thousand miles further distant from those coasts than are the Aleutians, while they are not so near even to any part of our own. Consider also the rapid development of Alaska. Have we not that extensive coast to protect?

But our naval authorities want Hawaii. Of course they want Hawaii. Did any one ever know a place belonging to some one else that they did not want? Name a spot in the seas, name a port on any coast, and your naval authority can furnish you a respectable argument that we ought to have it ourselves. Did they not nearly commit us to the purchase of St. Thomas, from which we rescued ourselves by our national honor forfeited to the Danes? Every other country under the sun, we were told, had a few of the West Indies. If this country wished to hold up its head any longer, it must have some islands too. A country without islands was a poor, pitiful sort of a country. Besides, St. Thomas abounded in negroes and rum. Did we not stand in need of negroes? Did we not stand in need of rum? The naval arguments, in addition to these, were that the harbor of St. Thomas would have been of great value.

vice to us in the rebellion just past, and that when we should have another rebellion between the same parts of the country ages thence, St. Thomas must prove invaluable. Amiable gentlemen!

FREDERICK BAUSMAN.

SEATTLE, WASH., March 4, 1898.

WHO WILL TEACH THE TEACHERS?

TO THE EDITOR OF THE NATION:

SIR: The recent movement to establish better methods of teaching history in secondary schools will certainly bring little improvement as long as the teachers remain in their present ignorance of the facts of history. Under existing conditions there is great danger that improved methods will signify the substitution of mere trifling for solid work. I have noticed that candidates for admission to college who know most about methods, have too often learned little else. The pursuit of crazy notions has proved more attractive than grubbing in Oman. A more alarming symptom of this evil is to be found in the "Report of the first annual meeting of the New England History Teachers' Association." The committee who prepared it show in it their preference for Greek history; and yet, while proposing a highly technical plan of studying the history of ancient Greece in connection with other subjects, they betray an amazing ignorance of its simple facts. I have never before seen such an accumulation of obvious misstatements, distorted views, and long-antiquated hypotheses packed into so brief a space. Below are a few examples of these, with my corrections:

First we shall notice some model questions and answers to be used by teacher and pupils:

"Q. In what relation does the Peloponnesian war stand to preceding Greek history?"
"A. It destroys the Confederacy of Delos."

The fact is that the Delian Confederacy ceased to exist twenty-three years at least before this war began.

"Q. In what relation does the Confederacy of Delos stand to preceding Greek history?"
"A. It is one of the epochs in the development of the 'Democracy of Athens.'"

This answer is absurd. The Delian Confederacy was a phase of Greek federalism.

The answers to most of the other questions are equally faulty. We pass next to the "Perspectives," or outlines for the use of pupils. On p. 26 the Committee say that "Lycurgus's constitution" resulted in the conquest of Peloponnesus. The truth is that the Lacedæmonians conquered Messenia, but not the rest of Peloponnesus. In the following passage, p. 27, referring to Solon, there is an accumulation of errors:

"Political Reforms.—Timocracy of four classes. Ecclesia admits all free citizens and controls magistrates by *tyranny* [for *tyranny*]. These reforms only nominal, for four blood tribes are 'political bosses' who control votes in Ecclesia."

In fact, the timocracy of four classes was not a reform of Solon; the Assembly did not control magistrates in the manner stated; the comparison of the tribes with political bosses is grotesque; and the term "blood tribes" implies a misconception of the nature of the Greek tribe. Just below, the Committee declare that the Athenian Assembly had legislative power before Cleisthenes, whereas

in reality it never exercised such power. On p. 35 they say that Athens fought the battle of Thermopylæ!

These may be taken as fair examples of the many errors contained in the Report. With such ignorance of the simple facts of history, how can these teachers grapple successfully with the "Parallels," the "Correlates," the "World-Ideas," and the other mighty notions for which the "Perspectives" provide? GEORGE WILLIS BOTSFORD.

CAMBRIDGE, MASS., March 10, 1898.

FOREIGN EXPRESSAGE.

TO THE EDITOR OF THE NATION:

SIR: In your number for March 10, "P." narrates an instance of double charge in foreign expressage. He thinks that, had the books in question been sent by mail in three or four small packages, they would have reached their destination more quickly and at much less cost.

I am not so sure about that. There is a German monopoly which seizes upon all mail matter that can by any means be construed as constituting "packages," forwards them at its leisure—and very leisurely leisure it is!—and charges heavily before it will surrender them. I have had a good deal of experience. It has repeatedly happened that parcels mailed to me from Russia, with postage fully paid (they would not be accepted otherwise), have been seized by that German company, forwarded on the slowest available steamer, and delivered only on payment of dues which far exceeded the postage. I paid \$1.15 on such a package in December last, and the package was very much smaller and lighter than the ten books mentioned by "P." could have been. It, also, was literary matter, non-dutiable.

The German Government *does* levy such a tax in that it permits that packet company to seize prepaid mail matter at its own sweet will. It reminds me of the indignation I encountered in Austria when I suggested that the revenue stamp affixed to every number of my daily paper from Vienna (over and above the subscription price) was a tax on civilization. "We are not so barbarous as to tax intellectual work!" cried the Austrian. The retort is obvious.

ISABEL F. HAPGOOD.

NEW YORK, March 10, 1898.

TO THE EDITOR OF THE NATION:

SIR: The letter of your correspondent "P." in regard to "Foreign Expressage," in the *Nation* of March 10, moves me to make public my own recent experience with the United States Express Company, which advertises itself as a forwarder of valuables "by connecting expresses throughout the entire United States and foreign countries." On the 4th of January, ult., this company accepted a package for delivery at Ousland, Mandal, Norway, the sender prepaying the seventy-five cents charges called for by the printed tariff of the company. About a week ago I received a letter from Norway saying that the package had just arrived *by post* from Hamburg, with two kronor (fifty cents) postage due thereon. The package could have been sent by mail from here for fifty cents; but to secure certainty and celerity in delivery it was sent by express—only to have it go finally by mail, and to be six weeks in transit.

F. H. PUTNEY.

WAUKESHA, WIS., March 12, 1898.

Notes.

Benjamin R. Tucker, No. 24 Gold Street, will shortly have ready a full report of 'The Trial of Émile Zola,' making a pamphlet of 300 pages.

'The Meaning of Education,' by Prof. Nicholas Murray Butler of Columbia, will be among the spring publications of Macmillan Co., together with 'Greek Tragedy in the Light of Vase-Paintings,' by J. H. Huddleston.

Among the authorities who are writing for the new 'Dictionary of Philosophy and Psychology' which Professor Baldwin of Princeton is editing for the Macmillans (in addition to those announced some time ago), we note Profs. Simon Newcomb (physical science), Minot of Harvard (biology), Hadley and Simon Baldwin of Yale (economics and law), Wheeler of Cornell (language), Giddings of Columbia (social science). The organization, which is now complete, includes a board of "Consulting Editors," comprising three for English, besides the general editor, four for German, and the same number for French, all among the best-known names in their departments, as may be judged from the following who constitute the English committee: H. Sidgwick (Cambridge), A. Seth (Edinburgh), W. James (Harvard). These "Consulting Editors," we are informed, are all giving positive counsel and aid to the work. A special feature is to be the very extensive bibliographies, which are mainly in the hands of Dr. Benjamin Rand of Harvard. The publishers expect to issue the work in two volumes early in 1899.

Dodd, Mead & Co. have nearly in readiness 'Robert Burns and Mrs. Dunlop,' correspondence now first published, with elucidations by William Wallace; 'Charles Dickens,' a critical study, by George Gissing; 'Wisdom and Destiny,' essays by Maurice Maeterlinck; 'The Diplomatic History of America, in its First Chapter (1482-1493-1494),' by Henry Harrisse; and 'Folks from Dixie,' by Paul Laurence Dunbar.

From T. Fisher Unwin's list we select 'Karl Marx and the Close of his System,' from the German of Prof. Böhm-Bawerk; 'Leo Tolstoy; or, The Making of a Prophet in the 19th Century,' by G. H. Ferris; 'Paul Krüger and his Times,' by F. Reginald Statham; 'Memorials of an 18th Century Painter (James Northcote),' by Stephen Gwynn; 'British Guiana; or, Work and Wanderings among the Creoles and Coolies, the Africans and Indians, of the Wild Country,' by the Rev. L. Crookall; 'Saunterings in Florence,' a tourists' handbook, by E. Grifi; and 'Over the Alps on a Bicycle,' by Elizabeth Robins Pennell, illustrated by Joseph Pennell.

Mr. Lang's "Gadsdill Edition" of Dickens's works (London: Chapman & Hall; New York: Scribners) proceeds with a stout volume of Christmas Books and 'The Old Curiosity Shop' in two volumes, all with the original illustrations, and all in the open typography of the first of this series. Mr. Lang has some very just remarks on Dickens's pathos and the changed view of it which our generation has to own, as well as on his vague sentimental philanthropy, with never a hint of ways and means for rectifying the abuse aimed at in the story. From Scribners, also, we have the third and fourth volumes of 'Frederick the Great' in their truly fine and very inexpensive "Centenary Edition" of Carlyle's Works; and another

volume, 'Pipes o' Pan at Zekebury,' in the handsome reprint of "The Poems and Prose of James Whitcomb Riley." Finally, the fourth, remodelled Baedeker's 'Egypt,' in a single volume for Upper and Lower. Five additional maps have been added by the latest editor of this incomparable handbook, Prof. Georg Steindorff of Leipzig, fresh from a special journey to the country in 1895. Later than that is the rising into being of the new Museum of Egyptian Antiquities, which on p. 75 is only "projected." The next edition will, in fact, have to undergo a complete renovation in the section now denominated "The Museum of Gizeh."

Bulwer's 'The Caxtons,' with sixteen illustrations, forms the newest in the line of standard English novels attractively brought out by the Putnams in conjunction with Service & Paton, London.

We have been tardy in reporting the issue of volume xi. in Macmillan's edition of Turgenyev, 'The Torrents of Spring,' and volume vii. in that of Björnson, 'Captain Mansana, and Mother's Hands'—both enjoyable possessions. And now we must welcome the long-contemplated Globe Chaucer, edited by Alfred W. Pollard, with three special collaborators, one of whom is an American, Prof. Mark H. Liddell of the University of Texas. Mr. Pollard has taken the "Canterbury Tales" and the "Legend of Good Women" for his province, together with glossary, preface, and introduction. General principles have to some extent governed all the editors in evolving a text, and the result, though popular, is really a scholarly addition to existing texts. Each editor presents a diagrammatic scheme or genealogy of the MSS. compared. A select number of variant readings are given as foot-notes. Each page bears at the top the line numbers of the included poetic fraction, as 167-234, 235-291, etc. In the glossary, we remark the generally single reference to a use of the word, as a concordance was out of the question. In brief, in its apparatus as in its text, this is an edition to be thankful for.

The Rev. N. R. Johnston's autobiographic 'Looking Back from the Sunset Land' (Oakland, Cal.), with its sub-title, "People Worth Knowing," tells of life in Pennsylvania, Ohio, Vermont, and on the Pacific Coast. It would have been more readable if the humane author had lost his note-books, his minute transcripts from which confine the interest of his story almost to those who hold, with him, that "the most important convention or legislative body in any land is the annual Synod of the old Covenanter Church." Mr. Johnston has not lived so much out of the world as this belief would imply, for he has preached anti-slavery doctrine in the Green Mountains, has ministered to the freedmen in the Sea Islands and to the Chinese in California. His retrospect has value in all these aspects, the first involving contact and friendly coöperation with the Garrisonian abolitionists, who figure in his pages. It is also curious to study the adjustment of his *ex-officio* anti-slavery and non-voting denomination to the exigencies of the civil war, and to contrast with our author's inflexible orthodoxy, fixed as the monument on Bunker's Hill, his dislocated life, begun in the sunrise, and apparently destined to end in the sunset, land of our American continent. The volume contains a number of portrait illustrations, Covenanter, abolition, and Chinese.

The Boston Book Co. puts out No. 2, Bul-

letin of Bibliography Pamphlets, in tiny form: 'Bermuda in Periodical Literature,' by George Watson Cole of No. 36 West Seventeenth Street, New York, who asks for corrections and additions.

Three volumes of 'Annals of the Cape Observatory' have recently appeared. Volume iii. contains 'The Cape Photographic Durchmusterung for the Equinox 1875,' by David Gill and J. C. Kapteyn (Part I., Zones —18 deg. to —37 deg.). Volumes vi. and vii. are devoted to 'A Determination of the Solar Parallax and Mass of the Moon, from Helio-meter Observations of the Minor Planets Iris, Victoria, and Sappho, made in the years 1888 and 1889.' This work is the outcome of coöperation with the observatories of Yale College, Leipzig, Göttingen, Bamberg, and Oxford, "to determine some of the fundamental constants of astronomy with a higher accuracy than had hitherto been attained." An appendix to 'Cape Meridian Observations. 1890-'91' contains W. H. Finlay's "Star-correction tables," which have been found so convenient at the Cape Observatory, where they have been in use since 1892, that they are now printed for the use of astronomers.

An appreciative notice of the late Dr. Frederic Dawson Stone, librarian of the Pennsylvania Historical Society, accompanies a portrait of him and a list of his authoritative works in the January number of the Society's *Magazine*. A portrait of the late William Spohn Baker also enriches the number.

The Landmarks Club of Los Angeles, Cal., lays claim to priority as an "incorporated effective movement in all the United States to preserve . . . historic treasures." It is now a little more than two years old, as we read in the local *Land of Sunshine* for March, and "has secured (free) long leases on the two most important missions within its jurisdiction," San Juan Capistrano and San Fernando Rey. At each it has saved the chief buildings against the elements for another century. It has restored them in the only true sense of replacement, with repairs and buttresses for crumbling masonry. This work has been conducted by experts in Spanish-American architecture. The magazine gives a number of views, "before and after," which exhibit the club's well-directed activity.

M. René Doumic's "À Propos du Désastre," in the *Revue des Deux Mondes* for February 15, is like an *envoi* following the story itself, which appeared in recent issues of the same review. The poetic memorial of the ill-fated army of Metz is here conceived of by the critic as an inspiring and opportune example of military discipline and honor for the whole army and the entire nation. Faith in the army and its chiefs (in spite of Bazaine) is the lesson taught by the brothers Margueritte to the people of France. This is not what Zola has taught in 'La Débâcle.' M. Doumic mentions neither the author nor the book by name, but his allusion is as plain as is the bearing of the whole article upon recent events. It does not impress one pleasantly, now that the court has sent to prison the man who defended what is greater even than the glory of an army, viz., simple justice and humanity.

The latest number of the *Zeitschrift für Deutschlands Buchdrucker* contains some interesting statistics of the German press in 1897 as compared with that of Austria and of Switzerland. Besides 3,056 *Fachzeitschriften*, representing some special department of

study, there were published in the German Empire during the past year 3,477 political journals in 1,752 different places, making one newspaper to 12,092 inhabitants and to every 152 square kilometres of territory. In Austria, on the other hand, there is only one newspaper to 72,290 inhabitants and to every 1,167 square kilometres of territory, whereas in Switzerland there is one newspaper to 7,581 inhabitants and to every 107 square kilometres of territory. In these figures the effects of laws and police regulations restricting the freedom of the press are clearly perceptible. Switzerland, which enjoys the greatest liberty in this respect, stands first; then comes Germany, where the editor has the fear of lese-majesty ever before his eyes, and lastly Austria, where every effort is made to hamper the development and minimize the influence of journalism by arbitrary and absurd prohibitions, and especially by onerous stamp duties, which increase the cost and restrict the circulation of newspapers. Germany has nine newspapers, which appear more than twice daily, Switzerland one, and Austria none. There are also in Germany 79 papers issued twelve or thirteen times a week, 1,185 six or seven times a week, and 1,745 from two to five times a week. Fully one-half of the German political journals are independent, and do not discuss public questions from a partisan standpoint.

The belated number of the *American Journal of Archaeology* for October-December, 1896, appeared only recently. The whole number is devoted to the first instalment of the results of the expedition to Crete which Prof. Halbherr undertook in behalf of the Archaeological Institute of America. The number contains two articles entitled: "Inscriptions from Various Cretan Cities," and "Christian Inscriptions"—in all, 103 inscriptions, none of which are of importance. The first two numbers of the new series of the same periodical have also appeared, and we are informed that six other articles relating to Crete by Messrs. Halbherr, Orsi, Mariani, and Taramelli are already in type and will shortly appear in the *Journal*. Prof. Halbherr also announces that four more articles on Cretan matters will be sent to the editors early in 1898, and that additional articles, completing the series, will be prepared during the course of the present year. The greater part of the *Journal* for a year to come will be taken up with the results of Dr. Halbherr's explorations.

On Washington's Birthday the Rev. J. Edwin Odgers, Hibbert Lecturer in Ecclesiastical History, gave at Manchester College, Oxford, the first of three evening lectures on "Some Aspects of the Later Paganism," especially as it appears in the Latin Christian apologists. Christian authors seem to give us a travesty of the serious thought of Paganism, which now had its outlook towards Monotheism and anon merged into Telluric Pantheism. Strange and innovating rites, such as those of Mithras, loomed up in latter-day Paganism. These can now be studied with increasing facilities and encouraging results. Here the lecturer briefly sketched the old-time "agricultural" religion of Rome, dwelling upon the impersonal and abstract nature of its deities. The great gods of Roman state religion had no history, no adventures. In this regard they are sharply contrasted with the gods of Greek Olympus. The lecturer entered into sundry details of various late

worships, illustrating his points by many inscriptions and statues found of late years by Italian excavators. After the Greek gods came in at Rome and apparently triumphed over the old impersonal abstractions, they were promptly discredited by the sceptical and rationalizing play of Greek philosophic thought. Euhemerus and his preposterous explanations of mythology were taken seriously. A process of syncretism began, which was accelerated by the importation of new and vividly conceived divinities from the East, and favored by the gradual falling of interest among the Romans in their old ancestral rites. The upshot of all these tendencies seems to have been in some sort a reversion to the early Roman impersonal conception of divinities, a "deanthropomorphization" of the Græco-Roman divinities, which ran parallel to the course of Stoicism and tended towards a general acceptance of the doctrine that

"All are but parts of one stupendous whole
Whose body Nature is, and God the soul."

Early in April a celebration is to be held at Florence, Italy, in honor of two natives of that city, intimately associated with the discovery of the new world, namely, Amerigo Vespucci and Paolo del Pozzo del Toscanelli. The latter died in 1482, but his map was used by Columbus on his first voyage and served to direct its course. The selection of April for the celebration is quite arbitrary, although it may be due to the fact that the first expedition in which Vespucci took part, under Pinson, sailed from Cadiz on May 10, 1497, returning to the same port October 15, 1498. The project of transporting the ashes of Amerigo Vespucci from Seville to Florence interested the Florentines in the family history of their illustrious townsman, and led to the discovery of his sole direct descendant in the person of an old lady of fourscore years, whom her father, having no son, christened Amerigo in memory of their illustrious ancestor. She married Viscount Talon, an Italian officer, who was mortally wounded in the battle of Solferino. Viscountess Talon now lives in Florence in needy circumstances, and receives from the Italian Government the sum of 13½ lire (about \$2.50) a month in compensation for the death of her husband in the service of his country. The statement in the *Nazione* of February 1, that she has a small pension from the Spanish Government, is incorrect; she has never received anything from this source.

In this connection it is interesting to note the recent discovery of the fresco of a Pietà by Domenico Ghirlandajo in the Church of Ognissanti on Piazza Manin in Florence, with portraits of different members, men and women, of the Vespucci family. The portraits are two-thirds life-size, and Amerigo is represented as a young man about twenty years of age. The painting is described by Vasari, but was covered with whitewash during the restoration of the church in 1616. The removal of this coating has brought the fresco again to light in an admirable state of preservation.

The proposed memorial to the late "Lewis Carroll," namely, an "Alice in Wonderland" cot at the Hospital for Sick Children, Great Ormond Street, London, will demand a thousand pounds. Subscriptions in this country may be sent to the Macmillan Company, No. 66 Fifth Avenue, New York.

A notable presentation of the Roman chorus has just been given at Middlebury Col-

lege, Vermont. It was the crowning feature of a convention of the teachers of Latin in the fitting schools of Vermont, held March 11 and 12, and was carried through under the direction of Prof. Sanford of the chair of Latin. The chorus itself was the sophomore class in Horace, and it was, according to an eye-witness, a memorable sight when the 34 costumed singers and musicians moved slowly up the central aisles and grouped themselves on the platform. Three odes were sung, and all were received with the heartiest appreciation. The work of the singers alternated with a vivid illustrated presentation, by Prof. Sanford, of the Rome of the days of Augustus. Later in the evening a reception was tendered by the class of 1900 to the members of the convention and the faculty. Among those in attendance were many of the most prominent educators of Vermont.

—Apropos of Prof. Sterrett's communication in the *Nation* of November 11, 1897, "Who Are the People of Asia Minor?" a correspondent in that country writes as follows:

"I think Prof. Sterrett's view of the Turkish peasantry, or rather the non-Turkish peasantry, is correct; but the strange thing about it is that they did participate in the Armenian massacres. In all this region, and I believe the same is true of the region lying between us and Samsoun, the killing was done principally by the Turks of the cities and villages. The Koords gave themselves up to plunder, but did not kill much. This was not true of the region around Diarbekir and from there to Bitlis, Moosh, and Van. In that region the Koords slaughtered right and left. I do not know how to explain the participation of the village Turks in the massacres. I sometimes think nothing but Satanic possession can explain it. They themselves speak of it with regret now. But certain things may be said. First, they believed they were authorized by higher powers to kill the Armenians and take their property. Second, it seems to me that Moslem emissaries had been preaching a jihad against the glaiours for some time previous to the outbreak. Third, when the thing once started, the thirst for blood and the frenzy carried everything before it. Fourth, it must be said that some of the most diabolical acts were committed by village Moslems. It is difficult to distinguish between your non-Turkish Moslem peasants and the Turks, so there is room for question which committed these acts. But in all this region the executioners were village and city Moslems rather than Koords."

—The first report of the Historical Manuscripts Commission of the American Historical Association makes an excellent showing. In addition to a statement of the principles on which the Commission have proceeded, and a useful list of printed guides to archives and other repositories of historical manuscripts, the report includes five sets of papers, all of value and interest. Sixty-one letters of Phineas Bond, British Consul at Philadelphia, to the Foreign Office of Great Britain, written during the years 1787-'89, contribute a good deal to the rather scanty knowledge of the economic conditions in America at that time. A long letter of November 10, 1789, to the Duke of Leeds, seems to have furnished Hammond, the British Minister, with the store of grievances on which he drew in his correspondence with Jefferson, in 1792, regarding American infractions of the treaty of 1783. Some intercepted letters from an unknown correspondent in America, written in 1756 to the Duke of Mirepoix, French Ambassador to Great Britain, together with letters from Halifax and others in reference to them, shed some new light on the movements in

the colonies during the Seven Years' War, besides showing how much better informed the French were than the English regarding American affairs. Considerably more important are the letters of Stephen Higginson, written between 1783 and 1804. More than ordinarily readable, they are of especial interest as showing the view of things taken by a Federalist who, though not himself actively engaged in politics, was nevertheless, during this critical period, the familiar correspondent and trusted adviser of leaders like John Adams, Nathan Dane, Hamilton, and Knox. Four of the letters (Nos. 48-51) unfold what the editor fairly describes as "a curious transaction—a high Federalist of the 'Essex Junto' selling arms to the Virginia arsenal of 1799, built, as John Randolph years afterwards publicly declared, for the protection of the State against those Federal encroachments against which the Virginia Resolutions of 1798 were directed; or, if this is not effected, showing his correspondent how they can be sent to Toussaint l'Ouverture with great profit, and with the connivance of the Government, while the Secretary of State is assured that his Federalist friend has concluded not to send them thither."

—A series of extracts from the diary of Edward Hooker, while of less positive value than the other papers in the volume, gives an entertaining picture of political life in South Carolina in 1806-'8, as seen by a New England youth fresh from college. It is to be hoped that the Commission may see their way to printing the rest of this diary, including the parts, omitted here, picturing social life in South Carolina at the time. Perhaps the most important documents in the report are those relating to the proposed expedition of George Rogers Clark against Louisiana, in 1793-'4, selected from the Draper collection in the possession of the State Historical Society of Wisconsin. The expedition, as is well known, was set on foot by Genet shortly after his arrival in the United States; but Clark, who had already offered his services to Spain, appears from the documents here presented to have been the author of the plan. How much Jefferson knew of the proposed movement is not entirely clear; but that he knew a good deal about it is certain, and Genet professed, at least, to believe that Jefferson "was privately satisfied with his plans." Adequate financial support from France, however, was not forthcoming, while Genet's indiscretion soon alienated popular sympathy. It should be noted, also, that the correspondence appears to confirm the explanation of Gov. Shelby of Kentucky regarding his own attitude towards the expedition. We must not leave this interesting volume without commending the admirable editorial notes with which it is equipped.

—Lloyd's 'Clerical Directory' (Hamilton, O.: *News and Telegraph Publishing Co.*) is a well-meant attempt to supply the American Church with a statistical book of reference modelled after the style of the English "Crockford." It is intended to give, in regard of each of the clergy, his place of birth, college, and seminary, with his academic degrees and honors, the dates of his ordination to the diaconate and priesthood, and by whom he was ordained; the positions he has held, with their dates, and any printed works he may have published, with records of their publisher and price. To bring

out the first issue of a list so crowded with minute statistics is a work of immense labor, and complete accuracy in the accomplishment of it is a thing hopeless to expect. We will not, therefore, judge the editor of the present venture too severely, although the inaccuracies in his book are many, and although gross blunders, like setting down St. Paul's School as being in Concord, Mass., occur far too often. Nor can the print or the paper or the binding of the volume be praised. Yet, after all these things are allowed for, the book has a distinct value. An imperfect list of this sort is, at least, better than no list at all, and one may hope and fairly expect to find the present issue greatly improved next year and as years go on. One difficulty, on which the editor can hardly have counted beforehand, has been the reluctance with which a certain number of the clergy have furnished the information asked for. Some have evidently feared that a knowledge of their age or of their foreign extraction (English, for the most part, or Canadian), would do them some injury in American eyes. Others, in a somewhat amusing way, resented the editor's circular as an impertinence. One reverend gentleman writes: "Your circular of June 4 was received. I do not understand that you have authority to demand the circumstances of my life and services, and very respectfully decline to furnish you with the information desired." Another is still more peppery: "The American Church has all the information about her clergy that she ought to have. At any rate, she has got all about me that she will ever get."

—The third volume of the translation of Nietzsche's Works (Macmillan) is numbered vol. x., and contains the 'Genealogy of Morals' and 'Poems,' the former being translated by Mr. W. A. Housemann, the latter by Mr. J. Gray. The editor also, as the chief apostle of Nietzsche in *paribus infidelium*, supplies one of his pretentious introductions, in which it is noteworthy that he gives up as unphilological Nietzsche's derivation of moral terms from the antithetical valuations of actions accepted by a blonde master caste and a dark (malus *μᾶλιν*) slave race. But he still clings to the notion of a "master" morality, and seeks to illustrate Nietzsche's fancy by appealing to the English code of manners with its ideal of "gentlemanliness" and its divergence from the principles of Christian morals. The illuiveness of this illustration appears, however, as soon as we reflect that we have no right to expect an exact coincidence between an æsthetic valuation of conduct, such as that expressed in a code of manners, and an ethical valuation as expressed in a code of morals, and that the moral judgment always has to emphasize those aspects of conduct the observance of which is inadequately provided for by the other forces operative in the social life of the community. We ordinarily call morally wrong only such socially injurious conduct as does not obviously involve bad manners or foolishness and imprudence, or inflict immediate unpleasantness upon the agent.

—In spite of the fact, however, that its central idea is but the discovery of a prehistoric mare's-nest, the 'Genealogy of Morals' probably exhibits Nietzsche at his best. It has more coherence, both of thought and of style, than the majority of his other productions, and less of the froth and foam of

an unbalanced mind, while it startles us even more frequently than is his wont by those strange flashes of insight which penetrate the surface of the social life and reveal the titanic forces that struggle dumbly at its core. Nor need we hesitate to concede that there is an element of truth in his contention that, in the secular struggle of brain with brawn, the moral and religious beliefs of mankind have often been subtly moulded by the former and daringly affirmed by the fiat of the latter. But the various strands have been too inextricably woven into the fabric of the social life to render it possible to disentangle the contributions of each, and the strength and weakness of the same fibre vary most surprisingly in different parts of the texture. Still, we can dimly discern the truth which is exaggerated in Nietzsche's account of the origin of "bad conscience," viz., that the struggle which transmuted the "ape and tiger" into civilized man involved cruelties as terrible as any which the imagination of Mr. Wells has conjured up in the unhallowed 'Island of Dr. Moreau'; we can perceive the truth, also, which peeps through the denunciations of Nietzsche's essay on the significance of æsthetic ideals, viz., that æstetism is simply *training*, the training of a refractory and discordant nature. For these and other reasons the present volume will probably be found the most valuable and interesting of Nietzsche's works, and it would have been an agreeable surprise to find the translation also an improvement on its predecessors. Such, however, is unfortunately not the case. The rendering resembles Carlyle rather than English, and too often requires a reference to the German to become intelligible; at its best it is wooden, at its worst it translates, e. g., "frevelhaft" by "frivolous" (p. 145)! We are subjected to annoyance, also, by mistakes about the use of will and shall (e. g., pp. 191, 194), and the absence of an index, which in so discursive a writer as Nietzsche is indispensable. It is to be hoped that the editor will see his way to providing one for the whole translation in the end, but it would be far better to add an index to the outfit of each volume.

—Prominent representatives of Oriental and Biblical research in Germany, among them Wellhausen, Delitzsch, Kittel, Socin, Hommel, Nöldeke, and others, have united in the publication of an Appeal, the object being the organization of a "Deutsche Orient-Gesellschaft." This society proposes to be national in character, and by the establishment of local unions in the larger cities, and by securing a large number of contributing members throughout the empire, expects not only to awaken a wider and deeper interest in the remnants and remains of ancient civilization in the Tigris-Euphrates valley, in Mesopotamia and Western Asia in general, as well as in Egypt, but, further, to secure the necessary funds to make excavations and bring monumental relics of these civilizations to the museum in Berlin. Hitherto German scholars have been compelled, as a rule, to depend for their working materials in this department on the expeditions which the governments or private liberality in England, France, and America have sent to the East. Lack of funds and of organization and coöperation has made the Germans mere lookers-on in this eager search and research. The Appeal in question draws attention to the wealth of Oriental antiquities deposited

in the museums of London, Paris, and New York, silently contrasting this with the lack of such raw and original material in German collections. A preliminary commission has already been sent East by the "Orient-Komité," an organization on a smaller scale that has in recent years been supported by a few wealthy Germans. The Appeal declares that it shall be the purpose of the new society (1) to study Oriental antiquities in general, and Biblical archaeology in particular; (2) to secure monuments of Oriental antiquity especially for the Berlin museum, and possibly for collections that may be founded in other parts of the empire; (3) to popularize the results and investigations in Oriental research and arouse a general interest in these investigations. The Prussian Cultus Ministry has warmly approved of this project, and Prince Heinrich von Schönau-Carolath has accepted the Presidency of the Gesellschaft.

RECENT BRITISH POETRY.

There is said to be, at this moment, in both hemispheres, an epidemic of assassinations; and this is perhaps at its worst when it takes the form of that Oriental punishment which consists in being smothered with honey and then hung up to be stung to death by wasps. Another youth of fine poetic gifts is just now being offered as a sacrifice to that sensationalism which is as marked in the literary criticism of London as is the love of political sensation in the American press. Melancholy shadows of transient fame rise up to testify to the outcome of this sensationalism in the past: Philip James Bailey, Alexander Smith, Sydney Dobell; and more recently Francis Thompson. Each of these found his first crude work embraced with such enthusiasm by his early critics that he took not a step farther, and presently dropped into oblivion. Now comes the *Academy*—originally founded by Dr. Appleton, as one of his biographers tells us, to be "a critical record of real work by real students"—and heaps upon Stephen Phillips's 'Poems' (John Lane) such a crushing eulogium as is more fatal to genius than the *Quarterly's* treatment of Keats, or the "This will never do" which was supposed to have annihilated Wordsworth's "Excursion." How infinitely more wholesome was the early censure which made Tennyson withdraw from his collected writings the foolish lines,

"O darling room, my heart's delight,"

or which led Browning to elucidate his "Sordello" by head-lines. Fortunately for American literature, this terrible forcing process of London has only once been conspicuously brought to bear on an American poet; and surely the commonplace later career of "Joaquin" Miller gives a sufficient warning against taking these sudden ardors as a substitute for permanent fame. In the case of Stephen Phillips, one sees another in the long line of inspired schoolboys; it is evident that the laurels of Thompson have not suffered him to slumber, and that Le Gallienne's prettinesses have beguiled a naturally strong talent. "Beautiful Death" is a mere hammering out into a thinner surface of George Eliot's "Oh, may I join the choir invisible"; and the otherwise spirited phrase (p. 16),

"Not for that face that might indeed provoke
Invasion of old cities,"

is irresistibly suggestive of Marlowe's most famous lines. On the other hand, we find everywhere a tendency to words too big or too little for the occasion; too big, as where Mr. Phillips says (p. 53):

"Frail was she born; petal by petal fell
Her life till it was strewn upon the herb;
Like petals all her fancies lay about";

or too little, as in this (p. 79):

"I in the greyness rose;
I could not speak for thinking of one dead.
Then to the chest I went,
Where lie the things of my beloved spread."

Fine single lines occur, but only in the midst of those that are trivial and halting, as these (p. 34),

"Out from the arms of that shadow
Swiftly she burst and eager now";

or sprawling into cumbrous excess of syllables, as in that underscored below (p. 60):

"Thou maiden with the silent speckless ways
On plant or creature soundering thy heart;
Thou in carences large shalt spend thy life,
Conspiring with the summer plans of lovers, acent
From evening hedge the walk of boy and girl."

The one poem in the book which not merely has unusual strength, but adds enough of complete unity in expression to be called a work of art, is this which follows; and if Mr. Phillips is ever to attain maturity, it must be by following in this direction (p. 6):

THE PRISONER.

Backward the prison door is swung,
Without the young wife stands;
While to herself she murmurs with bright eyes,
And over-eager hands.

They brought the young man out to her,
That was so strong erewhile;
Slowly he ventured up to her strange arms
With unrecalling smile.

O like a mother she must lead
His slow and wandering pace;
He stammers to her like a little child,
And wonders in her face.

O like a daughter must she live,
And no wife to him now;
Only remain beside those ailing limbs,
And soothe that aged brow.

"Husband," she said, "I had rather closed
Those wild eyes on the bier,
Rather have kissed those lips when they were cold,
Than seen them smile so drear!"

In passing from Mr. Phillips to Mr. Watts-Dunton's 'The Coming of Love, and Other Poems' (John Lane), we turn to something not merely mature, but in a certain sense Elizabethan in character—Elizabethan in its broad, free handling; in its tendency to dramatic forms which combine, like old-time masques, ingredients that seem in themselves incongruous (as, for instance, gypsies, sea-birds, and Alpine glaciers); Elizabethan in ardent, yet not ungenerous British feeling; and Elizabethan, above all, in the spirit of the sea. As fearlessly as Mr. Kipling, Mr. Watts-Dunton gives himself to the surges, while escaping altogether that pedantry of detail under which even Mr. Kipling's most ardent admirers are beginning to chafe at last, and which seems to belong rather to a landsman just taught the vocabulary of the forward deck than to one cradled on the sea. Whether Mr. Watts-Dunton has not carried the Elizabethan comprehensiveness of *mew* too far when he flings in his two celebrated sonnets, "Natura Benigna" and "Natura Maligna," as mere ingredients in a picturesque gypsy romance, we will not venture to decide; but he certainly grasps the Stormy Petrel as completely for his own as did Shelley the

skylark, or Keats the nightingale, or Lowell the bobolink (p. 10):

MOTHER CAREY'S CHICKEN.

From out thy jail thou seest yon heath and woods,
But canst thou hear the birds or smell the flowers?

Ah, no! those rain-drops twinkling on the buds
Bring only visions of the salt sea-showers.
"The sea!" the linnets pipe from hedge and heath;
"The sea!" the honeysuckles whisper and breathe,
And tumbling waves, where those wild-roses
wreathe.

Murmur from inland bowers.

These winds so soft to others—how they burn!
The mavis sings with gurgle and ripple and plash.
To thee yon swallow seems a wheeling tern;
And when the rain recalls the briny lash,
Old Ocean's kiss we love. Oh, when thy sight
Is mocked with Ocean's horses—manes of white,
The long and shadowy flanks, the shoulders bright—
Bright as the lightning's flash—

When all these scents of heather and brier and
whin,
All kindly breaths of land-shrub, flower, and
vine,

Recall the sea-scents, till thy feathered skin
Tingles in answer to a dream of brine—
When thou, remembering there thy royal birth,
Dost see between the bars a world of dearth,
Is there a grief—a grief on all the earth—
So heavy and dark as thine?

And now to see thee here, my king, my king,
Far-glittering memories mirrored in those eyes,
As if there shone within each iris—ring—
An orbéd world—ocean and hills and skies!
Those black wings ruffled whose triumphant sweep
Conquered in sport!—yes, up the glimmering steep
Of highest billow, down the deepest deep,
Sported with victories!—

To see thee here!—a coil of wilted weeds
Beneath those feet that danced on diamond spray,
Rider of sportive Ocean's restless steeds—
Winner in Mother Carey's Sabbath-fray
When, stung by magic of the Witch's chant,
They rise, each foamy-crested combatant—
They rise and fall and leap and foam and gallop
and pant
Till albatross, sea-swallow, and cormorant
Must flee like doves away!

And thou shalt ride no more where thou hast
ridden,
And feast no more in hyaline halls and caves,
Master of Mother Carey's secrets hidden,
Master and monarch of the wind and waves,
Who never, save in stress of angriest blast,
Asked ship for shelter—never till at last
The foam-flakes hurried against the sloping mast
Slashed thee like whirling glaives!

Right home to fields no seamew ever kenned,
Where scarce the great sea-wanderer fares with
thee,
I come to take thee—nay, 'tis I, thy friend!
Ah, tremble not—I come to set thee free;
I come to tear this cage from off this wall,
And take thee hence to that fierce festival
Where billows march and winds are musical,
Hymning the Victor-Sea!

It is at least a well-intentioned error to smother a young poet with praise; it is surely a more agreeable task to build the monument of one long since dead and reintroduce him to the public, as Miss Guiney, with faithful love, has done for James Clarence Mangan in his 'Selected Poems' (Lamson, Wolfe & Co.). With her usual felicity and vigor of expression, she says of her hero: "He has been, for half a century, wandering on the dark marge of Lethe. It will not do, as yet, to startle him with gross applause. Otherwise his gratified editor would like to repeat, introducing Clarence Mangan, the gallant words with which Schumann once began a review of the young Chopin: 'Hands off, gentlemen; a genius!'" (p. 112). Yet Mangan gave the proof of absolute genius only in one song, "My Dark Rosaleen"—supreme among all Irish lyrics, and one whose characteristic is that, more than any poem ever written, it so intensifies the love of country, under the name of love of woman, that the two supreme passions absolutely meet and coincide, so that the reader is swept away and does not care whether it is the patriot or the

lover who sings, for one strain suffices to utter the heart of each (p. 116):

"Woe and pain, pain and woe,
Are my lot, night and noon,
To see your bright face clouded so,
Like to the mournful moon.
But yet will I rear your throne
Again in golden sheen;
'Tis you shall reign, shall reign alone,
My Dark Rosaleen!
My own Rosaleen!
'Tis you shall have the golden throne,
'Tis you shall reign, and reign alone,
My Dark Rosaleen!"

"Over dews, over sands,
Will I fly for your weal:
Your holy delicate white hands
Shall girdle me with steel.
At home in your emerald bowers,
From morning's dawn till e'en,
You'll pray for me, my flower of flowers,
My Dark Rosaleen!
My fond Rosaleen!
You'll think of me thro' daylight hours,
My virgin flower, my flower of flowers,
My Dark Rosaleen!"

And the most interesting and remarkable part of Miss Guiney's admirable introduction is its full exhibition of the fact that this wild lyric, which, more than all others, might seem to have been struck off at a white heat, was in reality but one out of three versions of the old Irish strain on which it is founded, but which has nothing of what Miss Guiney well calls "the stormy beauty" of Mangan's lay. In like manner, Mangan often, though not always, improved the German ballads which he purposed to translate, as, for instance, Freiligrath's "Lady Eleanora von Allee," which he amplifies and makes more dramatic than when it left the hands of its author, or Schnetzler's ballad of the Mummelsee, which we judge from internal evidence, though it is not included in this edition, to be also by Mangan. He was, in truth, one of the daring Fitzgerald school of translators, and did not hesitate, in transferring a statue from the clay into the marble, to throw in all the added graces that he could.

To those who remember the late Mathilde Blind in her brilliant and affluent youth, when the inherited spirit of German radicalism filled her fine face with ardor, and when she found in Darwin something as stimulating and elevating as a new revelation from heaven, there will be a positive satisfaction in the brief "Selection" from her poems, edited by Mr. Arthur Symonds (London: T. Fisher Unwin). His tribute to her in his preface is simply admirable—brief, lucid, sympathetic, discriminating, and offering, with the admirable portrait, a better memorial than most elaborate biographies. Many of the poems are fine; the love-poems pure and passionate, while those bearing upon the sordid tragedies of humble life are full of keen and saddened observation. Yet the most interesting of all is this glimpse, from within, of the point where the noblest agnostic may find his creed unsatisfying (p. 140):

THE AGNOSTIC.

Not in the hour of peril, thronged with foes
Panting to set their heel upon my head,
Or when alone from many wounds I bled
Unflinching beneath Fortune's random blows;
Not when my shuddering hands were doomed to
close

The unshrinking eyelids of the stony dead;
Not then I missed my God, not then—but said:
"Let me not burden God with all man's woes."

But when resurgent from the womb of night
Spring's Oriflamme of flowers waves from the
soil;

When peak on flashing Alpine peak is trod
By sunbeams on their missionary flight;
When heaven-kissed Earth laughs, garmented in
light;

That is the hour in which I miss my God.

'Rampollit: Growths from a Long-planted

Root, being translations, new and old, chiefly from the German; along with a Year's Diary of an Old Soul,' by George MacDonald (Longmans), is a curiously named book, which recalls irresistibly to the American mind the 'Monologues of a Homeless Snail' of Yone Naguchi. It is in reality a volume of unusually good translations, including especially the rarely translated 'Hymns to the Night' of Novalis, and ranging as far as the hilarious chants to be found in Luther's 'Song Book' under the name "Of Life at Court." But all the last hundred pages are occupied by a really original and mystical series of religious reveries, under the quaint name above given, the "Diary" stretching through twelve long months, and hinting at personal sorrows unexplained. To enjoy it the reader must also be able to enjoy Novalis; but both of them leave in the mind a curious sense of elevation and of nearness to some higher source of life, like that for which Matilde Blind yearned. Take for instance these stanzas (p. 249):

"Oh, what it were to be right sure of thee!
Sure that thou art, and the same as thy son,
Jesus!

Oh, faith is deeper, wider than the sea,
Yea, than the blue of heaven that ever sees us!
Yet simple as the cry of sore-burnt child,
Or as his shout, with sudden gladness wild,
When home from school he runs, till morn'g set free.

"If I were sure thou, Father, verily art,
True father of the Nazarene as true,
Sure as I am of my wife's shielding heart,
Sure as of sunrise in the watching blue,
Sure as I am that I do eat and drink
And have a heart to love and laugh and think,
Meseems in flame the joy might from my body start.

"But I must know thee in a deeper way
Than any of these ways, or know thee not;
My heart at peace far loftier proof must lay
Than if the wind thou me the wave didst roll,
Than if I lay before thee a sunny spot,
Or knew thee as the body knows the soul,
Or even as the part doth know its perfect whole.

"There is no word to tell how I must know thee;
No wind clasped ever a low meadow-flower
So close that as to nearness it could show thee;
No rainbow so makes one the sun and shower.
A something with thee, I am a nothing fro' thee.
Because I am not save as I am in thee,
My soul is ever setting out to win thee."

Miss Mitford's old-time phrase, "He translated Horace, as all gentlemen do," might now be almost applied to the new translators of Homer, and especially of the tempting, familiar, gossiping 'Odyssey.' Mr. J. G. Cordery had previously done the 'Iliad' in a manner which made the *Spectator* declare it to be the best blank-verse translation of the greater work; and this praise might easily tempt the author to attempt the smaller task. Unfortunately the problem is here quite different, for the 'Odyssey' lends itself far more easily than the 'Iliad' to prose version; and the competition with such renderings is proportionately more difficult. After Palmer, or even after Butcher and Lang, blank verse seems a little monotonous and gratuitous; one is tempted to try Dr. Johnson's famous experiment, as performed on Shells, the compiler of 'Cibber's Lives of the Poets,' when Johnson read aloud a page of Thomson's 'Seasons,' to Shells's great delight, and then announced that he had omitted every other line. Yet Mr. Cordery has made his work, on the whole, readable—much so, for instance, than that of Lord Carnarvon—and he has a just right to claim, in his preface (p. xvii), that he has "eschewed the use of all mock-archaic diction in which so many translators indulge"; this being apparently a hit at Mr. Andrew Lang, who has certainly erred sufficiently in that direction. Yet it is to be noticed that Mr. Cordery himself uses such a phrase as "fair-

snooded wives" (p. 65), which is at best mock-modern, and hardly accurate even as such, inasmuch as the Scotch snood is the attribute of maidenhood, not wifehood. It is rhythmically doubtful, too, whether Homer's alternative of Odysseus and Odysseus, with the accompanying change of quantity, is as permissible in English as in Greek, although Mr. Cordery employs it. For the rest, the translation is vigorous, sympathetic, and, for blank verse, reasonably close. Test it, for instance, in that fine and touching passage where Homer does not hesitate to make his great hero weep at the tale of bygone deeds (viii., 521):

So sang the glorious Minstrel of these things:
With grief Odysseus inly was consumed.
Tears dropped from either eyelid down his cheeks,
Ev'n as in tears a woman falling clasps
Her husband, who before his people's eyes
Hath perished for his children and his home;
And she hath seen him in his agony,
And wildly across his body showering herself
Lies shrieking, till her enemies lead her off,
Pricking her with their lances from behind,
To slavery, and to bear distress and toil,
While her fair cheeks thenceforward fall away
In grief most piteous; such the piteous tears
Odysseus shed.

In this passage the peculiar phrase "show-ering herself" seems a forced and yet rather felicitous equivalent for *χυκνύει*, a word which certainly has a meaning less adequately expressed by Palmer's "flings herself" or Butcher and Lang's tame "embracing." On the other hand, to introduce the phrase "fair" before "cheeks" (*τραπέαι*) is a distinctly modern and conventional touch which takes half the strength out of Homer's "with pain most pitiful her cheeks are thin." This is Palmer's version, and Butcher merely puts "grief" instead of "pain," while Lord Carnarvon solves the problem by altogether omitting the clause. There is in Mr. Cordery's book a good deal of this kind of inequality of execution, to which a translation of Homer into verse is always liable, but it is good honest work, nevertheless, and on the whole increases one's respect for the author.

The two aspects of the legal profession—the sublime and the trivial—were never perhaps better marked than in Addison M'Leod's 'A Window in Lincoln's Inn' (Kegan Paul), were it only in these two extracts from the close of "Outside the Window" (p. 28):

O men of laws,
Ye are not built until the end of time;
But temporary sheds and shanties, raised
Till law grows greater, needs a finer house.
When she shall pull you down and cast you by.
Yet, if we mould ourselves to finer clay,
We with our lives may build a house on earth,
Or help to build it. Stately towers rise,
Long graceful colonnades, translucent domes,
And when the work is done the world shall end.
And no more do we know the plan of it,
Or wherewithal we make it glorious,
Than coral insects working in the sea
Know what a wondrous land shall rise to life,
What woods, what shores, what flowers cover it.
And with our hearts a house is built in heaven.
If they are worthy, where the Source of all
Shall have his dwelling; using them perchance
As veined marble for the lower walls,
While the white angels make the coping stone.

So moralising in a lofty strain,
A sound of thunder coming from the door
Arouses me; the edges bending in,
As if a hurricane was clamoring
For my opinion on a point abstruse
Touching the mysteries of light and air.
"Who is it?" Hastily the Muse is sent
Under the table, and the law resumes.
Then enter Clerk: "For the last half hour, sir,
I have been hammering to make you hear."
"What is it, Edwards?" "Mr. Bullard's clerk
About the Wapping Mortgage." "Show him in."
(Scene closes on the poet discussing with the clerk whether the title is affected by a sub-demise to Skinfint in fee tail, with every appearance of interest.)

It is difficult to say anything about Mr.

Le Gallienne's 'Rubáiyát of Omar Khayyám' (John Lane)—a paraphrase from several previous versions, except that its title is in no way justified and its execution of little value. If a man ignorant of Greek were to reconstruct a versified 'Odyssey' from Palmer's or Butcher's translation, no value would be given to it by putting 'The Odyssey' on the title-page; and even a sonnet like that of Keats on Chapman's Homer would scarcely justify the title. It is a comfort to think that, as Mr. Le Gallienne frankly cuts free from FitzGerald, he makes no attempt to spoil the very finest passages of the latter's version, and the resulting effect of mediocrity must be divided between the other translators and their present poetic scribe. Not that Mr. Le Gallienne is always mediocre, for he has occasional streaks of something like genius; yet these are never continuous enough to constitute what miners call "pay gravel," and he has constantly affected that very form of London and Paris cynicism which he protests against in his best poem. He must needs bring it even into Omar Khayyám, as in the following stanza (p. 63):

O heart, my heart, the world is weary-wise,
My only resting-place is your deep eyes.
O wrap me warm in your illusive love,
For well I know that they are also lies.

This surely does not belong to the Vale of Cashmere, where lovers do not languidly exult in the faithlessness of their mistresses; it has a flavor of the Champs-Élysées and of Piccadilly.

A better book by another young English poet, whose greatest weakness lies in having been Mr. Le Gallienne's editor and endorser, is Mr. William Watson's 'The Hope of the World,' in which, though the title-poem is inadequate—as title-poems are wont to be—contains the following fine lines written on Salisbury Plain, and addressed to a lady whose kinsman, Mr. Aubrey de Vere, has revived the old Irish legends with such beauty. For those who recall the "billowing leagues" of that rolling prairie of English soil, and who will always associate with it the sheep-bells and the pewits—Mr. Watson does not mention the sky-larks, perhaps because they do not represent so much to him as to an American—these sixteen lines must have an unerring charm (p. 39):

TO MRS. HERBERT STUDD.

Amid the billowing leagues of Sarum Plain
I read the heroic songs which be, the bard
Of your own house and lineage, lovingly
Hath fashioned out of Ireland's deeds and dreams,
And her far glories, and her ancient tears.

The sheep-bells tinkled in the fold. Hard by,
A whimpering pewit's desultory wing
Made loneliness more manifestly alone.
Friend, would you judge your poets, try them thus:
Read them where rolls the moorland, or the main!

Not light is then their ordeal, so to stand
Neighbored by these large natural Presences;
Nor transitory their honour, who, like him,
No inch of spiritual stature lose,
Measured against the eternal amplitudes,
And tested by the clear and healthful sky.

This sonnet to Mr. Aldrich also deserves especial recognition (p. 56):

TO THOMAS BAILEY ALDRICH.

In answer to his sonnet "On Reading 'The Purple East.'"

Idle the churlish leagues 'twixt you and me,
Singer most rich in charm, most rich in grace!
What though I cannot see you face to face?
Allow my boast, that one in blood are we!
One by that secret consanguinity
Which binds the children of melodious race,
And knows not the fortuities of place,
And cold interposition of the sea.
You are my noble kinsman in the lyre:
Forgive the kinsman's freedom that I use,
Adventuring these imperfect thanks, who late,

Singing a nation's woe, in wonder and ire—
Against me half the wise and all the great—
Sang not alone, for with me was your muse.

If the words "weird" and "growsome" did not exist in abundance just now on the lips of young ladies, it would be necessary to coin them, or something like them, to describe the favorite themes of Mrs. Shorter (née Dora Sigerson) in her *'The Fairy Changeling, and Other Poems'* (John Lane). So many of these poems end in skeletons and shrouds and phantoms and churchyard mould that one would reproach the writer, were she anything but Celtic, with a most gloomy imagination; whereas she is very probably one whose delights are equal to her depths, and who is not in the least depressed by her own tragedies. As the daughter of an accomplished father, Dr. George Sigerson, she has doubtless been immersed from childhood in that fascinating world of revived tradition which has, in the hands of Mr. Yeats and Fiona MacLeod, produced results so remarkable; and though nothing that she has yet done has quite so fine and airy a touch as Mr. Yeats's world of fantasy, nor anything so altogether amazing in power as Fiona MacLeod's *'The Prayer of Women'* and *'The Rune of Age'*—nor has she even produced any single poem so haunting as Miss Alice Gillington's *'The Doom-Bar'* and *'The Seven Whistlers'*—yet there is in this volume a glimpse of latent strength and imagination which may yet place her by the side of the best of these. One of the most thoughtful of her poems is *'Unknown Ideal'* (p. 75), which appeared originally in the *Chap-Book*. Another is the following (p. 57):

THE KINE OF MY FATHER.

The kine of my father, they are straying from my keeping;
The young goat's at mischief, but little can I do:
For all through the night did I hear the Banshee keening;
O youth of my loving, and is it well with you?
All through the night sat my mother with my sorrow;
"Whist, it is the wind, O one childen of my heart!"
My hair with the wind, and my two hands clasped in anguish;
Black head of my darling! too long are we apart.
Were your grave at my feet, I would think it half a blessing;
I could herd then the cattle, and drive the goats away;
Many a Paternoster I would say for your safe keeping;
I could sleep above your heart, until the dawn of day.
I see you on the prairie, hot with thirst and faint with hunger;
The head that I love lying low upon the sand.
The vultures shriek impatient, and coyote dogs are howling,
Till the blood is pulsing cold within your clenching hand.
I see you on the waters, so white, so still, forlorn,
Your dear eyes unclosing beneath a foreign rain:
A playing of the winds, you turn and drift unceasing,
No grave for your resting; O mine the bitter pain!
All through the night did I hear the Banshee keening;
Somewhere you are dying, and nothing can I do;
My hair with the wind, and my two hands clasped in anguish;
Bitter is your trouble—and I am far from you.

The Workers: An Experiment in Reality.
By Walter A. Wyckoff. The East. Charles Scribner's Sons. 1897.

Mr. Wyckoff's book is sure to find readers, for it has the one indispensable literary quality of interest. What carries the reader along is not the sociology (the author is a lecturer on sociology at Princeton, and his

experiment had a sociological motive), but the story. One of the things charged to the author for a fault by some critics—that he is constantly telling us of his physical sufferings in his self-imposed task—is, perhaps, a literary merit. It sounds true, and helps to make the rest credible. When the author imputes sufferings of the same sort to laborers injured to toil, he may be blamed for falling into a common sociological "pathetic fallacy," but he does not often seem to do this. That his own hands and feet were blistered, his eyes blinded, his throat parched, and his muscles tortured, were facts important to him and relevant to the story.

To sum up the narrative in a few words, it appears that the author, avowedly a man without much experience of life, was paying a visit at a country house on the Sound, when he fell in with a chance acquaintance—a man of the world—whose talk suddenly suggested to him the idea of making an experiment in life by sallying forth disguised as a laborer, and sharing, for a time, the laborer's lot, becoming himself a part of the labor "problem," and thus studying the social questions affecting the laboring man at first hand. No sooner said than done. He is on the road as a laborer without funds, looking for a job, and for several months he finds employment—as one of a "gang" under a boss, as a hotel porter, as a hired man at an asylum, as a farm hand, and as a lumberman or woodchopper in a logging-camp. How far he was actually disguised seems doubtful, for, according to his own account, he struck those with whom he worked as a nondescript, being taken, in one instance, not unnaturally, to be a "sky-pilot" (p. 219). But whatever they thought of him, he lived their life patiently, and his report of what he saw and heard is curious and interesting. We select a few of the points that have struck us, though the author does not dwell on them; his main object wisely being to report facts only, leaving others to draw conclusions.

The first fact to which the report points is the extraordinary ease with which employment is obtained in the United States—and that, too, in the Eastern States—by any one willing to work with his hands. Mr. Wyckoff starts out without either money, references, or good physical qualifications (for he is totally unused to manual labor), and yet finds work at every turn, and "no questions asked." His experience, so far as it goes, gives the lie to the common talk of the vast army of people who are out of work and cannot get it. The book confirms the view that, as a rule, any man in the United States who is willing to work with his hands can get food and lodging; i. e., that the demand in the unskilled labor market is generally greater than the supply. Mr. Wyckoff's experiment was made in 1891. Had it been made in 1894, the test would, of course, have been more severe.

Another point very noticeable is that the picture here given of the laboring world does not warrant any new sociological conclusions whatever. Mr. Wyckoff represents the average laborer (what he calls the proletaire) as a good-natured nomad, very profane and loose in his morals, ignorant and coarse in his conversation, and dirty in his habits, brutal if placed in authority, and seeking relaxation from toil chiefly in the gratification of his appetites. About thrift our author has nothing to say, probably

from not having seen much sign of it, and, from beginning to end, there is nothing in the account given of the laborer to please those who imagine his vices and troubles to be the result of oppression and wrong. The author's idea evidently is that what he describes and deplors is to be attributed to a lack of organization—this is almost the only inference that he allows himself. He shows (p. 69) how, if the proletariat were managed by an intelligent and superior "organization," everything would be much better than it is. But he does not seem to see that this organization must be produced by the very men of whom he gives such a deplorable account. It is individuals who produce organization in ordinary life, and if sociology can reverse the process, it is not too much to ask for a clear explanation of how it is to be done.

But the book has another feature which makes it really useful. We doubt if any American of the employer class can read it without a feeling that the picture tells a story of the whole civilization in which he lives. It is a thoroughly American book, and could have been written in no other country. As we lay it down we cannot help reflecting that there is in the description an exposure. At first we hardly perceive what it is that is laid bare, but on reflection find that we have really been reading about ourselves. These wood-men, and hotel-porters, and farm-hands, and day-laborers are ourselves, stripped of our civilization and inherited tastes and thoughts and sentiments, and doomed, in all our nakedness, without means and with little hope, to struggle through life as we may. And, so born again, what is there in us to make it likely that we should be very different from the proletariat here described? How large a proportion of our own class are free from the vices which play havoc a little lower down in the scale? Face to face with the human animal, turned adrift, hungry, and with unsatisfied wants, and surrounded, too, with preachers assuring us that we are entitled to a liberal share of all the world affords, what should we make of the labor "problem"? Man is the sport of his circumstances; character alone elevates him above them. This is as true of the plutocrat in his electric cab as of the motorman who drives him.

The book ends with a sermon and a prayer; the author, "sky-pilot" that he is at heart, perceiving after all that it is rather an attitude of mind that he wishes to encourage than an economic propaganda that he has to spread.

A Students' History of the United States. By Edward Channing. Macmillan. 1898.

A History of the United States for Schools. By Wilbur F. Gordy. Scribners. 1898.

Prof. Channing is at least to be praised for his courage. The large number of textbooks in American history, some of them by well-known writers, lately put upon the market, all of about the same size and style, and all pretending to do about the same thing, has not deterred him from adding another to the list. Externally, his *'Students' History'* makes a good impression. It is an attractive volume of six hundred pages, well supplied with maps and pertinent illustrations, and equipped with an excellent bibliographical "apparatus." Intended primarily for advanced classes in high and normal schools, or for such students as have

already used a more elementary work, it has little to do with the anecdotal and picturesque side of history, or with the minor details of military movements. In the apportionment of space, colonial events are subordinated to national; three-fourths of the book being given to the period after 1760, and considerably more than half to the period subsequent to 1783. From the standpoint of formal construction, hardly any work in its field shows a clearer perception of the broad proportions of things. As regards details, also, there is much to commend. Prof. Channing is particularly at home in American colonial history, and he has here given a clear and well-ordered account of the establishment and development of the colonies, their relations with the mother country, and the causes of the Revolution. The mass of facts is not great, but the selection is generally judicious, the treatment adequate, and the emphasis fair.

If the same praise to which the earlier chapters are fairly entitled could be accorded to the second half of the volume, we should feel bound to credit Prof. Channing with having produced a text-book of a high order. Unfortunately, however, we cannot think his treatment of the constitutional period altogether commendable. We hesitate to express an opinion which may, perhaps, do him an injustice; but it is impossible to feel here that he has at all points a thorough mastery of his subject, or an extensive first-hand acquaintance with it. For the space occupied, the information imparted is scanty: the facts are hardly more than the usual ones of elementary handbooks, while the point of view is, as a rule, conventional. Events in their isolation are treated clearly and, in general, accurately enough; but with events in their connection the author does not seem to be greatly concerned. On such important topics, for example, as the origin and development of political doctrines, the growth of parties, the influence of public men, the interaction of economic and political forces, or the embodiment of moral ideas in political action, the 'Students' History' makes but a slight contribution: every one of these matters is alluded to, but no one of them is, to our thinking, adequately set forth. It cannot be denied that a satisfactory treatment of these and similar subjects, in a limited space, is difficult; not to do it, however, is to incur the danger of making the exposition somewhat clearer than the period. The result of these shortcomings is that the latter half of the book lacks interest. That all the things of which Prof. Channing writes did really happen, and in much the way in which he describes them, the student will have no difficulty in believing; but why they happened, or how they could have had any particular interest for the persons concerned in them, is not always made clear.

A short introductory chapter of "Suggestions to Teachers," prepared by Miss Anna B. Thompson, of the Thayer Academy, Braintree, Mass., merits more attention than can be given it here. The whole array of "method" now thought necessary, by some teachers, for instruction in history in elementary schools—outline maps, note-books, digests, special reports, conferences, "students," "perspectives," "chains," etc.—is here set forth by an acknowledged expert, and illustrated by questions and topics appended to the various chapters. We have no doubt that any student who survived a

thorough course of treatment along the lines here marked out would have a deep sense of the importance of history in the school curriculum, but whether he would have found time to study anything else seems doubtful. We agree with Prof. Channing, however, that while few teachers will be able to adopt all of Miss Thompson's suggestions, every teacher can derive assistance from them.

Several statements in the text need correction. Jefferson's ordinance for the government of the Northwest Territory was passed in 1784, not in 1785 (p. 247). The Whiskey Insurrection occurred in 1794, not in 1796 (p. 294). Jackson's proclamation of 1832, to South Carolina, was issued December 10, instead of December 11 (p. 421). The "specie circular" of 1836 was not "to the effect" that nothing "save gold and silver and notes of specie-paying banks" was to be received in payment for lands (p. 434); no provision was made for the acceptance of notes of any kind. Lord Ashburton was not "British Minister at Washington" in 1842 (p. 438), but a special envoy. January 19, 1848, the date on which the first discovery of gold in California is said to have been made, was not "ten," but fourteen, days (p. 453) before the signing of the treaty of Guadalupe Hidalgo (February 2). Douglas had been trying for ten years previous to, not since, 1854 (p. 465) to secure a Territorial organization for the Nebraska region. A slip on page 483, by which "acres" is substituted for square miles, makes the figures for the area of the country meaningless. John W. Crittenden (p. 498) should, of course, be John J. Crittenden. It was the New England Emigrant Aid Society, not the *Emigration Society* (p. 470), that helped the cause of freedom in Kansas. One error of peculiar importance should not be passed over. In speaking (p. 305) of Adams's message on the "X. Y. Z." affair, Prof. Channing says:

"News travelled slowly in those days, and it was April, 1798, before Adams communicated to Congress the failure of this ill-starred commission. After narrating the facts of rejection, he concluded with the assertion that he would 'never send another minister to France without assurances that he would be received, respected, and honored as the representative of a great, free, powerful, and independent nation.'"

The reader would naturally suppose that the words quoted from Adams form a part of the message of April 3, of which the writer is speaking; as a matter of fact, however, they are not found in that message at all, but in a message of June 21. It is a curious coincidence that Prof. Channing's colleague, Prof. Hart, in his 'Formation of the Union,' should have fallen into the same ditch.

Mr. Gordy's book, written, apparently, for younger students than those whom Prof. Channing has had in mind, may be commended as a successful attempt to tell again the leading facts of American history. The claims of the preface would, perhaps, lead one to expect a volume of some distinction; but the work seems to be carried out along substantially the usual lines, though, so far as we have tested it, with care and accuracy of statement. The profuse illustrations are rather cheaply executed; many are "fancy" pictures of no historical worth. The scattered suggestions to pupils show the practical teacher, and the references prefixed to the various chapters are well chosen. On the whole, Mr. Gordy has produced a safe and usable book.

Life and Letters of Thomas Kilby Smith, Brevet Major-General U. S. Volunteers: 1820-1887. By his son, Walter George Smith. With portraits. G. P. Putnam's Sons. 8vo, pp. 487.

The home letters of soldiers in the civil war will always be prized as original sources of history, and a new series is cordially welcomed. They are to be used by students with discretion, of course, for no historical material is more variable in value. They will give endless interesting work to the expert, not merely in collecting and sifting the evidence of the truth in regard to important historical events, but in studying the character and qualities of the men themselves who were in the struggle, and who were drawing their own portraits unconsciously in the freedom of intercourse with those nearest and dearest to them.

It is no disparagement to the clever work done by the author of the Memoir which makes a third of the volume, to say that the collection of letters must be considered by far the more important part of the book in both the aspects indicated above. During the campaign of Shiloh, the attack on Chickasaw Bluff, the capture of Arkansas Post, the siege of Vicksburg, and the Red River campaign, we have a full current account of the experiences of the writer, his comments on what he saw, his opinions of the men about him and over him, and his transcript of the emotions which stirred him. It would be hard to imagine a more unreserved disclosure.

Kilby Smith assisted in organizing troops in Ohio, in the summer of 1861, and at the end of October was made Colonel of the Fifty-fourth Ohio Infantry. He had been Deputy-Clerk of Court in Cincinnati, and an active young politician in the Douglas wing of the Democratic party. His regiment took the field in February, 1862, becoming part of the division which, with Gen. Sherman, joined Grant after the fall of Fort Donelson. He showed military aptitude in drilling his regiment and courage in leading it. He succeeded to the brigade command when his superior was wounded at Shiloh, was promoted Brigadier-General after Vicksburg, and commanded a division in Banks's Red River expedition. The greater number of his published letters were written to his mother, a woman of active mind and energetic character, proud of her son and ardently ambitious for him. Her praise stimulated him in his military work and in his epistolary composition. If the letters grow too rhetorical, we remember to whom they are addressed, and cannot find it in our heart to blame the young officer for an effusiveness so affectionately invited.

Conscious of good performance of duty and of the approval of Sherman and Grant, promotion was frankly sought, and all the influences likely to be useful were industriously used. Mother and wife took their part in an active correspondence, which rallied powerful friends to the work of securing the desired object. It was gained, perhaps, not much sooner than it would have been without so energetic efforts, and the distinction was gracefully and honorably worn when it arrived. It was part of Gen. Smith's temperament to enjoy keenly the recognition of others, and to rate at their full value the evidences that his comrades and fellow-citizens understood his career. A genial bonhomie made him a welcome guest and companion, so that, despite as-

rious inroads on his health made by disease incident to the camp, life did not appear to him, either in the present or in retrospect, in sombre colors. The letters of such a brave gentleman and good soldier, holding the mirror up to his daily life with its adventures, to his own heart with its hopes and fears, its aspirations and its disappointments, must needs be a typical study, which students of the period would not willingly lose.

A Group of French Critics. By Mary Fisher. Chicago: A. C. McClurg & Co. 1897.

This group of critics is composed of the upright and delicate and narrow Soherer; Bernot, the philosophic moralist; the brilliant lecturer Saint-Marc Girardin; the fastidious, man-of-the-world recluse, the letter-writer Doudan; and the irritable and bitter journalist Gustave Planche. They all belong to another generation than the present, and are none of them of quite sufficient importance to demand much personal study. They are no longer living voices in any sense. A higher estimate than this is held of them by Miss Fisher, herself a very kindly critic, who has emptied on these pages the contents of her extract-book, mingled with selections from her own *poésies*, which are sometimes as well worth thinking as this:

"There is a vast difference between living in your opinions and having your opinions live in you. In the first case you use your opinions as you do your house and furnishings, for mere shelter and convenience. They are no more a part of you than your house and furnishings; and yet, like these, they may give you a certain prestige, a certain social status. . . . They are not in you but on you. In the next case your opinions are a living part of your character. They give shape and consistency to it. . . . If they change, it is by the slow vital process of waste and assimilation."

It is a pleasure to an American to read

these lines, taken from one of Doudan's letters; he is writing of Abraham Lincoln:

"The democrats will do well to guard his memory preciously, for he is the finest portrait of their race. He is exactly the ideal democrat—simple, rugged, mild, patient, courageous when the primitive sentiments of human nature lay hold of him by the throat. Pericles did not speak so well of the young Athenians who died in the Peloponnesian war as he did over the American dead brought home to the great desolate cemetery near the city of Washington."

There would be a certain absurdity in criticising a volume like this. To criticise a criticism of critics would be to create one of those simulacra of literature that the reader of to-day accepts as solid substance.
